National Defense. Military service is compulsory. The army on Nov. 1, 1939, consisted of 15,000 active soldiers and 120,000 trained reserves, according to the Adjutant General's Office, Washington, D. C. The air force comprised 1000 men and 100 aircraft. At the beginning of 1939, the navy—designed for coast defense only—was composed of 4 ironclads, 1 mine-layer, 5 destroyers, 3 first-class torpedo boats and 14 others; 9 submarines; 6 fishery protection vessels and about 20 other vessels.

Education and Religion. Primary education is obligatory and there is practically no illiteracy. Enrollment in elementary schools in 1935-36 was 369,861 pupils; in secondary schools, 29,136; the University of Oslo was attended by 4229 students in 1939. Practically the entire population belongs to the state church (Evangelical Lutheran), the 1930 census showing only 91,459 dissenters—12,207 Methodists, 7788 Baptists, 2827 Roman Catholics, 667 Mormons, and 81 Quakers.

Production. About 29 per cent of the working population is engaged in agriculture, forestry, and gardening, 27 per cent in industry, 10 per cent in commerce, 9 per cent in transportation, 7 per cent in fishing and whaling, and 5 per cent in public administration and the liberal professions. In 1938 cultivable land was estimated at 2,099,000 acres (2.8 per cent of the total land area); permanent meadow, 466,000 acres; forests, 18,531,000 acres. The value of agricultural production was more than 500,000,000 crowns in 1938. Yields of the chief cereals in 1939 were (in metric tons): Wheat, 69,400; barley, 126,700; rye, 10,400; oats, 183,200. The 1938 potato crop was 34,452,000 bu.; sown hay, 3,000,000 metric tons; fodder roots, 733,000 metric tons. Livestock in 1938 was: 1,399,000 cattle; 1,778,000 sheep; 429,000 swine; 308,000 goats; 193,000 horses. Cheese manufacture (1938) totaled 18,800 metric tons. The 1938 fishing catch was valued at 86,101,000 crowns; whaling catch, 1937-38, 998,000 bbl. of oil valued at 42,900,000 crowns.

Industrial production in 1938 was valued at about 1,890,000,000 crowns. Iron ore production in 1938 reached the record figure of 1,545,000 tons (1,076,000 in 1937). Output of other minerals in 1938 (in metric tons) was: Cement, 320,000; coal, 780,000 (from Spitzbergen); pig iron, 174,000; zinc (smelter), 46,500; tin (smelter), 200; aluminum (smelter), 29,000; copper, 20,700 (1937); nickel, 900 (1937). Beer produced in 1938 totaled 12,653,791 gal. (U.S.); wool and mohair, 2700 metric tons; rayon, 141 metric tons; wood pulp, 887,000 metric tons. Output of electricity aggregated 9,907,000,000 kilowatt-hours.

Foreign Trade. Imports in 1938 were valued at 1,888,436,000 crowns and exports at 786,746,000 crowns as compared with 1,292,717,000 and 923,258,000 respectively in 1937. For chief classes of imports and exports, and for distribution of trade, see YEAR BOOK for 1938, page 546. Consult also article on IMPORTS AND EXPORTS in the present volume.

Finance. For the fiscal year ending June 30, 1940, ordinary revenue was estimated at 517,-

075,000 crowns and expenditures at 486,731,000 crowns. Actual receipts in 1937-38 totaled 601,107,000 crowns; expenditures, 556,480,000 crowns. The budget for 1938-39 was estimated to balance at 563,030,000 crowns. The public debt on Jan. 1, 1939, was 1,430,395,000 crowns. The Norwegian crown (or krone) was linked to the pound sterling and had an average exchange value of \$0.2484 in 1937 and \$0.2457 in 1938. On Aug. 29, 1939, it was cut loose from the British pound and pegged to the American dollar at the rate of 4.40 kroner to \$1.

Transportation. Norway has about 2500 miles of railway lines, mostly owned and operated by the state. Gross revenues for the 1939 fiscal year aggregated 88,096,000 crowns; expenditures, 99,686,000 crowns. Paved highways extended 25,699 miles in 1939 (see **ROADS AND STREETS**). Civil aviation statistics for 1938 were: Miles flown, 448,629; passenger miles, 1,472,000; mail, luggage, and goods carried, 260 metric tons. Regular flying schedules are confined to the period May to September, inclusive. On Jan. 1, 1939, the Norwegian mercantile marine—the fourth largest in the world—consisted of 4308 vessels of 4,756,000 tons. Gross earnings in 1939 were estimated at between 800,000,000 and 1,000,000,000 crowns. See *History* below.

Government. Executive power resides in the King. He exercises it through a cabinet, which is actually responsible to the parliament. This parliament, the Storting, consists of 150 members. They are elected at intervals of four years, according to geographical districts, by proportional representation. The Storting assembles every year. Its members effect their own division into two chambers, the Lagting, having 38 members, and the Odelsting, 112. The Premier in 1939 was Johan Nygaardsvold, of the Labor party, which held 70 seats in the Storting elected in 1936.

History. The country was in comparatively good shape to meet the situation when war started among leading European powers in September, 1939. Its shipping industry was in a position to serve the demand that the war created. A system of compulsory insurance against unemployment went into effect on July 3, applying to 550,000 employees, more or less; it promised to strengthen the economic structure against shock, in some respects. Relations with Germany were good at the start of the war, although Norway, unlike Denmark, had abstained from an agreement for non-aggression offered by Germany to the Scandinavian neutrals in the spring and discussed in conference by the Foreign Ministers of Denmark, Sweden, Finland, and Norway at Stockholm in May. The country had enough grain to carry it through the next harvest.

Norway's long-established policy of complete neutrality in European wars again guided its course. This policy imposed on the authorities the duty, sometimes difficult, of opposing attempts of either of the warring sides to make unwarrantable use of Norwegian harbors and waters. It also tended to put the government in opposition to popular sentiment in a case where this sentiment should become partial to one belligerent, as against another, as indeed threatened when Russia attacked Finland on November 30.

The government, as war approached, took early action to protect economic essentials from the disturbance to be expected. As early as August 19 the Bank of Norway released the crown from its usual fixed ratio to sterling. A committee of the

banks of the kingdom, September 5, announced that banks would sell no more foreign exchange except for such purposes as warrantable travel and payments for imported goods. On November 13 a widespread dispute as to employment in the industry of transportation, the expected prologue to a strike of 8000 therein employed, was forbidden, and the council of state ordered the compulsory settlement of the dispute by arbitration, before it could halt economic activity.

The merchant marine, during the early months of the war had to support great losses but was actively employed at higher rates for its services than before. A Norwegian source, *Veritas*, computed the total of the country's shipping destroyed by belligerents up to December 1 at 94,000 dead-weight tons; Lloyd's reported the total on December 28 as 23 ships of 61,903 gross tons. Norway's loss in ships, in any case, exceeded that of any other single neutral. Yet the country's merchant marine, 4,765,600 tons on December 1, exceeded the total for January 1 by 108,000 tons and was only 11,000 tons less than for July 1. In December 655,000 tons of new ships were under order or actually under construction; and the government undertook in that month to promote, by means of a loan, the building of a new shipyard to produce 150,000 tons of vessels a year, using a special welding device to reduce the cost of hulls. The marine's gross earnings of 1939 appeared to have exceeded by one-third or more the 620,000,000 crowns of 1938. Much of the gross of 1939 went into higher pay for the seafarers, and thus made its way into the nation's income.

Norway's relations with Great Britain were not seriously disturbed in 1939 by reason of the latter's participation in the war with Germany, though German vessels' tendency to seek Norwegian waters made the continuance of harmony with Great Britain uncertain. British naval vessels also to some extent frequented Norway's territorial waters, and two British destroyers, the *Inglefield* and *Maori*, accompanying a damaged submarine, the *T-53*, were reportedly admitted to the port of Fosteroy, north of Bergen, November 20, pleading damage from stress of weather. The U.S. merchant ship *City of Flint* (see **INTERNATIONAL LAW**; **NEUTRALITY**; **UNITED STATES under Foreign Affairs**), under a German prize crew and carrying the American crew as prisoners, slipping down the Norwegian coast from the Arctic Ocean in an effort to gain a German port, put in at Haugesund, ostensibly to land a sick American. A doctor sent by the Norwegian Admiral in the area, having examined the patient, found him not so ill as to warrant the ship's entry into port. Entering and anchoring nevertheless, the vessel was delivered by the Norwegian authorities to her American crew and the Germans were interned.

At the beginning of the Russian attack on Finland, many of the population, in Norway as in other Scandinavian countries, were greatly agitated by sympathy for the Finns, so that it became somewhat difficult for the government to keep the country out of the Finnish struggle. The kings of Sweden, Norway, and Denmark had met in Stockholm in October, only a few weeks before, with President Kallio of Finland, and the group had re-expressed intentions of immovable neutrality. Norwegians raised a considerable sum in private contributions to the Finnish cause; about 8,000,000 crowns were reported to have been sent to Finland by December 28.

For Norway's participation in the peace efforts

and other negotiations of the Oslo and Scandinavian powers, see BELGIUM, DENMARK, FINLAND, and SWEDEN under *History*. See also CHEMISTRY, INDUSTRIAL; COMMUNISM; MILITARY PROGRESS; NAVAL PROGRESS.

NORWEGIAN LITERATURE. See SCANDINAVIAN LITERATURE.

NOTRE DAME, UNIVERSITY OF. A Roman Catholic institution at Notre Dame, Ind., founded in 1842 for the higher education of men. The enrollment in the summer session of 1939 was 1086, of which number 716 were religious, sisters of religious communities being permitted to attend. The enrollment for the first semester of 1939-40 was 3276. The faculty numbered 230. The general endowment amounted to \$1,010,000, while the income for the year 1938-39, including student fees and departmental income, was \$2,015,274. The library contained 203,008 volumes in the general and department libraries; 16,214 volumes in the law library, and 1251 periodicals. President, the Rev. John F. O'Hara, C.S.C., Ph.B.

NOVAE. See ASTRONOMY.

NOVA SCOTIA, nō'va skō'shya. An eastern maritime province of Canada. Area, 21,068 square miles; population (1939 estimate), 554,000 compared with 408,219 (1931 census). During 1938 there were 12,189 births (22.2 per 1000); 6063 deaths (11.1 per 1000); and 4084 marriages (7.5 per 1000). Chief cities (1931 population figures in parentheses): Halifax, the capital (59,275); Sydney (23,089); Glace Bay (20,706); Dartmouth (9100); New Glasgow (8858); Truro (7901); Sydney Mines (7769); New Waterford (7745); Amherst (7450); Yarmouth (7055). In 1937 there were 139,082 students enrolled in the schools including 13,101 students in the universities and colleges.

Production. The estimated gross value of agricultural production for 1938 was \$29,467,000 (\$28,561,000 in 1937) of which field crops accounted for \$9,658,000 (\$10,811,000 in 1937). Other important items were: Dairy products, \$7,890,000; fruits and vegetables, \$7,382,000; farm animals, \$2,835,000; poultry and eggs, \$1,137,000; fur farming, \$465,000. Livestock (1939): 43,710 horses; 240,000 cattle (including 115,500 milch cows); 143,700 sheep; 44,600 swine. The apple crop in 1939 amounted to 2,212,600 barrels (2,190,700 in 1938). In 1938, with 18,548 men employed in the fisheries, the fish catch was valued at \$8,804,000. The 1937 output of the forests equaled 137,823 M cu. ft. which was valued at \$7,399,065.

Mineral production (1938) was valued at \$26,253,645 of which coal (6,236,417 tons) accounted for \$22,523,802; gypsum (870,856 tons), \$908,383; gold (26,560 fine oz.), \$549,044; salt (44,950 tons), \$194,759. In 1937, from the 1135 manufacturing plants, with 18,088 employees, the net value of products was \$33,146,796 (\$27,788,510 in 1936).

Government. For the year ended Nov. 30, 1938, revenue totaled \$11,804,383; expenditure, \$11,296,664; net funded public debt, \$88,485,229. Estimates for the year ending Nov. 30, 1939, indicate revenue of \$12,125,105 and expenditure of \$12,082,098. The government is administered by a lieutenant-governor (appointed by the Dominion government) who is assisted by an executive council of 8 members who also are members of the House of Assembly of 30 members elected for a term of 5 years by popular vote of the people. Nova Scotia is represented in the Canadian parlia-

ment at Ottawa by 10 members in the Senate and 12 members in the House of Commons. Lieutenant-Governor, Robert Irwin (appointed May 1, 1937); Premier, A. L. MacDonald. See CANADA.

NUCLEAR CHANGES. See CHEMISTRY.

NYA. National Youth Administration (q.v.).

NYASALAND (nyā'sā-lānd; nī-ās'a-). A British protectorate in East Africa. Land area, 37,374 square miles; population (1938 estimate), 1,639,329 including 1894 Europeans and 1631 Asiatics. Chief towns: Zomba, the seat of the government; Blantyre, the commercial capital; Limbe; Lilongwe; Karonga; Fort Johnston; Livingstonia; Port Herald. Education (1938): European—5 primary schools and 101 pupils; African—4218 primary and vocational schools and 208,189 pupils.

Production and Trade. The chief products were tobacco, cotton, tea, maize, coffee, and rubber. Other products were groundnuts, rice, sisal, and tung oil. Livestock in 1936 included 260,764 goats, 222,718 cattle, 55,516 sheep, 72,371 swine, and 220 asses, mules, and horses. Minerals known to exist are gold, copper, iron, bauxite, asbestos, mica, graphite, manganese, and coal. In 1938, imports were valued at £833,324; total exports, £974,729. Of the exports, tea (10,218,821 lb.) accounted for £448,477; tobacco (£3,463,463 lb.), £392,683; cotton (6,853,894 lb.), £99,953. Highways extended 1852 miles in 1938.

Government. For 1938, revenue amounted to £842,626; expenditure, £810,261. The public debt on Dec. 31, 1938 totaled £5,373,820. Nyasaland is under the administration of a governor who is assisted by an executive council of 4 official members. Laws are enacted by the governor with the advice and consent of the legislative council (consisting of the governor, 5 official members, and 5 unofficial members). The report of the commission appointed to inquire into the financial position of Nyasaland was published during October, 1939,—consult *Nyasaland, Financial Position and Future Development* (Col. No. 152; H.M. Stationery Office, London). For the report of the royal commission appointed to look into the question of closer association or co-operation among Northern and Southern Rhodesia and Nyasaland consult *Rhodesia-Nyasaland Royal Commission* (Cmd. 5949; H.M. Stationery Office, London). Governor and Commander-in-Chief, Sir Donald Mackenzie-Kennedy (appointed Feb. 24, 1939).

NYLON. See CHEMISTRY, INDUSTRIAL; RAYON; TEXTILES.

OATS. The United States oats crop of 1939 was estimated at 937,215,000 bu., 12.3 per cent less than the 1938 crop of 1,068,431,000 bu. and 10.7 per cent below the 1928-37 average of 1,049,300,000 bu. The relatively low production total was attributed primarily to substantial acreage reductions. The acreage not harvested for grain was considerably greater than in 1938. The harvested acreage of 33,070,000 was about 7 per cent smaller than that of 1938 and 12 per cent below the 1928-37 average of 37,452,000 acres. Yield per acre averaged 28.3 bu. in 1939 and 30 bu. in 1938. Leading oats-producing States were Iowa with 154,818,000 bu., Minnesota 151,652,000, Illinois 93,540,000, Wisconsin 71,012,000, South Dakota 43,929,000, Michigan 42,712,000, and Missouri 40,920,000 bu. The seasonal average price per bushel received by farmers was 29.5¢ and the estimated value of production was \$276,891,000 in 1939 compared to 23.7¢ and \$253,335,000 in 1938. World production of oats in 1939 (excluding

the U.S.S.R. and China) totaled 3,286,000,000 bu. See *Crop Production in 1939* under AGRICULTURE.
HENRY M. STEECE.

OBERLIN COLLEGE. A nonsectarian institution for the higher education of men and women in Oberlin, Ohio, founded in 1833. The registration for the first semester of 1939-40 was 1913, College of Arts and Sciences 1341, Conservatory of Music 457, Graduate School of Theology 115, while that for the summer session of 1939 was 126. The faculty had 191 members. The productive funds of the institution as of Aug. 31, 1939, amounted to \$19,050,541, and the income for the year was \$1,476,501. The library contained 395,879 bound and 238,229 unbound volumes. The Hales Memorial Gymnasium for Women was erected in 1938-39 at a total cost of \$203,112. President, Ernest Hatch Wilkins, Ph.D., Litt.D., LL.D.

OBITUARIES. See NECROLOGY.

OCCUPATIONAL DEATHS. See ACCIDENTS.

OCEANIA, FRENCH ESTABLISHMENTS IN. A French colonial possession in the Pacific, consisting of the following main groups of islands: Society, Marquesas, Tuamotu, Leeward (Iles sous le Vent), Gambier, Tubuai, and Rapa. Total area, 1520 square miles; population (1938 estimate, 45,000) compared with 43,608 including 37,786 natives and 5290 French in the census of 1936. The main island is Tahiti (600 sq. mi.; 19,029 inhabitants in 1936) of the Society Islands. Capital, Papeete (7061 inhabitants in 1931).

The chief products are phosphates (187,000 metric tons in 1937); copra (19,800 metric tons exported in 1937); fruits and vanilla. In 1938, merchandise imports (in old U.S. gold dollars) totaled \$1,100,000; exports, \$1,100,000. In 1937, 89 overseas vessels (270,668 tons) entered the ports of the colony. The budget for 1938 was balanced at 19,530,600 francs. (Franc averaged \$0.0288 in 1938.) The establishments are administered by a governor aided by an administrative council. Governor, Chastenet de Géry (appointed April, 1937).

OCEAN ISLAND. See GILBERT AND ELLICE ISLANDS.

ODD FELLOWS, THE INDEPENDENT ORDER OF. A society of free white men and women, founded in Baltimore, in 1819. The society is non-political, non-sectarian and its objects and aims are to promote fraternalism, assist the needy, bury the dead, and educate the orphan. It is also active in the promotion of social welfare. The principals of the Order are, friendship, love, and truth.

The society's 115th annual session was held in Minneapolis, Minn., Sept. 18 to 23, 1939, at which time legislation for the Order, continuance of the Moral Education Program, etc., were considered and adopted.

At the close of 1938, the total subordinate membership throughout the world was 876,901. The total Encampment membership was 123,065, the Rebekah Membership, 644,465, the Junior membership, 8771, and the Theat Rho Girls' Club membership, 14,836. The total receipts for the fiscal year ending June 30, 1939, was \$145,781, and the total expenditures were \$139,762, showing a balance of \$6019.

The Order maintains approximately 64 Homes and Orphanages, the present value of which is \$14,394,232. The number of residents therein is

4609. In 1938 the Order expended \$3,836,750 for relief.

The Order also maintains the Educational Foundation, and during 1938-39, loans totaling \$17,000 were made to 78 borrowers in 29 jurisdictions.

The Order is composed of a Sovereign Grand Lodge and 9 Quasi-Independent Grand Lodges (in Australasia, Czecho-Slovakia, Denmark, Latin America, The Netherlands, Norway, Poland, Sweden, and Switzerland), 61 Grand Lodges, 58 Grand Encampments, 34 Department Councils, Patriarchs Militant, 11,855 Subordinate Lodges, and 8701 Subordinate Encampments. The 115th Annual Session of the Sovereign Grand Lodge was held in Minneapolis, Minn.

The officers for the year 1939-40 were: George S. Starrett, Grand Sire; James A. Hagerman, Deputy Grand Sire; E. G. Ludvigsen, Grand Secretary; Robert B. Groat, Grand Treasurer. The Headquarters of the Order are at 12-20 W. Chase St., Baltimore, Md.

OGLETHORPE UNIVERSITY. An institution of higher education for men, founded in 1913 as a revival of the famous institution which existed in Milledgeville and in Atlanta, Ga., from 1835 to 1872. The enrollment for the autumn term of 1939 was 800. The 1939 summer session had an attendance of 210. There were 31 members on the faculty. The income for the year amounted to \$120,000. The library contained 60,000 volumes. President, Thornwell Jacobs, LL.D., Litt.D. See EDUCATION.

OHIO. Area and Population. Area, 41,040 square miles, exclusive of State's waters in Lake Erie, but including (1930) 300 square miles of other water. Population: Apr. 1, 1930 (census), 6,646,697; July 1, 1937 (Federal estimate), 6,733,000; 1920 (census), 5,759,394. Cleveland had (1930) 900,429 inhabitants; Cincinnati, 451,160; Toledo, 290,718; Columbus, the capital, 290,564; Akron, 255,040.

Agriculture. Ohio harvested, in 1939, 10,017,100 acres of principal crops, of which total seven-eighths was in hay and grains. Tame hay, grown on 2,720,000 acres, gave 3,577,000 tons (estimated farm value, \$23,966,000); corn, the foremost crop in both extent and value, produced on 3,425,000 acres 171,250,000 bu. (\$90,762,000); wheat, on 1,906,000 acres, 37,150,000 bu. (\$27,862,000); oats, 1,020,000 acres, 33,150,000 bu. (\$10,608,000); potatoes, 120,000 acres, 12,600,000 bu. (\$10,710,000); apples for market, 5,800,000 bu. (\$3,480,000); tobacco, on 31,100 acres, 28,842,000 lb. (\$3,501,000); soybeans, 461,000 acres, 9,681,000 bu. (\$7,261,000).

Manufacturing. According to the U.S. Census of Manufactures published in 1939 and dealing with 1937, totals for Ohio (with those for 1935 in parenthesis) were: Establishments in operation, 9138 (9142); wage-earners therein employed, 694,205 (579,522); their wages for the year, \$957,650,237 (\$665,855,146); value of manufactured output, \$5,099,816,893 (\$3,660,903,592); contributed thereto by processes of manufacture, \$2,306,627,196 (\$1,655,136,002). The average manufacturing establishment thus employed, in 1937, about 76 wage-earners and created, by its processes of manufacture, distinct from cost of materials, fuel, etc., about \$263,000 as its direct contribution to the value of its output; these ratios were conspicuously high among those for the States; so was the average pay of the manufacturing wage-earner. The ratios indicated the

prevalence of industries operating on a large scale and at the same time occupied to a great extent with skilled and intricate fabrication. The manufactories' wage-earners included more than one-tenth of the population, and their pay was equivalent to \$144 per capita of the whole population.

Steel-works and rolling mills, the foremost industry, produced \$733,351,272 in yearly output for 1937, employing 95,350 wage-earners, or nearly one in seven of all those engaged in manufacturing. The output of rubber tires and inner tubes amounted to \$307,255,214; their manufacture employed 38,719; miscellaneous rubber goods' output came to an additional \$37,119,777. Electrical machinery, apparatus, and supplies attained \$234,152,633 of production, employing 34,479 wage-earners; several other classifications of machinery accounted, together, for more than \$206,000,000 of output. The manufacture of bodies and parts for motor-vehicles, using 28,365 wage-earners, produced \$206,133,617; an additional 12,811 wage-earners, using in part material from the previous classification, produced vehicles worth \$167,916,695. The divers branches of garment-manufacture produced not far from \$160,000,000 in output.

Eight cities' respective manufactures in 1937 attained reported totals above \$100,000,000: The output in Cleveland was \$966,935,327; in Cincinnati, \$413,763,938; Akron, \$337,927,807; Toledo, \$298,325,676; Youngstown, \$222,095,013; Columbus, \$169,717,720; Canton, \$135,431,965; Springfield, \$120,686,925. Dayton, for which the total production of the year was not separately reported, ranked as another leading industrial centre.

Mineral Production. Ohio's total production of native minerals, as stated in 1939 by the U.S. Bureau of Mines, attained \$131,025,104. This did not include the component furnished to former years' estimates, of pottery and refractories. The loss in the new total may be judged from the Bureau's revised estimate for 1936, taking off about \$26,000,000 by reason of the exclusion of pottery and refractories. The chief parts of the total for 1937 came from the production of coal, of clay products, and of natural gas. The mining of coal decreased by about 28.8 per cent, to a total of some 17,920,000 net tons for 1938, from that of 25,178,000 tons (value, \$44,313,000) for 1937. The clay products attained, for 1937, \$23,327,740. The production of natural gas was reported to have decreased in 1938, from the level of 1937, which had produced a total for that year of 42,783 million cu. ft., delivered to consumers and valued at \$19,967,000. Cement was shipped from mills, to the total of 5,258,603 barrels for 1938, as against 5,501,769 for 1937; by value, \$7,094,745 (1938) and \$7,771,268 (1937). Wells yielded 3,298,000 barrels of petroleum in 1938; in 1937, 3,559,000 barrels (value, \$5,820,000); as Pennsylvania crude, a superior grade of petroleum, formed about two-fifths of the year's total, the value of the whole year's output ran relatively high. Salt was produced to the quantity of 1,489,720 short tons in 1938 and 1,733,875 tons in 1937; by value, \$2,562,620 (1938) and \$2,625,644 (1937).

Outside the total production of the State's native minerals, Ohio made coke to the total of 3,703,819 net tons in 1938 and 6,737,881 (332,185,945 in value) in 1937. Blast furnaces delivered 4,186,217 gross tons of pig iron in 1938 and 7,724,882 tons in 1937; by value, \$85,186,824 (1938) and \$167,076,855 (1937). Steel ingots and cast-

ings totaled, for open-hearth, 5,372,234 gross tons (1938) and 9,067,944 (1937); bessemer, 1,074,032 gross tons (1938) and 1,747,710 (1937). Ferro-alloys were produced in 1937 to the quantity of 156,653 long tons and the value of \$6,229,723.

Education. Ohio's inhabitants of school age (from 5 years to 18) were stated for 1938 to number 1,470,990. For the academic year 1938-39, enrollments of pupils in the public schools totaled 1,243,793; this comprised 720,879 in elementary study, 473,017 in high schools, 21,236 in kindergartens, 23,398 special students, 934 postgraduates, and 4329 vocational students. The expenditure for public-school education in 1938 (latest stated) totaled \$103,964,547. This included the pay of teachers, averaging \$1558.29. Teachers in 1939 numbered 41,595.

Legislation. The General Assembly convened in regular session January 2, closely following the adjournment of a special session of its predecessor, which was reported to have sat into the early morning of New Year's Day. The new session sat until June 14. Republicans had the majority in both houses, in contrast to the outgoing Legislature, which had been elected in the Democratic sweep of 1936. As the old session had used some of its dying moments to confirm appointments of Davey, the outgoing Governor, the new session gave early attention to nullifying its predecessor's acts. The old session, near midnight of the old year, had confirmed an appointee to the Unemployment Compensation Commission; one of the new session's early acts abolished the Unemployment Compensation Commission and created as its successor a Bureau of Unemployment Compensation, thus automatically cutting off certain of the higher Democratic appointees. Other so-called ripper acts recast and changed the upper personnel of the Tax Commission and the Board of Parole; another enactment, transforming the Conservation Division into a Department of Conservation guided by a newly created Natural Resources Council, had the effect of disturbing incumbents, but was represented as working to take the conservation service out of partisan strife altogether and put it into the hands of long-term appointees; the addition of a third member to the Civil Service Commission tended to upset its even partisan balance.

Responsive to complaints that the previous biennial budget had left the State's finances confused with deficits, deficiencies and additions to debt, the Legislature strove to enact a budget that would keep in balance. The budgetary appropriations for the two years ahead attained \$317,926,000, thus exceeding the corresponding total, \$316,000,000, for 1938-39; it was asserted however, that the new enactment had made full necessary provision against need for later additional appropriation, so far as could be foreseen. New legislation transferred earmarked special funds for a group of State functions to the general fund and thus helped to increase the budgetary total. Early in the session \$5,000,000 was voted to fill a deficiency in the State's contribution to poor-relief in the expiring biennium. The appropriation for such contribution in the two years to follow approximated \$20,000,000. Provision was made for the State's funding the debt incurred by public schools, in their issues of warrants against expected payments, later not received from a source known as the School Foundation; it was estimated that the outstanding warrants might come to as much as \$17,000,000.

The compact signed in 1937 by eight States of the Ohio River basin (see YEAR BOOK, 1937, p. 550) as to the pollution of river waters was ratified for Ohio by the Legislature.

Few new State taxes were created; the existing tax on sales of cigarettes was extended, and a similar tax on cigarettes brought into the State for use within it was created; the tax on liquid fuels was continued. The segregation of the proceeds of the tax on intangibles, of those on liquor, and inheritances, for specified purposes was ended, and the revenue of these sources was directed into the general fund. A system was set up for delinquent taxpayers' paying up in installments.

Political and Other Events. John William Bricker, the first Republican Governor to hold the office after the beginning of 1931, was inaugurated, January 9, and with him came into power a Legislature and elected officers prevailingly of the same party. In his first message to the Legislature Bricker asked for measures to undo the existing organization of the politically important Unemployment Compensation Commission, to remove by retrenchment a deficit of \$2,000,000 in the State's general fund, and to put an end to the earmarking of parts of the State's revenue for the benefit of specified lines of expenditure.

Economic activity in the State made a considerable advance, evidenced by the rise of retailers' sales to an excess, for July, of 10 per cent over those of a year earlier. Payments of public money to needy persons for subsistence nevertheless stayed high; for June, they totaled \$19,672,000, of which nearly \$12,000,000 was wages from the WPA, almost \$3,000,000 was from other Federal projects of work and construction, over \$3,000,000 as succor to the special classes tended by the Social Security Administration (especially the aged indigent), and less than \$1,500,000 for ordinary poor-relief. Public support in one form or another went out to about half a million individuals or families; the WPA paid it to some 204,000, ordinary poor-aid went to 90,000, and old-age assistance to 116,000.

Contest over Civil Service. The Democratic opposition denounced the new Legislature's overthrow of the previous Democratic Legislature's State civil-service law as a subordination of the good of the public service to partisan appetite for spoil. Despite the Republican view that the new legislation merely undid the permanent tenure assured under the old law to an undue number of Democrats, a step backward from civil service was detrimental, on its face, in the opinion of many of the reform-minded; thus the minority party found a timely issue with which to press the new administration. Herbert W. Mitchell was appointed as the newly created third member of the Civil Service Commission (see *Legislation*, above). A contest upon the validity of his claim to serve on the Commission was carried to the State Supreme Court. This court decided, October 4, that the appointment was not valid; that the new civil-service legislation, moreover, was not in effect, having been put in abeyance by the force of a popular petition for a referendum on a proposal to keep the Commission at its old membership of two. This petition, circulated throughout the State by the friends of the old Commission, came to the Secretary of State with a purported sufficiency of signatures to require the referendum to be held. There occurred the usual contest over the validity of signatures;

after the Court's decision the Secretary of State sought to help the petition and put the question on the November ballot, but delays in disputes over signatures almost—though not quite—prevented this and deferred the vote to 1940 (see *State Elections*, below).

Other Court Decisions. The State Supreme Court ruled, July 5, that the State Building Authority, designing to carry the cost of construction of mental hospitals for the State's Department of Welfare, could not under the State's constitution bind the State to an obligation exceeding the constitutional limit of \$750,000 of debt; Secretary of State Griffith had previously refused to sign bonds of the Authority to the sum of \$7,500,000. In a case dealing with the immunity of certain public employees discharged by the State, the Supreme Court held that employees, when included even only provisionally in the State civil service, might not be discharged but must be retained until their positions had been filled by examination or had been abolished. Candy, by another decision of the Court, was held to be food and therefore specifically exempt from the State's tax on retail sales; the receipts from the application of this tax to candy were supposed to approximate \$500,000 a year. An act of the legislative session of 1938, raising salaries in the Highway Department, was judged by the Supreme Court to be unsound.

Cleveland. In the Cleveland area the strike of the C.I.O.'s faction of the United Automobile Workers, carried on mainly in Michigan, was waged against the Fisher Body works in July. After about a dozen bizarre murders, occurring in slow succession over a number of years and marked by the baffling discovery of a human member or trunk deftly severed, there came into the hands of the Cleveland police a suspect, thought by them to have committed the latest of these crimes. The man, Frank Dolezal, made an oral confession to policemen, but repudiated it; he afterward (August 24) killed himself by hanging, in the cell where he was held.

Cleveland and, to a less extent, Toledo ran short of means, about November 15, for providing poor-relief. Mayor H. H. Burton of Cleveland called in vain on his fellow-Republican, Governor Bricker, for succor; Bricker held that the State had provided funds and that it was the business of the municipality to administer them properly. All efforts to impel Bricker to have a special session vote additional State money were useless. According to assertions from the local association of social workers, 16,000 single persons and childless couples were wholly deprived of relief after mid-November, and 40,000 other persons had to subsist at the rate of 5½ cents a meal. Eventually Cleveland, despairing of money from outside, issued \$1,200,000 of its own bonds. Subsistence for the destitute thereupon went back, December 15, to the normal rate.

Cincinnati. In Cincinnati the popular vote at a special election held June 6 rejected a proposal, offered by referendum, to do away with the method of proportional representation, provided by the city charter for the election of members of the City Council. At another election the city's voters authorized an issue of \$5,000,000 of bonds for the cost of works to protect the lower part of the city from a recurrence of the costly flood of 1937. A new Federal Building, costing \$3,000,000 was dedicated on January 14.

State Elections. The chief issue at the elec-

tion held on November 7, a proposal offered by referendum on popular petition, to give old-age pensions to residents reaching the age of 60 years at \$50 and, to couples, \$80 a month, was settled by the overwhelming defeat of the proposal. It had been asserted by opponents that the plan would cost the State \$300,000,000 or more a year; as the taxation of land valued at \$20,000 or more at an additional 2 per cent was proposed as part of the plan, the effect on cities was regarded as likely to be particularly adverse. The movement for the liberalized pensions was conducted by the Rev. Herbert S. Bigelow of Cincinnati, former Democratic Representative in the 75th Congress. Bigelow estimated the cost of the additional payments of pensions at \$60,000,000 a year.

The vote in the referendum (see above) on the civil-service reorganization act was heavily adverse and put the act out of existence.

Officers. Ohio's chief officers, serving in 1939, were: Governor, John W. Bricker (Rep.); Lieutenant-Governor, Paul M. Herbert; Secretary of State, Earl Griffith; Auditor, Joseph T. Ferguson; Treasurer, Don H. Ebricht; Attorney-General, Thomas J. Herbert; Director of Education, E. N. Dietrich.

OHIO NORTHERN UNIVERSITY. An institution for the higher education of men and women at Ada, Ohio, founded in 1871, and under the direction of the Methodist Episcopal Church. The enrollment for the fall quarter of 1939 was 776. The 1939 summer quarter had an attendance of 298. The faculty consisted of 47 members. The productive endowment of the institution, as of June 30, 1939, amounted to \$404,807, and the income for 1938-39, to \$190,776. The libraries contained 30,555 volumes. President Robert Williams, D.D., LL.D.

OHIO RIVER. See FLOODS.

OHIO STATE UNIVERSITY. A State institution for the higher education of men and women in Columbus, Ohio, founded in 1870. The enrollment for the autumn of 1939 totaled 13,230, distributed as follows: Graduate School, 1299; agriculture, 1736; arts and sciences, 2641; arts-education, 70; commerce and administration, 2120; dentistry, 208; education, 2213; engineering, 1838; law, 202; medicine, 306; nursing, 82; optometry, 90; pharmacy, 198; veterinary medicine, 227. There were in addition, 5799 students registered in the summer session. The faculty numbered approximately 1000. Endowment amounted to \$1,603,820, total income for the year was \$9,492,984, and total expenditures were \$9,089,627. The library contained 519,125 volumes. Acting President, William McPherson, LL.D.

OHIO UNIVERSITY. A State university for the higher education of men and women, founded at Athens, Ohio, in 1804. The student enrollment for the 1st semester of 1939 was 3551, of whom 210 were in the College of Applied Science, 503 in the College of Arts and Sciences, 498 in the College of Commerce, 576 in the College of Education, 92 in the College of Fine Arts, 99 in the Graduate College, and 1577 in the University College. The enrollment for Extension Division and Correspondence Study courses was approximately 1993. The enrollment for the summer session was 1509. The faculty numbered 247. The amount of endowment and income for the year 1938-39 was endowment, \$85,814; income \$5034. The number of volumes in the library of the university totaled 121,800. President, Herman G. James, Ph.D., J.D., LL.D.

OHIO WESLEYAN UNIVERSITY. An institution for the higher education of men and women in Delaware, O., under the control of the Methodist Episcopal Church, chartered in 1842. For the autumn semester of 1939 the total enrollment was 1426. The faculty numbered 116. The productive endowment of the university amounted to \$3,709,579 and the income for 1938-39 for educational enterprises was \$443,740 and for auxiliary enterprises \$314,329. The library contained 155,170 volumes. President, Herbert John Burgstahler, D.D., LL.D., inducted Oct. 20, 1939. See PRINTS.

OIL. See PETROLEUM.

OKLAHOMA. Area and Population. Area (1930, with later revision to exclude 45 square miles yielded to Texas in a revision of the boundary), 70,012 square miles; included (1930) water, 643 square miles. Population: Apr. 1, 1930 (census), 2,396,040; July 1, 1937 (Federal estimate), 2,548,000; 1920 (census), 2,028,283; Oklahoma City, the capital, had (1930) 185,389 inhabitants; Tulsa, 141,258.

Agriculture. Oklahoma harvested, in 1939, 12,743,000 acres of principal crops. Wheat, on 4,317,000 acres, gave 60,438,000 bu. (\$37,472,000 in estimated value on the farm); cotton, on 1,772,000 acres, 520,000 bales (\$21,060,000); corn, 1,877,000 acres, 27,216,000 bu. (\$16,330,000); oats, 1,242,000 acres, 21,114,000 bu. (\$6,334,000); grain sorghums, 1,200,000 acres, 9,600,000 bu. (\$6,144,000); tame hay, 626,000 acres, 755,000 tons (\$5,662,000); potatoes, 33,000 acres, 2,244,000 bu. (\$1,526,000); barley, 378,000 acres, 6,048,000 bu. (\$2,298,000). The acreage and production of barley quadruple the average for the previous 11 years.

Manufacturing. According to report made in 1939 by the U.S. Census of Manufactures covering the year 1937, totals for Oklahoma (with figures for 1935 in parenthesis) were: Manufacturing establishments in operation, 1428 (1335); wage-earners there employed, 29,551 (24,349); their wages for the year, \$34,390,477 (\$24,520,806); value of manufactured output, \$366,088,721 (\$280,676,215); the part contributed thereto by the processes of manufacture, \$110,618,322 (\$77,417,856). Much the greater part of the manufacturing fell within two classes, that connected with the mineral industries and that engaged in preparing for consumption the products of the farm. In the mineral group, the refining of petroleum attained \$144,474,915 in value of output; the smelting and refining of zinc attained \$13,537,488. In the second group, meat packers' output amounted to \$38,555,703; flour and other products of milling, to \$33,119,822; the output of butter-making establishments, to \$15,149,654; the treatment of cottonseed yielded \$5,661,596 in oil, cake, and meal; the dressing of poultry, making of condensed and evaporated milk, and production of cheese accounted for lesser amounts. Oklahoma City's manufactured output amounted to \$30,767,023; Tulsa's, to \$25,858,174.

Mineral Production. The value of Oklahoma's yearly total production of native minerals for 1937 was \$367,444,222. Of this, petroleum contributed 77 per cent; natural gas and gasoline therefrom, 17 per cent; and zinc the greater part of the remainder. Thereafter the production of petroleum fell sharply to some 174,882,000 barrels for 1938, from 228,839,000 barrels (value, \$283,500,000), the total for 1937. The State's Corporation Commission reduced the daily allowable

production of petroleum from 550,000 barrels as the January average, to 405,000 for June, which was not much raised for the rest of the year. Restrictions thus imposed on production were supported by reduced demand. The production of gasoline amounted, for 1938, to about one-fourth less than that of 1937; the quantity of natural gas delivered to consumers in 1937 was 296,260 million cu. ft., its value \$6,127,000 at the wells and \$32,039,000 after being piped to the users. As much natural gas normally went into the operations in part of the petroleum fields, reduced activity in these carried through into the natural-gas industry. A considerable extension of the Hugoton gas-bearing area of Kansas into Texas County was proved. In 1937, 139 establishments in the State extracted from natural gas 492,290,000 gallons of gasoline, by value, \$20,272,000 at the places where it was produced. The yearly total of zinc in ores mined in the State decreased to 112,924 short tons for 1938, from 135,696 tons (value \$17,640,480) for 1937. Coal mined in Oklahoma totaled about 1,269,000 net tons for 1938 and 1,600,295 tons (value, \$3,841,000) for 1937. A considerable production of lead, largely obtained in ore containing zinc as well, amounted to 29,840 short tons (value, \$3,521,120) for 1937.

Education. Oklahoma's inhabitants of school age (from 6 years to 20, inclusive) were reckoned, for the academic year 1938-39 at 706,547. Enrollments of pupils in public schools numbered 621,295. As stated for the previous year, 1937-38, the latest for which the applicable data were received, enrollments in the elementary group numbered 500,471; in the high schools, 133,772; in other classifications, 507. Expenditures for public-school education in that year included \$32,414,918 for the pay of the 20,405 teachers, averaging \$1588.58.

Legislation. The regular biennial session of the Legislature, meeting in January, worked in agreement with Governor Phillips on a number of points as to which his administration was pledged by the State Democratic platform. In the effort to balance the State's budget, the Legislature had a committee survey the prospective income of the general fund and estimate it, the total thus found being \$21,000,000 a year. Legislation was drawn to require the Highway and the Tax commissions to conform to strict budgetary system. Both these commissions were reorganized; each was made to consist of three members, removable by the Governor. A resolution was voted, asking Congress to halt the Federal work on the construction of the Denison Dam, in the Red River, in view of Oklahoma's doubts lest this undertaking damage its inhabitants. Without recourse to new taxation, the greater part of the Governor's program was carried out. A law enacted to deal with the control of illicit traffic in liquor committed to the Federal agencies the task of protecting Oklahoma from the entry of unauthorized liquor from elsewhere. Quarterly estimates of expenditure for departments, institutions, and school-aid were required.

Political and Other Events. Leon C. Phillips, a country lawyer and an apostle of economy in State affairs, was inaugurated as eleventh Governor of Oklahoma on January 9. Setting forth his policies in an address to the Legislature, he sought to make all the governmental departments keep to a systematic budget; to abolish a number of the State's boards, bureaus and commissions; and to bring about the suspension of the Federal project

of constructing a dam across the Red River at Denison, widely and bitterly opposed in Oklahoma as destined to put some of the State's most fertile lands under water for the benefit of people in Texas. This projected dam, to be put up near Denison, Tex., was to stand at the junction of the Red River, which separates the two States, and the Washita. The State's delegation in Congress later failed to offer effective opposition to the Federal legislation making the initial appropriation for this undertaking. Phillips also sought to better the standing of the State's system of old-age assistance by demanding the resignations of the members of the Oklahoma Public Welfare Commission. By paring the new quarterly estimates of expenditure (see *Legislation*, above), Phillips saved \$1,570,000 in the latter part of 1939.

The State's registration law of 1916 was declared unconstitutional (May 22) by the U.S. Supreme Court on the ground that it made discriminations against Negroes, so strict as to amount to violation of the Fifteenth Amendment. An oil workers' union affiliated with the C.I.O. conducted during the early months of the year a strike against the Mid-Continent Petroleum Corporation; a dozen or more dynamitings of pipe line in the course of this strike were reported.

Officers. Oklahoma's chief officers, serving in 1939, were: Governor, Leon C. Phillips (Dem.); Lieutenant-Governor, James E. Berry; Secretary of State, C. C. Childers; State Auditor, Frank C. Carter; Treasurer, Carl B. Sebring; Attorney-General, Mac Q. Williamson; Superintendent of Public Instruction, A. L. Crable.

OKLAHOMA, UNIVERSITY OF. A State institution for the higher education of men and women in Norman, Okla., founded in 1890. The enrollment for the autumn of 1939 totaled 6935, of whom 4788 were men and 2147 were women. For the summer session of 1939, 2532 students were registered. There were 316 faculty members. The productive funds amounted to \$3,717,347, and the income for 1939-40 was \$3,350,283. The library contained 222,211 volumes. President, William Bennett Bizzell, Ph.D.

OLD-AGE AND SURVIVORS INSURANCE TRUST FUND. See SOCIAL SECURITY BOARD.

OLD-AGE PENSIONS. (For statistics, see under SOCIAL SECURITY BOARD AND RELIEF.)

For the great majority of the people of the United States the term old-age pensions continued to signify the payments officially known in the Federal social-security system as old-age assistance. The old-age insurance, distinct from this assistance, and based on the projected accumulation of the required funds through specially assigned taxation, played as yet no considerable part in the function of taking care of the aged poor; it did not form a leading subject of political activity; on the contrary, in the judgment of great numbers of elderly people who had to think of their necessities for few years ahead, old-age insurance had little to offer and old-age assistance alone counted.

Legislation. Congress made important changes in the Federal law, both as to old-age assistance and as to old-age insurance. These changes formed part of the Social Security Act of 1939, passed by the regular session, August 5, and signed by the President on August 11. Thereby the highest allowable monthly payment of old-age assistance made by a State and authorized to be matched by Federal contribution was increased; it had been

\$15 a month and was raised to \$20 a month. The requirement that the Federal monthly contribution should not exceed the State's remained unaltered. Only one State, California, was at the time contributing more, per capita of beneficiaries, than the \$15 set by the older act as the maximum of Federal matching; and California's rate (for June) was \$17.45. Any other State must increase its own rate in order to obtain any advantage from the new Federal provision. A clause that would have raised the Federal contribution toward old-age assistance, if not over a Federal \$15 per beneficiary, to two-thirds of the figure for any individual State, from the actual Federal share of one-half, was taken out of the measure in conference committee, just before final passage. The defeat of this clause, the Connally amendment, dashed the hopes of the less wealthy States to get for their aged dependents an addition of one-half to the monthly pension check without cost to the individual State. The act took pains to keep down the States' demands on the Federal Government by specifying that in the case of the aged poor (and likewise of needy blind folk and children) none should be held qualified for Federal contribution unless in need.

Features of the new act bearing, not on old-age assistance, but on old-age insurance were: provision that the rate of the tax therefor, previously scheduled to rise in 1940, should remain at 1 per cent for the next three years; limitation of the part of an employee's salary subject to the tax to \$3000 at most; advancement of the date for starting payment to aged wives and widows, to child beneficiaries, and to aged dependents to Jan. 1, 1940; qualification of persons entitled to start receiving payments in 1940 because attaining the age of 65 years, by letting them become recipients if attaining that age at any time in the course of that year; extension of the group covered by old-age insurance (and by unemployment compensation also), to include part of the labor previously excluded as agricultural—that part not actually working on farms—and part of that previously left out as domestic, as well as seamen. The postponement of the higher tax and the other liberalities as to old-age insurance were expected to add very considerably to the cost that the Treasury would have to bear in years soon to come. By way of offset it was alleged that the cost over a long term would not be greatly affected. There remained none the less the impression, traceable in the press at the time, that old-age insurance had been made more generous in the endeavor to pacify a rising popular appetite for ampler provision for the elderly poor at public expense.

Affecting both old-age assistance and old-age pensions, a provision of the Social Security Act required that a State agency administering any part of social security must regulate the selection and tenure of its employees by means of a civil-service or merit system.

For States' old-age assistance laws see TEXAS and LABOR LEGISLATION.

States' Troubles over Pensions. The States particularly afflicted with difficulties over their payments of old-age assistance in the course of 1939 might be grouped in three divisions: those where agitation for exorbitantly high public support for the old folk threatened to have its way, as in California and in Ohio; those in which expensive pensions, already fastened on the government by popular vote, hindered the State finances,

as notably in Texas and in Colorado; and those where either inadequate State administration or else antagonism between the Federal and State administrations had caused the Social Security Board to withhold payment of its share of the pension money, as in the case of Ohio.

Two High-Pension Agitations. For details of the campaigns to set up, by referendum of the people, payments far in excess of the rate of existing old-age assistance, see CALIFORNIA and OHIO. The course of the agitations in these two States will bear a comparison. Both simultaneously went through several months of political stress and economical uncertainty, facing formidable movements to fasten upon them the public duty to pay old-age pensions at rates above all American experience in public support. The outcome in the two cases was much the same, for the popular vote in each State rejected the pension proposal, though Ohio's rejection was more emphatic. The movement centered in each case in one populous city, Los Angeles playing the part in California that Cincinnati played in Ohio. Both States were above the average in the number of the population, in the percentage of native whites of native parentage, and in their school statistics. For such reasons as these the strength of the pension-boosting movements in both was regarded with the more apprehension elsewhere, particularly in view of the unsoundness which was widely believed to characterize the proposals that were offered.

There appeared great dissimilarity between the two cases in some other respects. In the matter of the proposed ways for raising the means to pay old people out of the public purse, incomes of well over the usual rates, the Californian and Ohioan agitations agreed in offering familiar but generally rejected plans; yet the respective plans bore no other similarity. That of the Californian movement proposed a modification of the self-paying warrant, to which stamps at 2 per cent of face value must be pasted every week for a year, a plan lately tried without success in the Canadian Province of Alberta and rejected in somewhat different form in California at the election of 1938. That of Ohio called for the imposition of a specially assigned tax on incomes and for an additional tax, at 2 per cent, on land valued above \$20,000 an acre. Opponents represented the latter tax as a partial application of Henry George's principle of the single tax on land. It may be noted that the Ohio plan asked for less in public support than did the proposal used in California. In Ohio all persons over 60 years of age were to get \$50 a month, except man and wife, who would receive \$40 apiece; while in California, every resident over the age of 50 was to have \$30 a week. Ohio proved the less fertile ground for agitation, as it rejected the milder proposal by a much more emphatic majority of the popular vote. The vote—adverse by two to one in California and three to one in Ohio—was in neither case close enough to warrant conservatives' alarm; yet it revealed a big enough body of opinion, in either State, to invite further attention from politicians and, equally, to bring home to others the fact that the elder age-groups were gaining over the population as a whole and must be taken into account more attentively as a political factor.

High Pensions and Low Payments. Details of the handling of pensions in Colorado and the failure to appropriate for paying more and

higher pensions in Texas will be found in the articles on these States. The two cases differed widely, in that Texas had but begun its experience with endeavors to enforce or evade a liberalization of grants to the aged, while Colorado had worked on the problem for two prior years. Again, Colorado owed its existing system of grants for the aged to the voters' having put this system in the State constitution at the polls, while Texas, at the outset of 1939 faced only a demand for more aid to the elderly, expressed in the big vote won by Governor O'Daniel, who had advocated the change. This evidence of popular feeling sufficed to impel the Legislature to pass a measure making the grants to old people more generous, but did not inspire agreement on any plan for raising the money that this would require. See **TAXATION**.

OLIPHANT, HERMAN. An American lawyer and economist, died in Washington, D. C., Jan. 11, 1939. Born in Forest, Ind., Aug. 31, 1884, he was educated at Marion College (A.B., 1907), the University of Indiana (A.B., 1909), and the University of Chicago (J.D., 1914). Upon graduation from Marion he joined its faculty as an instructor in English, serving until 1911. After obtaining his law degree, he became associated with the University of Chicago Law School as an instructor (1914-15), assistant professor (1915-16), associate professor (1916-19), and professor (1919-21). He transferred to Columbia University in 1921 as professor of law, and in 1929 joined the faculty of the newly-formed Institute of Law at Johns Hopkins University of which he was one of the organizers.

Long a champion of liberal policies—he was counsel for the Amalgamated Association of Street & Electric Railway Employees in its fight against the Interborough Rapid Transit Co., New York, in 1926—he joined the Farm Credit Administration as general counsel, in March, 1933. In November, he moved to the Treasury Department with Henry Morgenthau, Jr., and in 1934 was appointed general counsel to the Department of the Treasury. Mr. Oliphant was one of the important fiscal advisers of the Roosevelt Administration and was considered the brain father of the undistributed corporate profits tax. Among his many recommendations were the devaluation of the dollar, the purchase of silver, and the revolving stabilization fund. He drafted much of the New Deal legislation looking toward a broader distribution of wealth and assisted in planning legislation for the control of the country's securities markets. Also, he helped plan the monopoly investigation at which he represented the Treasury.

During the World War, Oliphant served as an assistant director of War Trade Intelligence (1917-18) and as an assistant director of the industrial relations division of the Emergency Fleet Corporation (1918-19). Active in legal organizations, he was president of the American Association of Law Schools in 1927.

OMAN. See under **ARABIA**.

ONTARIO, 6n-tār'i-ō. A province of Canada. Area, 412,582 square miles; population (1939 estimate), 3,752,000 compared with 3,431,683 (1931 census). The Indian population was 30,-631 in 1934.

During the year 1938 there were 65,501 births (17.6 per 1000); 36,879 deaths (9.9 per 1000); and 30,089 marriages (8.1 per 1000). Chief cities (with 1931 population figures in parentheses):

Toronto, the capital (631,207); Hamilton (155,547); Ottawa, Dominion capital, (126,872); London (71,148); Windsor (63,108); Kitchener (30,793); Brantford (30,107); Fort William (26,277); St. Catharines (24,753); Kingston (23,439); Oshawa (23,439). In 1937 there were 765,974 students enrolled in the schools, including 38,751 students in the colleges and universities. Ontario has five universities (Toronto, Queen's, Western Ontario, McMaster, and Ottawa), an agricultural college at Guelph, and the Royal Military College at Kingston (maintained by the Dominion government).

Production. The estimated gross value of agricultural production in 1938 was \$327,529,000 (\$343,137,000 in 1937), of which field crops accounted for \$127,810,000. Other items were: Dairy products, \$89,153,000; farm animals, \$51,095,000; poultry products, \$22,329,000; tobacco, \$18,293,000; fruits and vegetables, \$13,469,000. Livestock (1939): 559,500 horses; 2,488,000 cattle, including milch cows; 846,900 sheep; 1,546,100 swine; 21,618,200 hens and chickens. Fur production for the year ended June 30, 1937, totaled 683,941 pelts valued at \$2,987,713. The 1937 output of the forests equaled 629,826 M cu. ft. valued at \$37,668,861. The fish catch in 1938 was estimated at \$2,850,500.

Mineral production (1938) totaled \$219,801,994, of which gold (2,896,477 fine oz.) represented \$101,883,578; nickel (210,572,738 lb.), \$53,914,494; copper (309,030,106 lb.), \$30,405,500; platinum (161,310 fine oz.), \$5,196,279; natural gas (10,952,806 M cu. ft.), \$6,460,764; silver (4,318,837 fine oz.), \$1,877,701; palladium, rhodium, iridium, etc. (130,893 fine oz.), \$3,677,342; salt (388,130 tons), \$1,637,140. In 1937, from the 9796 manufacturing plants, with a total of 321,743 workers, the net value of products was \$802,403,114.

Government. For the year ended Mar. 31, 1940, revenue was estimated at \$98,456,000, and expenditure at \$102,900,929. Budget (1940-41): Ordinary revenue, \$89,051,209; expenditure, \$88,694,970. The government is vested in a lieutenant-governor who is advised by an executive council of 10 members who also are members of the legislative assembly of 90 members elected for a term of five years by popular vote of the people. Ontario is represented in the Dominion parliament at Ottawa by 24 members in the Senate and 82 members in the House of Commons. Lieutenant-Governor, Albert Matthews (appointed Nov. 30, 1937); Premier, Mitchell F. Hepburn (Liberal). See **CANADA** under *History*.

OREGON. Area and Population. Area, 96,699 square miles; included (1930) water, 1092 square miles. Population: Apr. 1, 1930 (census), 953,786; July 1, 1937 (Federal estimate), 1,027,000; 1920 (census), 783,389. Portland had (1930) 301,815 inhabitants; Salem, the capital, 26,266.

Agriculture. Oregon harvested, in 1939, 2,534,900 acres of the principal crops. Hay, wheat, and fruits of the orchard normally furnished the main returns on culture of the soil. In 1939 tame hay, on 824,000 acres, made 1,476,000 tons (\$12,103,000, estimated farm value); wheat, on 775,000

acres, 16,818,000 bu. (\$11,268,000); apples gathered for market, 2,000,000 bu. (\$1,400,000); pears, 4,229,000 bu. (\$2,399,000). Other crops included potatoes, 45,000 acres, 7,200,000 bu. (\$4,680,000); oats, 350,000 acres, 11,725,000 bu. (\$4,221,000); barley, 177,000 acres, 5,222,000 bu. (\$2,507,000); hops, 19,300 acres, 19,300,000 lb. (\$4,383,000).

Manufacturing. According to report made in 1939 by the U.S. Census of Manufactures covering 1937, totals for Oregon (with figures for 1935 in parenthesis) were: Establishments engaged in manufacturing, 2107 (1710); their wage-earning employees, 65,982 (51,006); wages paid, \$79,492,397 (\$51,414,772); value of manufactured products, \$363,142,053 (\$259,344,694); part of this value contributed by processes of manufacture, \$169,056,912 (\$113,946,581). The chief industry, the manufacture of lumber and timber products, occupied 36,040 wage-earners in 1937 and brought them in wages \$45,456,652; it produced \$127,760,857 in goods; while the planing-mill industry, separately classified, produced \$7,884,227 and the production of pulp, separate also, and chiefly made from wood, attained \$8,654,225. From pulp, in turn, was made paper to the value of \$16,643,999. Much of the rest of the total of manufactured goods was covered by the output of preparations from products of the farm. Thus was produced \$24,212,542 in canned goods and other preparations of fruits and vegetables; the output of flour and other products of grain mills amounted to \$19,138,231; that of meat-packing, to \$17,255,182; factories' production of butter totaled \$10,972,515; separately listed were the production of cheese, \$3,509,767; and of condensed and evaporated milk, \$2,140,435. Dependent on the fisheries, factories canned and cured fish, crabs, shrimps, and molluscs, producing \$4,333,913. Portland's production of manufactured goods totaled \$123,795,111. Salem's, \$15,740,729.

Mineral Production. The yearly production of gold in Oregon rose to about 91,100 ounces for 1939, from 81,729 for 1938; by value, to \$3,188,500, from \$2,860,515. Minor production of silver, copper, and lead brought the aggregate value of the yearly production of the four metals—gold, silver, copper, and lead—to \$3,268,134 for 1939 and to \$2,935,053 for 1938.

Education. For the academic year 1938-39 Oregon's inhabitants of school age (from 4 years to 19, inclusive) were reported to number 270,397. Enrollments of pupils in the public schools totaled 207,546; this comprised 144,794 in elementary study and 62,752 in high schools. Additional enrollments outside of the foregoing groups numbered 11,673. The year's expenditure for public-school education amounted to \$18,885,990, of which the greater part represented the salaries of the 7887 teachers, averaging \$1304.

Legislation. The regular session of the Legislature, meeting in January, found little to do in the field of industrial regulation, for the popular vote, Nov. 8, 1938, adopted a law brought before people by initiative petition; this measure, the Anti-Picketing law, prohibited pickets' obstructing the lawful processes in the economic course of agricultural or other products; made non-obstructive picketing likewise unlawful except in the case of a "bona-fide, existing labor dispute" between employer and employees; forbade boycotts; forbade collecting union dues in excess of the union's "legitimate requirements"; required the labor or-

ganization to keep accounts of its receipts and expenditures for members' inspection; prohibited hindering or molesting employees; and made violations punishable as misdemeanors.

To strengthen the enforcement of the law of 1938, the Legislature in 1939 conferred on the State's circuit courts the power to issue the necessary injunctions and other orders. The State's income-tax law was revised.

Political and Other Events. Cascade Locks, a town a short way upstream from the Federal Government's Bonneville Dam, voted to buy and operate municipally the local electrical lines of the West Coast Power Company and became, at the beginning of August, the first regular purchaser of electric current from the Federal development on the Columbia. See HORTICULTURE.

Labor organizations agreed in condemning the strict law passed by the Legislature to regulate the relations of unions and employers; they did not attempt to resort to any general outbreak of strikes in opposition to the new act, but started proceedings to test the constitutionality of its provisions. However, the chief counsel of the A. F. of L. was reported (August 30) as advising the unions of the group in Oregon to "ignore and defy" the State's "anti-labor" law. Governor Martin declared, November 15, that only a few small strikes had occurred under the new law and that the State now had "industrial peace."

Officers. Oregon's chief officers, serving in 1939, were: Governor, Charles A. Sprague (Rep.); Secretary of State and Auditor, Earl Snell; Treasurer, W. E. Pearson; Attorney-General, I. H. Van Winkle; Commissioner of Labor, C. H. Gram; Superintendent of Public Instruction, Rex Putnam.

OREGON, UNIVERSITY OF. A coeducational institution under State control and support at Eugene, founded in 1872. The total enrollment for the fall term of 1939 was 3610. The attendance at the 1939 summer sessions was 954. The instructional staff for the fall term numbered 274. The total income for the year ending June 30, 1939, was \$972,044, exclusive of gifts. The library contained 296,318 volumes. A new building, Chapman Hall, was completed in 1939. President, Donald M. Erb, Ph.D.

OREGON STATE COLLEGE. The Federal land-grant college of Oregon, established under Federal and State support at Corvallis in 1868. Oregon State College is one of the six institutions constituting the Oregon State System of Higher Education. In the reorganization of Oregon higher education, inaugurated in 1932, the State College has been made the center of science, and of the professional and technical schools based upon the natural sciences. The enrollment for the autumn term of 1939 was 4632. The 1939 summer-session enrollment was 987. There were 347 members on the resident teaching faculty. Income is from millage levy plus varying supplemental appropriations. The library contained 166,687 catalogued volumes. During the fall of 1939 various improvements were made in campus walks, landscaping, and drainage under WPA projects. A new chemistry building was completed costing \$425,000; a new agricultural engineering building, \$65,000; and a \$75,000 remodeling of the old chemistry building into a class A education building. President, George Wilcox Peavy, M.S.F., Sc.D., LL.D.

ORGANIC COMPOUNDS. See CHEMISTRY.

ORGANIZED RESERVES. See **MILITARY PROGRESS.**

ORT, WOMEN'S AMERICAN. A Jewish society organized in America in 1927 for constructive relief for victims of war, persecution and economic maladjustment. It is an autonomous group functioning in conjunction with the American ORT Federation.

The name ORT is derived from the initial letters of three Russian words meaning Organization for the Promotion of Industrial Trades and Agriculture. The ORT was founded in Russia in 1880. Since the World War it has become an international organization. Its chief function today is the rehabilitation, vocational guidance and training of refugees. This is accomplished in a network of autonomous school systems, co-operatives, workshops and training farms distributed throughout Europe. Present operations centre in France, England, Germany, Switzerland, Poland, Rumania, Lithuania, Latvia, Bulgaria, and Hungary. This work is supported by volunteer groups and whole communities in these countries as well as in North, South, and Central America, and Africa.

ORT's programme in 1939 was somewhat revised in accordance with the demands of war. Working in co-operation with various governments, ORT continued to support technical training schools for children and adults of both sexes, industrial and agricultural co-operatives, and to provide funds for the purchase of tools, machinery, agricultural implements, seeds, and livestock. While refugee work in cities, in ORT colonies, and in training camps was the paramount function, a variety of other kinds of projects was included in the programme. Courses to improve the skill of artisans in countries where there is anti-Semitic vocational discrimination were maintained. One hundred and five boys and instructors from the Berlin ORT School were transferred to England. A number of members of the Women's American ORT continued to finance the education of orphans in Eastern Europe through the ORT Guardianship Plan.

The Women's American ORT has 34 chapters in the United States and Canada. The Paris headquarters of the World ORT Union were transferred to Vichy, France, when evacuation of the capital was decreed. The national headquarters of the American ORT Federation and of the Women's American ORT are at 212 Fifth Avenue, New York City.

O'SHAUGHNESSY DAM. See **DAMS.**

O'SHEA, WILLIAM J (AMES). An American educator, died in New York, Jan. 16, 1939, where he was born, Oct. 10, 1863. Educated at the College of the City of New York (B.S., 1887) and Manhattan College (M.S., 1889), he studied medicine for a short time, but turned to education and was appointed a teacher in the New York Public Schools in 1887. In 1901 he was appointed principal of P.S. 171, a new school. From district superintendent in 1906, he was promoted to associate superintendent in 1918. Mayor Hylan appointed him superintendent of schools on May 1, 1924, and he served until Feb. 1, 1934, retiring upon the expiration of his term of office.

Dr. O'Shea campaigned for the improvement of the teachers' pension system and was in charge of all war and war relief activities in the schools during the World War, including the Liberty Loan, Red Cross, War Saving, and Thrift Stamp

drives. In 1907 and in 1916 he was chairman of the membership committee of the National Education Association. He was the author of *Common Words in Easy Sentences*.

OSLO POWERS. The signatories of the Oslo Convention of 1931 for the mutual reduction of international trade barriers. These powers (Belgium, Luxembourg, Denmark, Finland, The Netherlands, Norway, and Sweden) subsequently co-operated to an extent in economic matters and in defense of their neutrality. See **BELGIUM** and the other countries under *History* for developments in 1939.

OUTER MONGOLIA. See **MONGOLIA.**

PACIFIC RELATIONS, INSTITUTE OF. An organization formed in Honolulu in 1925 as an unofficial body for the study of the peoples of the Pacific and their mutual relations. It is governed by a Pacific Council composed of representatives of member national councils in Australia, Canada, China, France, Great Britain, Japan, the Netherlands and Netherlands Indies, New Zealand, the Philippines, the Union of Soviet Socialist Republics, and the United States. In addition to carrying on a regular international conference and research program covering such subjects as land utilization, population, migration, economic development, trade, colonial problems, cultural relations, and diplomatic relations, the Institute is conducting an Inquiry into the background of the present Sino-Japanese conflict. Offices of the International Secretariat are at 129 East 52nd St., New York City.

The American Council, in addition to its participation in the international program, carries on its own extensive research and educational activities. Research projects under way, and shortly to be published, treat such questions as American shipping in the Pacific, American rights and interests in China as affected by the Sino-Japanese conflict, Far Eastern news in the American press, narcotic drugs in the Far East and their repercussions in the Occident, protection of coastal fisheries under international law, and similar topics. Appearing in its publication series, "Studies of the Pacific," are "American Far Eastern Policy and the Sino-Japanese War," edited by Miriam S. Farley, "Rural Australia and New Zealand," by Edmund deS. Brunner, "North Pacific Fisheries," an economic survey by Homer E. Gregory and Kathleen Barnes, "Fijian Frontier," by Laura Thompson, and "Shanghai and Tientsin," an analysis of the problems of these foreign concessions in China. Other new publications include three pamphlets, "America Holds the Balance in the Far East," by Robert W. Barnett, "Deadlock In China," by Lawrence K. Rosinger, and "Our Far Eastern Record: A Reference Digest on American Policy"; "Films of the Pacific Area," an annotated bibliography, and other reading lists; "Propaganda from China and Japan," by Bruno Lasker and Agnes Roman, a case study, and a series of textbooks on "Peoples of the Pacific."

As part of its educational program, the American Council has arranged a series of private round table conferences throughout the country on American Far Eastern policy and the Sino-Japanese war with the aim of aiding the development of an informed and intelligent public opinion on foreign policy. Experimental language schools in Chinese and Russian have been developed to facilitate the acquisition of these language tools by American scholars. The Council has also participated in the editing of educational material in connection with the release of educational motion pictures on Pa-

cific subjects, taken part in radio and conference programs, published reading lists and bibliographies, provided library facilities for students and writers, sent out bibliographical exhibits and news releases for news and editorial use, and engaged in a variety of activities aimed at stimulating interest in and research on the problems of the Pacific area.

Its fortnightly journal, *Far Eastern Survey*, covers significant economic developments in the Far East, and more especially at the present time the economic aspects of the Sino-Japanese war and American policy in relation to that war.

The officers of the American Council of the Institute of Pacific Relations are Dr. Philip C. Jessup, chairman, Francis S. Harmon, treasurer, and Frederick V. Field, secretary. It maintains offices at 129 East 52nd St., New York, 1795 California St., San Francisco, and 517 Dillingham Building, Honolulu.

PACIFISM. See **PEACE MOVEMENT.**

PADDOCK. THE RT. REV. ROBERT LEWIS. An American Protestant Episcopal Bishop, died in Brooklyn, N. Y., May 17, 1939. Born in New York, Dec. 24, 1869, he was educated at Trinity College (A.B., 1894; A.M., 1897) and the Berkeley Divinity School, from which, upon graduation in 1897, he was sent to Southington, Conn., in charge of a mission. In the fall of that year he was assigned as an assistant at St. Paul's Church in Cleveland and as general secretary of the Church Students' Missionary Association there.

Ordained a priest in 1898 he was made vicar of the Pro-Cathedral and canon of the Cathedral of St. John the Divine in New York, where he remained until 1902 when he was appointed rector of the Church of the Holy Apostles. He became interested in civic and social reform movements in the City and established Chelsea House, a self-supporting home for young women, and other organizations. On Dec. 18, 1907, he was consecrated bishop of Eastern Oregon and he retired, under criticism of his missionary methods, in September, 1922, after a breakdown in health. He retained the rank of Bishop with one vote in the House of Bishops.

After his retirement, Bishop Paddock took an active part in the work of the Church League for Industrial Democracy, the American Civil Liberties Union, and similar organizations, and was one of the organizers, and chairman, of the American Friends of Spanish Democracy which worked on behalf of the Loyalist cause during the Spanish Civil War.

PAHANG. See **FEDERATED MALAY STATES.**

PAINTING. The status of painting in the United States altered little in 1939 from that of preceding years, although the volume of production increased. An effort to transcribe the American scene and so find nationalistic expression was pronounced, and there was increasing evidence of influence exerted by the works of French modernists. With neither public nor critics did the comprehensive exhibitions of contemporary American painting, held in connection with the two World's Fairs, find favor, for the excellent reasons that subjectively the works shown were dreary, if not vulgar, and technically they failed to uphold a creditable standard.

Never before in the history of art was there such demand for mural paintings as that created in 1939 by U.S. Federal agencies. The Division of Fine Arts, Public Buildings Administration, conducted eighteen competitions for mural paintings

to be placed in new Federal buildings, each of which was judged by a specially appointed committee of experts, and paid for by allocation of a percentage of the amount appropriated for construction. Under this Division, 255 commissions for mural paintings were completed, 226 reported under-way, and 200 in process of designing in 1939. In addition to this, under the WPA Federal Art Project, primarily a relief measure, 1400 mural paintings were produced and assigned to tax-supported institutions. Most important of the competitions held by the Division of Fine Arts, P.B.A., were those for a series of panels for the post office at St. Louis, Missouri, and for 48 murals to be placed in 48 post offices—one in each state of the Union. These competitions were anonymous, and nation-wide rather than regional.

Outstanding for merit were the mural paintings by Ezra Winter for one of the reading rooms in the Library of Congress Annex which were completed in the early summer. These illustrate the Canterbury Pilgrims as described in the Prologue of Chaucer's *Canterbury Tales*—a procession of 32 figures (life-size) on horseback; a pageant running the length of the two side walls, a distance of 120 feet, with smaller related panels on the end walls.

Also of superior merit was a series of mural paintings by Thornton Oakley for the auditorium of the Franklin Institute, Philadelphia (completed in September), which depict epochs in science as represented by eminent men of the past—astronomers, mathematicians, and others.

Mention should also be made of a series of historic mural paintings by Barry Faulkner for the new State Capitol at Salem, Oregon, likewise completed in 1939; and to the unique mural decorations of the new lecture hall of the Carnegie Institution in Washington (opened late in 1938), designed by J. Monroe Hewlett. All of these outstanding works were obtained through direct commission rather than competition. An effort to use mural paintings on the exteriors of buildings at the two World Fairs was made but without advancing the art.

The number of easel paintings produced during this same year was even greater than that of murals. The WPA Federal Art Project alone reported 50,500 completed under its aegis, to which must be added paintings by self-supported professional artists—of whom there are six or seven thousand—in all parts of the country, which, with a minimum normal credit of ten paintings each would more than double this gigantic figure.

Notwithstanding the discouraging financial outlook, the registration of students in art schools throughout the country greatly increased in 1939, as did the number of summer schools of painting. Also, more requests were made of the WPA Federal Art Project by groups in various parts of the country, for teachers of art than could possibly be supplied.

Of the eight prizes awarded in connection with the Carnegie Institute's International Exhibition, five, in 1939, went to American artists. The first of these, \$1000, went to Alexander Brook for a painting entitled "Georgia Jungle," later purchased for the Institute's permanent collection.

The refusal by the jury for the Biennial Exhibition at the Corcoran Gallery of Art of Peter Blume's surrealist painting, "The Eternal City"—an attack on Fascism, depicting Mussolini as a jack-in-the-box in the Roman Forum—aroused vigorous protest from representatives of the

ORGANIZED RESERVES. See **MILITARY PROGRESS.**

ORT, WOMEN'S AMERICAN. A Jewish society organized in America in 1927 for constructive relief for victims of war, persecution and economic maladjustment. It is an autonomous group functioning in conjunction with the American ORT Federation.

The name ORT is derived from the initial letters of three Russian words meaning Organization for the Promotion of Industrial Trades and Agriculture. The ORT was founded in Russia in 1880. Since the World War it has become an international organization. Its chief function today is the rehabilitation, vocational guidance and training of refugees. This is accomplished in a network of autonomous school systems, co-operatives, workshops and training farms distributed throughout Europe. Present operations centre in France, England, Germany, Switzerland, Poland, Rumania, Lithuania, Latvia, Bulgaria, and Hungary. This work is supported by volunteer groups and whole communities in these countries as well as in North, South, and Central America, and Africa.

ORT's programme in 1939 was somewhat revised in accordance with the demands of war. Working in co-operation with various governments, ORT continued to support technical training schools for children and adults of both sexes, industrial and agricultural co-operatives, and to provide funds for the purchase of tools, machinery, agricultural implements, seeds, and livestock. While refugee work in cities, in ORT colonies, and in training camps was the paramount function, a variety of other kinds of projects was included in the programme. Courses to improve the skill of artisans in countries where there is anti-Semitic vocational discrimination were maintained. One hundred and five boys and instructors from the Berlin ORT School were transferred to England. A number of members of the Women's American ORT continued to finance the education of orphans in Eastern Europe through the ORT Guardianship Plan.

The Women's American ORT has 34 chapters in the United States and Canada. The Paris headquarters of the World ORT Union were transferred to Vichy, France, when evacuation of the capital was decreed. The national headquarters of the American ORT Federation and of the Women's American ORT are at 212 Fifth Avenue, New York City.

O'SHAUGHNESSY DAM. See **DAMS.**

O'SHEA, WILLIAM J (AMES). An American educator, died in New York, Jan. 16, 1939, where he was born, Oct. 10, 1863. Educated at the College of the City of New York (B.S., 1887) and Manhattan College (M.S., 1889), he studied medicine for a short time, but turned to education and was appointed a teacher in the New York Public Schools in 1887. In 1901 he was appointed principal of P.S. 171, a new school. From district superintendent in 1906, he was promoted to associate superintendent in 1918. Mayor Hylan appointed him superintendent of schools on May 1, 1924, and he served until Feb. 1, 1934, retiring upon the expiration of his term of office.

Dr. O'Shea campaigned for the improvement of the teachers' pension system and was in charge of all war and war relief activities in the schools during the World War, including the Liberty Loan, Red Cross, War Saving, and Thrift Stamp

drives. In 1907 and in 1916 he was chairman of the membership committee of the National Education Association. He was the author of *Common Words in Easy Sentences*.

OSLO POWERS. The signatories of the Oslo Convention of 1931 for the mutual reduction of international trade barriers. These powers (Belgium, Luxembourg, Denmark, Finland, The Netherlands, Norway, and Sweden) subsequently co-operated to an extent in economic matters and in defense of their neutrality. See **BELGIUM** and the other countries under *History* for developments in 1939.

OUTER MONGOLIA. See **MONGOLIA.**

PACIFIC RELATIONS, INSTITUTE OF. An organization formed in Honolulu in 1925 as an unofficial body for the study of the peoples of the Pacific and their mutual relations. It is governed by a Pacific Council composed of representatives of member national councils in Australia, Canada, China, France, Great Britain, Japan, the Netherlands and Netherlands Indies, New Zealand, the Philippines, the Union of Soviet Socialist Republics, and the United States. In addition to carrying on a regular international conference and research program covering such subjects as land utilization, population, migration, economic development, trade, colonial problems, cultural relations, and diplomatic relations, the Institute is conducting an Inquiry into the background of the present Sino-Japanese conflict. Offices of the International Secretariat are at 129 East 52nd St., New York City.

The American Council, in addition to its participation in the international program, carries on its own extensive research and educational activities. Research projects under way, and shortly to be published, treat such questions as American shipping in the Pacific, American rights and interests in China as affected by the Sino-Japanese conflict, Far Eastern news in the American press, narcotic drugs in the Far East and their repercussions in the Occident, protection of coastal fisheries under international law, and similar topics. Appearing in its publication series, "Studies of the Pacific," are "American Far Eastern Policy and the Sino-Japanese War," edited by Miriam S. Farley, "Rural Australia and New Zealand," by Edmund deS. Brunner, "North Pacific Fisheries," an economic survey by Homer E. Gregory and Kathleen Barnes, "Fijian Frontier," by Laura Thompson, and "Shanghai and Tientsin," an analysis of the problems of these foreign concessions in China. Other new publications include three pamphlets, "America Holds the Balance in the Far East," by Robert W. Barnett, "Deadlock in China," by Lawrence K. Rosinger, and "Our Far Eastern Record: A Reference Digest on American Policy"; "Films of the Pacific Area," an annotated bibliography, and other reading lists; "Propaganda from China and Japan," by Bruno Lasker and Agnes Roman, a case study, and a series of textbooks on "Peoples of the Pacific."

As part of its educational program, the American Council has arranged a series of private round table conferences throughout the country on American Far Eastern policy and the Sino-Japanese war with the aim of aiding the development of an informed and intelligent public opinion on foreign policy. Experimental language schools in Chinese and Russian have been developed to facilitate the acquisition of these language tools by American scholars. The Council has also participated in the editing of educational material in connection with the release of educational motion pictures on Pa-

cific subjects, taken part in radio and conference programs, published reading lists and bibliographies, provided library facilities for students and writers, sent out bibliographical exhibits and news releases for news and editorial use, and engaged in a variety of activities aimed at stimulating interest in and research on the problems of the Pacific area.

Its fortnightly journal, *Far Eastern Survey*, covers significant economic developments in the Far East, and more especially at the present time the economic aspects of the Sino-Japanese war and American policy in relation to that war.

The officers of the American Council of the Institute of Pacific Relations are Dr. Philip C. Jessup, chairman, Francis S. Harmon, treasurer, and Frederick V. Field, secretary. It maintains offices at 129 East 52nd St., New York, 1795 California St., San Francisco, and 517 Dillingham Building, Honolulu.

PACIFISM. See PEACE MOVEMENT.

PADDOCK. THE RT. REV. ROBERT LEWIS. An American Protestant Episcopal Bishop, died in Brooklyn, N. Y., May 17, 1939. Born in New York, Dec. 24, 1869, he was educated at Trinity College (A.B., 1894; A.M., 1897) and the Berkeley Divinity School, from which, upon graduation in 1897, he was sent to Southington, Conn., in charge of a mission. In the fall of that year he was assigned as an assistant at St. Paul's Church in Cleveland and as general secretary of the Church Students' Missionary Association there.

Ordained a priest in 1898 he was made vicar of the Pro-Cathedral and canon of the Cathedral of St. John the Divine in New York, where he remained until 1902 when he was appointed rector of the Church of the Holy Apostles. He became interested in civic and social reform movements in the City and established Chelsea House, a self-supporting home for young women, and other organizations. On Dec. 18, 1907, he was consecrated bishop of Eastern Oregon and he retired, under criticism of his missionary methods, in September, 1922, after a breakdown in health. He retained the rank of Bishop with one vote in the House of Bishops.

After his retirement, Bishop Paddock took an active part in the work of the Church League for Industrial Democracy, the American Civil Liberties Union, and similar organizations, and was one of the organizers, and chairman, of the American Friends of Spanish Democracy which worked on behalf of the Loyalist cause during the Spanish Civil War.

PAHANG. See FEDERATED MALAY STATES.

PAINTING. The status of painting in the United States altered little in 1939 from that of preceding years, although the volume of production increased. An effort to transcribe the American scene and so find nationalistic expression was pronounced, and there was increasing evidence of influence exerted by the works of French modernists. With neither public nor critics did the comprehensive exhibitions of contemporary American painting, held in connection with the two World's Fairs, find favor, for the excellent reasons that subjectively the works shown were dreary, if not vulgar, and technically they failed to uphold a creditable standard.

Never before in the history of art was there such demand for mural paintings as that created in 1939 by U.S. Federal agencies. The Division of Fine Arts, Public Buildings Administration, conducted eighteen competitions for mural paintings

to be placed in new Federal buildings, each of which was judged by a specially appointed committee of experts, and paid for by allocation of a percentage of the amount appropriated for construction. Under this Division, 255 commissions for mural paintings were completed, 226 reported under-way, and 200 in process of designing in 1939. In addition to this, under the WPA Federal Art Project, primarily a relief measure, 1400 mural paintings were produced and assigned to tax-supported institutions. Most important of the competitions held by the Division of Fine Arts, P.B.A., were those for a series of panels for the post office at St. Louis, Missouri, and for 48 murals to be placed in 48 post offices—one in each state of the Union. These competitions were anonymous, and nation-wide rather than regional.

Outstanding for merit were the mural paintings by Ezra Winter for one of the reading rooms in the Library of Congress Annex which were completed in the early summer. These illustrate the Canterbury Pilgrims as described in the Prologue of Chaucer's *Canterbury Tales*—a procession of 32 figures (life-size) on horseback; a pageant running the length of the two side walls, a distance of 120 feet, with smaller related panels on the end walls.

Also of superior merit was a series of mural paintings by Thornton Oakley for the auditorium of the Franklin Institute, Philadelphia (completed in September), which depict epochs in science as represented by eminent men of the past—astronomers, mathematicians, and others.

Mention should also be made of a series of historic mural paintings by Barry Faulkner for the new State Capitol at Salem, Oregon, likewise completed in 1939; and to the unique mural decorations of the new lecture hall of the Carnegie Institution in Washington (opened late in 1938), designed by J. Monroe Hewlett. All of these outstanding works were obtained through direct commission rather than competition. An effort to use mural paintings on the exteriors of buildings at the two World Fairs was made but without advancing the art.

The number of easel paintings produced during this same year was even greater than that of murals. The WPA Federal Art Project alone reported 50,500 completed under its aegis, to which must be added paintings by self-supported professional artists—of whom there are six or seven thousand—in all parts of the country, which, with a minimum normal credit of ten paintings each would more than double this gigantic figure.

Notwithstanding the discouraging financial outlook, the registration of students in art schools throughout the country greatly increased in 1939, as did the number of summer schools of painting. Also, more requests were made of the WPA Federal Art Project by groups in various parts of the country, for teachers of art than could possibly be supplied.

Of the eight prizes awarded in connection with the Carnegie Institute's International Exhibition, five, in 1939, went to American artists. The first of these, \$1000, went to Alexander Brook for a painting entitled "Georgia Jungle," later purchased for the Institute's permanent collection.

The refusal by the jury for the Biennial Exhibition at the Corcoran Gallery of Art of Peter Blume's surrealist painting, "The Eternal City"—an attack on Fascism, depicting Mussolini as a jack-in-the-box in the Roman Forum—aroused vigorous protest from representatives of the

American Artists' Congress. On the night of the private view, the main entrance to the Corcoran Gallery was picketed, and printed protests were distributed to the invited guests.

In February, 1939, paintings by the French modernist Utrillo were refused free admission to this country by the New York Customs House because it was claimed that they were copies of post cards and therefore to be classed as commercial art. This decision was later reversed.

Among the painters of note who died during 1939 were Harriet Blackstone, Mary J. Riley, Gilbert White, Frederick C. Friescke, Robert Hallowell, Frank Tenney Johnson, Ernest Lawson, Ellsworth Woodward, and William Woodward, all of this country; and Boris Grigoriev, of Russia, Henri E. Le Sidaner of France, Alphonse Mucha of Czecho-Slovakia, and Bruno Liljefors of Sweden.

An extraordinary number of books on art came from American publishing houses in 1939, the majority of them elaborately illustrated not only in black and white but in color. Notable among these were: *A Treasury of Art Masterpieces* with text by Thomas Craven; *World-Famous Paintings*, edited by Rockwell Kent; *Modern American Painting*, by Peyton Boswell; *American Painting Today*, edited by Forbes Watson; *Some Old Portraits*, Booth Tarkington; *Gist of Art*, by John Sloan; a biography of Louis M. Eilshemius entitled *And He Sat Among Ashes*, by William Schack; *An American Artist's Story*, autobiography of George Biddle, and *Drawings of the Florentine Masters*, by Bernard Berenson. Among foreign publications were: *Masterpieces of European Painting in America*, edited by Hans Tietze; *French Painting in the Seventeenth Century*, by Edouard Marchel, and *Leonardo da Vinci*, by Sir Kenneth Clark.

LEILA MECHLIN.

PALAU. See JAPANESE PACIFIC ISLANDS.

PALESTINE. A territory on the east coast of the Mediterranean, administered by Great Britain under the mandate of the League of Nations since Sept. 29, 1923. Capital, Jerusalem.

Area and Population. Area, 10,429 square miles; population on Dec. 31, 1938, 1,435,285 (Moslems, 900,249; Jews, 411,422; Christians, 123,614). Births per 1000 (1938), 38.9; deaths per 1000, 15.03; immigrants (1937), 12,475 (10,536 Jews). Populations of the chief cities in 1938: Tel-Aviv, 140,000 (all Jews); Jerusalem, 126,000; Haifa, 100,000; Jaffa, 69,000. Jewish immigrants exceeded emigrants by 8085 in 1938 while there was a net migration loss of 6785 Moslems and 1321 Christians.

Education. In 1937-38 there were 402 public schools for Arabs, with 49,300 pupils (mostly Moslems); 184 private Moslem schools, with 14,052 pupils; 622 Jewish schools, with 71,376 pupils; 193 Christian schools, with 24,046 pupils. The Hebrew University at Jerusalem had 733 students; Hebrew Technical Institute, Haifa, 499.

Production. Agriculture is the main occupation, although manufacturing is rapidly growing in importance. The chief crop is citrus fruit (1938-39 exports, 15,310,436 cases valued at £P4,370,078). Yields of other leading crops were (1938, in metric tons): Wheat, 44,400; barley, 66,700; corn, 8000; potatoes, 9500 (1937); tobacco, 2500 (1937); sesamum, 4000; olive oil,

6900. The 1938 wine yield was 31,000 hectoliters. Melons, durra, kersenneh, figs, tomatoes, bananas, and dates are grown. Wool and mohair clip (1938), 500 metric tons. Potash (24,000 metric tons in 1938), bromine (exports, 523 metric tons, 1937), and salt (9000 metric tons, 1938) are the chief minerals. Principal manufactures: wine, soap, olive oil, metals and machinery, foodstuffs, cement, wood products, chemicals.

Foreign Trade. Merchandise imports in 1938 were £P14,242,438 (£P15,903,666 in 1937); exports, £P5,020,368 (£P5,813,536). Military stores accounted for £P2,676,860 of imports (£P468,959 in 1937). Re-exports of goods included in import total for 1938 were £P663,217; the additional transit trade (exclusive of 2,079,081 tons of crude petroleum received at Haifa via pipeline from Iraq), £P671,915. Imports from the United Kingdom in 1938, £P4,235,821; exports to U.K., £P2,468,854. See IMPORTS AND EXPORTS.

Finance. The final returns for the fiscal year ended Mar. 31, 1939, showed budget revenues of £P4,235,000 (£P4,744,000 in 1937-38) and grants-in-aid from the British Government of £P1,702,000 (£P153,000). Actual expenditures were £P5,693,000 in 1938-39, including £P1,597,000 spent for defense and public security; in 1937-38 expenditures were £P7,298,000 (£P1,920,000 for defense and security). The 1939-40 budget estimated total receipts at £P6,396,000, including British grants-in-aid of £P2,307,000, and total expenditures at £P6,276,000, including £P2,146,000 for defense and security. After 1937-38 the British Government bore the major part of the cost of maintaining British military forces in Palestine, which is not covered by the above grants-in-aid to the Palestine Government.

Communications. Railways in 1938 extended 328 miles; highways, 1914. There was completed during 1939 the Palestine section of an automobile highway from Haifa to Baghdad, Iraq, following along the oil pipeline from the Iraq fields and connecting the six airports located along the line. Completion late in 1939 of an asphalt highway across the western edge of the Sinai Desert to Ismailia on the Suez Canal brought Palestine within five hours by automobile from Cairo, Egypt.

The principal civil airport is at Lydda, used by Imperial Airways, Royal Dutch Air Line, (Egyptian) Misr Air Line, and Palestine Airways, which operates between Tel-Aviv, Lydda, Haifa, and Beyrouth, Syria. The Italian Alla Littoria service extended to Haifa. During 1938 2761 passengers and 46 tons of mail were delivered at Palestine airports and 3179 passengers and 37 tons of mail departed. Shipping tonnage entering the ports with cargo and ballast in 1938 was 5,244,000; cleared, 5,208,000. See ROADS AND STREETS.

Government. The government is administered by a High Commissioner and Commander-in-Chief (Sir Harold Alfred MacMichael assumed office Mar. 1, 1938), who is appointed by the British Crown and assisted by executive and advisory councils. The Jewish, Moslem, and Christian communities have autonomous control of their religious, cultural, and communal affairs. Official languages, English, Arabic, Hebrew.

HISTORY

The Tripartite Conference. While the Arab revolt against British authority in Palestine was largely stamped out during 1939, and terrorism by intransigent Arab and Jewish groups declined

as compared with 1938, little progress was made toward a settlement of the basic Arab-Jewish dispute.

The tripartite conference of Arab, Jewish, and British representatives, for which preparations were made late in 1938 (see 1938 YEAR BOOK, pp. 560-562), met in London for six weeks beginning Feb. 7, 1939. All parties and groups interested in the Palestine question were represented—the British Government; the various Jewish factions in Palestine and the Jewish communities in the United States, South Africa, and many European countries; the Grand Mufti's adherents and the rival Arab National Defense Party of Palestine; and the governments of the other Arab states (Egypt, Iraq, Saudi Arabia, Yemen, and Trans-Jordan). In an effort to secure the co-operation of the Grand Mufti of Jerusalem, who inspired and directed the Arab revolt of 1937-38 from his refuge in Beyrouth, Syria, the British on Dec. 5, 1938, released five of his leading associates who had been exiled from Palestine to Seychelles (q.v.) in 1937.

The London conference, however, proved fruitless. As in previous efforts at Arab-Jewish co-operation, the question of Jewish immigration into Palestine was the rock on which the conference was wrecked. The Arabs demanded cessation of Jewish immigration as a menace to their numerical superiority in Palestine, asserting that it had the political objective of insuring Jewish domination. They demanded also the curtailment of land purchases by Jews, replacement of the mandate by an independent Arab state allied to Britain, and abolition of the Balfour Declaration. The Jews, on the other hand, rejected any scheme that would legally establish their status as a permanent minority, such as the Arab offer of "minority rights." They held out for equality of status with the Arabs and for retention of the mandate and the Balfour Declaration.

In an effort to break this deadlock, the British Government late in February tentatively advanced a plan of its own. This was denounced by the Jews as a gross betrayal and was likewise rejected by the Arabs as inadequate although the plan went far toward meeting Arab demands. After some discussion the British on March 15 submitted revised proposals to the conference with the statement that the plan was open to discussion but not to major alteration in any of its main principles. Again the Arabs and Jews were unable to reach an agreement on the British plan and the London Government accordingly announced that it would impose its solution.

The White Paper. After the conference had disbanded, the definitive British plan was published on May 17, 1939, in the form of a White Paper. This statement of future British policy declared the Balfour Declaration's pledge to promote the development of a Jewish National Home "meant . . . not the imposition of a Jewish nationality upon the inhabitants of Palestine as a whole but the further development of the existing Jewish community with the assistance of Jews in other parts of the world, in order that it may become a center in which the Jewish people as a whole may take, on grounds of religion and race, an interest and pride."

Along with the concept of a Jewish national state, the White Paper rejected the Arab contention that the British were obligated to set up an independent Arab state in Palestine under the pledges made by Sir Henry McMahon on behalf

of the British Government in 1915. It declared that the ultimate British objective was the establishment of "an independent Palestine State . . . in which the two peoples . . . , Arabs and Jews, share authority in government in such a way that the essential interests of each are secured."

On the basis of these principles, the White Paper outlined "British intentions regarding the future government of Palestine" as follows:

Establishment within ten years of an independent Palestine State in such treaty relations with the United Kingdom as will provide satisfactorily for the commercial and strategic requirements of both countries in the future.

British control during the transitional period preceding independence, with Jews and Arabs being given an increasing part in the government, the objective being to place Palestinians in charge of all departments of government, with the assistance of British advisers and subject to control of the British High Commissioner. Arabs and Jews to serve as heads of departments, approximately in proportion to their respective populations.

Eventual establishment of an elective legislature if public opinion shows itself in favor of such a development and if local conditions permit.

Five years after peace and order is restored, the establishment of an Arab-Jewish-British body to draft a constitution. Both the constitution and the Anglo-Palestinian treaty of alliance must satisfy the British Government's requirements concerning the security of, and freedom of access to, the holy places; the protection of the different communities in Palestine; and the protection of British strategic interests.

Jewish immigration during the next five years to be permitted at a rate which, if the economic absorptive capacity permits, will bring the Jewish population up to approximately one-third of the total population of the country. After a five-year period in which about 75,000 Jews would be admitted, no further Jewish immigration to be permitted without acquiescence of the Palestine Arabs.

Exercise by the High Commissioner throughout the transitional period of powers to prohibit and regulate transfers of land from Arabs to Jews.

Reactions to British Plan. The Jews in Palestine showed their violent disapproval of the proposals by demonstrations on May 18 in which a British policeman was killed and more than 100 Jews wounded. Symbolic strikes continued for several days and these were followed by a long period of Zionist non-co-operation with the British administration in Palestine. Jews in other parts of the world deluged the London authorities with protests; in the United States they enlisted the aid of government officials in seeking to change British policy.

The Arab followers of the Grand Mufti also flatly rejected the British policy as inadequate, but the Arab National Defense Council accepted the White Paper as a basis for discussion. The governments of Egypt and Iraq announced their formal opposition to the White Paper but the other Arab rulers were said to have urged the Mufti to accept the British terms. The British House of Commons approved the White Paper by a smaller government majority than usual after Winston Churchill and David Lloyd-George had attacked the British proposals as a repudiation of former pledges. The Permanent Mandates Commission of the League of Nations studied the British White Paper in June. Its report, issued August 17, declared the White Paper was not in accordance with the interpretation that the commission, the League Council and the British Government itself, had always placed upon the Palestine mandate. However three of the seven members held that circumstances justified the new policy providing the League Council approved it.

Jewish anger at the government's policy was increased when Colonial Secretary Malcolm MacDonald on July 12 prohibited all Jewish immigration into Palestine for six months beginning

October 1. He told the House of Commons that 8000 illegal immigrants were either in or about to enter Palestine, that the illegal influx represented an organized movement to smash the White Paper policy, and that it was undermining Arab confidence in British good faith. The Commons again supported the government's policy. But with the outbreak of war in Europe, the immigration policy was modified. It was reported late in September that Jewish refugees from Eastern Europe were entering Palestine illegally at the rate of 1200 or more a week, but that the British authorities were releasing them after first placing them in concentration camps.

Decline of Disorders. The stringent military measures taken late in 1938 by Lieut.-Gen. R. H. Haining, in command of British forces in Palestine, produced results in 1939. The Arab bands waging warfare against the British and the Jews were gradually decimated, cut off from their sources of supply, and deprived of support from the Arab population. Between October, 1938, and the middle of August, 1939, British authorities reported that their forces had killed 34 leaders of bands, including six of the most prominent, and about 1200 of their followers. Most of these losses were inflicted in numerous clashes between relatively small armed forces. Due to their superior armament, the British losses were much lighter.

With the breaking up of the invisible government established by the Arab rebels in 1938 and the restoration of peace, the British relaxed many of the restrictions imposed upon the entire Arab population. While extremist Arabs still remained unreconciled, the bulk of the Arab population appeared to have been won over to a more co-operative attitude by the display of military force coupled with the concessions to Arab nationalism made in the White Paper. Accordingly some of the British forces in Palestine were withdrawn in August. The Grand Mufti, Haj Amin El Huseini, who escaped from the French authorities at Beyruth in mid-October and fled to Baghdad, was reported by the Prime Minister of Egypt early in November to have accepted the British White Paper proposals for settlement of Arab-Jewish difficulties in Palestine.

These results were partly offset by the increase of terroristic activities by the radical Revisionist wing of the Zionists in Palestine following publication of the White Paper and the curtailment of immigration. The Revisionists held that the White Paper policy testified to the failure of the moderate policy of Dr. Chaim Weizmann, head of the Zionist movement, and urged his removal. They also acknowledged responsibility for a series of bomb outrages that claimed 78 lives (72 Arabs, 4 Jews, 2 British constables) during June and July alone. The police curbed the terroristic wave by numerous arrests of Revisionist members and by punishing Jewish communities that sheltered terrorists. Moreover the bulk of the Jews opposed the Revisionist tactics, as was indicated in August by the re-election of Dr. Weizmann as president of the Zionist Congress by a larger majority than before.

Palestine and the War. Despite the hatreds aroused by the three-cornered struggle in Palestine, both Jews and Arabs announced their support of Great Britain when the latter became involved in war with Germany. Anti-British propaganda circulated in Palestine and other Arab countries by Italy and Germany was largely nullified as a result of Moslem indignation at Musso-

lini's invasion and conquest of Albania, with its 700,000 Moslems, in April, 1939. The British authorities established control of foreign exchange transactions on September 7 and enrolled thousands of Jewish volunteers and Arab levies in the British Near Eastern military and auxiliary defense services, directed from Jerusalem.

See GREAT BRITAIN and TRANS-JORDAN under *History*; JEWS.

PALMYRA, pāl-mi'ra (**CORNWALLIS**) **ISLANDS.** A group of 52 small islands in the central Pacific (5° 40' W.; some 850 miles S. by W. of Hawaii), belonging to the United States since 1862. The Naval Appropriations Bill of 1939 called for the establishment of a naval base on one of the islands at a cost of \$13,000,000. A suit to acquire title to the islands was filed by the United States Government in Federal Court, Honolulu (Dec. 12, 1939) after a group of Hawaiians had asserted private ownership of the islands. See HAWAII under *History*.

PANAMA. A republic of Central America, bisected by the Panama Canal Zone (q.v.). Capital, Panamá.

Area and Population. Area, 32,380 square miles; population (estimated, Dec. 31, 1937), 548,000 excluding the Canal Zone. Racial division of population (1930 census): 78,813 whites, 69,583 Negroes, 42,897 Indians, 4138 Orientals, 249,583 mestizos. Estimated populations of the chief cities were Panamá, 82,827; Colón, 33,460; David, 8000.

Defense. There is no army or navy (see *History*). There is a National Police Force of 1500 officers and men.

Education and Religion. About 50 per cent of the inhabitants are illiterate. There were 61,706 children in 629 primary schools (1938), 3830 secondary students (1937), and about 411 students in the National University. Matriculation fees for secondary students were abolished in 1938. Roman Catholicism is the dominant religion, but other faiths have a considerable following.

Production. Agriculture, cattle raising, lumbering, pearl fishing, commerce, and the tourist business are the chief occupations. There were exported in 1938 6,399,928 stems of bananas and 4041 metric tons of cacao. Fresh beef, cattle hides, mother-of-pearl shells, coffee, rice, oranges, vegetables, chicle, ivory nuts, balata, hardwoods, and tortoise shell are other products, many of which find a market in the Canal Zone. Some gold and salt is mined. There is manufacturing on a small scale for domestic consumption.

Foreign Trade. Imports in 1938 were \$17,651,454 (\$21,828,175 in 1937); exports and re-exports, \$7,668,566 (\$8,619,195). The United States furnished 57.4 per cent of the 1938 imports (52 in 1937); Japan, 9.3 (14.1); Germany, 6.2 (5.4). Of the domestic exports, the United States took 89.3 per cent (90.9 in 1937); Canal Zone, 4.9 (4.0); Germany, 3.9 (2.5). The 1938 value of banana exports was \$2,755,029; cacao, \$441,783. See IMPORTS AND EXPORTS.

Finance. The budget estimates for the biennial period 1937-38 placed revenues and expenditures at \$18,814,000; for 1939-40, \$22,795,000.

The public debt on Mar. 31, 1939, totaled \$21,300,000 (domestic, \$3,400,000; foreign, \$17,900,000). The unit of currency is the balboa, equivalent to one U.S. dollar.

Transportation. There are about 230 miles of railways, including the Canal Zone. High-

ways on Jan. 1, 1939, extended 725 miles, excluding 90 miles of all weather roads in the Canal Zone (see *History*). Panamá is the junction point of the Pan American Airways South American circuit. Internal air route mileage on Jan. 1, 1939, 270 miles; in Canal Zone, 47 miles. For shipping, see PANAMA CANAL.

Government. The Constitution vests executive power in a President elected by direct popular vote for four years and ineligible for re-election. There is a National Assembly of 32 members elected for four years, which meets biennially on September 1. President in 1939, Dr. Juan Demóstenes Arosemena, who assumed office Oct. 1, 1936.

HISTORY

Treaty with United States. After three years of delay caused by objections raised in the United States Senate, the general treaty signed between the United States and Panama on Mar. 2, 1936, was ratified by the American Senate on July 25, 1939, and went into effect with the exchange of ratifications two days later.

The new treaty revised the convention concluded by the two governments on Nov. 18, 1903, which had governed their relations for 35 years. It eliminated several provisions of the 1903 treaty that the Panamanian Government considered infringements upon its sovereignty, including the clause pledging the United States to guarantee and maintain Panama's independence. A summary of the main features of the new treaty, prepared by the State Department, follows:

Article I establishes a basis of friendship and co-operation between Panama and the United States.

In Article II the compliance of Panama with the provisions of Article II of the convention of Nov. 18, 1903, in turning over to the United States additional lands and waters beyond those specifically mentioned therein, is recognized. The requirement of further lands and waters is considered improbable by both Governments, but they nevertheless recognize their joint obligation to insure the continuous operation of the Canal and undertake to reach an agreement should additional lands and waters be in fact necessary for this purpose.

Article III contains various provisions restricting the commercial activities of the United States in the Canal Zone in order that Panama may take advantage of the commercial opportunities inherent in its geographical situation. In this article are listed the classes of persons who may reside in the Canal Zone and the persons who are entitled to make purchases in the Canal Zone commissaries.

Article IV provides for the free entry of merchandise entering Panama destined for agencies of the United States Government, and provides that no taxes shall be imposed upon persons in the service of the United States entering Panama or upon residents of Panama entering the Canal Zone.

Article V provides that port facilities other than those owned by the Panama Railroad Co. in the ports of Panamá and Colón may be operated only by Panama; exempts from Panamanian taxation vessels using the canal which do not touch at ports under Panamanian jurisdiction; and provides for the establishment of Panamanian customhouses within the Canal Zone. The United States undertakes to adopt such administrative regulations as may be necessary to assist Panama in controlling immigration into that country.

Article VI revises Article VII of the convention of Nov. 18, 1903, in that the United States renounces the right to acquire, by the exercise of the right of eminent domain, lands or properties in or near the cities of Panamá and Colón, although retaining the right to purchase necessary lands or properties. The third paragraph of the said Article VII, granting the United States the right to intervene in the cities of Panamá and Colón and the territory adjacent thereto for the purpose of maintaining order, is abrogated.

Article VII provides that beginning with the 1934 annuity payment the annual amounts of these payments shall be 430,000 balboas or the equivalent thereof. In a supplementary exchange of notes the balboa is defined as having a gold content equal to that of the present United States dollar.

Article VIII provides for a corridor under Panamanian jurisdiction to connect the city of Colón with other territory of Panama.

Article IX establishes a similar corridor under American jurisdiction to connect the Madden Dam area with the Canal Zone proper.

Article X provides that in case of emergency both Governments will take such measures of prevention and defense as they may consider necessary for the protection of their common interests.

Article XI reserves to each country all rights enjoyed by virtue of treaties now in force between the countries, and preserves all obligations therein established, with the exception of those rights and obligations specifically revised by the present treaty. The juridical status of the Canal Zone, as defined in Article III of the 1903 convention, thereby remains unaltered. . . .

Article X was the main cause of the U.S. Senate's delay in ratifying the treaty. It provides for consultation between the two governments in the event the United States forces considered it essential to enter Panamanian territory in defending the Canal. The Senate committee withheld its approval of this article until its meaning was clarified by an exchange of notes on Feb. 1, 1939. In this exchange, the Panamanian Government agreed that if confronted with an emergency threat to the Canal, the United States need not delay armed or other action to meet the threat until after it had consulted with the Government of Panama.

Article VII ended the dispute arising from the refusal of Panama to accept the annuities of \$250,000 tendered by the United States in devalued dollars beginning in 1934. It was announced September 20 that the U.S. Government had paid Panama \$2,580,000 in complete settlement of the annuities in arrears. Immediately after ratification of the treaty the Panamanian Government started negotiations, authorized in April, to refund two external loans aggregating \$14,916,000, pay defaulted interest totaling \$3,500,000, and resume service on the foreign debt.

Along with the general treaty, the United States Senate also ratified the Trans-Isthmian Highway Convention providing for a highway between Panamá and Colón running through both Panamanian and Canal Zone territory. Under other agreements, the United States obtained leases from Panama on sites for auxiliary air bases at strategic points in Panamanian territory. Work was under way in 1939 upon such a base at Rio Hato, 75 miles southwest of the Pacific entrance of the canal, and upon a connecting highway costing about \$3,000,000, with the United States supplying materials and equipment and the Panamanian Government the labor.

The action of the United States and Panama in raising their legations at Panamá and Washington, respectively, to embassies testified to the growing importance of their relationships. On the eve of the passage of the U.S. fleet through the canal, the Panamanian Government on April 25 ordered a census of all foreigners residing in the republic as a precautionary measure against sabotage. On August 15 the 25th anniversary of the opening of the canal was celebrated with ceremonies in the Canal Zone and Panama.

Political Developments. On October 22 Dr. Arnulfo Arias, brother of former Pres. Harmodio Arias, was nominated for the Presidency by three groups controlling 18 of the 32 seats in the National Assembly—the National Revolutionary, National Liberal, and Conservative parties. This was believed equivalent to his election in June, 1940.

President Arosemena (q.v.) died on December 15, and was succeeded temporarily by Minister of Finance Ezequiel Fernández Jaén, second Vice President, pending the arrival of First Vice President Augusto S. Boyd, who was serving as Ambassador to Washington. Dr. Boyd was sworn in as President on December 18.

By a law published Jan. 5, 1939, the President obtained emergency financial and economic powers up to Aug. 31, 1940. A law published January 12 authorized transfer of the \$6,000,000 Constitutional Fund from New York to Panamá as soon as it ceased to be used as a guarantee of the external debt.

Other Foreign Relations. Outstanding developments were the hostile demonstration against the crews of two visiting Italian cruisers in February, the violent anti-German press attacks precipitated by the Nazi annexation of Bohemia and Moravia in March, and the holding in Panamá in September of the conference of Foreign Ministers of the American republics (see PAN AMERICANISM). See NICARAGUA under *History*; PAN AMERICAN UNION.

PANAMA, DECLARATION OF. See PAN AMERICANISM; PAN AMERICAN UNION.

PANAMA CANAL. The Panama Canal, crossing the Isthmus of Panama between Limon Bay on the Caribbean coast and Panama Bay on the Pacific, a distance of 40.27 miles from shoreline to shoreline, was opened for traffic on Aug. 15, 1914. It thus virtually completed 25 years of operation on June 30, 1939, the day concluding the fiscal year covered in its annual report.

For the fiscal year ended with June 30, 1939, the total of transits of the canal, made by 1609 toll-paying, ocean-going, merchant vessels, was 5903; for 1938, 5524. The aggregate of tons of cargo that passed through was 27,866,627 for the fiscal year 1939; for 1938, 27,385,924. The net tonnage according to the rules of measurement in use was somewhat less: 27,170,007 for 1939; for 1938, 25,950,383 (as partly adjusted for 8 months prior to new rules of measurement that went into effect Mar. 1, 1938). The yearly total of tolls levied on vessels for passage rose to \$23,661,021 for 1939, from \$23,169,889 for 1938. The net revenues from the operation of the canal proper fell slightly, nevertheless, to \$13,841,071 for 1939, from \$13,909,903 for 1938. Additional revenue from operations connected with the canal (vessels refueled, repaired, provisioned, drydocked, or provided with stores) came to \$681,272 for 1939; for 1938, to \$824,613. The aggregate net revenue of the canal and of its business units thus was \$14,522,344 for 1939, as against \$14,734,516 for 1938. The consequent yearly return on a stated net capital investment, in the canal and its commercial units, of \$508,346,822, was 2.86 per cent for 1939, as against 2.90 for 1938.

In connection with the figures for earlier years the results for the fiscal year 1939 marked a further rise in activity from 1932's minimum in the course of the shrinkage that followed the fiscal year 1930, but still fell far short of 1930's totals.

In addition to cargo-bearing vessels, the canal carried a considerable total of ships of the U.S. Government toll-free as well as those of the governments of Panama and Colombia and vessels passing through for the sole purpose of reaching the site for repairs. It also carried warships of other governments and vessels not built to take cargo (e.g. dredgers), for toll on the basis of displacement. Of all the vessels and total displacement

in these classifications, ships of the U.S. Navy made the chief part; they accounted (fiscal year 1939) for 453 crossings of the canal (not necessarily by that many individual vessels), and the aggregate displacement listed in these transits was 1,644,272 tons. Passages of British warships numbered 17, aggregating 63,417 tons' displacement and tolls thereon of \$31,708. They furnished most of the totals for ships that paid toll on displacement, not on burden: the passages of all such ships numbered 23, aggregated a displacement of 94,531 tons, and brought tolls of \$47,265.

In point of total cargo carried through the canal by ships according to nationality, the United States led. Its vessels carried (fiscal year 1939) 9,909,380 tons, or 35.6 per cent of all cargo taken through, as against 9,892,619 tons (1938). Corresponding totals for other nationalities were: British, 6,801,556 tons (1939), and 6,417,016 (1938); Norwegian, 3,408,078 (1939) and 3,433,571 (1938); Japanese, 1,710,303 (1939) and 1,877,502 (1938); German, 1,468,996 (1939) and 1,518,593 (1938); Swedish, 1,008,245 (1939) and 763,049 (1938); Danish, 727,552 (1939) and 865,235 (1938); Netherlands, 675,105 (1939) and 749,642 (1938); Greek, 666,471 (1939) and 525,351 (1938); French, 501,752 (1939) and 567,288 (1938); all other, 989,189 (1939) and 776,058 (1938).

The freight that went through the canal eastward bound, from Pacific to Atlantic waters, amounted to more than double that bound westward, as to tonnage, though presumably not as to value. For the fiscal year 1939 the eastward-bound freight amounted to 18,555,360 tons; the westward-bound, to 9,011,267. Of the eastward-bound freight nearly three-fifths originated on North America's western coast; this whole coast plus the Hawaiian Islands sent through the canal 10,959,658 tons; the U.S. western coast alone, 7,521,585, Canada's western coast, 2,873,452. South America's western coast sent 5,345,115 tons; Australasia, 946,340; Asia, 1,604,247. The origin of the westward-bound freight was more predominantly North American: 78 per cent of it started from the eastern coast of North America; this whole coast plus the West Indies sent westward through the canal 7,033,969 tons; the U.S. eastern coast alone, 6,034,326; Canada, 348,410. It must be remembered as to all these figures, that the data on the movement of freight through the canal, like the tolls charged thereon, rest on the tonnage of the freight and not (as in the case of the classified tariffs of railroads) partly on considerations connected with the value of the goods. In view of this, the magnitude of the components of freight passing through the canal, as here presented, need not closely correspond to the order that would be established on the basis of value.

Projected Construction. The U.S. Congress passed the Bland Act (signed August 11), authorizing the Government to build a third set of locks, thus to afford three passages for vessels at every break between levels. The act did not carry appropriations for the construction of these locks, and the preliminary plans for them were not yet ready at the time. The act, however, gave approval to additional locking facilities as the means both to raise the peak of the canal's capacity for bearing ships across the isthmus and to increase insurance against the risk of the canal's being put out of service by acts of war. Preliminary construction activities on the new locks was under way at the year end.

Administration. The administration of the Panama Canal is identical with that of the PANAMA CANAL ZONE (q.v.).

PANAMA CANAL ZONE. A strip of territory extending five miles to either side of the Panama Canal, across the Isthmus of Panama. Area, 552.8 square miles; includes water, about 191 square miles (chiefly Gatun Lake, 163 square miles). The United States holds the area in virtue of a treaty of 1903 with the Republic of Panama, by which the latter party granted perpetual use, control, and occupation.

The population, exclusive of the commissioned and warrant officers and the enlisted members of Army or Navy, were enumerated in June, 1939: They numbered 28,978; of these, 7714 were employees of the Panama Canal or of the Panama Railroad Company; and of such employees, 2787 were citizens of the United States. About 700 U.S. citizens and 5000 natives employed by canal or railroad lived outside of the zone. The death rate of the population (1938) was 5.79 per 1000. The birth rate, 7.96. The prevalence of malaria was 10.4 cases per 1000 of the population, the lowest yearly rate that had been recorded. Protected by careful inspection of vessels, the zone, despite vessels' arrival from all quarters of the maritime world had no cases of plague, cholera, typhus, or yellow fever. The public schools—of two types, white and colored—had in 1939 a daily attendance of 2686 white and 2818 colored pupils; the junior college counted 141 enrolled pupils, its highest total subsequent to its opening in 1934.

Government. The Canal Zone is in effect a military reservation of the U.S. Army. Its administration is situated at Balboa Heights; all civil administrative authority normally rests in an appointed Governor, Brig. Gen. C. S. Ridley, U.S.A. In the Governor is concentrated authority for the operation and maintenance of the canal and its auxiliary services to shipping and for the maintenance of law, order, health, education, and related matters, among the inhabitants; the Governor is also president, ex officio, of the Panama Railroad Company, a separately operated adjunct of the canal. The defense of the Canal Zone, however, and the command of the forces for this purpose, are the charge of another officer (in 1939 Maj. Gen. David L. Stone, U.S.A.) styled "the officer commanding the United States troops stationed in the Canal Zone." But at the outset of war between the German and the British and French governments the President of the United States, by executive order of September 6, assigned temporarily to this officer authority to operate the canal and its adjuncts and to govern the Canal Zone; the same order put the Governor under the direction of the military commander. The foremost apprehended risk at the time was lest a belligerent should covertly put the canal out of operation in order to prevent its service to the opposing side; and another executive order of the President (September 5) took the precaution of requiring ships, as a condition to entering the canal, to submit to inspection, to armed guards, or even to the removal, for the time, of their own personnel, in case that the authorities should judge that safety demanded it.

History. The treaty executed by the Republic of Panama and the United States in 1936 was at last ratified by the U.S. Senate (July 25); it had been ratified by Panama soon after its execution and went into effect promptly after the U.S. Senate's action (for particulars of the treaty, see

PANAMA). The intention of the United States and the apparent effect of the treaty was to promote joint action on the part of the two signatories in the event of an attack on the Canal Zone; at the same time, an exchange of statements between the two governments was reported to have recorded the understanding, on both their parts, that the United States, in emergency, might exercise great liberty in taking necessary steps of defense on its own account, prior to consultation with the authorities of Panama. As the Panama Canal Zone, too narrow to shelter the canal effectively from attack by land, might need in emergency to extend its defenses into the Republic of Panama, the treaty added an important element to its security.

See COLOMBIA under *History*.

PAN AMERICANISM. With the outbreak of the European War (q.v.) on Sept. 1, 1939, and the resultant threat to the peace, independence, and economic prosperity of the American republics, the movement for closer inter-American political and economic collaboration received a great impetus. The machinery and moral solidarity necessary for such co-operation had been developed over the preceding 50 years, particularly by the Pan American Conferences held in Montevideo, Uruguay, in 1933; in Buenos Aires, Argentina, in 1936; and in Lima, Peru, in December, 1938 (see 1933, 1936, and 1938 YEAR BOOKS under *Pan American Conference*). The other agency chiefly responsible for developing the bases of inter-American co-operation was the Pan American Union (q.v.), which serves as permanent organ of the Pan American Conferences.

Panama Conference. At Buenos Aires in 1936 and at Lima in 1938 the American republics had agreed upon a procedure for consultation "to preserve the peace of the American continent." In accordance with this agreement, the Government of Panama following the outbreak of the European conflict invited the Foreign Ministers of the 21 American republics to confer on measures for meeting the problems raised by the war. This move was supported by Colombia, Peru, and Cuba, and the invitation was accepted with alacrity by the remaining governments.

The conference was held in the city of Panama, with official delegations from all 21 republics in attendance, from September 23 to October 3. Its efforts were concentrated upon three principal objectives—the maintenance of neutrality, the preservation of peace, and the promotion of economic co-operation. Working in an atmosphere of exceptional cordiality and harmony, the conference took action upon each of these points.

Neutrality. A General Declaration of Neutrality, approved October 3, set forth the "standards of conduct which, in conformity with international law and their respective internal legislation, the American Republics propose to follow in order to maintain their status as neutral states and fulfill their neutral duties, as well as the recognition of the rights inherent in such a status." The governments agreed to "maintain close contact with a view to making uniform so far as possible, the enforcement of their neutrality and to safeguarding it in defense of their fundamental rights." The declaration provided for an Inter-American Neutrality Committee, composed of seven experts in international law, to study and formulate recommendations with respect to neutrality problems in the light of experience and changing circumstances. This Committee was scheduled to sit in Rio de

Janeiro, beginning in January, 1940, for the duration of the war. The seven members were appointed, respectively, by the governments of Argentina, Brazil, Chile, Costa Rica, Mexico, the United States, and Venezuela.

In another resolution, the Foreign Ministers at Panama opposed the placing of foodstuffs and clothing intended for civilian populations on lists of contraband. They also declared that they did not consider contrary to neutrality the granting of credits to belligerents for the acquisition of foodstuffs and clothing. Still another resolution called for joint measures to "facilitate the action of the police and judicial authorities of the respective countries in preventing or repressing unlawful activities that individuals, whether they be nationals or aliens, may attempt in favor of a foreign belligerent State."

Preservation of Peace. The action of the Panama Conference in this field was of exceptional significance. It established a "safety belt" averaging 300 miles in width around the Western Hemisphere south of Canada (see map facing page 597). The European belligerents were asked to avoid all hostile acts within this zone. The text of the important sections of the Declaration of Panama, as this resolution was called, follows:

1. As a measure of continental protection, the American republics, as long as they maintain their neutrality, have the undisputed right to conserve free from all hostile acts by any belligerent non-American nation those waters adjacent to the American continents which they consider of primordial interest and direct utility for their relations, whether such hostile act is attempted or carried out by land, sea or air.

2. The governments of the American republics agree to make an effort to seek observance by the belligerents of the dispositions contained in this declaration through joint representations to the governments actually participating in hostilities or those that may participate in the future.

This procedure will in no wise affect the exercise of the individual rights of each State inherent in its sovereignty.

3. The governments of the American republics further declare that, whenever they consider it necessary, they will consult among themselves to determine what measures they can take individually or collectively for the purpose of obtaining fulfillment of the dispositions of this declaration.

4. The American republics, as long as there exists a state of war in which they themselves are not participating and whenever they consider it necessary, may carry out individual or collective patrols, whichever they may decide through mutual agreement or as far as the elements and resources of each one permit, in waters adjacent to their coasts within the zone already defined.

This extension of American territorial waters beyond the universally recognized three-mile limit met with a mixed reception. In the United States and elsewhere it was widely criticized as impractical and illegal. The United States, Argentina, Brazil, and Uruguay made some attempt to patrol the enormous stretches of seas within the safety zone adjoining their shores. But there was no lessening of belligerent activities, despite formal communication of the Declaration to the belligerent governments by the Government of Panama on October 4.

A number of German vessels were captured or scuttled within the safety zone as a result of Allied naval activities. On December 13 the German pocket battleship, *Graf Spee*, attempted to capture the French liner *Formose* off the Uruguayan coast and was thereupon driven into Montevideo harbor by three British warships after a day-long naval battle, part of which was fought within three miles of the Uruguayan shore. This defiance of the Declaration of Panama led to further consultation among the American governments, followed by a joint protest to France, Britain, and Germany on December 23. They were warned that belligerent

vessels might be prevented from supplying themselves and repairing damages in American ports if they committed warlike acts within the security zone. No replies were received up to the end of December.

Other resolutions of the Panama Conference, designed to consolidate peace, reaffirmed the Lima declaration of inter-American solidarity; appealed to the European belligerents for a peaceful settlement of the conflict and for the humanization of the war; urged the American governments to "eradicate from the Americas the spread of doctrines that tend to place in jeopardy the common Inter-American democratic ideal"; called for another meeting of American Foreign Ministers in Havana on Oct. 1, 1940, or before; and provided for another consultative meeting "in case any geographic region of America subject to the jurisdiction of any non-American state should be obliged to change its sovereignty and there should result therefrom a danger to the security of the American Continent."

Economic Co-operation. The Conference's main action in the field of economic affairs was the establishment of an Inter-American Economic and Financial Advisory Committee, composed of one expert from each of the 21 republics, to study problems of an economic nature growing out of the European struggle. To this committee was referred most of the economic and financial issues raised at Panama. In addition the Conference's resolution on economic co-operation urged the American governments to take specific steps to promote cheaper and better inter-American transportation and communication services; facilitate the free inter-American movement of capital and the granting of inter-American credits; prevent excessive increases in prices of manufactured articles destined for export; conclude regional agreements for solving common financial, fiscal, or economic problems; and expedite the construction of their respective sections of the Pan American Highway.

The Inter-American Economic and Financial Advisory Committee convened in Washington on November 15 under the chairmanship of Sumner Welles, Under-Secretary of State of the United States, and was still in session at the year-end. Its study of inter-American financial problems led to a consideration of plans for an inter-American bank. Later it studied the problem of developing Latin American natural resources and manufacturing industries with United States capital.

The activities of this committee were supplemented by several other conferences held during the autumn of 1939. In the latter part of October a conference on the promotion of trade between the United States and Latin America was held in Washington under the auspices of the U.S. Department of Commerce. Representatives of the Latin American republics, the U.S. Government, and United States retail distributing agencies attended. A five-point program was adopted to promote importation from Latin America by the United States of manufactured articles that could not be obtained from belligerent countries or made in the United States. Increased Latin American sales to the United States were expected to stimulate United States exports to Latin America.

Inter-American trade and monetary problems were also considered by the First Meeting of the Finance Ministers of the American Republics, held in Guatemala City on November 14-21. Finance Ministers or their representatives from all of the

PAN AMERICAN UNION. The Pan American Union is an official international organization founded in 1890 as the International Bureau of American Republics and maintained by the 21 republics of the Western Hemisphere for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a Governing Board, composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a Director General and an Assistant Director chosen by the Board.

The Union published a monthly *Bulletin* which is issued in three editions, English, Spanish, and Portuguese, as well as numerous special reports on the countries which are members of the Union. These are widely distributed in all the republics of the American continent and are intended to make available information on the various aspects of inter-American activity.

The Pan American Union acts as the permanent organ of the International Conferences of American States which meet at intervals of five years. The last or Eighth of these Conferences was held at Lima, Peru, Dec. 9-27, 1938. The program and regulations of each Conference are prepared by the Governing Board of the Union, and in the interval between the Conferences the organization is engaged in giving effect to the resolutions adopted and also co-operates in securing the ratification of the treaties and conventions signed at each Conference.

The Lima Conference resulted in a considerable enlargement of the duties and responsibilities of the Pan American Union which during 1939 was engaged in giving effect to the conclusions adopted at the Conference. A new Division of Labor and Social Information was organized which began to function on Jan. 1, 1940, and the scope of other administrative divisions was broadened.

An outstanding event of 1939 in the field of inter-American relations was the meeting of Foreign Ministers of the American Republics held at Panamá from September 23 to October 3, to consider problems affecting the republics of the American Continent as a consequence of the outbreak of the war in Europe. The meeting adopted the Declaration of Panamá which undertook to establish a zone of security around the American Continent to be kept free of belligerent activities. An Inter-American Financial and Economic Advisory Committee was created which met at the

Pan American Union on Nov. 15, 1939 and was expected to continue in session during the period of the emergency arising out of the war. Provision was also made for the formation of an Inter-American Neutrality Committee of seven members which was named by the Governing Board of the Pan American Union on November 1 and which was expected to meet at Rio de Janeiro on Jan. 15, 1940.

The Third Pan American Highway Congress met at Santiago, Chile, from Jan. 11 to 19, 1939, and engaged in a broad and comprehensive discussion of the technical, financial, and administrative aspects of highway construction and maintenance. The First Pan American Sanitary Aviation Conference met at Montevideo from Feb. 2 to 9, 1939, with representatives in attendance from 12 countries and the Sanitary Bureau. The Conference considered questions relating to aeronautical medicine and sanitation designed to facilitate the movement of aircraft engaged in inter-American traffic. From Apr. 14 to 21, 1939, the First Inter-American Travel Congress met at San Francisco under the auspices of the Golden Gate International Exposition and adopted a series of resolutions designed to promote travel in the Americas. From Oct. 2 to 7, 1939, a Pan American Housing Congress was held in Buenos Aires in accordance with resolutions adopted at the Seventh and Eighth International Conferences of American States.

The First Meeting of Finance Ministers of the American Republics was held at Guatemala City from Nov. 14 to 21, 1939. The purpose of the meeting was to permit an informal exchange of views between representatives of the treasuries of the American Republics on matters of common interest. A series of resolutions was adopted on monetary and related questions.

Following the Pan American Congress of Municipalities which met at Havana in November, 1938, a meeting of the Pan American Commission on Inter-Municipal Co-operation was held at Chicago from Nov. 20 to 25, 1939. A program of co-operative action between the municipalities of the American Continent was drawn up and preparations were made for the Second Pan American Congress of Municipalities.

Pan American Day was again observed on April 14 and exercises appropriate to the occasion were held in all the 21 countries, members of the Union. At the Pan American Union a special session of the Governing Board was held at which President Roosevelt delivered an address. A concert of Latin American music was presented at the Union on the evening of April 14 at which the Secretary of State, Cordell Hull, who is also chairman of the Governing Board of the Union, delivered a brief address.

At the meeting of the Governing Board held on Nov. 1, 1939, the Secretary of State of the United States was re-elected chairman of the Board for the ensuing year. Hector David Castro, Minister of El Salvador, was at the same time elected Vice Chairman to succeed J. Richling, Minister of Uruguay. Headquarters of the Union are at the Pan American Building, Washington, D. C.; L. S. Rowe, Director General; Pedro de Alba, Assistant Director.

See the separate articles on the American republics under *History*; PAN AMERICANISM.

PANTELLARIA, pân-těll'ă-rĕ'ă. An Italian island (area, 32 sq. miles; population, 9082) situated in the Mediterranean 45 miles from the coast

of Tunisia and 62 miles from the Sicilian coast. Strategically situated to dominate the shipping route between the eastern and western Mediterranean, it was fortified by Italy during the crisis of 1935-37 in Anglo-Italian relations. It thus served as a counterweight to the British base at Malta (q.v.). The island has two small ports and is said to be equipped for use as an auxiliary air and submarine base (see map, 1938 YEAR BOOK, p. 360).

PAPER AND PULP. A comparison of the year 1939 with other years in the paper and pulp industry reveals that a new record in volume was made in the past year. Activity, as indicated by the production ratio of leading mills on Jan. 7, 1939, was 66 per cent of capacity; paper board mills at 45 per cent of capacity. This output was steadily increased and at the end of the first half of the year paper production rose to 81 per cent and paper board production to 70 per cent. Pulp mill operations were similar to that of paper. The heavy demand for paper increased pulp output about 20 per cent over that of the final quarter of 1938. Imports of pulp increased about 15 per cent, while exports were cut in half. Prices for all kinds of paper and pulp were relatively low and inadequate for profitable operations, despite the high volume. The relative low price level continued throughout the year. The large volume of speculative buying in September and October advanced paper prices only about 8 per cent.

The beginning of the second half of 1939 was marked by a substantial improvement in demand, followed by a steady increase in production, which was accelerated by the war in Europe, creating a shortage of paper and pulp in the belligerent countries. Production of paper rose to 92 per cent on September 16; paper board to 80 per cent, and remained well above those figures for the remainder of the year, with mills operating at capacity. In the last quarter of the year, some further moderate price advances in paper and pulp were made to cover the higher cost of chemicals and materials, which averaged 13 per cent above the low of the year. Production of all kinds of paper, except newsprint, was 15 per cent higher in October and 18 per cent at the end of 1939.

Domestic production of newsprint was 0.6 per cent above that of last year, shipments 6.7 per cent higher. Total domestic production in 1939 is estimated at 939,000 tons, compared with 820,055 tons in 1938. The value of paper and paper products consumed in 1938 was \$900,000,000, of which 40 per cent was paper board. The most conservative estimate for the year 1939 is over one billion dollars. Domestic production of all kinds of paper and paper board for 1939 is estimated by a leading authority at 13,441,000 tons, which is an all-time record for the industry.

STILLMAN TAYLOR.

PAPUA, pǎp'û-a; pǎ'pōō-ä, **TERRITORY OF.** A territory (formerly called British New Guinea) of Australia, comprising the southeastern part of the island of New Guinea (87,786 sq. mi.) and the Woodlark, Louisiade, Trobriand, and D'Entrecasteaux groups of islands (2754 sq. mi.). Total area, 90,540 sq. mi.; total population (1938), 277,401 including 1488 whites and some 275,000 Papuans. Capital, Port Moresby.

Production and Trade. Copra (11,400 metric tons exported in 1938) rubber, sisal hemp, and gold (27,000 fine oz., 1938) are chief products.

General imports (in old U.S. gold dollars) in 1938 totaled \$700,000; exports, \$800,000.

Government. For the year ending June 30, 1938, revenue totaled £A182,808; expenditure, £A183,403 (Australian £ averaged \$3.8955 in 1938). The territory is administered by a lieutenant-governor, aided by an executive council of 9 members, and a legislative council composed of the 9 councilors and 5 unofficial members. Lieutenant-Governor, Sir J. H. P. Murray.

PARAGUAY, pār'a-gwā. An inland republic of South America. Capital, Asunción.

Area and Population. Area, about 152,767 square miles, including 91,120 square miles in the Chaco Boreal awarded Paraguay by the arbitral decision of Oct. 10, 1938, ending the Bolivian-Paraguayan frontier dispute. Estimated population, 1,000,000, of mixed Spanish and Guarani Indian blood with the exception of the small white ruling class. Spanish and Guarani are the spoken languages; Spanish, the language of government and commerce. Estimated populations of the chief cities: Asunción, 90,000; Villarrica, 30,000; Encarnación, 15,000; Concepción, 12,000. During the year ended Sept. 1, 1937, 9151 immigrants entered the republic.

Education and Religion. There is widespread illiteracy. In 1937 there were 139,466 pupils in 1742 primary schools, 2034 in secondary schools, and 350 students in the National University. Teaching of anti-totalitarian doctrines in all primary schools was made compulsory on Dec. 30, 1938. Roman Catholicism is the state religion, but freedom of worship is granted other faiths.

Production. The chief occupations are agriculture, stock raising and the exploitation of forests. Estimated production of the chief crops in 1937 was (in 1000 lb.): Mandioca, 1,100,000; sugarcane, 698,250; sweetpotatoes, 198,900; corn, 144,300; cotton, 90,160; yerba maté (native tea), 38,400; peanuts, 19,900; beans, 44,100; tobacco, 19,500; rice, 18,300; castor seed, 21,100. Oranges and bananas are extensively grown.

Production of quebracho extract is about 55,000 metric tons annually. Chief exports industries are the extraction of tannic acid from quebracho logs, meat-packing, cotton ginning, and preparation of yerba maté. Sugar refining, flour and rice milling, and the production of cheap textiles, shoes, leather goods, soap, furniture, matches, cigarettes, foodstuffs, etc., are carried on for the domestic market.

Foreign Trade. Imports in 1938 were equivalent to \$9,873,000 (\$8,500,000 in 1937); exports, \$9,001,000 (\$8,270,000). Argentina supplied 37.9 per cent of the 1938 imports, Japan, 16.2; Germany, 11.4; United Kingdom, 9.6; United States, 9.4. Of the exports, Argentina took 25 per cent "in transit" and 21.4 per cent for consumption, Germany 14.2, United Kingdom 13, and the United States 12.3 per cent. Ginned cotton, quebracho extract, and cattle hides accounted for 65 per cent of the total exports in 1937.

Finance. For the year ended Aug. 31, 1938, actual revenues were 2,589,765 gold pesos and 861,802,000 paper pesos; expenditures, 3,242,426 gold and 1,075,007,000 paper pesos. The external debt on Dec. 31, 1937, was 7,910,048 gold pesos; consolidated internal debt, 3,343,641 gold and 51,007,824 paper pesos; floating debt, 103,540 gold and 71,143,000 paper pesos. Average exchange rate of Paraguayan gold peso, \$0.6866 in 1938 (\$0.6854 in 1937); of paper peso, \$0.00426 (\$0.005 in 1937). See *History*.

Transportation. In 1939 there were about 713 miles of railway lines, 4009 miles of roads, and air lines connecting Asunción with Buenos Aires and Rio de Janeiro. Asunción, which is 950 miles from the sea, is accessible to vessels of 12 foot draft at all times of the year. In 1937 4503 steam vessels of 251,331 tons entered the port of Asunción.

Government. The Congress of 20 Senators and 40 Deputies elected Sept. 25, 1938, was composed entirely of Liberals as the opposition National Republican (Colorado) party boycotted the polls. On Oct. 11, 1938, Congress elected Provisional President Felix Paiva as constitutional President to serve until it called a new general election. The Constitution of 1870, suspended following the military revolt of Feb. 17, 1936, had not been restored up to the beginning of 1939. The state of siege that had been in effect almost continuously since the outbreak of the Chaco War in 1932, was extended for an additional four months in November, 1938. For developments in 1939, see *History*.

HISTORY

Estigarribia Elected. The political confusion that had reigned in Paraguay since the overthrow of the Ayala Government by the military revolt of Feb. 17, 1936, appeared to have been ended, at least for a time, by the election of Gen. José Félix Estigarribia as President on Apr. 30, 1939.

There was another obscure political crisis after the executive committee of the dominant Liberal party on January 4 convoked a national convention to select the Liberal candidate for the Presidency (see 1938 YEAR BOOK, p. 570 for background). On January 18 Col. Arturo Bray, who had exercised a military dictatorship on behalf of President Paiva, resigned as Minister of Interior. Shortly afterwards he left Asunción for Buenos Aires "for reasons of health." Resignations of Finance Minister Enrique Bordenave and Minister of Justice Juan F. Recalde were announced March 12. On March 29 the Liberal convention nominated Estigarribia and Luis A. Riart for President and Vice President respectively.

The National Republican (Colorado) party again boycotted the elections, asserting that "there are no liberties in Paraguay today and the rights of her citizens are not respected." Consequently Estigarribia and Riart were the only candidates in the election of April 30. General Estigarribia, who was commander-in-chief of Paraguay's victorious armies during the Chaco War and was serving as Minister to Washington at the time of his election, obtained 101,127 out of about 150,000 votes cast. He received a tumultuous welcome from 50,000 persons upon his arrival in Asunción on July 10 and was inaugurated for a four-year term on August 15.

United States Credits. In the period between his election and inauguration, General Estigarribia succeeded in negotiating a series of important economic and other agreements with the United States and Argentina that provided a base for his program of national rehabilitation.

Paraguay was in a desperate financial situation as a result of the Chaco conflict, which cost the republic an estimated \$10,000,000, and the ensuing irresponsible and extravagant military governments. Large outstanding debts remained unpaid, while successive budget deficits and the progressive depreciation of the Paraguayan peso made it

impossible to obtain further loans or credits from the usual sources.

On April 21 the Paiva Government concluded an important treaty with Bolivia providing for joint Paraguayan-Bolivian exploitation of part of Bolivia's oil exports (see BOLIVIA under *History* for details). In May one of the German agents sent to Bolivia to carry out the German-Bolivian barter agreement sought to bring Paraguay into the German barter system with a somewhat similar proposal. As agent of important German industrial concerns, he offered to carry out a public works and industrial development scheme desired by the Paraguayan Government. Payment was to be made through a surtax on petroleum products handled by the projected Paraguayan petroleum monopoly over a 25-year period. The scheme called for construction of an automobile highway from Asunción to the Brazilian frontier at Iguazu Falls and the establishment of tobacco factories and other industrial plants using products grown in the region to be opened up by the highway.

The Paraguayan Government rejected this offer in favor of financial aid proffered by the United States Government. Through an exchange of notes between General Estigarribia and Secretary of State Hull on June 13, the U.S. Export-Import Bank agreed to extend credits up to a maximum of \$500,000 to Paraguay for the purpose of checking the depreciation of the Paraguayan peso and liquidating commercial obligations to United States citizens. The Export-Import Bank also agreed to extend additional credits—later fixed at \$3,000,000—to finance the Paraguayan public works program. The first credit of \$500,000 was to expire on June 30, 1941, and advances made under it were to be repayable quarterly and carry an annual interest rate of 3.6 per cent. The second credit was to mature over a period of seven years, with interest at 5 per cent annually.

The Paraguayan Congress passed bills authorizing acceptance of both of these credits in September. It was stipulated that the \$3,000,000 credit be used to engage a United States company to construct a highway from Asunción to Villarrica (first stage of the Asunción-Iguazu road), sanitation works in Asunción, and minor port works. Repayment of both credits was to be made through issuance of 5 per cent bonds, the interest and amortization on which was to be met through import taxes on gasoline and other substitute inflammables, highway tolls, and other imposts on those using the public works after their construction.

General Estigarribia while in Washington also contracted for the services of a United States banking expert to transform the Bank of the Republic into a Central Bank. Earlier in the year Harold D. Gresham of the U.S. Tariff Commission was sent to Paraguay to act as adviser to the government in tariff and related matters.

Agreements with Argentina. En route from Washington to Asunción, General Estigarribia stopped for several weeks of negotiations with Argentine officials in Buenos Aires. As a result six treaties were signed by the Argentine and Paraguayan Foreign Ministers on July 5 (see ARGENTINA under *History* for details). These agreements eliminated several controversial issues endangering the relations between the two republics (see 1938 YEAR BOOK, p. 570). According to sentiments expressed in the Paraguayan

Senate, the establishment of a branch of the Bank of the Argentine Nation in Asunción, called for in one of the treaties, was expected to stimulate Paraguay's economic development and aid efforts to stabilize its currency.

Brazil in Paraguay. Argentina, which dominates Paraguay economically, was undoubtedly spurred into further measures of economic collaboration by the interest displayed in Paraguay by both the United States and Brazil. On June 25 a Brazilian-Paraguayan treaty for the promotion of their mutual commercial and cultural relations was signed in Rio de Janeiro. It called for the establishment of Brazilian banking agencies in Paraguay, construction of a railway connecting Asunción and the Brazilian capital, etc. According to the railway agreement, Brazil was to construct a line in the State of Matto Grosso from Campo Grande to Ponta Pora on the Paraguayan border (155 miles) and a branch line to Bella Vista in the same State (56 miles). The Paraguayan Government was to extend the Concepción-Horqueta railroad to Pedro Juan Caballero opposite Ponta Pora (93 miles), with a branch line to Bella Vista, Paraguay, which is directly opposite Bella Vista, Brazil.

Relations with Bolivia. While in Buenos Aires General Estigarribia had an interview with the Bolivian Foreign Minister, Alberto Ostria Gutiérrez, and lent every support to the Bolivian-Brazilian rapprochement. See BOLIVIA under *History*.

Other Developments. Late in May the Paraguayan Government dispatched several notes demanding the release of the Paraguayan chargé d'affaires in Burgos, who had been arrested by General Franco's police. The Franco Government complied. Early in January the Paraguayan Government cancelled all immigration permits issued since the end of November. The result was that some 500 Jewish refugees from Germany and Italy en route to Paraguay were stranded at Montevideo. The Paraguayan National Land Colonization Bureau refused to admit any immigrants who were not farmers. Alleged anti-democratic and anti-Paraguayan activities among some colonists were said to have influenced the government's attitude.

See URUGUAY under *History*.

PARAPSYCHOLOGY, OR PSYCHICAL RESEARCH. Extra-sensory perception (ESP) has continued through 1939 to dominate the attention of experimental investigators in the field of psychical research. Significant advances in methods have been made, primarily in the direction of security and substantiation, but also in the direction illuminating the nature of the process. Reports of significant results in ESP tests under extraordinarily guarded conditions have been reported by Murphy and Taves of Columbia University and by Pratt and Woodruff of Duke University, both reports appearing in the *Journal of Parapsychology*.

The year 1939 has also seen a very marked decrease in the number, vigor, and relevance of criticisms of the ESP research, and there has been, during the same time, a noticeable increase in the number of psychologists who accept the problem of ESP as one for experimental investigation in the psychological laboratory. For example, a symposium on extra-sensory perception was scheduled by the Southern Society for Philosophy and Psychology for its April meeting, and several papers were read which were favorable to

the hypothesis of ESP with discussion predominantly constructive in nature. Also, several recent psychology texts and laboratory manuals have included references to the ESP problem.

Murphy and Taves, mentioned above, found from an analysis of their results that subjects tended to vary in the same direction on different tests when given a four-part ESP task to perform at a single experimental session, which indicates that some extra-chance factor influences the subject's choices, even when the total deviations are within the range expected by chance. Pratt and Woodruff found that novelty introduced into the experimental situation (in the form of different sizes of symbols) enhanced the scores of their subjects, even though size differences per se were not important. Hettinger reports positive conclusions concerning experiments under the title of "ultra-perceptive faculty" in which he has evaluated, by statistical methods, statements of "sensitives" (mediums) in tests that are commonly known as "psychometry." Perhaps the significant point about this work is the fact that it was accepted as a Ph.D. thesis by the University of London.

Whately Carington, in England, has continued his study of personality identifications in mediumship and has published further advances in methodology. In the field of mathematical and statistical research, which has been stimulated by the work in ESP, the contributions of J. A. Greenwood of Duke University and T. N. E. Greville of the University of Michigan are outstanding.

The most sweeping attempt thus far made to place the phenomenon of extra-sensory perception in the order of the universe has been published during the year by the philosopher, O. L. Reiser (Pittsburgh). His rational treatment embraces the conceptions of emergent evolution, non-Aristotelian logic, and that of a psychic ether. Clairvoyance and telepathy are, according to this theory, emergents in the evolution of a "world mind" or psychic continuum analogous to the physical energy field.

Parapsychology suffered a very great loss in the death of William McDougall late in 1938. Professor McDougall was largely responsible for the present status of ESP research as a university study, having sponsored research in this field at Harvard and at Duke.

Several books have appeared in the year 1939 which are directly concerned with psychical research. One of the most readable books is by Dr. Charles Francis Potter entitled *Beyond the Senses*, a survey of the author's life work and opinions. The *Journal of Parapsychology*, an organ dealing with experimental findings in ESP, is now being edited by Gardner Murphy of Columbia University and Bernard F. Reiss of Hunter College.

J. B. RHINE.

PARENTS AND TEACHERS, THE NATIONAL CONGRESS OF. A national welfare body organized on Feb. 17, 1897, in Washington, D. C. The co-founders were Mrs. Theodore W. Birney and Mrs. Phoebe H. Hearst, both of Washington. The original name was "National Congress of Mothers." In 1908 the name was changed to "National Congress of Mothers and Parent-Teacher Associations," and again was changed to "National Congress of Parents and Teachers" in 1924. It functions through approximately 27,000 local

parent-teacher associations in urban and rural communities in every state, District of Columbia, Hawaii, and Alaska.

The local parent-teacher association has a three-fold purpose: To know the child through child study and parent education; to co-operate with the schools and other educational agencies in his training, through shared participation with teachers and educators; and to control and build his environment through the development of public opinion and civic activity.

The Congress membership as of Apr. 15, 1939, was 2,291,420. Persons interested in child welfare become members of the National Congress by joining a Congress parent-teacher association. The annual dues for membership in the National Congress is five cents. The life membership fee is \$50.

The P.T.A. is founded on the premise that the community itself is the true school of youth, and that all activities of the community tend to modify the development of children and young people. The P.T.A. capitalizes on all community institutions and sentiments that tend to improve the environment of children.

Because the objects of the organization are broad enough to cover practically all needs and interests of American children and youth, the program of work of the P.T.A. has been very flexible through the years. The fields covered include civic welfare, health, education, and family relationships.

The Congress publishes many books, leaflets, pamphlets, bulletins, and other publications on subjects of major interest to its local associations. The annual *Proceedings and Parent Education Yearbooks*; leaflets on organization and standing committee subjects; the *Parent-Teacher Manual*; and the monthly *National Congress Bulletin* are among the most widely used publications of the Congress. The *National Parent-Teacher* is its official magazine.

The Congress holds an annual convention in the spring to which its state branches send delegates. Reports and papers of permanent value presented at these meetings are included in the *Proceedings of the Convention*. The Board of Managers, composed of selected officers, chairmen of standing committees, and presidents of state branches, meets semi-annually.

The National Office of the Congress is located at 600 South Michigan Blvd., Chicago, Ill.

PARK, WILLIAM HALLOCK. An American bacteriologist, died in New York, Apr. 6, 1939, where he was born Dec. 30, 1863. Educated at the College of the City of New York (A.B., 1883), the College of Physicians and Surgeons, Columbia University (M.D., 1886), and in Vienna (1889-90), he joined the faculty of University and Bellevue Hospital Medical College, New York University in 1897, becoming Herman M. Biggs Professor of Preventive Medicine in 1933. Three years previously, he joined the New York City Board of Health. In 1937 he was retired as emeritus.

His most notable researches were carried out in the field of public health, and it was he who, in 1893, organized the first public health laboratory in New York City. The new laboratory, dedicated in 1936, was named in his honor. An outstanding specialist in the field of anti-toxins, his greatest success was with the diphtheria anti-toxin, which he developed in the early 1890's. His name was also associated with the bacteriology of milk control, the influence of pasteuriza-

tion on the health of infants, the epidemiology of influenza, pneumonia measles, poliomyelitis, and scarlet fever. He was an early advocate of the germ theory of contagious diseases and his long and faithful campaign against diphtheria may well be called his monument.

Dr. Park was not without honor in his own country. Upon reaching the retirement age in 1933, the City Government was prevailed upon to retain his services, and he was awarded the Sedgwick Medal of the American Public Health Association in 1932, which called him the "American pasteur"; the Public Welfare Medal of the National Academy of Sciences in that same year; the Townsend Harris Medal of the College of the City of New York (1933), the Roosevelt Medal (1935), and the George M. Kober Medal of the Association of American Physicians (1937).

After 1914, Dr. Park was consulting bacteriologist of the N. Y. State Department of Health; after 1917, medical examiner in bacteriology, and after 1921, consulting bacteriologist of the U.S. Quarantine Service. He served as president of the American Public Health Association in 1923, and besides contributions to the scientific press, was the author of *Pathogenic Microorganisms* (10th ed., 1933); *Public Health and Hygiene* (2d ed., 1927), and *Who's Who Among the Microbes* (1929).

PARK COLLEGE. A nonsectarian institution for the higher education of men and women at Parkville, Mo., founded in 1875 and co-operating with the Presbyterian Church in the United States of America. The enrollment for 1939-40 totaled 509; the faculty numbered 45. Endowment funds totaled \$1,300,000, from which the income was \$46,000. Tuition and fees amounted to \$138,000; donations to \$30,000, and the grounds, buildings, and equipment were valued at \$1,500,000. The library contained 30,769 volumes. President, William Lindsay Young, D.D., LL.D.

PATENT DUCTUS ARTERIOSUS, SURGICAL TREATMENT OF. See MEDICINE AND SURGERY.

PATENT OFFICE. Legislation recommended and drafted by the U.S. Department of Commerce and the U.S. Patent Office, to effectuate significant improvements in the patent system was enacted by the U.S. Congress in 1939 and still more important measures having the same purpose are to be considered at the session beginning in January, 1940. The amendatory acts now in effect provided for such changes in the procedure concerned with the examination and issue of applications as will correct abuses which the former statutes failed to prevent or to remedy, and at the same time will reduce the time and lessen the expense involved in obtaining decisions from the Patent Office. Most vital of the bills awaiting Congressional approval is that contemplating the establishment of a single court of patent appeals having jurisdiction throughout the United States and its Territories and virtually final authority in the determination of actions affecting the ownership, validity, and infringement of patents. This court would substitute for the ten appellate courts now having cognizance of such cases. The several measures already passed and those pending were approved by The Temporary National Economic Committee following its in-

vestigation of the patent system and were prompted by the most thorough scrutiny of the patent system undertaken in the last sixty years.

For the fifth time in six years the Patent Office reported a surplus at the close of the twelve months ended June 30, 1939. The average of these annual surpluses was \$135,721. For the ten years prior to July, 1934, the deficits varied from a minimum of \$134,433 to a maximum of \$827,342. The deficit of \$78,364 in 1936 was chargeable to increases in the salaries of a large number of junior examiners. Receipts of the Office in the fiscal year 1939 were \$4,742,617. The expenditures were \$4,615,505.

While the total of applications for patents (including reissues) and for registration of trade-marks, prints and labels filed in 1939 was slightly less than that for 1938 they exceeded the number received in any previous year since 1931. In the latest fiscal period 91,163 such applications were filed. Of these 66,166 were for patents for mechanical, chemical, and other such inventions; 7603 were for designs; 384 for reissues; 14,321 for registration of trade-marks and 2689 for registration of prints and labels. The corresponding figures for 1938 were: Applications for patents, 66,050; for designs, 8014; for reissues, 421; for registration of trade-marks 14,601, and for registration of prints and labels 2932, the aggregate being 92,506.

Patents granted in 1939 numbered 47,473. Of these 5154 were for designs; 52 for plants and 359 for reissues. Registrations of trade-marks and of prints and labels were respectively 10,591 and 2315. In 1938 there were issued 36,672 patents for inventions; 28 for plants and 5142 for designs. The reissues of patents numbered 343. In the same twelve months 5776 patents were issued to citizens of 56 foreign countries and their dependencies.

Litigation within the Office included 1232 interferences declared in patent cases and 95 interferences, 1140 oppositions and 147 cancellations instituted as to trade-marks. There were 4399 appeals to the Examiners-in-Chief. The miscellaneous activities of the Office included the receipt, disposition and indexing of 482,120 letters; the sale of 4,041,895 copies of patents; the typing of 3,063,700 words for the public; the furnishing of 1,011,874 photostats and 59,751 photographic copies of records, etc. The average number of employes of the Office in 1939 was 1355. Of these 693 were in the professional corps and the others in the clerical and custodial service. The salaries of the officials and employes totaled \$3,534,851.

CONWAY P. COE.

PEACE. An American Union for Concerted Peace Efforts was organized in Washington to carry out a three point program: To oppose aggression; to promote international justice between nations; to build adequate machinery for peace. It was attended by representatives of church, press, radio, educational, and labor organizations. The first work decided upon by the conference was to organize National Peace and Security Week, April 26 to May 3, to mobilize public opinion in opposition to any further aid to aggressors by the United States. The Peace and Security Week Committee, headed by Donald Richberg and Mrs. Henry F. Grady, included the Rt. Rev. G. Ashton Oldham and Dr. Henry A. Atkinson, of the World Alliance, Dr. Charles G. Fenwick of Bryn Mawr, William Green of the American Federa-

tion of Labor, Senator Claude Pepper, of Florida, Dr. James T. Shotwell, of the Carnegie Endowment for International Peace, Miss Josephine Schain of the National Committee on the Cause and Cure of War, and other prominent public leaders.

Fourteen pacifist groups were united into a "permanent strategy and co-ordinating committee" for the purpose of unifying all pacifist activities throughout the country in February in Washington. The groups unanimously resolved to revive the war referendum, the protest against the May bill, to congratulate the C.I.O. for its opposition to the bill for industrial mobilization, and to organize co-operative farms which would provide for the families of conscientious objectors in case of war. It was pointed out that the "war to end war" had brought about militarism, and the "war to make the world safe for democracy" had been followed by dictators. Among the pacifist groups represented at the conference were Labor Temple, War Resisters League, Pax Group (Roman Catholic), Student Peace Service, Fellowship of Reconciliation, Universal Peace League, Committee on Militarism in Education, Bronx Free Fellowship, Biosophical Institute, Youth Committee for the Oxford Pledge, Women's Peace Union, Women's International League for Peace and Freedom, American Friends Service Committee, and the Catholic Worker.

Pleas for an international conference for justice and peace, analysis of the difficulties to be met and a development of an agenda for such a conference characterized the Thirteenth Annual Meeting of the Roman Catholic Association for International Peace in Washington, April 10-11. The sessions of the conference were given over to presentation of papers for the Ethics, International Law and Organization, National Attitudes and Joint Policy Committees of the Association. Panel talks and discussion from the floor followed each Committee address. The proposal for an international conference was made for the Ethics Committee at the opening session of the Conference by the Rev. Charles C. Miltner, C.S.C. of the University of Notre Dame, Notre Dame, Indiana. "Although the outlook for international peace at the present moment is disheartening and war seems inevitable," Father Miltner declared, "now is the time when an international conference is not only necessary but desired by many." A conference to consider particularly the problems of economic justice, was called for in charity and social justice.

Six points were proclaimed, by the British Labor Party, as essential. They were: (1) No dictated Peace; (2) recognition of the right of each nation to develop its characteristic civilization; (3) complete abandonment of armed force as an instrument of policy; (4) recognition of the rights of national, racial, and religious minorities; (5) recognition of an international authority superior to the individual states; (6) abandonment of Imperialism . . . there must be equal access for all nations to markets and raw materials.

The British National Peace Petition reached its climax on Saturday, March 18, in the Queen's Hall, London. It appealed "for a New Peace Conference." Two days later, on March 20, the Prime Minister received at the House of Commons an influential deputation representing the signatories to the Petition. It was signed by 1,062,000 people. The petition read:

We, the undersigned, believing that permanent peace cannot be secured by competitive armaments, through sac-

rifices imposed upon small nations, or by exclusive arrangements between groups of major Powers, but only through a more fundamental and general settlement, urge the necessity for the holding of a New Peace Conference open to all nations and directed towards remedying the economic and political conditions likely to lead to war; and pray His Majesty's Government to take, in consultation with the President of the United States of America, the necessary steps to secure the holding of such a Conference, after adequate preparation, and to offer the fullest collaboration of this country in bringing the negotiations to a successful issue.

More and more the radio is coming into its own as an educational aid for world peace. Groups as well as individuals are finding broadcasts on world affairs a valuable basis for study and discussion. The Town Meeting of the Air, presented on Thursday evenings over the blue network of the National Broadcasting Company, is familiar to millions. Likewise, the University of Chicago Round table, held on Sunday afternoons is heard by large audiences.

The Foreign Policy Association has put on a series of talks entitled "America Looks Abroad" on Sunday afternoons. The Commission to Study the Organization of Peace has inaugurated a Sunday evening program. Dr. Shotwell, Chairman of the Commission, acts as master of ceremonies and specialists on various phases of international relations state their views. A student Round Table discussion on the basis of peace, under the same auspices and beginning on the same date, is heard on Saturday afternoons. In this way large audiences are reached with peace arguments who were heretofore untouched.

In December, 1939, the anniversary of the signing of the Treaty of Ghent, which brought the War of 1812 to an end, was observed. For 125 years, the United States has been at peace with Canada. For nearly a century and a quarter the 3000 miles of border between the United States and her northern neighbor have been unfortified. For four generations the keystone of Canadian-American relations has been co-operation and good-will. The Committee on Relations with Canada urged that churches throughout the country remember this victory of peace in their services on one of the latter Sundays in December. Cardinal Villeneuve, Archbishop of Quebec, said, "Let us be grateful to God for such friendly feeling and let us hope that they may ever continue."

The peace exhibit at the Golden Gate International Exposition was one of the most timely and effective of the Fair's projects. Focal point of the project was a 30-ft. prismatic glass "Peace Beacon," which housed the display of colored transparencies showing productive activities in a peaceful community and positive ways to peace action. The visitor as he looked at this display, heard the "Voice of Peace," but only after passing through the war exhibit in a dimly lighted room where war movie flashes were shown, together with transparencies illustrating the cost of war in life and property.

A Trujillo peace prize of 50,000 pesos was established in the Dominican Republic by a law signed by President Peynado. It will be awarded annually to "individuals, societies, associations, or organizations that have most notably worked for the re-establishment or strengthening of peace between nations or for the spread or development or positive consecration of the principles or doctrines on which such peace is based." In addition to the money, individuals will receive a gold medal and a diploma, while organizations will be given a bronze plaque and a diploma.

The Wateler Peace prize was founded in 1931 by J. G. D. Wateler, Netherlands banker, who willed a sum to the Carnegie Institute which administers the Hague Peace Palace. From the revenues of this sum (about 9500 florins or \$9000) an annual prize is awarded alternately to a Netherlander or a Netherlands society and to a foreigner or foreign society. In 1939, the directors of the Foundation announced an award of the Wateler Prize to the American Friends Service Committee and the Friends Service Council, London, for their assistance to those suffering in various parts of the world.

Judge Michael Hansson, director of the Nansen Office for Refugees in Geneva, received the £8500 Nobel Peace Prize on behalf of his office at a ceremony at the Nobel Institute at Oslo on December 10. The Nansen Office is to be merged at the end of this year with the International Commission for Refugees in London. The New High Commissioner will be Sir Herbert Emerson.

PENNSYLVANIA. Area and Population. Area, 45,126 square miles, exclusive of State's waters in Lake Erie, but including (1930) other waters, 294 square miles. Population: Apr. 1, 1930 (census), 9,631,350; July 1, 1937 (Federal estimate), 10,176,000; 1920 (census), 8,720,017. Philadelphia (1930) had 1,950,961 inhabitants; Pittsburgh, 669,817; Scranton, 143,433; Reading, 111,171; Harrisburg, the capital, 80,339.

Agriculture. Pennsylvania's farms harvested, in 1939, 6,217,400 acres of principal crops. Nearly four-fifths of this acreage was in hay, wheat, and corn. Tame hay, on 2,406,000 acres, totaled 2,658,000 tons (estimated farm value, \$31,099,000); wheat, 926,000 acres, 19,421,000 bu. (\$15,731,000); corn, 1,368,000 acres, 58,140,000 bu. (\$37,791,000); potatoes, 187,000 acres, 22,440,000 bu. (\$20,196,000); oats, 906,000 acres, 26,274,000 bu. (\$10,510,000); apples gathered for the market totaled 6,100,000 bu. (\$3,965,000); peaches, 2,618,000 bu. (\$2,749,000); tobacco, on 27,200 acres, 36,239,000 lb. (\$4,920,000); barley, 124,000 acres, 3,658,000 bu. (\$1,939,000).

Manufacturing. As shown in 1939 by the U.S. Census of Manufactures covering 1937, totals for Pennsylvania (with figures for 1935 in parenthesis) were: Active manufacturing establishments, 13,084 (12,926); their wage-earners, 954,340 (814,670); wages paid, \$1,176,957,270 (\$816,022,112); value of manufactured products, \$6,032,083,005 (\$4,191,368,642); part of this value contributed by processes of manufacture, \$2,664,410,319 (\$1,870,467,258). The figures evidenced a conspicuous gain over the period from 1935 to 1937: though still behind New York in totals for 1937, Pennsylvania exceeded New York in amount of gains made over that period.

Steel-making, the leading industry, employed 165,952 wage-earners, paid them \$272,636,738, and produced \$1,109,843,763. The manufacture of divers kinds of garments approximated \$383,000,000, to include \$40,947,613 in boots and shoes,

\$116,119,197 in hosiery, and totals in two dozen other classifications. The refining of petroleum produced \$259,696,775. The output of blast furnaces totaled \$229,075,759; electrical machinery, apparatus, and supplies were made to the total of \$207,506,310. The output of miscellaneous machinery, \$94,189,447, was but a fraction of the value of all the machinery produced, such as engines, motor-driven vehicles, and many other lines separately itemized.

Philadelphia numbered, in 1937, 4147 manufacturing establishments, paying 213,851 wage-earners a year's pay of \$257,327,331, and producing goods that amounted to \$1,493,638,124. Pittsburgh had 1046 manufacturing establishments, whose 51,040 wage-earners received \$71,874,182, and which produced \$401,473,349 in goods.

Mineral Production. The total value of the yearly production of the native minerals of Pennsylvania, reported in 1939 as \$599,817,364 for 1937, was below the corresponding total for Texas and above that for any other State of the Union.

The output of bituminous coal dropped sharply, by 30 per cent, to a total of about 77,040,000 net tons for 1938, from 111,002,289 tons, \$228,665,000 value, for 1937. The anthracite mines produced about 46,099,000 net tons of hard coal in 1938, as against 51,856,433 in 1937; by value, \$180,600,167 (1938) and \$197,599,000 (1937). The drop in the anthracite output of 1938 was attributed in part to warmer than average winter temperatures and in part to the competition of other kinds of fuel for the residential consumer. The year's commercial shipments of anthracite, being exclusive of coal used by the collieries, employees, etc., totaled less than the production; for 1938, they came to 41,064,000 tons; for 1937, to 46,203,000. The production of anthracite attained a lower total quantity for 1938 than for either of the depressed years 1932 and 1933. The unauthorized taking of coal by miners working unlawfully for their own gain in companies' property went on unhindered by the authorities. The State's Department of Mines estimated that this illicit output amounted to 2,500,000 tons for 1938.

Production of petroleum diminished to 17,426,000 barrels approximately, for 1938, from 19,189,000 (value, \$49,300,000), for 1937. All the product of the State's wells was of the well-defined Pennsylvania grade, superior for special uses and thus regularly commanding higher prices than ordinary petroleum; the price of the State's product averaged 30 per cent less for 1938 than for 1937, and this depressed both output and the drilling of new wells. The quantity of natural gas produced in Pennsylvania and delivered to consumers there or elsewhere totaled 115,928 million cu. ft. for 1937; the value of this output was \$20,206,000 at the wells and \$41,842,000 at the points where the gas was consumed. Later corresponding figures were not at hand; production for 1938, however, was reported as lower and drilling activity diminished. The output of cement declined at much the same ratio as that for the entire Union; Pennsylvania continued in 1938 to make about one-fifth of the Nation's yearly total of Portland cement, but the quantity of the output decreased to 21,082,966 barrels for 1938, from 22,952,603 for 1937, and the corresponding value to \$28,242,913, from \$31,917,831. Clay products, exclusive of pottery and refractories, amounted in value to \$11,713,891 for 1937. The fabrication of pottery, no longer included in the totals of the State's mineral output as calculated by the U.S. Bureau

of Mines, had attained for 1936 a yearly output in excess of \$19,000,000.

Coke, produced almost wholly from native coal, diminished in yearly output to 7,606,799 net tons for 1938, from 16,260,310 tons (value, \$65,841,452) for 1937. Blast furnaces shipped 4,684,017 gross tons of pig iron (1938) as against 11,036,467 tons in 1937; by value, \$101,266,844 (1938) and \$239,838,942 (1937). Output of open-hearth steel sank to 7,072,157 gross tons (1938) from 14,561,700 tons (1937); that of Bessemer steel, to 348,060 gross tons, from 830,440.

Education. For the academic year 1937-38, the latest covered by the data that follow, Pennsylvania's inhabitants of school age ($5\frac{1}{2}$ years to 18) were reported as 2,201,577. Pupils' enrollments in the public schools numbered 1,909,747; this comprised 1,258,619 in elementary study and 651,128 in high schools. Outside these totals were 35,241 enrollments in kindergartens. Exclusive of tuition paid for students from some school districts, the year's expenditure for public-school education amounted to \$226,945,078. The public schools' teachers, supervisors, and administrators numbered 64,043.

Legislation. The Legislature convened in regular biennial session January 3 and adjourned May 30. The Republican group controlled the Senate by a scant majority and held the House by a lead of 50 votes. Thus composed, the Legislature acted in accord with Governor James on several principal features of the work in hand. These included the revision of the State's methods in the administration of poor-relief, the reduction of expenditure where possible, the adoption of restrictions upon the conduct of organized labor, and the creation of a State agency to foster business and industry. The session failed to carry out James's recommendations for revising the law as to liquor, improving the condition of the ailing anthracite industry, and altering the State's system for the regulation of the price for milk.

Legislation as to poor-relief involved both budgetary appropriation for the next two years' cost to the State and changes in the law as to the recipients and the dispensing organization. The State's payment toward support of the poor in the biennium ended with June 30 approximated \$200,000,000; the appropriation for such payment, to cover the two years thereafter, totaled \$127,440,000, as passed by the Legislature, but only \$120,940,000 as cut down by executive trimming subsequent to legislative action. Apart from this sum, the Legislature voted \$12,000,000 in January, to meet the deficiency in funds for poor-relief prior to June, when the new fiscal year began; this deficiency appropriation resulted from the exhaustion of the money appropriated by the Earle Legislature. Governor James had originally recommended the appropriation, for poor-relief in the coming biennium, of \$128,000,000; in cutting the total to less than \$121,000,000, he was impelled by the need to reduce the budget at the last moment. Dealing with recipients of poor-relief, an act was passed requiring the able-bodied to accept such work as the State government, public bodies, and organized charities might offer, on penalty of being shut off from State support; employers were allowed, likewise, to call upon recipients to work for them, on condition that the pay should attain the rate prevalent for like work at the same place and time. Another act gave the Governor authority to discharge relief workers at the demand of any of the County Assistance Boards

but provided that the vacancies be filled through examinations under the system of civil service.

The biennial budget as passed by the Legislature carried a total of \$376,065,000, after the Governor had vetoed more than \$10,000,000 in items of appropriation. Its three chief heads were: deficits from the previous biennium, \$49,315,000; general appropriations, \$168,081,000; special aid for the poor, institutions, etc., \$158,669,000. Outside the budget, expenditures from specially assigned revenues were expected to bring the State's outgo for the two years up to \$500,000,000 or higher. Appropriations as finally approved brought the expenditures into approximate balance with the estimated applicable revenues and thus fulfilled one of the main objects of the James administration. Grave doubt, however, was expressed at the time, as to whether the State could reduce the cost of poor-aid sufficiently to obviate supplementary appropriation within the two-year period.

The Republican administration's purpose of creating no new taxes was fulfilled. All idea of abolishing major taxes bequeathed by the Earle administration, however, was abandoned. The eight special taxes that it had created as temporary expedients, to produce about \$81,500,000 a year, were accordingly re-enacted. In the order of the size of their yields these taxes were: corporate net-income tax, at 7 per cent; emergency gasoline tax, at 1 cent a gallon; personal-property tax, at 4 mills on the dollar; cigarette tax, at 1 cent on ten; sales tax on liquor, at 10 per cent of price; additional tax on public utilities' gross receipts, at 8 mills; on banks' and trust companies' shares, an additional 4 and 3 mills, respectively.

The session's labor-relations act amended the like-named State act of 1937 in a manner most important to industry and to the social structure. The earlier act had given employees' organizations, in matters within the State's jurisdiction, special rights before a State Labor Board, similar to rights before the NLRB, given by the Federal Labor Act with regard to the field of Federal jurisdiction. The State act of 1939 extended to employers rights in many respects balancing those already given employees' organizations. In particular, the State Labor Board was required to investigate labor disputes on the employer's petition; the seizure of the employer's premises was forbidden; an employee was forbidden to coerce another into joining a union or to coerce an employer into granting employees' demands; the check-off, or payment of employee's dues to a labor union by the employer, directly, as a deduction from the pay envelope, was made unlawful unless authorized by a majority of the employees and, further, allowed by each affected employee in writing; craft unions within an industry were specifically allowed to choose their own agents for bargaining with employers. The anti-injunction act of 1937 was amended in much the same spirit, to allow State courts to enjoin when a valid labor contract had been violated, when a striking union lacked a majority of the employees, and when employees seized or damaged property. Both the labor measures went through past strong laborite protest.

While little in favor of most of the works of the outgoing Democratic regime, the Legislature carried out a task started by the crime commission that Governor Earle had appointed. This commission recommended giving the State a uniform system, under a single board, for the paroling of offenders. Accordingly the State Parole Board

was created, to have five members appointed by the Superior Court, and to give supervision to the paroling of prisoners in all State and county institutions, with one exception; the existing Board of Pardons was to retain its jurisdiction over the cases of those convicted of murder. In the field of the civil service, a Civil Service Commission was created, to co-ordinate the separate authorities regulating the selection and protecting the employment of workers in the Department of Public Assistance, the system of liquor control, and the unemployment-compensation offices. For school districts in particular distress for money, a special appropriation of \$3,000,000 was made; the big school districts were authorized to issue 10-year bonds for the means to continue operating, and to the amount of uncollected current taxes. The age at which teachers in public schools must retire was made to diminish yearly, from 70 years in 1939, to 62 years, the limit in and after 1947. Bills favored by the State Medical Society and passed by the Legislature laid a legal foundation for the establishment of non-profit-making medical corporations that would supply the service of salaried physicians to people of low income out of payments made by these at a low monthly rate when in health. Acts like those already on the books in many other States were passed to require applicants for marriage licenses to undergo tests for syphilis and to require tests for the same purpose in cases of pregnancy. Laws inspired by recent proceedings against the outgoing Democratic regime included an "anti-macing" act sponsored by Governor James. To mace, in Pennsylvanian parlance, is to extort by political influence, as from a jobholder; the act made political organizations' demands for contributions from public employees and recipients of poor-relief unlawful. Acts passed by the special session of the previous Legislature in 1938, to prevent a grand jury's investigation of Governor Earle's regime, were repealed. The registration of aliens was required (see IMMIGRATION AND EMIGRATION).

A great part of the attention of the session was given to Philadelphia. The draft of a new charter for the city, submitted in 1938, came before the legislators by way of several bills, none of which achieved passage. The rate at which the city must pay off its accumulated deficit was reduced by enactment to \$2,500,000 a year, from \$5,000,000. The President of the City Council was made the lawful successor of the Mayor in case of vacancy; the successor designated in 1937, the City Controller, was thus eliminated in favor of a Republican officer. Back pay, withheld by the city since as early as 1932, was made payable in 1940, at an average of \$144 to each man, to some 7000 police and firemen.

Political and Other Events. Arthur H. James, who took office as Governor on January 17, had adequate Republican support in the Legislature and was in a position to take many needful steps to rid the State government of excessive expenditure and bring it out of the troubles left by the Earle administration. In his inaugural address he promised economy, undertook to make the State live within its means, and asked general co-operation in the task of taking care of the State's indigents. He replaced with his own appointees the members of a number of administrative bodies, including the Department of Assistance and the Delaware River Commission's three Democratic members. Insisting that the Public Utility Commission reduce its budget for the cur-

rent period to end with May 31, he cut off the commission's authority to draw on State funds in order to force its compliance. By revising the plan of road construction he sought to effect more extensive employment of indigents receiving public support on work in this field; he suspended work on the construction of an expensive "escape-proof" State prison at Mount Gretna. By various means he reduced the number of those on the State's payroll by an estimated 2538 up to the end of August, in those of the State's departments over which he had control; this saved \$3,701,379 out of an annual payroll of \$21,241,005; the sum constituted only a small part of the State's annual expenditure, but the reduction was considerable in relation to the total.

The Tax Problem. A report on the State's situation as to taxes was rendered (March 13) by the Industrial Tax Survey Committee (Dent Committee), a body created in 1937 by the Legislature to study the subject. The report denied that conclusive evidence had been found to show that the disquieting tendency of industrial establishments to remove from the State resulted from oppressive taxes, but it found that existing taxes retarded the expansion of industry; it recommended the creation of a State Tax Commission to replace the Department of Revenue and shape permanent and consistent policies, the granting of relief to ailing industries, reduction of the tax on invested capital, restriction of the tax per ton of coal for workmen's compensation in the mines, the radical reduction of the rates of taxation on personal property and on capital stock, and the creation of a graduated tax on incomes. No statement was made as to the taxing record of the Earle administration.

Prosecution of Ex-Officials. District Attorney Carl B. Shelley of Dauphin County had brought before a grand jury at Harrisburg, in 1938, matters relating to the conduct of several of Governor Earle's chief subordinates. The grand jury's inquiry continued into 1939. It brought forth indictments (March 9) charging ex-Secretary of Highways Roy E. Brownmiller with misusing highway funds to pay people in Luzerne County just before the election in the previous November; ex-Secretary of the Commonwealth David L. Lawrence, with "macing," extracting contributions from State employees through divers forms of pressure; and ex-Secretary of Labor Ralph M. Bashore, with the like offence. Other indictments found against Lawrence (January 7) had to do with the State's purchase of 57,000 tons of gravel from a firm in Erie and Warren counties. Brownmiller, tried in Dauphin County, was found guilty (June 25) of fraudulent use of State funds in connection with the payroll in Luzerne County; he was sentenced to serve a year in prison and pay a fine of \$3000 and took appeal to the State Superior Court. Separate but related indictments brought against him in Luzerne County were dismissed for technical imperfections, after considerable delay, and redrawn. In the original trial ex-Governor Earle testified that he had not approved a transfer of \$1,025,337 from the motor-license fund to meet the cost of the alleged payroll-padding in Luzerne. Another witness indicated that the effort had been to add 12,000 to the payroll there, shortly before the November election. Lawrence was tried for conspiracy and blackmail, upon charges related to the Erie gravel dealings. He was acquitted of these charges on December 8.

Social Problems of the State. The difficulty of meeting the cost of poor-aid continued to provide the most pressing social problem. The number of "cases" (commonly families) listed as receiving this aid tended to increase during the first half of the year; the total for July, 279,548, exceeded that for June by nearly 6 per cent and that for July, 1938, by 20.9 per cent. In part this rise resulted from the WPA's discharge of clients, who then came to depend on State aid. Rapid acceleration in some of the chief industries, attending the outbreak of European war in September, took care of some of the dependents. It thus helped Governor James put off the calling of a special session, needful as soon as the exhaustion of the appropriated means at hand should threaten the recipients with loss of support. Effort was made, in accordance with statutory provision and with the Governor's policy, to connect the more capable dependents with public work where possible. James, in letters to Administrator Harrington in December, charged the WPA with having skimmed on Federal dispensations in Pennsylvania since the incoming of the Republican regime.

The cause of medical insurance was advanced when the Medical Service Association of Pennsylvania offered (August 12) for the approval of the State's insurance authorities a schedule of proposed rates; these set the cost of the medical services offered by the Association at \$2.50 a month, whether needed or not, for single individuals; \$4.50, for husband and wife, both; and \$1 a month for each additional member of the family. The State Medical Society approved and furthered the enterprise; there was expectation that the service would begin early in 1940.

Courts' Decisions. The State Supreme Court upheld (September 25) the validity of the State's tax on the franchises of non-resident corporations to do business, a lucrative tax that the Dauphin County Court had some months before declared unconstitutional, to the prospective embarrassment of the State by the loss of millions in anticipated revenue and the prospect of having to restore \$26,000,000 previously collected. On the other hand, the Supreme Court ruled (June 19) that the tax on chain stores was invalid; it held unconstitutional parts of the workmen's compensation law, recently added, forbidding that a workman's disobedience of orders or regulations should bar him from compensation if hurt, denying credence to anything favorable to the employer that an employee had said within 12 hours after being hurt, and otherwise handicapping defense against claims; it permitted the holding of elections in individual counties, on the question of local option, although the liquor act of 1937 had encumbered permission therefor with a peculiar limitation by calendar that would apparently have prevented any such election before the year 2000; it affirmed the power of the Board of Public Education, of Philadelphia, to reduce salaries of teachers by nearly \$8,000,000 for the year, to the minimum rates set by statute; it dismissed (January 11) the appeal of 205 employees of the leather-manufacturers McNeely and Price, Inc., from a permanent injunction issued against them by a lower court in connection with their seizure and occupation of the employer's premises.

The U.S. Supreme Court decided (February 27) the Fansteel Metallurgical Corporation case, the most prominent of the suits arising from the seizures of premises by strikers in Pennsylvania during the violent strikes of 1937; its decision

(see SUPREME COURT) condemned as lawless the practise of such seizures and upheld a lower court's denial of the right of the NLRB to compel the company to re-employ all the offenders. A Federal Circuit Court's decision (November 29) in a case of the Apex Hosiery Company for damages on account of strikers' seizure of the plant, set aside judgment, by a lower court, for \$711,932 in treble damages.

The contest of 50 railroad companies against the full-crew law enacted in 1937, during Earle's governorship reached a decision in the Dauphin County Court, to which it had been recommitted by the State Supreme Court; this decision (March 15) held the law incompatible with the State constitution and not substantially promotive of safety; the enforcement of the law was permanently enjoined. The decision, on appeal, was upheld by the State's Supreme Court (November 27). See PRISONS.

Events in Philadelphia. Mayor S. Davis Wilson died on August 19. Indictments standing against him at the time of his death had been found by a grand jury called in 1938 by Judge Bok to investigate vice and gambling. Judge McDevitt dismissed them a few days after Wilson's death, declaring that they nowhere charged bad faith or corruption. The City Council selected one of its members, George Connell, to succeed Wilson, despite a provision in the city charter, disqualifying a Councilman from becoming Mayor during the term for which he had been elected to the Council. As Wilson's elected successor the vote cast at the election on November 7 chose Robert E. Lamberton (Rep.) by a small plurality. Both Connell and Mayor-Elect Lamberton helped speed the Councils' creation, in December, of a tax to overcome the deficit in the city's budget for 1940. This impost levied 1½ per cent on gross earned incomes—mainly, on wages and salaries.

For several months early in 1939 the city, bound by its charter to make no expenditures until the budget for the year had been balanced, struggled to keep the public services going. The city had to seek orders from the State Supreme Court on successive occasions from January until July, allowing it to pay its employees. During this time the City Council, having bowed to the popular disfavor backing the Mayor's veto (January 7) of a 3-per cent sales tax, endeavored to pave the financial way ahead for a time by the sale, for a sum in hand, of the rents to come from the municipally owned gas works. The State Supreme Court decided (March 24), in a preliminary proceeding, that the city could lawfully sell these rents, which came to \$4,200,000 a year. A contract was made under which the city received, July 31, \$41,000,000 and granted in return 12½ years' rents from the gas works, and if needful, the rents of 18 years; the RFC advanced half of the money; the rest came from a group of banks. Most of the lump sum received was due on a debt of \$34,000,000 approximately, the accumulation of a series of yearly deficits.

Frank A. Craven, former deputy warden of the Philadelphia County Prison, was convicted of manslaughter in the deaths of convicts punished by confinement in steam-heated quarters during a hot spell in August, 1938, and sentenced to (July 7) prison for from one to three years. Through most of 1939 were held the trials of members of a group of assassins to whom the murders, for payment from ill-wishers (fre-

quently spouses), of about 70 persons of Italian extraction were said to have been imputed. The supposed chief of the assassins, Herman Petrillo was sentenced to death, and a number of other defendants were convicted or pleaded guilty.

Officers. Pennsylvania's chief officers, serving in 1939, were: Governor, Arthur H. James (Rep.); Lieutenant-Governor, Samuel S. Lewis; Secretary of Internal Affairs, William S. Liven-good, Jr.; Secretary of the Commonwealth, Sophia M. R. O'Hara; Auditor-General, Warren R. Roberts; Treasurer, F. Clair Ross; Attorney-General, Claude T. Reno; Superintendent of Public Instruction, Francis B. Haas.

PENNSYLVANIA, UNIVERSITY OF. A non-sectarian institution of higher education in Philadelphia, founded in 1740. It is composed of the college of arts and sciences, the college of liberal arts for women, the Towne Scientific School (engineering and chemistry), the Moore School of Electrical Engineering, the Wharton School of Finance and Commerce, the school of fine arts (architecture, fine arts, music), the school of education, the graduate school, and the professional schools of medicine, graduate medicine, law, dentistry, veterinary medicine. An affiliation exists with the Pennsylvania School of Social Work under which students in that School may, under certain conditions, receive University certificates and degrees. The 1938 autumn enrollment was 17,161, including all schools and departments. Of those enrolled 7059 were registered in the undergraduate schools, 3229 were registered in the graduate and professional schools, 6873 were registered in the evening, extension, and summer schools. The enrollment of the 1939 summer school was 1882. The faculty numbered 1565. The productive funds amounted to \$22,323,236. The income for the year from all sources, was \$7,031,658. The library contained 901,164 bound volumes and 219,000 pamphlets. President, Thomas S. Gates, Ph.B., LL.B., LL.D.

PENNSYLVANIA STATE COLLEGE, THE. A State-supported nonsectarian institution for the higher education of men and women at State College, Pa., founded in 1855. On Nov. 1, 1939, the undergraduate enrollment totaled 6422 and the graduate and special enrollments, 778. The 1939 summer-session enrollment was 3482 (net). The resident faculty numbered 593 with the rank of instructor or above; the extension faculty numbered 646, of whom 362 were on a full-time basis. The productive funds amounted to approximately \$517,000, and the income for operation for the previous fiscal year was \$5,892,525. The library contained 200,000 volumes. Resident instruction is supervised by the following seven undergraduate schools and the Graduate School. The undergraduate schools are: Agriculture, Chemistry and Physics, Education, Engineering, Liberal Arts, Mineral Industries, and Physical Education and Athletics. During the fall of 1939, nine major buildings included in the General State Authority-Public Works Administration construction programme, started in the spring of 1938, were completed. They were awaiting the installation of equipment and were expected to be pressed into service in 1940. The total investment in this project is expected to reach \$5,000,000 and will increase the total value of grounds and buildings to \$16,500,000. President, Ralph D. Hetzel, LL.D.

PERFORMING RIGHT SOCIETIES. Co-operative associations of composers, authors, and publishers of music which function as clearing houses for the licensing of public performance of members' copyright music. These societies exist throughout the world, with an international affiliation comprising some 45,000 members. Such societies are founded upon the principle in copyright law that the right to control public performance for profit is vested in the copyright owner.

The American Society of Composers, Authors and Publishers (ASCAP) is chief performing right society in the United States and sole affiliate in this country of the principal foreign societies. Organized Feb. 13, 1914, by Victor Herbert, it is a voluntary non-profit association, now numbering (1939), 1200 members, all of whom assign to the Society their performing rights under the copyright law. ASCAP issues 30,000 licenses annually in the United States to users of music in public performances for profit. Fees vary in proportion to the use of music. Revenue is distributed quarterly among members of ASCAP and foreign affiliates. Foreign societies similarly represent the interests of ASCAP.

ASCAP from its beginning has encountered hostility from organized users of music. With the decimation of sheet music sales in the radio age, composers have come to depend more upon income from exercise of performing rights than from sales royalties. Currently ASCAP's chief opponent is the National Association of Broadcasters, which in August, 1939, launched plans to replace ASCAP's musical reservoir with an independent catalogue to be available with the expiration of ASCAP-radio contracts Dec. 31, 1940. During 1939 ASCAP conducted a vigorous campaign to nullify hostile laws enacted in several states. These laws would outlaw ASCAP's licensing methods. ASCAP challenged the validity of such laws (Washington, Montana, Nebraska, Tennessee, Florida) asserting that since they bar ASCAP members from copyright protection they are unconstitutional. Decision has not been reached (November, 1939), on these cases.

During 1939, nearly 100 of the leading law schools participated in the annual Nathan Burkan Memorial Competition, a copyright law essay contest sponsored by ASCAP which gives a \$100 prize for the best essay from each of the schools. ASCAP's Festival of American Music, a week of free concerts of exclusively American music, at Carnegie Hall, October 1-7, was generally appraised as the most ambitious undertaking of its kind in American musical history.

Officers of ASCAP (1939) are: Gene Buck, President; Louis Bernstein, Vice-President; Otto A. Harbach, Vice-President; George W. Meyer, Secretary; Gustave Schirmer, Treasurer. Headquarters are at 30 Rockefeller Plaza, New York City.

PERLIS. See UNFEDERATED MALAY STATES.

PERMANENT COURT OF INTERNATIONAL JUSTICE. See WORLD COURT.

PERSIA. See IRAN.

PERU. A republic on the west central coast of South America. Capital, Lima.

Area and Population. Area, about 430,000 square miles, exclusive of approximately 120,000 square miles between the Marañón and Ambiyacu rivers on the eastern slope of the Andes claimed by both Peru and Ecuador. Estimated population on Dec. 31, 1937, 7,100,000. With the exception of about 600,000 whites and a few Asiatics, the inhabitants are of Indian and mixed Indian and white blood. Registered living births in 1937 numbered 170,229; deaths, 86,949; marriages, 21,424. In August, 1936, there were 48,317 foreigners in Peru (22,560 Japanese). Estimated populations of the chief cities (1936) were: Lima, 370,000; Callao, 75,000; Arequipa, 46,000; Cusco, 40,000; Iquitos, 40,000; Chiclayo, 35,000.

Defense. Military service is compulsory, but not all eligible youths are conscripted. The French-trained army in 1938 had 1343 officers and 10,860 in other ranks; Italian-trained police and gendarmerie, about 8000; navy, 2 obsolete cruisers, 2 destroyers, 1 torpedo boat, 4 submarines, 7 river gunboats. A United States naval mission was engaged in 1938. There is a relatively strong air force, trained by Italian officers. Of the total 1939 budget appropriations, 14 per cent went to the army and 8 per cent to the navy and air force.

Education and Religion. About half the population is illiterate. Eleven per cent of the 1939 budget went to education. In 1937 there were 4697 primary schools, with 471,304 pupils; 147 secondary schools, with about 22,474 students; 7 normal schools, with 649 students; 26 vocational schools; and 5 universities, with about 4500 students. See *History*.

Roman Catholicism, the predominant religion, is protected by the state. Only Roman Catholic religious instruction is permitted in state and private schools.

Production. Agriculture, stock raising and mining are the principal occupations. Mineral products comprised 65.1 per cent of all 1938 exports; agricultural, 27.4 per cent; animal, 5.1 per cent. Yields of the chief crops were (in metric tons): Wheat, 90,300 in 1937-38; coffee (exports), 3000 in 1938-39; cane sugar, 397,000 in 1938-39; cotton, 81,500 in 1937-38. Wool production in 1937 was about 9400 metric tons.

Output of the chief minerals in 1938 was (in metric tons): Crude petroleum, 2,100,000; coal, 115,000; salt, 42,000; copper (smelter), 36,000; lead (smelter), 28,500; tungsten ore, 102; antimony ore (metal content), 673; molybdenum ore (metal content), 92; silver, 635.3; gold, 7915 kilograms. Industrial establishments include petroleum and ore refining plants, and factories for cotton textiles, knit goods, hats, food products, beverages, furniture, leather, shoes, glass, soap, and cement.

Foreign Trade. Including specie, imports in 1938 totaled 260,158,735 soles (255,787,000 in 1939); exports, 342,128,640 soles (381,421,000). Values of the chief 1938 exports were (in 1000 soles): Crude petroleum, 73,499; cotton, 60,567; copper bars, 57,890; petroleum derivatives, 42,438; sugar, 24,948; mineral concentrates, 14,516; wool, 11,071; mineral ores, 10,172. The United States supplied 34.3 per cent of the 1938 imports (35.5 in 1937); Germany, 20.3 (19.7); Great Britain, 10.1 (10.3). Of the exports, the United States took 26.8 per cent (22.2 in 1937); Great Britain, 20 (22.8); Germany, 10.6 (13.7). See **IMPORTS AND EXPORTS**.

Finance. Final budget returns for 1938 showed receipts of 184,546,000 soles and expenditures of

183,531,000 soles. The 1939 budget estimates balanced at 174,700,000 soles. The public debt on Dec. 31, 1938, totaled 778,300,000 soles (external, 497,992,000; internal, 73,985,000; floating and short-term, 206,323,000). The sol exchanged at 4.46 to the U.S. dollar in 1938 and at 5.33 in 1939 (free bank rate).

Transportation. Peru has about 2624 miles of railway lines (579 miles state owned). In October, 1938, there were 14,074 miles of roads open to traffic, an increase of 501 miles over October, 1937. The Central Highway from Lima across the Andes was extended to Pucallpa on the Lower Ucayali River during 1939. From this point the Ucayali and Marañón rivers were navigable to Iquitos, port for ocean-going vessels 2300 miles from the mouth of the Amazon. On July 25 the 704-mile stretch of the Pan American Highway between Lima and Arequipa was officially opened. There were 6018 miles of air lines in 1939. In 1938 planes of the five Peruvian air companies flew 1,668,612 miles, carrying 26,453 passengers, 107,795 lb. of mail, 20,452 lb. of parcels, and 584 tons of express. New air lines were opened in 1939 between Lima and Iquitos, Lima and Cusco, and between Lima and Tarapoto. During 1939 work proceeded on the new port of Matarani in southern Peru and on additional harbor works at Callao. The tonnage of vessels entering all ports with cargo and in ballast in 1938 was 16,464,000.

Government. The Constitution of Apr. 9, 1933, vested executive power in a President elected for five years and ineligible for re-election. Legislative power was vested in a bicameral Congress. Suffrage was restricted to literate males of 21 years or older. The government-controlled Constituent Assembly, functioning as Congress, annulled the Presidential and Congressional elections of Oct. 11, 1936, when the electoral count showed an anti-government trend. On Nov. 14, 1936, it extended President Oscar R. Benavides' term of office for three years to Dec. 8, 1939, and then was permanently dissolved, leaving President Benavides with dictatorial powers. See *History* for 1939 developments.

HISTORY

Revolt Fails. On Feb. 19, 1939, Gen. Antonio Rodríguez, Minister of Government and Interior and a trusted associate of President Benavides, attempted to seize control of the government while the President and other leading Cabinet members were absent from the capital on a holiday. The plot was foiled by loyal officers, who shot and killed General Rodríguez. Four other persons were killed and 36 wounded in the accompanying fighting. President Benavides hurried back to Lima and supervised a round-up of 103 persons suspected of complicity in the conspiracy. Forty-three of these were tried by a military tribunal which on March 22 found Gen. Cirilo H. Ortega and 23 others guilty. Those convicted were sentenced to long prison terms or to exile in remote parts of the country.

Constitutionalism Restored. Shortly after liquidation of the revolt, President Benavides announced (March 26) that he would retire from office at the end of his term on December 8 but would first seek revision of the Constitution to strengthen the executive powers. A new cabinet headed by Manuel Ugarteche was installed April 19 for the purpose of supervising a plebiscite on the President's proposed constitutional

amendments and the Presidential and Congressional elections.

The 10 constitutional amendments proposed by President Benavides were approved by a vote of 368,813 to 53,123 on June 18, according to the government. They extended the Presidential and Congressional terms from five to six years; postponed election of a "corporative Senate" until 1945; provided for election of one-third of the Deputies every two years; gave the President exclusive authority to approve or suppress taxes, approve customs and tariffs, and control public employment; restored the President's power to veto legislation; repealed the system giving minority groups proportional representation in Congress; and enforced the national budget automatically on January 1 of each year, regardless of whether Congress had approved it.

In the elections held October 22, the government's candidate, Dr. Manuel Prado y Ugarteche, supported by 12 conservative parties, defeated José Quesada, candidate of the opposition Patriotic Front, by a vote of 262,971 to 76,142. Prado's running mates, Rafael Larco Herrera and Carlos D. Gibson, were elected first and second Vice Presidents, respectively. Most of the 48 Senators and 140 Deputies elected ran on the same ticket. As in the 1936 election, the government again barred the Aprista party—the most influential opposition group—from presenting candidates or participating in the balloting because of its "international affiliations."

Constitutional government was restored with Dr. Prado's inauguration as President on December 8. He announced that he would "avoid extremes of the Right or the Left," sponsor reforms to raise social, political, and economic standards, and collaborate in restoring world peace and promoting Pan Americanism. His new cabinet, with Alfredo Solís y Muro as President and Foreign Minister, was composed of civilians with the exception of the Ministers of War and Navy.

Other Events. Other developments of the year included Peru's resignation from the League of Nations, announced April 9; additional minor clashes between Peruvian and Ecuadorean troops in the disputed frontier region (see *ECUADOR* under *History*); inauguration of the scheme adopted in 1938 for colonizing the region east of the Andes opened up by the new Central Highway; completion of the great new Palace of Justice in Lima; and the purchase by the government for 2,920,000 soles of the Zorritos oil fields from the Italian owner. To improve cultural and working conditions among the Indians, the government established cultural brigades equipped with trucks, motion picture projectors, radio receiving sets, sanitary units, traveling libraries, etc., to circulate throughout the rural districts.

The outbreak of the European war caused the Peruvian Government on September 3 to assume emergency powers over commerce and trade in order to avert speculation and profiteering. The decree barred price increases in most articles, forbade dismissal of employees or cuts in wages or salaries without government consent, prohibited suspension "without cause" of building operations or other economic activities, established government regulation of exports and imports, and prohibited formation of trusts and monopolies. The war produced no such dislocation of the Peruvian economy as in 1914 but caused an in-

creased shortage of foreign exchange, particularly in dollars, due to the diversion of orders from the European countries to the United States.

See URUGUAY under *History*.

PETROLEUM. Nearly every manufacturing and consumption record of the petroleum industry was broken in 1939, according to the American Petroleum Institute. Nevertheless net earnings were expected to be below even the reduced profits of 1938, due principally to near-record low prices to consumers of petroleum products. The index of wholesale prices for petroleum products for 10 months of 1939 was only 52, compared with the index of 76.7 for all commodities, as compiled by the U.S. Bureau of Labor Statistics. The corresponding indexes for 1938 were 55.9 and 78.6, respectively.

Domestic production of petroleum in 1939 was estimated at 1,260,099,000 bbl. (1 bbl.= 42 U.S. gal.), a rate 3.8 per cent higher than in 1938, but slightly lower than the all-time peak of 1,279,160,000 bbl. in 1937. The European war had little effect on the domestic industry.

Production of other countries in 1939 probably increased 8.5 per cent to 817,532,000 bbl., making estimated world production 2,077,631,000 bbl. compared with 1,967,687,000 bbl. in 1938, and 2,042,038,000 bbl. in 1937, the previous high year. The United States produces fractionally more than 60 per cent of the world production.

Domestic motor-fuel production in 445 refineries, which ran 1,238,959,000 bbl. of crude in 1939, is estimated at 596,111,000 bbl., an increase of 7.2 per cent over 1938. Domestic consumption of motor fuel increased 5.5 per cent, to 552,000,000 bbl., while exports dropped 7.9 per cent to

46,163,000 bbl. Total refinery demand was thus 598,163,000 bbl.

The average motorist in the United States used about 732 gal. of gasoline in 1939, at an average cost of 13.3¢ per gal. Taxes averaged 5.44¢ per gal., making the total cost to the consumer 18.74¢ per gal. Total gasoline taxes levied in 1939 are believed to have reached \$1,029,000,000, passing the billion-dollar mark for the first time. The States collected \$812,000,000, the Federal government \$217,000,000. The average domestic consumption of all petroleum products in 1939 was 1725 gal. per family.

PHILATELY. See STAMP COLLECTING.

PHILIPPINES. A group of islands in the northern part of the Malay Archipelago; formerly a possession of the United States; transformed (Nov. 15, 1935), into a self-governing commonwealth destined by statute of the United States to become independent in 1946. Capital, Manila.

Area and Population. The Philippine Islands number 7083, including numerous islets; 466 of the group have areas as great as one square mile. The combined area of the islands is 114,800 square miles. Their population by the census taken in 1939 was 16,000,300; according to the census of 1918, it was 10,314,310. The principal islands and their areas in square miles are: Luzon, 40,814; Mindanao, 36,906; Samar, 5124; Negros, 4903; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799; Cebu, 1695; Bohol, 1534; Masbate, 1255. The chief cities and their populations (estimated, 1935) were: Manila, 353,418; Cebu, 82,032; Iloilo, 45,236; Laoag, 42,901; and Legaspi (formerly Albay), 35,694. Tagalog, which was made the "national" language in 1937, is spoken by approximately one-half of the inhabitants. English and Spanish, used for divers official purposes, are each understood by a considerable part of the population; the teaching of English in the public schools is compulsory.

Education. The system of free public schools that had been created in the period of American administration was carried on, somewhat modified, after the Philippine constitutional government came into power. Public schools were reported to number, in 1938, 10,919 (9489 primary, 1316 intermediate, and 114 secondary) as against 7938 in all in 1935. In 1937 all public schools numbered 8913; enrollments of pupils, 1,391,756 in elementary grades and, in all, 1,459,743. Private schools numbered, in 1936, 744 and had 137,187 enrolled pupils. About 67 per cent of children of primary-school age were asserted in 1939 to be enrolled in schools. An Office of Adult Education, created by the Philippine Government in 1936, effected the opening of 2057 schools by the end of 1938, in which 28,940 volunteer teachers instructed an enrolled total of 125,783 adults. Higher education was provided by several technical institutions and two outstanding universities—the State-supported University of the Philippines (458 professors and

7665 students in 1937) and Roman Catholic center of learning, the University of Santo Tomas, conducted by the Dominicans.

In religious belief the Roman Catholic faith predominates. An independent Filipino Church has gained a numerous following. Communicants of Protestant denominations are estimated at 250,000. Mohammedans, mainly found in Mindanao and Sulu, were last reported to number 443,037; Buddhists, 24,263.

Production. The harvest of sugar cane, season of 1937-38, treated at some 42 sugar centrals, produced about 1,103,000 short tons of raw sugar, of which nearly nine-tenths was destined for export to the United States. The cultivation of abacá (Manila hemp) produced, in 1937, 200,627 metric tons; the production of rice (1937) attained about 116,184,000 bu.; it formed the chief food of the majority of the population. In some districts, however, Indian corn took the place of rice. The production of corn totaled about 16,320,000 bu. The coconut tree, cultivated on about one-fourth of the agricultural area of the Islands, produced about 577,000 short tons of copra and a variety of other products, all mainly for export. The harvest of tobacco totaled 73,500,000 lb. That of maguay, about 26,000 tons. Cacao and coffee were grown for domestic consumption.

The most striking development of recent years in the Philippines' mineral industry was the rise in the mining of gold. An estimate from the president of the Chamber of Mines, in November, put the expected production of gold, for the year 1939, at \$36,600,000, or 73,200,000 pesos. The rise occurred almost wholly after 1907, for which year the production of gold attained only 187,674 pesos. In 1938 the mining of a number of base metals achieved gains. The exports of iron ore attained about 1,000,000 tons, by value 4,080,645 pesos. Higher export of ore of manganese, in value 999,189 pesos for 1938, indicated increased mining.

Manufactures active in 1938 included about 30 establishments making embroidery and serving the well-developed export market; five makers of cordage out of the native hemp; one cannery, putting up pineapples—a branch of a company in California; and establishments producing, on a limited scale, shoes, matches, oleomargarine, paint, varnish, furniture, and beverages. The National Development Company, a corporate implement of the Government, designed to develop industries, operated a cotton-spinning establishment and a factory producing cement. The National Rice and Corn Corporation, principally a governmental tool for stabilizing the market for rice, worked through subordinate companies to promote the canning of foods; it operated a fish-canning factory in Panganga and a factory for producing cans.

External Trade. The imports of 1938 totaled 265,215,095 pesos, as against 218,051,490 pesos for 1937; the total of exports dropped to 231,590,554 pesos for 1938, from 302,532,500 for 1937. Thus the trade balance for 1938 shifted by about 118,000,000 pesos from the highly favorable level of 1937. Imports from the United States rose to 180,714,457 pesos for 1938, from 126,604,072 for 1937; the exports to the United States fell to 178,889,989 pesos for 1938, from 241,486,043 for 1937. The yearly imports from other countries decreased slightly, to 84,500,638 pesos for 1938, from 91,447,418 for 1937; and the exports to these countries likewise decreased, to 52,700,565 pesos for 1938, from 61,046,457 for 1937. After the United States, the countries doing the greatest commerce with

the Philippines in 1938 were: Japan, from which the Islands imported a total of 25,414,803 pesos and to which they exported 15,026,342 pesos; Great Britain, for which the corresponding totals, in pesos, were 5,432,927 and 6,017,116; Germany, 8,309,238 and 2,988,229; Netherlands, 5,833,732 and 5,082,032; and China, 6,147,691 and 1,904,536. None of the figures above included transfers of gold or silver.

Shipments of gold bullion in 1938 were 60,875,883 pesos. The 10 other chief classes of listed exports (1938), in order of value, were: Sugar (chiefly centrifugal, destined for the United States), 100,044,047 pesos; copra, 24,512,048; coconut oil, 21,532,910; abacá (Manila hemp), 20,318,347; embroideries of cotton and of silk, 10,215,802; products of tobacco, 9,929,979; desiccated coconut, 7,632,715; timber and lumber, 5,650,541; copra meal and cake, 5,495,086; cordage, 2,398,062. See **IMPORTS AND EXPORTS**.

Finance. The Commonwealth issues money, of which the unit is the peso, equal in value, constitutionally and in fact, to 50 cents in U. S. money. The revenue of the Commonwealth's general fund (calendar year 1938) totaled 108,837,563 pesos as against 207,426,346 in 1937, when the total was swelled by the receipt of 111,179,383 pesos from the United States in overdue remittance of several years' collection of a tax on vegetable oils. A special fund received an additional 27,671,422 pesos of revenue (1938), as against 24,581,727 (1937). Yearly expenditures totaled, from the general fund, 129,905,931 (1938), as against 92,552,919 (1937); from the special fund, 14,532,462 (1938), 25,191,484 (1937). The total revenues received yearly by all funds, were 131,414,288 pesos (1938); 228,153,582 (1937). Those of 1938 included 84,134,527 pesos from import duties and internal taxation, 17,688,593 from the remitted tax on oil, and 24,068,861 from earnings and other credits. The total expenditures from all funds (1938) were 139,343,696 pesos: mainly, 55,295,301 for administrative expenses, 27,552,476 for public works, 25,939,487 in contributions to local governments, and 8,196,819 on public debt. The government reported a current surplus of 196,359,909 pesos at the end of 1938. Its excess of yearly expenditure over receipts resulted in great part from a policy of expending out of a surplus equal to some 18 months' income in order to hasten permanent advance in the Islands' economy.

Transportation. The greater part of the mileage of railroads is on the island of Luzon; the Manila Railroad Company, of which the government owns the common stock, operates the Luzon lines, totaling about 700 miles. The Philippine Railway Company operates lines aggregating 133 miles, on the islands of Panay and Cebu. The "clipper" airplanes of the Pan-American Airways normally make weekly trips between the United States and Manila and fly between Manila and Hong Kong. Two companies run lines of airplanes among the islands. Highways in the Islands aggregated 11,888 miles (2916 hard-surfaced) at the beginning of 1939. The Bureau of Public Works expended on the highways, for construction and maintenance in 1938, the equivalent of \$25,520,500; in that year it added 963 miles to the total of highways. See **ROADS AND STREETS**.

Government. An act of the U. S. Congress of Mar. 24, 1934, the Philippine Independence Act, provided a course by which the people of the Islands might gain independence in 1946 and in the meanwhile be governed in greater degree by their

own authorities than before. The citizens of the Philippines as before, owed allegiance to the United States during the years of transition, and had claim to its protection, but were not U. S. citizens. A constitution framed by a Filipino-elected convention and approved by popular vote went into effect Nov. 15, 1935. It established a largely autonomous government on the republican pattern; by name, the Commonwealth of the Philippines. The chief authority in this government rested in a President, elected by popular vote for a term of six years, and a National Assembly of a single chamber of 96 members elected for three years; a Vice-President was elected for six years. President, Manuel L. Quezon (entered office Nov. 15, 1935); Vice-President, Sergio Osmeña.

Particular powers retained by the United States in the Philippines for the period prior to their independence included: Limitation of the Philippine public debt and some features of taxation; entire control of foreign relations; a veto over acts affecting currency, coinage, imports, exports, and immigration, these not becoming valid until approved by the President of the United States; judicial review, by the U.S. Supreme Court, of decisions of the Philippine courts; the requirement that the President of the Commonwealth make reports periodically to the U.S. President and Congress and that all acts of the Philippine legislature be reported to the U.S. Congress. The U.S. Government had as its representative in the Philippines a High Commissioner; his office differed from the predecessor office of the Governor-General, who had been the Islands' chief executive. High Commissioner, 1939, Paul V. McNutt and (successor) Francis B. Sayre.

HISTORY

Relations with the United States. In Manila President Manuel Quezon held to his advocacy of independence throughout the year, as far as formal declarations went. Yet he found means to put before the public his view that an independent Commonwealth would lack the strength to defend itself. He made this particularly plain in public proposals, during the latter part of 1939, in favor of seeking an international agreement to preserve the Philippines' neutral status. Such a proposal led naturally to explanation of the reason why the Philippines must be neutralized, and allowed Quezon to assert that the Islands could not defend themselves against strong attack, "even though we should arm every male citizen" (speech of November 1). It was reported that Quezon received, at the end of August, a delegation of Filipino planters and business men, heard from them a proposal to initiate a continuance of relations with the United States, and told them that it was not only those who talked of independence who were the real patriots.

Tenure of the Presidency. President Quezon had until November, 1941 to serve; no other possible successor of his influence and experience was in view; but the constitution of 1935 forbade that a President should serve a second term in immediate succession. In an obvious effort to open the way to Quezon's re-election a bill was introduced (April 30) in the National Assembly, to amend the constitution by reducing the presidential term to four years and allowing one immediate re-election. A fortnight later Quezon was reported as indicating his willingness to accept re-election in the event that the constitution were thus changed, declaring, however that in no event would he

serve more than eight years. He apparently contradicted this and another affirmation on July 24, but was said by his supporters only to have meant, on this occasion, that he would not run again unless the constitutional term were reduced. The adoption of the constitutional amendment as to the Presidency soon thereafter sent the amendment to the popular vote for ratification.

Popular and Laborite Movements. Difficulties between tenant farmers and land-owners were acute early in the year, in some districts. An encounter in the province of Pampanga, March 2, left 20 wounded. The government checked the disorders by posting troops in the affected districts. It also encouraged colonization through a national agency by way of remedy. In June representatives of about 30 factions of the labor-union movement signed an agreement to co-operate with a labor commission formed by the government. A national organization of tenant farmers, the National Commission of Peasants, was created in July; President Quezon addressed a great gathering of its members July 16 at Cabanatuan. The Sakdalist leader Benigno Ramos, believed responsible for the Cabuyao uprising of 1935, was convicted of unlawful association (July 8) and sent to prison for a period from eight months to two years.

Economic Control. The chief action of the government in the direction of economic control was the operation of a device to reduce unemployment by carrying out public works; 96,000,000 pesos from remitted U.S. taxes on coconut oil were assigned to pay for such works. A National Abaca Company was organized to aid the business in abaca; the government subscribed 51 per cent of its capital of 20,000,000 pesos. The National Development Company, an arm of the government, began the sale of cotton goods. An Agricultural and Industrial Bank, also an agency of the government, opened with capital of 25,000,000 pesos from the coconut oil money. In November the government decreed maximum prices for 91 commodities; this reportedly hampered business, as dealers held that they could not sell and then renew their stocks in the higher markets from which they must themselves buy; soon the government exempted importers and dealers in numerous lines of goods. Preparations to start an official trading corporation were under way in December.

Legislation. The National Assembly revised the administrative code as to taxation and amended the parity law and the residents' tax. It authorized greater agricultural loans on the part of the Philippine National Bank and the creation of the Agricultural and Industrial Bank. The lawful working day was made eight hours. The government obtained authority to purchase the Manila Electric Company and other public utilities. A special session submitted to the popular vote constitutional amendments for altering commercial restrictions, in conformity with the relaxation of restrictions provided in the U.S. act of 1939, mentioned earlier in this article; for the addition of a second chamber, the Senate, to the Philippine legislature; and for making the duration of future presidential terms four years, instead of six. Another special session adopted a proposal of the National Economic Committee, for the creation of a governmental manufactory of fertilizers, to cost 8,500,000 pesos and produce 50,000 tons a year.

PHILOLOGY, CLASSICAL. Renewed and increased use of Greek and Latin authors in college and secondary education has grown to proportions which may fairly be characterized as

a renaissance of the humanities. As in earlier renaissances the new growth centers about interests which are different from those that had become traditional, and is outside the sphere, sometimes outside the knowledge and often against the opposition of those who are looked upon as the official keepers of the older tradition. The present renaissance is concerned with the contribution of the ancients to the spiritual history of mankind, and is expressed in a study of their literary forms and their criticisms of life. Such study can be and is carried on largely by the use of translations, and by teachers who are not professional philologists. (See J. S. Kieffer, "The Classical Revival at St. John's," *The Classical Journal* xxxv (1939), 144-153; Gilbert A. Highet, "The Renaissance of the Classics," *Columbia University Quarterly* xxxi (1939), 252-262; and Whitney J. Oates, "The Problem of Examining in Latin," *Classical Weekly* xxxiii (1939), 74-76.)

The kind of subjects currently pursued by classical philologists may be judged from the four principal annual bibliographical summaries. These are (1) *Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft* together with its supplement, *Bibliotheca Philologica Classica* (Leipzig); (2) J. Marouzeau, *L'Année Philologique* (Paris); (3) *Klassieke Bibliographie* (Utrecht); (4) *The Year's Work in Classical Studies* (Bristol). Descriptions of these publications and the names of other bibliographical periodicals, together with a list of the principal journals dealing with classical philology are given in the 1938 volume of this YEAR BOOK (585 f.). The only change worth mentioning, because it illustrates a characteristic shift in the character of support given to philological journals, is the transfer of the publication of the British *Classical Review* and *Classical Quarterly* to the Oxford University Press.

For the amount, direction, and personnel of American work in classical philology a good guide is provided by the *Transactions and Proceedings of the American Philological Association*. Volume lxix (for 1938, published 1939) reports the seventieth annual meeting of the Association, held at Providence, December 28-30, 1938. Its 700 pages contain thirty-one complete articles, abstracts of forty others, matter dealing with the organization of the Association and its work, a list of members (over 1000), and their bibliographical record for the preceding year. The 1939 meeting of the Association took place December 27-29 at Ann Arbor. Annual meetings for the reading of papers are also held by the regional associations, viz., The Classical Association of the Middle West and South, The Classical Association of the Atlantic States, The New England Classical Association, The Philological Association of the Pacific Coast (which is a branch of the American Philological Association). Reports of the activities of these organizations, of the various State associations, and of the classical conferences held at certain universities during the summer are to be found in the Current Events columns of *The Classical Journal* (St. Louis). The chief interest of this periodical is pedagogical. The highest reputation for critical scholarship is enjoyed by the two quarterlies, *The American Journal of Philology* (Baltimore) and *Classical Philology* (Chicago). Of the former Professor Harold Cherniss has become Editor, in succession to the late Tenney Frank. The only other Ameri-

can journal dealing exclusively with classical philology is *Classical Weekly* (Pittsburgh), which is valuable for its numerous short reviews and its abstracts from other journals. Of the two annuals devoted to classics exclusively, *Harvard Studies in Classical Philology* published its fiftieth volume in 1939, and *Yale Classical Studies* its sixth.

World conditions have not prevented progress in established lexicographical and other similar enterprises. Two new fascicles have been added to the *Thesaurus Linguae Latinae* and a half-volume (the thirty-fifth of the first series, *Olympia* to *Orpheus*) to Pauly-Wissowa-Kroll's *Realencyclopädie der classischen Altertumswissenschaft*. The *Cambridge Ancient History* has attained completion with Volume xii. Additions to the series which present scholarly recensions of the texts of Greek and Latin authors have been few. The principal series are: *Bibliotheca Scriptorum Graecorum et Latinorum Teubneriana* (Leipzig; various revisions); *Scriptorum Classicum Bibliotheca Oxoniensis* (Oxford; no additions); *Corpus Scriptorum Romanorum Paravianum* (Turin; Florus and parts of Cicero); *Collection des Universités de France publiée sous le patronage de l'Association Guillaume Budé* (Paris; with parallel French translations; Petronius, parts of Plautus, Aristotle's *Rhetorica*, Xenophon's *Hellenica*, the *Greek Anthology*); *The Loeb Classical Library* (Cambridge, Mass.; with parallel English translations). New Latin volumes in this series are Cicero, *Pro Sestio*, et al., J. H. Freese and R. Gardner; Cicero, *Brutus* and *Orator*, G. L. Hendrickson and H. M. Hubbell; Livy, vol. vi, F. G. Moore; Pliny, *Historia Naturalis*, vol. ii, H. Rackham. New Greek volumes are Athenaeus, vol. vii, C. B. Gulick; Demosthenes, *Private Orations*, vols. ii and iii, A. T. Murray; Dio Chrysostom, vol. ii, J. W. Cohoon; Diodorus Siculus, vol. iii, C. H. Oldfather; Dionysius of Halicarnassus, vol. ii, E. Cary; *Mathematici Graeci*, vol. i, I. Thomas; *Oratores Attici Minores*, vol. i, K. J. Maidment; Philo, vol. viii, F. H. Colson; Plutarch, *Moralia*, vol. vi, W. C. Helmhold; Procopius, vol. vii, H. B. Dewing and G. Downey; Nonnos, vols. i and ii, W. H. D. Rouse.

A half dozen of the important new books must be mentioned: M. Bieber, *History of the Greek and Roman Theatre*; R. Syme, *The Roman Revolution*; F. M. Heichelheim, *Wirtschaftsgeschichte der Altertums*; L. Pearson, *Early Ionian Historians*; B. D. Merritt, H. T. Wade-Gery, and M. F. McGregor, *The Athenian Tribute Lists*; R. J. Deferrari, Sister M. Inviolata Barry, and M. R. P. McGuire, *A Concordance of Ovid*.

MOSES HADAS.

PHILOSOPHY. The conflict between new realism and critical realism, which dominated Anglo-American philosophy during the first 30 years of the century, has been forced into the background in the past few years by new developments. The kind of realism which has emerged from the conflict as currently most interesting and provocative is perspectivism or perspective realism. (C. D. Broad called it the "multiple inherence" view.) Summarily stated, it is simply the view that qualities or events are *relative* to other qualities and events, such as those in the perceiving organism. Thus nothing can be said to be red or cubical or to have a certain acceleration, except from a certain position of space where organisms capable of

certain reactions, or other sets of relevant events, are situated. Assuming varied forms in the hands of different writers, this view is always threatened by a collapse into relativism, subjectivism, or loss of generality. And if these dangers are avoided, perspective realism seems to collapse into a view, which its whole purpose was to overcome, that is critical realism; for either perspective realism makes all qualities respective to others, or only some.

The success of the pragmatic polemic against primary *vs.* secondary qualities, and other dualisms, prepares the ground for perspective realism. The claim that this view fits in, better than its rivals, with the new developments of physics, such as the Relativity Theory, especially when put forward by such an authority as A. N. Whitehead, gives it strong support. It is significant that Evander Bradley McGilvary who delivered the Paul Carus lectures at Columbia University in December, chose as his topic, "Toward a Perspective Realism." Another paper read at the American Philosophical Association meeting at Columbia, "Objects Perceived and Objects Known" by A. G. Rampserger, was also devoted to a defense of a perspective view. Perspectivism, which is often advocated under the name of empiricism, operationalism or pragmatism, was emphasized this year more than ever due to the celebrations of the 80th birthday of John Dewey.

A number of meetings were held, papers read and books written exploring every phase of Dewey's philosophy. The program of the American Philosophical Association at Columbia included a symposium, "Dewey's Concepts of Experience and of Nature," in which Dewey defended his views against the criticism of W. E. Hocking and Morris Cohen. Following his usual line of attack, Cohen complained of what he called Dewey's "anthropocentric naturalism." Dewey's perpetual emphasis on human values and social instrumentality, he argued, prevented him from forming any just idea either of nature or of pure disinterested science. Hocking, on the other hand, accepted the validity of the human reference in Dewey's philosophy, and only regretted that Dewey had not followed up this line of thought more consistently to become an objective idealist. In answer Dewey was therefore able to say that each of his critics had made a more successful attack on the other, than on him. He concluded in typical fashion, without sharp disagreement, that neither philosopher had quite understood his position.

A further opportunity for the public to hear Dewey's replies to his critics was offered this year by a new, rather unique, publishing venture: *The Library of Living Philosophers*. The leading idea of this series (edited by Paul A. Schilpp), is to enable an already famous philosopher to reply to criticism while there is still time, and to include the whole discussion in one volume. The first volume entitled *The Philosophy of John Dewey* is of unusual interest. It contains articles so faithful to Dewey's thought, and so purely expository, that Dewey can make no reply, and essays so drastically critical that he can only charge a complete misunderstanding and restate his position, and it includes also, of course, articles of an intermediate nature.

A number of other books and articles were devoted to Dewey. *Intelligence in the Modern World* is a huge compilation of Dewey's writings, selections being made to demonstrate the scope, continuities, and developments in his thought. The

editor, Joseph Ratner, begins the book with a long introduction, in which he explains the significance of Dewey's philosophy of science in relation to that of Whitehead, Russell, and others, much to the disadvantage of the latter. The Scandinavian philosopher, Folke Leander, also published a book, *The Philosophy of John Dewey*, criticizing the pragmatic philosophy on a Continental, Neo-Kantian basis.

Of all the articles published, one by C. I. Lewis, "Meaning and Action" (*Journal of Philosophy*, October 12) deserves special mention. On behalf of Dewey's linkage of meaning and action, Lewis argues that the meaning of a prediction (or cognition) must be found in a possible future experience confirming its truth. "*But there are no such . . . confirming experiences which can be predicted without reference to the activity of the subject.*" Dewey's latest book, *Freedom and Culture*, also appeared this year. Retracing familiar ground which he has often covered before, the veteran philosopher stresses the need of faith in the operation of the scientific method but seems less confident than ever of any real solution of our social ills. "We must know," he concludes, "that the dependence of ends upon means is such that the only *ultimate* result is the result that is attained today, tomorrow, next day, and day after day, in the succession of years and generations."

Another American philosopher, Charles Saunders Peirce (1839-1914), was celebrated this year at a session of the A. P. A. meeting at Columbia University. James Feibleman, in a paper on "The Influence of Peirce on Dewey's Logic," contended that although Dewey professes nominalism, he adopts Peirce's realism in practice, which accounts for many of his insights that are out of line with nominalism as a metaphysical position. Walker H. Hill maintained that Peirce did not accept pragmatism in the sense of James and Dewey, while Paul Weiss spoke of the consistency and systematic character of Peirce's work as a whole. Finally, Charles Hartshorne gave "A Critique of Peirce's idea of God."

The philosophy of Edmund Husserl (who died in 1938) has also had considerable prominence this year. A memorial volume is in the press and the International Phenomenological Society has been founded with provision for a periodical. The most important phenomenological publication was the posthumous volume of Husserl, *Erfahrung und Urteil: Untersuchung zur Genealogie der Logik*. This extensive work carries further the genetic analysis which had already appeared in the *Formale und Transcendentale Logik*. Abstract logic is traced back to, and substantiated in, prelogical stages of plain intuition. Husserl's sketch of a preface to the 1913 edition of the *Logische Untersuchungen*, which was not printed at that time, appeared this year in *Tijdschrift Voor Philosophie* (1, 2. vol. i, Feb.) with editorial notes by Eugen Fink. The essay is of special interest because in it Husserl engages in sharp polemic with early critics, such as Natorp and Wundt, and explains his relation to Lotze, Brentano, and Bolzano. *The Revue Internationale de Philosophie* (vol. 1. no. 2) was also devoted to Husserl's philosophy. It contains a brief unpublished essay by Husserl, *Die Frage nach dem Ursprung der Geometrie*, which argues that geometrical conclusions must be traced back to *Anschauungen* in which they have their origin and final confirmation. Included in the volume are also articles by Fink, Landgrebe, Berger, Hering, and others. One issue of the *Journal of*

Philosophy (April 27) was also devoted to Husserl's contributions. It included an article by Kenneth G. Hamilton and a brief symposium. A popular exposition called *Edmund Husserl's Phenomenology*, by E. Parl Welch, also appeared.

Basically hostile to phenomenology, but sympathetic to Peirce and Dewey's operationalism, logical positivism, or logical empiricism as it is now called, continued to attract much interest. In September, the Fifth International Congress for the Unity of Science at Harvard University was held. Ernest Nagel read a paper claiming Peirce as a spiritual ancestor of the movement of logical empiricism on the basis of, what might be called for short, his tychism, behaviorism, operationalism, etc. In another paper P. W. Bridgman took issue with Dewey and with logical empiricists for attempting to confine their language to what is public and objective, avoiding the word "I." A sharp line between public and private can only be drawn at the cost of great complication and artificiality, whereas the use of "I" makes my exposition more patently a mere set of marks to guide my activity. The symbolic logician, W. V. Quine, formulated the old philosophical distinction between realism and nominalism as follows: "In realistic languages, variables admit abstract entities as values; in nominalistic languages they do not." John Somerville of Hunter College in a paper on "Methodological Factors in the advancement of the Social Sciences," contended that what is imperative in the social sciences at present is a thorough commitment to the criterion of predictability in order to distinguish truths which are socially valuable from truths which are not. This paper did not accept the position of logical empiricism, nor did others, and the Congress seemed to resist any common basis. Several papers read at the A. P. A. meeting a few months later revolted violently against logical empiricist restrictions of philosophy. J. Lowenberg of the University of California, for example, declared that Carnap's "principle of tolerance" required him to talk either a logical empiricist language or nonsense, whereas he was determined to talk neither.

Among the most interesting logical empiricist books to appear was Rudolf Carnap's *Foundations of Logic and Mathematics*. In it he discusses, not the foundations of logic and mathematics as usually understood but, the foundations of language. Much more importance is assigned to semantics, as opposed to syntax, than in his previous writings and the pragmatic trend of his thought is more pronounced. In another monograph of the *International Encyclopedia of Unified Science*, called *Principles of the Theory of Probability*, Ernest Nagel reviews the most important theories of probability up to the present.

In contrast to the trend of logical empiricism, many books devoted to social philosophy and to the relation between science and society appeared this year. Among the best are H. Levy's *Modern Science*, an extensive review of the achievements of physical science against a background of social needs and necessities, and J. D. Bernal's *The Social Function of Science*, which discusses the problem of how to make science work for society. As is often the case with scientists who become actively interested in bringing science to its full social usefulness, both writers are sympathetic to socialism. In sharp contrast to their socialist humanism, is Gaetano Mosca's frankly fascist defense of the élite in *The Ruling Class*.

The need for objective reports in philosophy,

already answered in other departments of knowledge, was supplied this year by the founding of a quarterly, *Philosophical Abstracts*, which provides digests of books and articles on philosophy appearing in all countries. Another quarterly presented to the public this year, *The Journal of the History of Ideas*, under the editorship of Arthur O. Lovejoy, will trace the peregrinations and vicissitudes of leading ideas through the centuries.

Besides those mentioned in the text, the following books were published this year:

Paul Russell Anderson and Max Harold Fisch, *Philosophy in America From the Puritans to James*; Jacques Barzun, *Of Human Freedom*; Albert A. Bennett and Charles A. Baylis, *Formal Logic*; Max Bense, *Geist der Mathematik*; Maurice Blondell, *Lutte pour la civilisation et philosophie de la paix*; Leonard Bloomfield, *Linguistic Aspects of Science*; Archibald Allan Bowman, *A Sacramental Universe*; Ernst Cassirer, *Axel Hagerström. Eine Studie zur Schwedischen Philosophie der Gegenwart*; Emmanuel Chapman, *St. Augustine's Philosophy of Beauty*; R. G. Collingwood, *An Autobiography*; Francis MacDonald Cornford, *Plato and Parmenides*; R. H. S. Crossman, *Plato Today*; A. D'Abro, *The Decline of Mechanism in Modern Physics*; Rapheal Demos, *The Philosophy of Plato*; Walter Ehrlich, *Das Verstehen*; James Feibleman, *In Praise of Comedy*; Carl Theodore Glock, *Wilhelm Diltheys Grundlegung einer wissenschaftlichen Lebensphilosophie*; Sidney Hook, *John Dewey. An Intellectual Portrait*; Anneliese Maier, *Das Problem der intensiven Grösse in der Scholastik*; J. H. Muirhead, *The Man versus the State as a Present Issue*; Charles M. Perry, *Toward a Dimensional Realism*; James Bisset Pratt, *Naturalism*; Proceedings of the Aristotelian Society (1938-39) and supplementary volume, *Hume and Present Day Problems*; Heinrich Rickert, *Unmittelbarkeit und Sinndeutung*; Maurice Riveline, *Essai sur le problème le plus général*; W. R. Sorley, *A History of English Philosophy*; Alban Winspear and Tom Silverberg, *Who was Socrates?*; Herman J. de Vleeschauwer, *L'évolution de la pensée kantienne*; J. H. Woodger, *The Technique of Theory Construction*.

V. JERAULD MCGILL.

PHOENIX (fē'nīks) ISLANDS. The group of 8 islands or atolls (Birnie, Canton, Enderbury, Gardner, Hull, Phoenix, and Sidney) in the central Pacific (2° 30' to 4° 30' S. and 171° to 174° 30' W.) belonging (except for Canton and Enderbury which are under joint Anglo-U.S.A. administration) to Great Britain and included in the (British) Gilbert and Ellice Islands colony by Order in Council of Mar. 18, 1937. Total area, 16 square miles; population (Jan. 1, 1938), 62. See CANTON ISLAND, ENDERBURY ISLAND.

PHOSPHATES. See FERTILIZERS.

PHOTOGRAPHY. The year 1939 marked the hundredth anniversary of the introduction of the Daguerreotype process, which was announced to the world on Jan. 7, 1839, by Arago at a formal meeting of the French Academy of Sciences, and on Aug. 19, 1839, the method was made public. In the interval between these two dates, the French government passed a law granting a life pension to the inventor. These events were appropriately commemorated during 1939 by photographic organizations throughout the world with the most significant meeting taking place in the large amphitheater in the Sorbonne in Paris where

over 3000 persons including the President of the Republic assembled on January 7 to hear distinguished leaders pay tribute to the life work of Daguerre and his associate, Niepce.

Two other anniversaries deserve mention, the fiftieth anniversary of the introduction of roll film by George Eastman and the fiftieth anniversary of the first showing of motion pictures with the Kinetoscope by Thomas Edison and William Dickson. *The Photographic Times* of June, 1889, carried an advertisement dated June 15, 1889, in which The Eastman Dry Plate and Film Co. stated that they had "perfected a process for making transparent flexible films for use in roll holders and Kodak Cameras." Edison returned from a European trip on Oct. 5, 1889, and the following day the first completed model of the Kinetoscope was demonstrated for him by Dickson.

It is of interest also that the year represented the centenary of the first use of the word "photography." It appeared first in unpublished notes of the English astronomer, Sir. J. F. W. Herschel, on Feb. 17, 1839, and in an article about Talbot's process by the German astronomer, J. H. Maedler, in a daily newspaper, the *Vossische Zeitung*, on Feb. 25, 1839.

Two publications of considerable historical interest appeared during the year, an article by Mees on the "Modern Era in Photography," which dealt with the development of processes and technique since about 1900; and an English translation by E. Epstein of a book by E. Stenger, *The History of Photography*.

Photography in Color. Color photography continued to expand during the year. The amateur was encouraged to use it more in the many small cameras available and the examination of the tiny transparencies was simplified greatly because one manufacturer supplied the developed films ready-mounted for projection. One of the most unique uses made of these color films was the spectacle known as the "Cavalcade of Color" in the Kodak Building at the New York World's Fair. There, on a screen 22 feet high and 187 feet long, color panoramas and stills were projected from eleven specially designed projectors, each of which held 192 color slides. The largest fine-pitch, precision-ring, spur-gears ever machined in the United States, 45-inches in diameter, were built for these projectors. When in operation, the eleven projectors ran without supervision, their synchronism and the spoken and musical accompaniment being provided by a specially matched sound film (*Sci. Amer.* 160; 367, June, 1939).

A more extensive use of sheet Kodachrome color film was noted by professional photographers and duplicates of this film were made available. A fair percentage of such workers still preferred to use the "one-shot" cameras which made sets of monochrome, three-color, separation negatives from which color prints were prepared. Several methods for making three- or two-color prints were described but each was essentially a modification of well-known processes.

The Trichrome Carbro process was simplified by the introduction of an improved non-frilling carbon tissue, a new single-bath sensitizer, and a semiautomatic method of squeezing the bromide and tissue (*Photography* 7: 21, May, 1939). A novel scheme for converting a thin Kodachrome or Dufaycolor transparency into a color print was introduced in England. It consisted in affixing the picture side of the transparency to a paper

surface and then dissolving away the film support (*Miniature Camera Mag.* 3: 969, Sept. 1939).

Within the last decade the time required to reproduce a color picture from the stage of making the original exposure to the final printed reproduction had been reduced from a matter of weeks to less than a day. A three-color process reproduction of a news picture was printed in a regular weekday edition of the *Chicago Daily Tribune* within eight hours after the negatives were exposed (*Photo-Engraver's Bull.* 28: 54, Feb. 1939). A set of three-color negatives made of the British King and Queen during their visit to Washington in June were transmitted by Wirephoto to Associated Press papers throughout the United States, marking the first time that "spot" pictures in color had been transmitted within the regular hours of publication.

More motion-pictures in color were produced than in any single year heretofore. Nine Technicolor features were in production during the month of July. One of these, Max Fleischer's *Gulliver's Travels*, represented the second feature-length cartoon ever made, and it was received with acclaim when released in December. Simultaneously it was reported that the Disney production, *Pinocchio* was scheduled for release soon after the close of the year. Impressive evidence of the popularity of the animated cartoon was revealed by the statement that the first feature cartoon, *Snow White*, had made over eight million dollars since its release two years before. In each of these Disney pictures greater realism was achieved by the use of a special multiplane camera and an improved painting technique (*Internat. Phot.* 11: 4, Dec. 1939). The longest color motion-picture ever released, the Selznick-International production *Gone With the Wind*, was widely praised by critics for its artistry and the quality of the color photography.

The Telco color process for 35-mm. motion-picture film utilizes bipack negatives from which black-and-white prints are made on both sides of duplitized positive film. Swelling of the positive silver image is controlled during processing according to the exposure gradation, and for that emulsion printed from the panchromatic negative a red-dyed gelatin filter is introduced into the relief to fill in the unswollen parts. After buffing and reswelling, a yellow gelatin filter is applied. The process is repeated on the opposite side of the positive for the ortho negative except that blue- and green-dyed layers are used (*Kinemat. Weekly* 265: 37, Mar. 30, 1939).

Interest in amateur cinematography in color continued to grow as more cameras and films were made available at a wide range of prices. The initial public showing of a 16-mm sound and color picture was made in the Rockefeller Center Newsreel Theater in New York in May. The picture was projected from the regular booth using an arc for the illuminant, and the lens was chosen so that the image filled the same screen used for 35-mm projection. In September the Cinecolor Co. announced a process for making 16-mm reduction prints in color from 35-mm color negatives (*Mot. Pict. Herald* 136: 36, Sept. 30, 1939).

Press Photography. The visit of their Majesties, King George VI and Queen Elizabeth to Canada and the United States in June probably represented the most photographed event of the year. Cameramen from all leading news services in this country and Canada as well as many from

MYSTERIOUS PRE-INCA CONES OF THE NASCA VALLEY, PERU

Photographed, from an altitude of approximately 14,000 feet, for the first time by Jack Kuhne while making aerophotographs for the Lowell Thomas Magic Carpet of Movietone picture, *Good Neighbors*. These markings are invisible from the ground and are believed to have been made by an ancient people predating the Incas. Archeologists think they may possibly have been used as a calendar for reckoning time. Some of the markings run straight for a distance of 12 miles.

AUTOMATIC TWIN PROJECTOR FOR SMALL COLORED SLIDES (1 x 1 1/2- INCHES)

Workman assembling one of eleven special projectors used in Hall of Color at the New York World's Fair. Each precision-ring gear shown behind the two lenses (4 1/2 inch, F/2.0) holds 96 color slides. A 2500-watt lamp was used to project each slide upon a screen, 17 feet wide by 22 feet high. The total size of the semicircular screen for all eleven projectors was 187 by 22 feet. More than 2000 pictures were projected every 12 minutes.

THE GREAT 82-INCH MIRROR OF THE NEW TELESCOPE AT McDONALD OBSERVATORY

This is the heart of the great telescope. Photograph shows appearance of the mirror after the grinding and polishing had been completed. Afterwards it was installed in the telescope at Mt. Locke, Texas, where it was put into operation in April, 1939.

abroad covered the ceremonies, and every major newsreel company was represented. Pictures were shown in London within 48 hours after their Majesties' visit to Washington. This was made possible by sending the film to Europe on a "clipper" airship.

A strict censorship of news photographs from the belligerent countries was established soon after the conflict in Europe began in September. Nevertheless a fair number of pictures was transmitted by radio and cable to New York. The quality of these pictures was much better than that of photographs transmitted a few years theretofore. A new service for trans-oceanic picture-transmission using cables was announced by the Western Union Telegraph Co. in April (*Photography* 7: 14, July, 1939). See illustrations under GREAT BRITAIN and UNITED STATES.

Motion-Picture Photography. Statistics on the export of motion-picture film released by the Motion Picture Division of the U.S. Department of Commerce indicated an appreciable falling-off in the total footage of positive and negative film. It was pointed out, however, that the decline was not severe because more duplicate negatives were being shipped than theretofore from which positive prints could be made abroad. The annual production cost for the motion-picture industry in the United States was estimated to be \$150,000,000; about 85,000,000 persons attended pictures weekly in the 16,251 theaters in operation; nearly one billion dollars in gross annual admissions was received of which about 10 per cent was paid as taxes to the government (*Mot. Pict. Herald* 136: 23, Aug. 19, 1939).

The introduction of improved film emulsions and the refinement of equipment used in taking and projecting motion pictures resulted in a general advancement of the quality of the motion picture. The use of faster films made possible the use of a smaller camera aperture with improved definition, or if preferred a larger aperture and less light could be used. As much as 30 to 40 per cent reduction in general illumination was reported by several cameramen (*Amer. Cinemat.* 20: 69, February, 1939).

Production requirements for special process projection equipment were summarized in a report of the Research Council of the Academy of Motion Picture Arts and Sciences (Feb. 3, 1939) which also published reports on release print preservative tests (Apr. 14, 1939) and on test reels available for adjusting and maintaining theater sound-reproducing equipment (May 22, 1939). A direct positive system of sound-recording was described by Dimmick and Blaney which permitted the omission of a printing operation and resulted in a reduction of film noise (*J. Soc. Mot. Pict. Eng.* 33: 479, November, 1939). Adoption of a fine grain positive type emulsion for variable density sound-recordings was reported by Hilliard to have given better quality and the possibility was suggested that a film of this type might be used for original picture negatives and release prints (*Amer. Cinemat.* 20: 535, Dec., 1939).

The U.S. Army Signal Corps had prepared about 20 films each year for a number of years as part of a program to be used as a quick-training medium in the event of a national emergency. Other branches of the U.S. Army also had an organized program for the use of motion pictures (*Mot. Pict. Herald*, 134: 29, Feb. 4, 1939). A novel use was made of sound records on motion-picture film by the General Motors

Corporation in their special exhibition known as *Highways and Horizons* at the New York World's Fair. An instrument called a "Poly-rhetor" consisting essentially of a steel drum 8 feet in diameter carried 24 continuous film loops past 168 optical scanners and associated amplifiers. The sound from these films was divided up by this device so that approximately 150 versions of the total talk of 15 minutes duration were distributed to various points along a moving conveyor to explain to four persons seated in each car on the conveyor the portion of a gigantic diorama which was before them. The system was designed to transport about 600 spectators at one time (*J. Soc. Mot. Pict. Eng.* 33: 488, November, 1939). Motion picture films were used daily as part of the television programs broadcast by the Radio Corporation of America at the New York World's Fair.

A definite trend toward a wider adoption of 16-mm film for industrial, educational, and special uses was noted, in part representing a change-over from 35-mm film. One authority claimed that results comparable in quality with the best optical reduction (35-mm to 16-mm) were obtainable directly with 16-mm equipment (*J. Phot. Soc. Amer.* 5: 16, May, 1939).

Aerial Photography. Extensive use of aerial photography for war reconnaissance work was made by the European nations. Several of the pictures made by the Germans over England that were released for publication showed remarkable clarity and it is to be presumed that the English and French had obtained equally as good photographs. Studies were also being made by army cameramen on the use of color films to record more accurately the terrain and camouflaged gun positions.

Further progress on an expanded scale was noted in the U.S. Government's program of crop and erosion survey throughout the country. An exhibition of air photographs in relation to housing surveys was held in London in June. Map revision and road planning and improvement were included. Stereoscopic examination of certain subjects was provided (*Brit. J. Phot.* 86: 376, June 16, 1939). The excellent definition obtainable with modern films and lenses encouraged further studies of vegetation inventories from aerial photographs. Such information is valuable for many purposes, such as forest fire control, erosion and flood control, and land utilization (*Photogram. Eng.* 5: 30, January-March, 1939).

While photographing scenes in the mountains of Argentina, Chile, and Peru, Jack Kuhne, Expeditionary Cameraman for 20th Century-Fox, succeeded in recording the mysterious cones of the Nasca Valley in the Andes. These markings are not visible from the ground and had been observed only once before but never photographed. Of considerable archeological interest, they are believed to pre-date the Inca civilization and possibly may be a calendar for reckoning time (*Amer. Cinemat.* 20: 406, September, 1939).

Visual Education and Microphotography. In the field of education, visual aids were finding greater use although the expansion of a 16-mm film program went ahead rather slowly. Nevertheless some cities, notably the larger ones, had quite extensive programs. One of the largest users of educational films was the city of Chicago where 95 per cent of the elementary schools and every high school were equipped to show motion pictures. Approximately 8000 schools in the

United States were using visual aids. A technique for the use of motion pictures to improve the speed of eye-reading of students was announced by Harvard University (*Science Supp.*, 89: 11, Mar. 17, 1939).

One of the uses of microphotography having possibilities for the future is its use for inter-library loans. Many types of library books cannot be loaned because of their value, fragility, size, or the constancy of their use, but film records of such material could be released (*J. Doc. Reproduction* 2: 3, March, 1939). As a result of a grant from the Rockefeller Foundation, a photoduplication service was set up at the Library of Congress which was said to be large enough to meet all demands for this work (*J. Doc. Reproduction* 2: 176, September, 1939). Considerable interest was being shown in the use of color films for microphotorecords, although the cost and color quality offered certain problems to the user.

Scholastic records of more than 12,000 students at Temple University (Philadelphia) were photographed on motion picture film for more convenient filing and examination (*Mot. Pict. Herald* 137: 15, Nov. 11, 1939). Microfilms of various aspects of 20th Century life were placed in the Westinghouse Time Capsule which was buried in a shaft at the N. Y. World's Fair and in the Crypt of Civilization at Oglethorpe University in Georgia to be examined several thousand years hence.

Photomechanical Processes. According to a survey by *Editor and Publisher*, 441 engraving departments operated by newspaper publishing companies were servicing about 500 newspapers in the United States. Wet plates were gradually being replaced by stripping film for photolithography. Besides cleanliness of operation, the use of film for such work gave better resolving power, improved sensitizing properties, and greater uniformity. Nearly 500 newspapers and commercial plants were reported to be using films exclusively. A number of weekly newspapers were being printed by offset although no large dailies were known to be using this process.

The use of fluorescence photography to exaggerate contrast and to facilitate the formation of highlight screen negatives was noted. The pigment used for the artist's sketches was mixed with fluorescent material; when exposed to ultraviolet radiation, it fluoresces and greater contrast results (*Amer. Photocngraver* 31: 335, April, 1939).

Further refinements were noted in the methods for the reproduction of small color transparencies and the general quality of such printings was improved. Suitable schemes were described for illuminating sheet Kodachrome on the process camera using fluorescent or tungsten lamps (*Photo Technique* 1: 10, August, 1939).

Scientific and Applied Photography. The opening of the new McDonald Observatory at Mt. Locke, Texas, represented one of the noteworthy events of the year. A program of work was started at once and during the first six weeks, 600 spectral photographs were obtained with the great 82-inch reflector, and two new "white dwarfs" or superheavy stars were discovered (*Science-Supp.* 89: 12, May 19, 1939). At Cornell University on August 11 an unusual display of the aurora borealis was photographed extensively in color and in black and white. Encouraging progress was reported on the assembly of the

giant 200-inch telescope on Mt. Palomar in Southern California.

The problem of undersea photography with submersible cameras, lights, etc., was studied by several investigators. Johnson described apparatus, optical properties of water with reference to the selective absorption and scattering of light in water, and the use of filters to overcome these effects (*J. Soc. Mot. Pict. Eng.* 32: 3, January, 1939). A steel tank caisson with a large plate-glass window was used by Bennett for both still and motion picture camera work (*Camera-Phila.* 58: 334, May, 1939). Two automatic cameras with lighting equipment for marine photography about 10,000 feet below the surface were developed and tested independently by Dr. Hofmann, a Munich engineer, and Professor Harvey of Princeton University (*Sci. Amer.* 18: 30, July, 1939 and *Science News Letter* 36: 173, Sept. 9, 1939).

A photographic study of steam-boiler furnaces in operation was made by Markson and Dargan who devised an optical instrument called a pyroscope, which consisted of an air-cooled double telescope. This device permitted single-frame motion pictures to be made of the fuel bed of a stoker-fired furnace over a period of hours without damage to the camera (*Mech. Eng.* 61: 727, October, 1939).

Some difficulties encountered by the Second Byrd Antarctic Expedition in their program of scientific photography were described by Perkins who reported that satisfactory pictures were made at temperatures as low as minus 70° F. (*J. Biol. Phot. Asso.* 7: 49, December, 1938). A very complete photographic laboratory was installed in the great snow cruiser, 'Penguin I., which is to be used by the Third Byrd Expedition.

Physical Measurements. A significant development of the year was the more liberal policy of leading manufacturers in releasing more technical information on the characteristics of their photographic materials. Pamphlets were published containing data on color sensitiveness, resolving power, speed, time *vs.* gamma, etc. A sectional committee of the American Standards Association began active work on standardization of numerous aspects of photography. The standardization of the measurement and specification of the speed of photographic materials was discussed at an international meeting, which was held in Munich in June. Much progress was reported and agreement on this important problem appeared to be in sight.

According to Jones, who had conducted research in sensitometry for 25 years, the negative itself is only a means to an end, which is a *good print*. He concluded that "the most satisfactory evaluation of *effective camera speeds* should be based on the minimum exposure which will yield negatives from which prints of satisfactory quality can be made." A criterion of effective speed based upon gradient considerations rather than upon inertia or density was worked out (*J. Franklin Inst.* 228: 297, February, 1939 et seq.). Methods and instruments for the determination of photographic speeds by measurement of relative characteristic gradients were discussed by Tuttle (*J. Opt. Soc. Amer.* 29: 267, July, 1939). Intensity-scale measurement of sensitometric characteristics of photographic materials appeared to have largely displaced time-scale measurement in many laboratories. A comprehensive report on the sensitometry of photographic papers was published by

Jones and Morrison. A description of and the results with a new instrument for such work were given (*J. Franklin Inst.* 228: 445, October, 1939, et seq.).

The status of lens-making in America was discussed by Rayton, who stated that the American optical industry could now make any practical optical instrument for which qualitative specifications can be written (*J. Soc. Mot. Pict. Eng.* 33: 426, October, 1939). Resolving power and distortion of typical airplane-camera lenses was investigated by Washer (*J. Research Nat. Bur. Standards* 22: 729, June, 1939). Useful data on the relation of camera error to photogrammetric mapping was prepared by Gardner (*J. Research Nat. Bur. Standards* 22: 209, February, 1939).

A method of making screen-brightness measurements in theaters with inexpensive equipment was described by Joachim who cited the need for correction of the variation in brightness which exists in many theaters (*Kinotechnik* 20: 285, November, 1938). Capstaff demonstrated in Hollywood and in New York a method of projecting an illuminated border around a motion picture which was claimed to enhance the quality of the projected picture.

Manufacture and Storage of Sensitized Materials. The amateur, the professional, and the technician were supplied with new films of greater speed in both panchromatic and orthochromatic types. Films of extremely fine grain were also made available. Sheet films and amateur roll films sensitized to infrared were introduced. Several new film emulsions were supplied for motion picture work including background process photography and sound-recording.

Perhaps one of the most significant trends from the standpoint of safety was the elimination of sheet films on nitrate support by one major firm in favor of safety acetate support. Other films on safety support included X-ray, amateur motion picture, aero films, and certain amateur miniature roll films. A gradual change of standard 35-mm. motion-picture film over to safety film was in progress in Germany and France but with the exception of 35-mm. films for non-theatrical use, most of the films made for use in theaters in the United States and in Great Britain was on nitrate stock.

Several interesting articles were published concerning the properties of aero films. Charrion and Valette investigated methods for the hypersensitization of various types of emulsions used for aerial photography and reported in favor of the well-known ammonia treatment (*Publ. Sci. Tech. Ministère de l'Air*, Bull. No. 86, 1939). The properties of safety topographic aero film were discussed by Carver (*Photogrammetric Eng.* 4: 223, October-December, 1938). Reckmeyer reviewed progress made in sensitized materials for aerial photography (*ibid.* 4: 214, October-December, 1938).

Progress was noted in the organization of an international federation of film archives whose purpose would be to effect closer co-operation between the film archives of member countries so that the greatest use could be made of historical and educational films. The National Bureau of Standards in their Miscellaneous Publication M162 published details of their findings on the stability and preservation of records on photographic film. The records to be sealed in the vaults of the Crypt of Civilization at Oglethorpe University, near Atlanta, Ga. were stated to be

of two types, those on safety acetate film and those etched on metal.

New Apparatus. Many new small cameras were introduced during the year, especially sizes which took 35-mm. film for snapshot exposure, as well as cameras taking slightly larger film. Morgan prepared a list of 73 cameras used by the amateur and included constructional details, special features and other pertinent data (*U.S. Camera* 1: 56, June, 1939). The small reflex-type and a miniature model of the "Speed Graphic" were reported to be quite popular. One new camera contained the unique feature of a photo-electric cell for automatic diaphragm control in accordance with subject brightness.

In the 10 years since the photoflash lamp had been introduced, many improvements had been made in its design and the use of such lamps was quite general, especially by the news photographer. Many types of equipment were available for synchronizing photoflash lamps with the camera shutter; even a few box cameras had such attachments. (See the night photograph under AERONAUTICS.) Toward the end of the year the midget photoflash lamp was announced which had a bulb smaller than a golf ball and a light output of 13,000 to 15,000 lumens. Some types of photoflash lamps were manufactured which were specially adapted for use with cameras having focal plane shutters. Fluorescent lamps were recommended for use of the professional photographer.

Recent developments in photographic lenses were discussed by Kingslake who stated that increasing the speed of lenses had resulted in many limitations, which were further complicated by the burst of activity in color photography (*J. Phot. Soc. Amer.* 5: 22, May, 1939). New lenses of extreme focal length, 60-inches, were introduced both in the United States and in England especially for press photography. The use of exposure meters by many branches of the trade appeared to be quite general, although opinion differed greatly on the best method of interpreting the readings of such devices (*J. Phot. Soc. Amer.* 4: 13, Fall-Winter 1938 et seq.; also *Amer. Cinemat.* 20: 200, May, 1939). See GLASS.

Several types of enlargers were announced for the amateur and the professional. One of these was a compact precision instrument which was supplied with interchangeable condensers as well as lenses to accommodate an unusual range of negative sizes. It was adaptable for copying, photomicrography, and special work.

The aroused interest in miniature color slides stimulated the design of several new projectors for such material, some of which were capable of handling up to 50 slides, either semi-automatically or manually. National photographic conventions displayed a limited number of new small cameras for making single exposure sets of three-color separation negatives. A meter for the measurement of the color temperature of photoflood lamps was understood to be finding use by advanced color photographers (*J. Soc. Mot. Pict. Eng.* 32: 298, March, 1939). The color temperature-candlepower characteristic of tungsten lamps was discussed by Weaver and Hussong (*J. Opt. Soc. Amer.* 29: 16, January, 1939).

Several new cameras and projectors were introduced for use with amateur cinematographic films. A limited interest was noted in equipment for sound recording and reproduction on 16-mm film and a few new pieces of equipment for such work were announced. Further refinements in the si-

lencing of cameras for 35-mm sound-motion-picture photography were accomplished. The U.S. Department of Commerce reported that an all-electric slow-motion camera had been demonstrated in Germany in June that was capable of making 80,000 exposures per second. A race-track camera was described by Gantz which could be made to "idle" during the whole race except the finish when it could be brought up to operating speed of 750 pictures per second in $\frac{1}{10}$ second (*Cinema Digest* 5: 6, May, 1939).

A new aero camera which took the largest single negative (18×18 inches) ever made was being tested by several organizations. It was equipped with an F.6.8 lens of 12-inch focal length and a 600-exposure magazine (*Popular Phot.* 5: 56, November, 1939). A seven-lens aero camera was developed in England under the supervision of the Air Survey Committee. Machine gun cameras using 16-mm film were used extensively as a highly efficient method of training aerial gunners (*Aero Digest* 34: 110, June, 1939).

Results of preliminary tests with the Brandt Eye-movement camera were described in connection with its use in making lay-out advertising copy. This camera made records of the reflected light from the cornea of each eye of the subject during reading or viewing of pictures or drawings (*Photography* 7: 10, May, 1939).

The Photographic Process. Although numerous proprietary developers continued to be marketed, indications began to appear that a more critical attitude was being taken by amateurs whose patience was being tried by the impossible claims made for some of these products. Fine grain developers still enjoyed a fairly vigorous patronage, but advanced amateurs found the new fine grain films to be very satisfactory unless extreme enlargement was required. A process of development described by Perry for use with underexposures attracted some attention. The film was immersed in a developer just long enough to saturate the emulsion, whereupon it was brought intimately in contact with an inactive smooth surface. Under these conditions no further movement of the developer in the emulsion layer occurred and no swelling was permitted. Highlight density was said to be controlled while shadow densities developed longer than normally (*Photo Art Monthly* 7: 11, January, 1939, et seq.).

Machine processing of film was used in several fields of photographic endeavor. In such work it was common practice to replenish the used developer at intervals, but very little accurate information was known on rapid methods of analysis of used solutions. It is encouraging to note that three papers were published on this subject during the year (Evans and Hanson, Jr., *J. Soc. Mot. Pict. Eng.* 32: 307, March, 1939; Huse and Atkinson, *Mot. Pict. Film Dept. Eastman Kodak Co., Hollywood, Calif.; Baumbach, J. Soc. Mot. Pict. Eng.* 33: 517, November, 1939).

Several papers were published on methods of using color-coupling developers for toning processes (Wilson, *Amer. Phot.* 33: 161, Mar., 1939; Famulener, *J. Soc. Mot. Pict. Eng.* 32: 412, Apr., 1939; Colton, *Photo Technique*, 1: 16, Sept., 1939). Further observations were made by Tull on the mechanism of color development (*Brit. J. Phot.* 86: 115, Feb. 24, 1939).

The evaluation of motion-picture film by semi-micro testing was discussed by Gibson and Weber (*J. Soc. Mot. Pict. Eng.* 32: 105, January, 1939). A very comprehensive treatise on the proposed

residual hypo determinations on film and paper was prepared by Townsend (*J. Documentary Reprod.* 1: 366, Fall, 1938). Useful data on the development of a normal silver halide latent image by electrolysis was given by Morse (*J. Franklin Inst.* 228: 169, August, 1939).

Bibliography. A new monthly publication, *Photo Technique*, issued by the McGraw-Hill Publishing Co., New York made its debut in June. A new German journal, *Zeitschrift für Angewandte Photographie*, was devoted largely to articles of interest to science and industry. It was issued bi-monthly by Hirzel, Leipzig. The *Photo World* published in London by S. Fielder, Ltd., was stated to be an illustrated monthly for the professional and the amateur. A technical publication, called *Photogrammetria*, was started in the fall of 1938 as the official organ of the International Society of Photogrammetry. A number of photographic magazines printed in belligerent countries abroad suspended publication for the duration of the war.

The more notable books of the year were: K. Henney and B. Dudley, *Handbook of Photography* (McGraw-Hill); J. E. Mack and M. J. Martin, *The Photographic Process* (McGraw-Hill); H. D. Murray and D. A. Spencer, *Color in Theory and Practice*, part 1 (Chapman & Hall, Ltd., London); W. G. Briggs, *The Camera in Advertising and Industry* (Pitman & Sons, Ltd., London); E. Stenger, *The History of Photography*, trans. by E. Epstein (Mack Printing Co.); E. Stenger and H. Staude, *Fortschritte der Photographie*, (Akademische Verlags., Leipzig); W. PHYSICS. Atomic Energy. Astounding discovery of the year in physics was the splitting of uranium, thorium, and protactinium when bombarded by neutrons. In the process a relatively enormous amount of atomic energy is released which, for the case of uranium, is equal per atom to 175,000,000 electron-volts of energy. While other elements have previously been bombarded with neutrons and other atomic particles and have been made to release atomic energy on a small

scale, the significant point about uranium's fission is that only low amounts of energy are necessary to release the 175,000,000 electron-volts of energy. The action of the neutrons appears to set off some kind of a "trigger" action within the uranium atom which, for a small expenditure of energy, releases large amounts. Hopeful and perhaps too enthusiastic accounts pointed out that here at last was the long-held dream of atomic power.

The original uranium fission experiments were performed in Berlin by Hahn and Strassmann. These scientists did not at first measure the atomic energy liberated but used chemical means to show that uranium, on fission, split approximately in half and gave atoms of barium and other elements of nearby atomic weight; weights roughly half of that of the parent uranium atom. It was the exiled woman German scientist Meitner, long associated with Hahn in his work, who first computed and pointed out that something like 200,000,000 electron-volts of energy should be liberated by this uranium splitting. Quickly known by informal communication in America, the truth of uranium splitting was confirmed in many laboratories by the great energy released in the process.

Key to the dream of atomic power in uranium splitting was that it should be a "chain" reaction and the search for this effect was quickly speeded. Roberts, Wang, Hafsted, and Meyer, at the Department of Terrestrial Magnetism of the Carnegie Institution of Washington, showed that neutrons of a delayed type were given off in the original fission of uranium. It was soon seen that, potentially, these secondary neutrons might serve as the agents for splitting other uranium atoms and continuing the process. It turned out, however, that the yield of neutrons seemed insufficient to set up the chain reaction easily, and at the end of the year one could say only that while the dream of atomic power was brought nearer to realization it was still a long way from reality.

There seemed, from research in many laboratories, to be no definite products of uranium fission other than the rough rule that the masses of the two splitter elements should add up approximately to the atomic mass of the parent uranium atom. Identified during the year as uranium splitter elements were barium, krypton, antimony, tellurium, iodine, strontium, yttrium, lanthanum, xenon, caesium, and rubidium. By Wilson cloud-chamber measurements Mouzon and Park at Duke found partial indication that perhaps three instead of two splitter products were created in uranium fission. Feenberg, at Washington Square College, New York University, used the heat produced in the uranium splitting to set off an explosion of the unstable chemical, nitrogen iodide. Henderson of Princeton, working at California, made direct thermo-couple measurements of the heat liberated by uranium fission and found its energy to be the 175,000,000 electron-volts already cited.

Significant point of uranium's fission was that uranium could be split by both high and low energy neutrons. Thorium appears to undergo fission only with fast (high energy) neutrons and the same was found for protactinium. Bohr of Copenhagen, resident for the year at Princeton, suggested with Wheeler that the low energy neutron splitting of uranium probably would be found to be due to the isotope of uranium having mass 235 instead of 239. The scarcity of the 235 isotope of uranium prevented tests on this point.

The discovery of uranium's fission ended all talk of the super-heavy "trans-uranic" elements

which had been reported in previous years as caused by the bombardment of uranium with neutrons. Many famous and reputable scientists, including Nobel-winner Fermi, had reported such elements and had checked partially back down the table of chemical elements to be sure that the "trans-uranic" elements were not already existing and known elements. The idea that uranium might be split in half by the neutron bombardment was so remote, however, that none of these scientists continued the intricate chemical testing down into the "middle-weight" elements like barium. If this had been done the astounding discovery would have been made several years ago.

The discovery of uranium fission immediately raised the question whether this splitting might be a source of error in the well-known and widely used uranium-lead ratio in the determination of the age of the earth by geologists. Libby, at California, investigated this point, and found that natural fission of uranium—if it occurs at all—is a very long-lived process having a half-life period of disintegration of more than 1×10^{14} years. Since estimates of the age of the earth are approximately 5×10^9 years it is now realized that uranium fission can play no significant role in changing this estimate.

Magnetic moment. Baffling to the layman but highly important to the theoretical nuclear physicist was the measurement of the magnetic moment of the deuteron by the four-man research team of Rabi, Ramsey, and Kellogg, of Columbia University, and Zacharias of Hunter College. The nucleus of the deuterium atom was found to be egg-shaped, or resembling a football spinning around its long axis. Technically the scientists confirmed the "existence of the deuteron quadrupole moment." Previously in nuclear calculations it had been assumed, in the absence of experimental evidence to the contrary, that the nucleus of the deuteron had a spherical shape.

Cyclotron. The great cyclotron at the University of California, whose magnet alone weighs 225 tons, was placed in operation and immediately yielded 16,000,000 electron-volt-energy deuteron particles. By employing alpha particles the energy of this newest and largest of the world's atom smashers can be increased to develop atomic accelerated particles having 32,000,000 electron-volts of energy. This performance excelled even the hopes of Prof. E. O. Lawrence, new 1939 Nobelist in Physics and director of the cyclotron's construction. It is entirely possible that by making minor changes and improvements 50,000,000 electron-volt-energy particles can be secured with this machine. So fruitful has been the operation of this newest cyclotron that Professor Lawrence announced plans for a super-giant cyclotron which would weigh between 2000 and 3000 tons and which could develop atomic particles possessing energies of more than 100,000,000 electron-volts. Plans were under way to secure a minimum of \$750,000 for the construction of such a unit.

Speed of Light. An important experimental method for measuring the speed of light, fundamental physical constant was developed by Anderson of Harvard. Using photoelectric cells the method makes the observations completely automatic and independent of observational errors of the human eye—a long-sought goal of physicists. Work is in progress to arrive at new and, it is hoped, more accurate determinations of the speed of light.

Disintegrations by Electrons. Because of

the low mass of electrons, these atomic particles have never been capable of producing atomic disintegrations. Collins, Waldman, and Polye, of Notre Dame, were able, however, to bring about the first of such disintegrations. They bombarded beryllium with electrons possessing 1,720,000 electron-volts of energy and turned the beryllium, mass nine, into two atoms of helium, each of mass four, and a neutron of unit mass. Mathematical calculations by Guth of Notre Dame predicted the disintegration.

Artificial Radioactivity. The production of artificial radioactivity and transmutation by bombardment with atomic particles has now been completed for virtually every element in the chemical periodic table. So many new disintegrations, with periods differing from those previously known, were reported during the year that a detailed listing is not possible here. One significant discovery, however, that of radioactivity produced in hydrogen of mass three, deserves special mention. Alvarez and Cornag at California produced radioactive mass three hydrogen by bombarding deuterium (mass two) with deuterons (the charged nuclei of deuterium atoms). The disintegration of the hydrogen of mass three takes place slowly and a considerable period must elapse before an estimate of its half life can be given.

Optical Glass. New types of optical glass containing rare chemicals instead of common silica, and possessing, in some cases, the highest index of refraction (light-bending ability) ever reported, were devised by Morey of the Geophysical Laboratory of Carnegie Institution of Washington. Coupled with low dispersion, the new glass will permit better correction for chromatic aberration in lenses. Typical elements used in the new glass are yttrium, barium, columbium, hafnium, tantalum, strontium, zirconium, and boron.

Current Detection. What is claimed to be the most sensitive current-detecting device ever devised was developed by Allen at Minnesota. The new instrument, a vacuum tube, can measure a current equivalent to 0.000,000,000,000,000,001 amperes. This inconceivably small current can be better appreciated when it is realized that the best previous current-detector measured a current equal to 20 electrons passing down a wire a second. The new tube of Allen measures an amount of electricity carried by a single electron passing down a wire every five minutes.

Upper Atmosphere. Preliminary but important discoveries were made in methods for probing the previously barred domain of the upper atmosphere of the earth in the intermediate zone of altitudes above that reached by sounding balloons and below the heights studied by means of radio-reflection measurements in the ionosphere. Johnson, Meyer, Hopkins, and Mock, of the Department of Terrestrial Magnetism of Carnegie Institution of Washington, developed a modulated searchlight technique and photocell detecting mechanism which permits knowledge to be gained of the scattering of light at altitudes of 40 kilometers, or 24.8 miles. With a searchlight mirror of 60-inch diameter it is believed that the method can be applied for studies of water vapor, turbulence, winds, dust, fluorescence, and absorption up to heights of 90 kilometers, or nearly 56 miles.

Magnetism. While Kapitza and others have developed methods for creating intense magnetic fields of 300,000 gauss for brief instants of time, it remained for Harrison and Bitter, of Massachusetts Institute of Technology, to produce the

most powerful, continuous magnetic field, rated at 100,000 gauss. At the peak of its operation the M. I. T. magnet uses 1800 kilowatts of electricity. The 100,000-gauss magnetic field will be used for research on the Zeeman effect, the splitting of spectral lines in a strong magnetic field.

Atomic Particles. No new atomic particles were discovered during the year and this negative result was helpful for the peace of mind of theoretical physicists.

Work continued on the newest of atomic particles, the mesons, (shortened from mesotron discovered in 1937). Many experiments apparently confirmed the fact that the mesons are "born" high in the atmosphere as cosmic rays strike the earth's blanket of air, and then rapidly "die," with an average lifetime of something like 25 ten-millionths of a second, according to Blackett at Manchester.

Cosmic Rays. Balloon flights bearing recording instruments, sent aloft by Millikan and Neher of California Institute of Technology, reached heights so great that only 1 or 2 per cent of the earth's atmosphere was above them. At these altitudes it was found that a definite maximum in cosmic-ray energy occurred, the magnitude of which was about 6,000,000,000 electron-volts of energy. This maximum corresponds closely to the energy to be expected if there is a possibility of transforming into cosmic-ray energy the whole of the rest-mass of the carbon atom.

In Panama, balloon flights under the direction of Johnson of Bartol Research Foundation gave information indicating that the "hard," high-energy component of cosmic rays consists of meson particles. The soft, low-energy component was found to consist of electrons, either positive or negative. Johnson also developed a hypothesis for the creation of mesons at the top of the earth's atmosphere, in which protons strike the blanket of air around the earth and, by their impact, form the mesons.

Other cosmic ray advances included:

The discovery by Jesse of Chicago that cosmic-ray intensity in the winter of 1938-39 was 10 per cent greater than during the spring and summer of the latter year.

The development of a new kind of a meter to measure the presence of neutrons by Danforth and Korff of Bartol, and the use of this meter by Korff on high-altitude balloon flights to prove the existence of neutrons near the top of the atmosphere. The significant point of this research was that neutron intensity increased with altitude ten times as rapidly as did cosmic radiation generally. Korff suggested the splitting of nitrogen atoms by cosmic rays as the cause of this previously unknown phenomenon. He indicated a complete disruption of a nitrogen nucleus would result in seven neutrons being liberated.

Electron Microscope. What is believed to be the most powerful electron microscope in the world was developed at the University of Toronto by Burton, Hillier, and Prebus: it has a limit of resolution of 60 Angstrom units. This corresponds to 0.000006 of a millimeter (six millionths of a millimeter). Magnification produced by the device was 12,700 diameters. Negatives taken with this enlargement were then re-enlarged by microphotography so that pictures of gold colloid films were obtained with a total magnification of 180,000. The new advance excels the previous record, announced in 1938 by German scientists, of an electron microscope capable of resolving objects

100 Angstroms apart, or 0.00001 of a millimeter. Scientists versed in electron research have fixed the limiting resolution of electron microscopes at 0.000001 millimeter from theoretical considerations; a tiny distance which the new Toronto apparatus closely approaches. Best resolving power in an optical type microscope is the Harvard apparatus of Graton and Dane which, while capable of enlargement to 50,000 diameters, has a resolving power magnification of 6,000; less than half as much as the Toronto device.

PICASSO. See ART EXHIBITIONS.

PITTSBURGH, UNIVERSITY OF. A nonsectarian institution of higher education for men and women in Pittsburgh, Pa., founded in 1787. The total autumn enrollment for 1939 was 10,223, distributed as follows: The College, 2446; engineering, 851; mines, 234; business administration, 1488; education, 839; off-campus centers, 828; graduate school, 2393; medicine, 265; law, 158; pharmacy, 221; dentistry, 228; retail training, 27; school of applied sciences, 226; school of nursing, 19. Students who are taking evening courses are included in the above enrollment. The extension division enrollment was 1098. The 1939 summer session enrollment was 3310. There were 1102 members of the faculty (including fellows of Mellon Institute of Industrial Research) during the year which closed June 30, 1939. The amount of endowment for the year ending June 30, 1939 was \$2,762,918, and the income from endowment was \$85,668. The library contained 350,000 volumes. The School of Nursing was established in September, 1939. Chancellor, John G. Bowman, LL.D.

PIUS XI (ACHILLE AMBROGIO DAMIANO RATTI), 261st Pope, and Bishop of Rome, died in Vatican City, Feb. 10, 1939. He was born in Desio, Italy, May 31, 1857 and was educated at the diocesan seminary at Milan and at the Lombard College and the Gregorian University in Rome. Ordained on Dec. 20, 1879, in 1882 he was assigned to the Seminary of San Carlo at Milan as professor of dogmatic theology. Six years later he was assigned to the Ambrosian Library, Milan, becoming its director in 1907. He immediately began various

needed improvements, cataloguing and arranging the books and manuscripts in an approved modern method. In 1914, Pope Benedict XV appointed him librarian of the Vatican Library, with the title of Monsignor. He alternated between Milan and Rome until 1916 when he devoted all his attention to the Vatican Library.

In 1918, Monsignor Ratti began his diplomatic career. He was sent to Poland as Apostolic Visitor and shortly afterward his scope was extended to include Russia. For his excellent work in establishing a regular ecclesiastical regime, and for his work in the partition of the great estates, many of which belonged to the Church, he was appointed Apostolic Nuncio and consecrated titular Archbishop of Lepanto in Warsaw on Oct. 28, 1919. Until 1921 he worked in Poland, where he was a member of the Interallied Commission which supervised the postwar plebiscites in Silesia; also he was active in working for the release of the Bishop of Minsk from prison in Russia.

On June 13, 1921, Archbishop Ratti was made Archbishop of Milan, and three days later the Red Hat was conferred upon him. His stay at Milan was short, for on Jan. 23, 1922, the death of Benedict XV left the Church without a head. Cardinal Ratti's reputation as a scholar, as an authority on Church law and on history, and the prestige of his diplomatic work, made him an outstanding candidate, and on Feb. 6, 1922 he was elected the 261st Pope. He was crowned Pius XI on February 12.

The theme of the reign of the new Pope was, perhaps, exemplified by his making an unprecedented appearance on the balcony overlooking the Square of St. Peter's and there giving his blessing to the multitude assembled and *Urbi et Orbi*. At his first consistory, Dec. 11, 1922, he declared that the promotion of Christian peace would be the aim of his pontificate and on December 23 he published the encyclical *Ubi Arcano Dei*, which announced as the program of his Pontificate, "The Peace of Christ in the Reign of Christ."

His reign of seventeen years was marked by many problems. Chief among them were the Roman question, the position of the Church in Mexico, Germany, Russia, and Spain, and the separation of Church and State in France. In diplomatic fields, his pontificate had this record: Concordat with Latvia, 1922; Concordat with Bavaria, 1924; Concordat with Poland, 1925; Concordat with Lithuania, 1927; Modus Vivendi with Czechoslovakia, and Conventions with Portugal for the Dioceses of India, 1928; the Lateran Pacts (Treaty, Concordat, and Financial Convention), Concordat with Rumania, Concordat with Prussia, 1929; Concordat with Baden, Concordat with the German Reich, Concordat with Austria, and institution of diplomatic relations between Estonia and the Holy See, 1933; Concordat with Yugoslavia, which was never approved by the Yugoslavian Senate, 1935; and recognition of the Franco Government in Spain, 1937. Possibly the outstanding event of his reign was the settlement of the Roman question and the signing of the Lateran Pacts with Italy on Feb. 11, 1929, which among other things, ended the 59-year imprisonment of the Pope and established Vatican City (q.v.). For a detailed account of the Pact see the NEW INTERNATIONAL YEAR BOOK for 1929.

The Pope created 103 dioceses and archdioceses, elevated 7 sees to archdioceses, established 19 abbeys and prelatures in nullius. Known as the "Pope of the Missions," he created 38 vicariates apostol-

ic; elevated 46 prefectures, 20 of which he created, to vicariates; created 73 other prefectures apostolic, and 24 missions and districts *sui iuris*, and in line with his belief in the necessity of a native clergy, elevated many to the bishopric, including 26 natives of China and Japan. He elaborated the program of Catholic Action, which, modified in every country to meet local conditions, was a policy designed to secure the collaboration of the Catholic laity in the apostolate of the hierarchy. Three times during his reign he announced a Holy Year: The first, to celebrate the 220th Jubilee Year, opened on Dec. 24, 1924 and closed on Dec. 24, 1925; the second, in honor of the Golden Jubilee of his ordination opened in January, 1929 and was extended to July, 1930; the third, which had for its aims the promotion of world peace and the encouragement of a world-wide return to prayer, was opened on Apr. 1, 1933 and closed on Apr. 2, 1934. He canonized, among many, Saints Joan of Arc, Thomas More, John Fisher, Therese of the Child Jesus, John Bosco, and Isaac Jogues; and beatified, among others, Mother Cabrini. He created 76 cardinals.

His many encyclicals were looked for and read with enthusiasm. The most important were *Divinus illius magistri* (Dec. 31, 1929) on the Christian education of children; *Casti connubii* (Dec. 31, 1930) on Christian marriage, which dealt not only with marriage but with current moral trends, companionate and trial unions, sterilization, abortion, contraception, and divorce; *Quadragesimo Anno* (May 15, 1931), which took its name from its first words and was issued on the 40th anniversary of Pope Leo XIII's *Rerum Novarum*, its aim being "to uplift the proletariat"; *Vigilanti cura* (June 29, 1936) on motion pictures; and *Divini Redemptoris* (Mar. 19, 1937), on atheistic communism. The others were: *Rerum Omnium* (Jan. 26, 1923) on the 3d centenary of St. Francis de Sales; *Studiorum Ducem* (June 29, 1923) for the 6th centenary of the canonization of St. Thomas Aquinas; *Ecclesiam Dei* (Nov. 12, 1923) for the 3d centenary of St. Josephat; *Maxima gravissimaque* (Jan. 18, 1924) on French diocesan associations; *Quas Primas* (Dec. 11, 1925) in which the Feast of Christ the King was instituted; *Rerum Ecclesiae* (Feb. 28, 1926) on Catholic Missions; *Rite Expiatis* (Apr. 30, 1926) for the 7th centenary of the death of St. Francis of Assisi; *Iniquis afflictisque* (Nov. 18, 1926) dealing with the conditions of the Church in Mexico; *Rerum Omnium* (Jan. 26, 1928) on true religious unity; *Miserentissimus Redemptor* (May 8, 1928) on reparation to the Sacred Heart; *Rerum Orientalium* (Sept. 8, 1928) on the Eastern Churches; *Mens nostra* (Dec. 20, 1929) on spiritual exercises; *Quinquagesimo Anno* (Dec. 23, 1929) marking the 50th anniversary of his ordination; *Ad salutem* (Apr. 20, 1930) for the 1500th anniversary of St. Augustine; *Non abbiamo bisogno* (June 29, 1931) on Catholic Action; *Nova impendet* (Oct. 2, 1931), dealing with the economic crisis, unemployment, and disarmament; *Lux veritatis* (Dec. 25, 1931), commemorating the 15th centenary of the Council of Ephesus; *Caritate Christi compulsi* (May 3, 1932), calling for prayers of expiation to the Sacred Heart; *Acerba animi* (Sept. 30, 1932) dealing with the persecution of the church in Mexico; *Delectissima nobis* (June 3, 1933) on the so-called religious laws of Spain; *Ad Catholicos Sacerdotes* (Dec. 20, 1935) on the Catholic priesthood; *Mit Brennender Sorge* (Mar. 14, 1937) on the Church in Germany; *Firmissimam*

Constantiam (Mar. 28, 1937) on the situation of the Church in Mexico; and *Ingravescentibus malis* (Sept. 29, 1937) on the recitation of the Rosary.

The end of the Pope's reign was marked by his failing health and the difficulties experienced by the Church in Mexico and Spain, but particularly in Germany where frequent violations of the Concordat as well as the Austrian *Anschluss*, which abrogated the Concordat of that country with the Vatican, made for estranged relations. Relations with Italy were also strained at times, particularly in connection with the racial laws promulgated in 1938.

In 1936 the Pope instituted the Pontifical Academy of Sciences. In 1914 he had addressed in Latin the 400th anniversary celebration of the birth of Roger Bacon at Cambridge, England. His publications before he was elevated to the Papacy include *Escursione notturna al Vesuvio* (1899); 42 *Lettere originali di Pio II relative alla guerra per la successione nel reame di Napoli* (1903), *Contribuzione alla storia della arti grafiche milanesi* (1912), and *Scritti alpinistici* (1923), his collected writings on mountain climbing, translated into English as "Climbs on Alpine Peaks."

PIUS XII. See ROMAN CATHOLIC CHURCH.

PLANNING. The National Resources Planning Board (q.v.), as a part of the Executive Office of the President, came into existence July 1 under the President's Reorganization Plan No. 1. It succeeds the National Resources Committee and its predecessors which for several years have conducted planning studies in co-operation with state, regional, county, and city planning agencies. A progress report of the old committee, released in February, stated that at the close of 1938 there were in existence 1200 city and 400 county planning boards, the latter mostly in the Northwest, besides state and regional planning authorities. Yearly revision of the six-year programmes for Federal Public Works construction, provided for by Congress in 1931, was being continued.

The Chicago Plan Commission, a voluntary advisory association of 300 members, was succeeded by an official board consisting of 12 city officials, serving ex-officio, and 10 civilians appointed by the mayor. There will be an advisory board of 200 members. The old commission had functioned for many years. It fathered the Burnham city plan, which was adopted and executed by the city.

"New trends in population growth, advances in zoning technique and recognition of the problems of blighted areas," reported a midwest planning engineer, have led to revision of city plans for Memphis, Tenn., Decatur, Ill., Des Moines, Iowa, and Kansas City, Kan. At Richmond, Va., probabilities of future city growth were analyzed to aid in locating city limits prior to annexation. Street circle intersections at the Federal Capital are being redesigned to remove traffic obstacles. An underpass was under construction at Thomas Circle and plans were being made for changes at Scott and Du Pont Circles. (*Engineering News-Record*, Oct. 26 and Nov. 9, 1939—New York.)

Pomezia, the last of the new towns built on the reclaimed Pontine Marshes, outside Rome, Italy, was dedicated in October. The town is surrounded by 330 farms. Public buildings and farmhouses with plumbing have been provided. See also: Symposium by Sir Raymond Unwin and others, *A Plan for Greater London*, Town and Country Planning, January-March (London).

PLATINUM. Canada is the world's largest producer of platinum metals, recovery of half the world's supply being made mainly from the copper-nickel ores of the Sudbury (Ontario) district. Production in 1939 is estimated at 292,000 troy oz., substantially the same as in 1938, according to the Dominion Bureau of Statistics. Of this production, approximately 160,000 oz. is platinum and the remainder allied metals: palladium, iridium, osmiridium, and others. The value of the 1939 Canadian production is estimated at \$9,368,000.

Second among world producers of platinum is the U.S.S.R., for many years prior to 1900 the dominant factor, producing 90 per cent of the world's supply. South Africa, United States, and Colombia rank third, fourth, and fifth, respectively. The rise of the United States to fourth position was due mainly to a phenomenal increase in production from the Goodnews Bay district of Alaska.

The price of platinum in the United States fluctuated during 1939 from \$34 per troy oz. in January to \$42 in October, closing the year at \$40.

POLAND. A central European republic, established Nov. 9, 1918, and partitioned between Germany and the Soviet Union in September, 1939. Capital, Warsaw.

Area and Population. On Jan. 1, 1939, Poland had an area of 150,432 square miles and a population estimated at 35,090,000, including 419 square miles with 241,698 inhabitants annexed from Czecho-Slovakia in October, 1938. Living births in 1938 numbered 849,873 (24.4 per 1000); deaths, 479,602 (13.8); marriages, 278,713 (8). Emigrants in 1937 numbered 102,463. The urban population was 27.4 per cent of the total. Estimated populations of the chief cities on Jan. 1, 1939, were: Warsaw, 1,289,500; Łódź, 672,200; Lwów (Lemberg), 318,200; Poznań (Posen), 272,300; Kraków (Cracow), 259,300; Wilno (Vilna), 208,900.

Education and Religion. The 1931 census showed 23 per cent of the population over 10 years of age as illiterate. The school enrollment in 1937-38 was: Primary, 4,851,500; general secondary, 221,200; continuation trades schools, 110,225; universities, 48,018; professional schools, 106,415. At the 1931 census 64.8 per cent of the population were Roman Catholics, 11.8 per cent Orthodox, 10.4 per cent Greek Catholics, 9.8 per cent Jews, and 2.6 per cent Protestants.

Production. About 61 per cent of the working population was engaged in agriculture, forestry and fishing and 19.2 per cent in industry and mining. Production in 1938 was (in metric tons unless otherwise specified): Wheat, 2,171,900; barley, 1,371,300; rye, 7,253,400; oats, 2,656,500; corn, 126,200; potatoes, 34,558,200; beet sugar (1938-39), 491,200; tobacco, 14,600; beer, 1,502,000 hectoliters (hectoliter equals 26.42 U.S. gal.); linseed, 68,400; hempseed, 19,600; rapeseed, 71,700; flax, 39,600; hemp, 12,800; wool and mohair, 5900; rayon, 6204; wood pulp, 187,000; cement, 1,719,000; petroleum, 507,000; coal, 38,104,000; salt, 642,000; iron ore (metal content), 270,000; pig iron and ferro-alloys, 968,000; steel ingots and castings, 1,542,000; zinc ore (1937), 58,000; potash, 108,000. Livestock in 1938 included 3,910,000 horses, 10,539,000 cattle, 7,489,000 swine, and 3,400,000 sheep. Textiles, iron and steel, flour, lumber, petroleum products, and refined sugar were leading manufactures.

Foreign Trade. Imports for consumption in 1938 were 1,299,764,000 zlotys (1,254,298,000 in 1937); exports of Polish products, 1,184,712,000 zlotys (1,195,488,000). The leading imports in 1938 by value were machinery, metals and metal goods, raw cotton and wool; the chief exports, coal and coke, timber, metals and metal goods. The three chief sources of imports in 1938 were: Germany, 299,366,000 zlotys; United States, 158,422,000; United Kingdom, 147,772,000. Of the exports, Germany took 285,812,000 zlotys; United Kingdom, 215,496,000; Sweden, 71,493,000.

Finance. Ordinary budget results for the fiscal year ended Mar. 31, 1939, were: Receipts, 2,531,900,000 zlotys; expenditures, 2,521,300,000. This was the third successive year in which a balanced ordinary budget was achieved after a series of deficits in 1931-36. Extraordinary expenditures totaled 1,063,000,000 zlotys in 1938-39. The national debt was 5,318,500,000 zlotys (internal, 2,829,000,000; external, 2,489,500,000) on Apr. 1, 1939 against 4,974,000,000 zlotys on Oct. 1, 1938. The zloty averaged \$0.1886 (1938), \$0.1884 (1939).

Communications. Poland in 1938 had 12,580 miles of state railway lines, 860 miles of private lines, 209,418 miles of roads (37,771 miles surfaced), and air lines connecting the chief cities with all European air centres. The 1938 traffic statistics of Polish Airlines (L.O.T.) were: Flights, 9980; passengers, 35,800; baggage, 954,140 lb.; freight, 594,748 lb.; mail, 323,532 lb.; newspapers, 363,110 lb.; miles flown, 1,547,286. Poland's overseas trade was carried on chiefly through Gdynia and Danzig. In 1938 Poland imported 1,300,000 metric tons of goods valued at 698,000,000 zlotys through Gdynia and 800,000 tons valued at 98,000,000 zlotys through Danzig; it exported 7,400,000 tons worth 485,000,000 zlotys through Gdynia and 5,200,000 tons worth 278,000,000 zlotys through Danzig. See ROADS AND STREETS.

Government. For the Polish Constitution and government, see 1938 YEAR BOOK, p. 610. Presi-

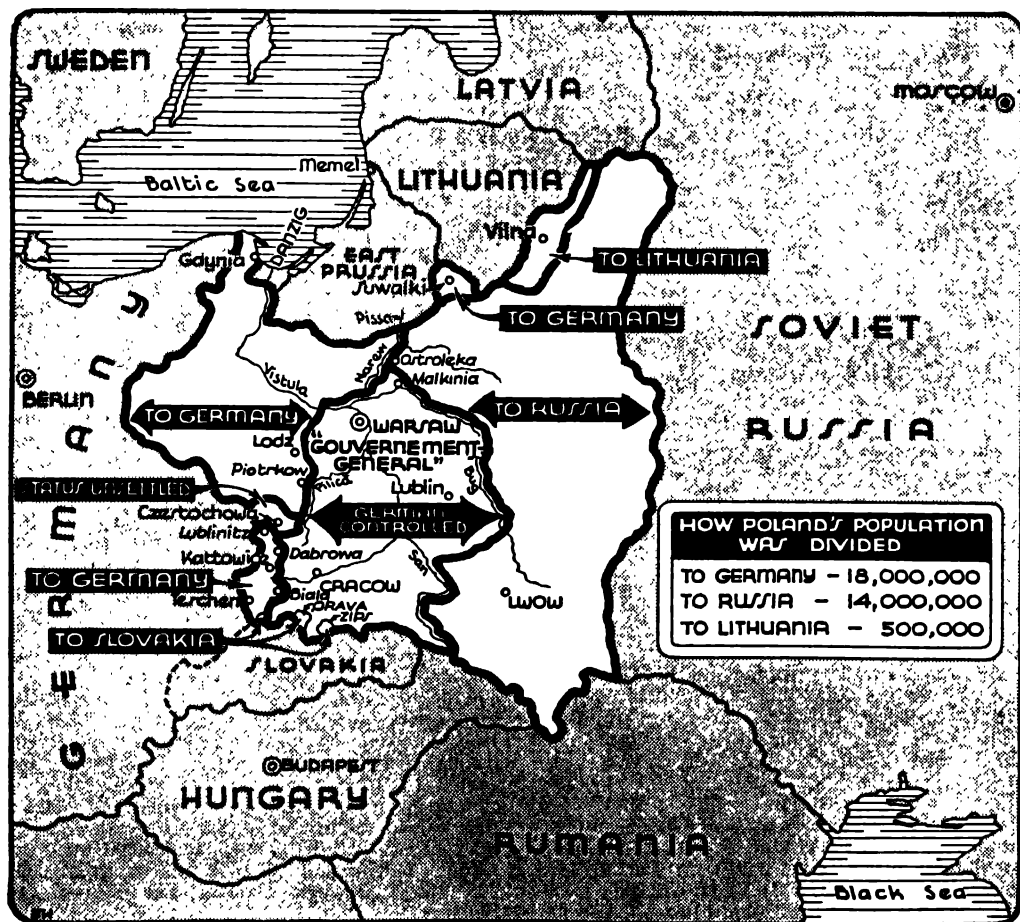

dent at the beginning of 1939, Ignace Moscicki; Premier, and Minister of Interior, Felicjan Slawoj-Skladkowski, heading a non-party cabinet formed May 16, 1936. Many of the dictatorial powers wielded by Marshal Joseph Pilsudski previous to his death were vested in Marshal Edward Smigly-Rydz, inspector-general of the army, in 1936. For developments in 1939, see *History*.

HISTORY

The Partition. The specter of a new Russo-German agreement for the division of Poland, that had haunted the Poles ever since the collapse of the Russian and German empires gave them their independence, became a reality in 1939. On September 1 Adolf Hitler launched the full force of his great war machine against Poland. On September 17, when the Polish armies were being rapidly shattered by the German hammer blows, a great Russian army invaded Poland from the east. In one of the shortest military campaigns in modern history (see *EUROPEAN WAR*), Polish resistance was crushed, Warsaw and other large cities left in ruins, and the government driven headlong across the Rumanian frontier. On September 28 a Russo-German treaty for the division of Polish territory was signed in Moscow. Germany took the western sector, including all of

the purely Polish districts of the country; Russia, the eastern sector, populated mainly by Ukrainians and White Russians. The German sector comprised about 72,000 square miles and a population of some 22,000,000; the Russian sector, about 78,500 square miles and 13,000,000 inhabitants. Germany later gave 225 square miles of Polish territory to Slovakia and on October 10 the U.S.S.R. ceded 2570 square miles to Lithuania.

Polish Provisional Government. The Poles commenced immediately the struggle to regain their independence—a struggle that they had waged without cessation from the partitions of 1772, 1793, and 1795 until 1918. Their British and French allies had proclaimed the restoration of an independent Poland as one of their war aims. To forestall a German-Russian effort to set up a puppet Polish state, President Moscicki before fleeing into Rumania on September 18, signed a proclamation stating that the government was being transferred to foreign soil to "safeguard Polish sovereignty" and the interests of the republic. The cabinet, Marshal Smigly-Rydz, and many Polish officials, army officers, and members of the nobility and other leading families followed the President into Rumania. President Moscicki and others holding official positions were interned by the Rumanian Government at Germany's demand. But many officers, soldiers, and politicians

went on to Paris, where headquarters of the Polish independence movement were established. On November 22 the Polish capital was transferred to Angers, France.

On September 30 President Moscicki resigned and transferred his powers to Wladislaw Raczkiewicz, former governor of Pomorze Province, who had gone to Paris. (The Polish Constitution empowered the retiring President to name his successor.) Raczkiewicz immediately appointed a new cabinet to replace that interned in Rumania, as follows: Premier and War Minister, Gen. Wladislaw Sikorski; Foreign Affairs, August Zaleski; Finance, Col. Adam Koc; Vice President of the Council and Minister without Portfolio, Prof. Stanislas Stronski. Later additional members were named representing various Polish parties. Moscicki and the members of the retired Polish Cabinet were permitted to leave Rumania, and most of them joined their compatriots in Paris. The provisional regime in Paris was recognized as the legal government of Poland by France, Great Britain and a number of neutral countries, notably the United States, Turkey and Sweden. The new government had at its disposal a Polish gold reserve of \$75,000,000 that had previously been deposited in Paris as well as substantial gold holdings in the Bank of England.

A moderate Conservative of democratic leanings, General Sikorski asserted that the Polish state when re-established would adopt democracy as its basic principle of government. On December 19 a National Council was created, including representatives of all former Polish opposition parties, to function as a war-time Parliament.

Polish Legion Organized. General Sikorski had previously (September 28) been named by the French Government in collaboration with the Polish Embassy in Paris as commander-in-chief of the Polish armies to be organized in France. Recruiting of men of military age from among the 800,000 Poles residing in France commenced September 29. Subsequently recruiting activities were extended to over 7,000,000 Polish citizens in Great Britain and the other democratic countries. General Sikorski declared his cabinet was one "of war and union. Its first task will be to organize an army and carry on the fight begun with courage and spirit by the soldiers and population of Poland." By the beginning of December two divisions were in training at Angers.

Polish-Czech Collaboration. Repudiating the foreign policy followed by the defeated Polish regime, the Sikorski Government announced that it would work in close collaboration with the Czechs and Slovaks led by ex-President Eduard Beneš who were organizing a provisional government in London dedicated to the restoration of Czecho-Slovak independence. On October 15 Dr. Beneš and Premier Sikorski exchanged formal assurances that they would never recognize the disappearance of Poland and Czecho-Slovakia.

German Policy in Poland. While the Poles were organizing to aid Britain and France in war against the Reich, Germany was carrying forward a thorough reorganization of its Polish conquest with two principal aims in view—economic exploitation and Germanization. Even before the fighting in Poland had ended, the German organization for the economic development of the conquered territory had begun to function. The German Labor Service aided army engineers in making the repairs needed to permit the resumption of economic activity. Deserted farms were

occupied and their crops and cattle cared for to augment the German food supply. Factories, railways, mines, and foundries were repaired and placed under German managers. Leading Polish business enterprises were likewise reorganized under German direction.

Thousands of Polish war prisoners, peasants and laborers were impressed for the heavy work of repairing war damage in Poland and replacing the men called to the colors from factories and farms in Germany proper. According to a Berlin correspondent of the *New York Times*, the destruction of property in those sections of western Poland fought over during the six weeks' war was greater than in the regions devastated during four years of warfare in France in 1914-18. Prisoners and other Poles employed by the Germans were paid 60 per cent of the prevailing wage for their labor.

In contrast with German policy in Czecho-Slovakia, where Czecho-Slovak cultural and political autonomy was recognized, at least in principle, the Nazi policy in Poland called for complete suppression of the Polish language, schools, cultural organizations and all other bulwarks of Polish national consciousness. German names supplanted Polish names for cities, squares, shops, etc. German commissioners operated former Polish-owned shops and hotels in the German language. The swastika banner everywhere replaced the Polish national flag. Polish children were required to go to German-language schools. Nazi youth societies were organized to aid the Germanization of Polish youth. Particularly in the former Polish Corridor, Polish peasants and business men were systematically replaced by Germans. The former German minority in Poland received the pick of the official posts and business positions opened as a result of the Germanization programme. Germans from Danzig and from the Baltic States (see ESTONIA, LATVIA, and LITHUANIA) were settled by the German Government on former Polish lands.

Towards the end of 1939 reports from various sources tended to substantiate the charges of the Polish Government in France that the German conquerors were exacting a terrible vengeance upon the Poles in the form of large-scale executions and imprisonments. The German terror appeared to be directed mainly at educated Poles of the middle and upper classes for the purpose of eliminating the groups mainly responsible for the preservation of Polish national patriotism during the previous partitions. Mass reprisals were inflicted upon cities or villages in which anti-German incidents occurred; the Catholic clergy were harried; and the Poles, like the Jews, were relegated to a helot status. Famine and disease, following in the wake of war and of a winter of unprecedented severity, added to the sufferings of the defeated. The German Foreign Office, justifying the harsh treatment of the Poles, charged on December 30 that Poles had "murdered" 5437 Germans in Poland since the start of the war.

Responsibility for carrying out these measures was placed by Hitler on Col. Gen. Gerd von Rundstedt, who was appointed head of the military regime in the occupied regions of Poland on September 27. Dr. Hans Frank, German Minister of Justice, was appointed head of the civil administration on General Rundstedt's staff. Under a decree signed by Chancellor Hitler and his war cabinet on October 8, some 30,000 square miles of Polish territory with about 8,000,000 inhabitants

were annexed as an integral part of the Reich on November 1. This area included the provinces of Pomorze (West Prussia), Posen and Upper Silesia and its annexation re-established in general Germany's 1914 boundaries. The German-occupied region east of this new frontier was given a separate status. Called the "Gouvernement-General," it was placed under the administration of Hans Frank on October 25. As Governor-General, Frank was assisted by Arthur Seyss-Inquart, former Governor of Austria.

In connection with this political reorganization, the Reich carried out one of the greatest reshufflings of population in modern history. All Poles and Jews living in the sector annexed to Germany were ordered to move east to the Gouvernement-General to make room for Germans from eastern Poland, the Baltic States, and the Italian Tirol. Jews were sent to the Gouvernement-General from all parts of the Reich and its dependencies, and for the most part were forced to settle in a "reservation" between Lublin and the Russian frontier.

Eastern Poland Sovietized. The day after Soviet forces commenced the invasion of eastern Poland, a Russian communiqué declared that they were sent "to bring order and reassurance to Poland and to help the Polish people, confronted with the collapse of their State." As the Russian forces advanced, meeting little resistance from the small Polish reserves left behind during mobilization on the western front, they set in motion a process of wholesale sovietization, carried out by peasant and other lower class groups at the instigation or under the guidance of political commissars accompanying the Red Army. Thousands of landlords, priests, middle class elements, Polish officials, and the more well-to-do peasants fled before the advancing Russians, and many escaped across the frontiers into Hungary, Rumania, Lithuania, and even the German-occupied sections of Poland. Those who remained were deprived of their properties and positions and either exiled, imprisoned, or executed. Churches were closed and converted into barracks, motion picture houses, or to other uses. According to a Moscow anti-religious newspaper, *Bezbozhnik*, many Roman Catholic and Greek Orthodox priests were slain. Local committees of peasants and workers, co-operating with the Red Army political commissars, assumed control of villages, towns and country districts. The land, livestock, equipment, and personal possessions of landlords and other bourgeois or upper-class individuals were distributed among peasants sympathetic to the Russian invaders. In the larger cities the stores, banks, and large business houses were reported to have been confiscated by the Soviet Government.

The Russians also catered to the anti-Polish sentiments of the Ukrainian and White Russian populations, eliminating all traces of Polish rule, and sending into those regions from the Soviet Union Communist-trained teachers, labor leaders and other propagandists of Ukrainian and White Russian nationality. The local labor organizations were replaced by Soviet-controlled trade unions. An extensive propaganda machine, which enlisted the soldiers of the occupying armies, was established to win the peoples of the Russian-occupied districts over to Soviet rule.

On October 23 elections to National Assemblies were held in the Ukrainian and White Russian occupied regions. It was announced that the candidates selected by the Soviet authorities had re-

ceived more than 90 per cent of the votes. The National Assemblies then met in Lwow (Ukraine) and Bielowostok (White Russia), respectively, and petitioned the Supreme Soviet at Moscow for admission into the Soviet Union as part of the Ukrainian and White Russian Soviet Socialist Republics (q.v.). The petition was granted by the Supreme Soviet on November 1-2 and formal annexation of these territories followed November 3. These events were accompanied by numerous arrests of Socialist and labor leaders in the annexed territories by Soviet authorities and by increased efforts to win acceptance of Soviet rule by the newly acquired populations.

Ukrainian Nationalism. This propaganda, however, encountered opposition from the Ukrainian nationalists, whose struggle for autonomy and independence had for years harassed government officials in both the Polish and Soviet Ukraine. Ukrainian nationalist bands, hostile to both Poles and Russians and hoping for independence from the German victory, inaugurated a reign of terror against Poles and Jews in the Polish Ukraine in the period between the collapse of Polish authority and the arrival of Soviet troops. A Ukrainian provisional government was set up in the region for a short time (for background, see 1938 YEAR BOOK, p. 611).

Polish Politics. The violence of the Ukrainian revolt against the Poles was due in no small part to the refusal of the Polish Government, even when facing the virtual certainty of German invasion, to grant the peasant masses and the minority nationalities a share in the administration of the country.

When the Reich first began to press its demands upon the Warsaw Government in March, 1939, the opposition leaders urged President Moscicki and Premier Slawoj-Skladkowski to form a cabinet of national defense that would unite all political elements in Poland against the Nazi threat. It was asserted that the existing government, representing a small minority of the population, did not command full public support. The government leaders turned a deaf ear to these appeals, although they permitted the return of the Polish peasant leader, former Premier Wincenty Witos, who had been in exile since sentenced to an 18-months' prison term for political activity in 1931.

Again elected president of the Peasant party on May 17, 1939, Witos declared that the peasants would defend Polish independence to the last. "The only reward we ask," he said, "is full citizenship rights in a Poland of freedom and equality, prosperity, and justice, loved and defended by all her citizens." The Polish peasant and other democratic opposition groups strongly supported the government's policy of firm resistance to Berlin's demands, as did the more responsible spokesmen for the minority nationalities. Nevertheless government officials made it plain that Poland's return to close collaboration with Britain and France did not mean restoration of democracy in Poland. When Parliament adjourned on June 16 it vested President Moscicki with emergency powers to issue legislative decrees until it reassembled.

Following the annihilation of the republic, Poles of all political opinions were reported to have placed responsibility for the disaster upon the quasi-dictatorship. Its foreign and defense policies had failed, and the flight of the government from Warsaw 24 days before the capital actually sur-

rendered to the Germans was believed by many Poles to have given the Russians a pretext for invasion. These circumstances accounted for the pro-democratic views expressed by the provisional government formed later in Paris.

Foreign Policy. At the beginning of 1939 Foreign Minister Josef Beck's policy of independent action and ruthless realism, calculated to prevent Russo-German collaboration and to maintain the balance of power between these powerful neighbor states, appeared to be paying Poland substantial dividends. Poland in 1934 had virtually nullified her alliance with France and signed a non-aggression pact with Hitler that permitted German expansion into Austria and Czecho-Slovakia. But this understanding with Germany had enabled Poland in 1938, by methods similar to those employed by Hitler against the Austrians and Czechs, to force a favorable settlement of her long dispute with Lithuania and to seize the Teschen district from Czecho-Slovakia (see 1938 YEAR BOOK, p. 612). At the same time it had lessened Soviet influence in Europe.

After the Munich triumph of 1938, Hitler's encouragement of the Ukrainian nationalist movement aroused Polish resentment, but did not move Colonel Beck to change his policy. In January, 1939, Beck had a cordial conference with Hitler in which the *Fuehrer* again proposed a German-Polish alliance for an attack upon the Soviet Union. The offer was declined. Beck felt confident that Russia and Germany would never come together so long as Hitler retained power in the Reich, and he had no intention of voluntarily making Poland a Soviet-Nazi battleground. Nor did he wish to strengthen Germany as against Russia, realizing that if either of these countries established predominance over the other, Poland's existence would be threatened.

Beck's "realism" led him to encourage Italo-German colonial claims upon Britain and France during the visits of the Italian Foreign Minister to Warsaw late in February. German expansive energies would thus be deflected from eastern Europe. At the same time Beck by negotiations with the Rumanian, Hungarian, and Lithuanian governments continued his efforts to build up a bloc of neutral states in Eastern Europe under Polish tutelage that would be strong enough to ward off attack from either Germany or Russia. On March 2 the government party's supreme council at Warsaw also evidenced Poland's growing international ambitions by putting forward a claim for a share in the redistribution of overseas colonies that was expected to follow Italo-German pressure against Great Britain and France.

Nazi Demands on Poland. These Polish ambitions suffered a rude check when Hitler in the middle of March suddenly occupied Bohemia and Moravia and established a military protectorate over Slovakia. German troops in Slovakia were in a position to outflank the Polish defense lines along the German frontier (see CZECHO-SLOVAKIA under *History*). On March 22 the Reich seized Memel Territory (q.v.) from Lithuania and undercut Polish economic and political influence in the latter republic.

Most ominous of all these adverse developments were the proposals made to the Polish Ambassador in Berlin by Foreign Minister von Ribbentrop on March 21. These called for the return of Danzig to the Reich and the cession by Poland of a strip of territory connecting East Prussia and Germany in which the German Government

would construct a railway line and automobile road and exercise extra-territorial rights. In return, according to German sources, the German Government offered to accept the existing western Polish frontier, conclude a 25-year non-aggression pact, and guarantee Poland's economic interests in Danzig. The Poles denied having received the latter proposals.

The British Alliance. Von Ribbentrop emphasized that if these proposals were not accepted immediately, they would be withdrawn and never repeated. At the same time there were reports of German troop concentrations along the Polish frontier. The anti-Polish agitation in Danzig (q.v.) assumed new violence. These circumstances increased Polish fears that Hitler was planning to repeat the tactics used so successfully against Czecho-Slovakia and that he aimed to destroy or emasculate Polish independence by successive demands backed by the threat of armed invasion.

Accordingly the Poles hurriedly sought to enlist the aid of Britain, France and the Soviet Union, while attempting to reach an amicable settlement with the Reich that would not weaken Poland's military position. At the same time they called up large numbers of reserves and gave notice that they would not capitulate to German threats.

On March 22 Poland offered to join the Anglo-French "peace front" provided Britain would sign a military alliance. While these negotiations were being pressed, the Warsaw Government on March 26 submitted counter-proposals to the German demands of March 21. It suggested a common Polish-German guarantee of the separate entity of the Free City of Danzig on the basis of respect for Polish rights and interests in that territory and complete freedom of the Danzig population. In place of the proposed extraterritorial zone across the Polish Corridor, it offered to grant Germany further facilities for travelers and goods in transit between the Reich and East Prussia. No reply was received from Berlin.

With the German attitude appearing more threatening, the Anglo-Polish discussions were hastened. On March 31 Prime Minister Chamberlain announced in the House of Commons that Britain had agreed to go to Poland's immediate aid "in the event of any action which clearly threatened Polish independence and which the Polish Government accordingly considered it vital to resist with their national forces." Despite German warnings that dire consequences would follow, Foreign Minister Beck went to London early in April and agreed to negotiate a permanent Anglo-Polish alliance insuring mutual aid in case either was attacked by Germany. This treaty was signed on the eve of the war (August 25).

Polish-German Pact Abrogated. When Chancellor Hitler in his Reichstag speech of April 28 announced the abrogation of the Polish-German non-aggression pact of 1934—five years before it was due to expire—the Polish-German crisis began to assume a more and more serious aspect. Attacks upon Poles in Danzig had already inflamed Polish public sentiment to the point of anti-German demonstrations. On May 5 Foreign Minister Beck in a speech to the Sejm firmly rejected the German demands and denied Hitler's assertion that the Anglo-Polish mutual assistance pact was a violation of the German-Polish non-aggression treaty.

Throughout the spring and summer of 1939

Poland was subjected to a "white war" of threats, military preparations, diplomatic maneuvers and agitation among the German minority in Poland, all directed from Berlin with the objective of either forcing Warsaw to capitulate or shattering the understanding between Poland, Britain, and France. Apparently it was expected in Berlin that Chamberlain and Daladier, rather than go to war over Poland, would re-enact their role at the Munich Conference and induce the Poles to give in.

The Poles, however, refused to be intimidated, and Britain and France repeatedly warned Hitler that they would stand by their pledges to aid Poland if it were attacked by the Reich. These warnings were backed by steps to co-ordinate the military efforts of the three powers. In the middle of July Maj. Gen. Sir Edmund Ironside, Inspector General of British Overseas Forces, held official staff talks in Warsaw. Franco-Polish military leaders had previously conferred. On August 2 Britain agreed to advance Poland a credit of £8,163,300 for the purchase of war materials in Great Britain.

Polish-Soviet Relations. Britain and France also sought to implement their guarantee of Polish independence by bringing the Soviet Union into the "peace front" organized after Hitler's annexation of Bohemia and Moravia. The Polish attitude toward collaboration with Moscow was later cited by Soviet commentators as one of the principal reasons for the failure of the Anglo-French-Soviet negotiations.

Immediately after German occupation of Bohemia-Moravia the Poles sought to improve their relations with Moscow, and on May 8 the Soviet Government accredited a new Ambassador to Warsaw, filling a post left vacant for two years. The Poles, however, flatly rejected Russian proposals for the entrance of Soviet troops into Poland to fight against the Germans in case of a Nazi attack. The Poles insisted that Russian help be confined to military supplies, assistance in the air and facilities for the importation of arms and munitions from Britain and France through Soviet Black Sea or White Sea ports. The Polish Government, controlled by army officers who had fought against the Red troops in 1920 and by the landed aristocracy, feared that if the Russians entered Poland as allies they might not leave when war with Germany was over, and that their presence would strengthen the Communist movement among the Polish masses.

Effect of Russo-German Pact. Polish hopes of limited Soviet collaboration against Germany were shattered by the signing on August 24 of a Russo-German non-aggression pact, concluded under circumstances that indicated a far-reaching political agreement if not a military alliance. This sensational somersault by both Hitler and Stalin ended Polish hopes that they could obtain British and French war supplies through Russia. It also forced Rumania to declare its neutrality in the subsequent conflict and thus prevented supplies from reaching Poland through Rumanian Black Sea ports.

Despite the obvious danger of their isolated position, the Poles refused to budge from their firm stand toward Germany. On August 10 Colonel Beck had again warned the Berlin government not to interfere with Poland's rights in Danzig. On August 16 the German demands were increased to include return of all former

German territory from Poland. In their refusal to consider such terms, the Poles were firmly supported by the British and French Governments, which insisted that Polish-German issues must be settled by peaceful negotiation rather than under the threat of German armed force. The final diplomatic negotiations were conducted largely between the German, British, and French governments. However on August 25 President Moscicki accepted President Roosevelt's proposal for a peaceful settlement of the German-Polish dispute. The Warsaw authorities also acceded to Anglo-French admonitions to avoid provocative incidents so far as possible. Neutral correspondents in Poland on the eve of the conflict reported that the German charges of Polish atrocities against the German minority were either entirely false or greatly exaggerated.

On August 30 developments in Germany led the Poles to commence general mobilization. The following day Warsaw announced its readiness to accept the British proposals for German-Polish negotiations. But with the ratification of the German-Russian non-aggression pact by the Supreme Soviet on August 31, Hitler was ready to strike. Early the following morning began the invasion that in the short space of six weeks completed the doom of the Polish state.

POLAR RESEARCH. *Antarctic.* Interest in the Antarctic region in 1939 far surpassed that bestowed on the Arctic. The most ambitious enterprise of exploration in years was the Third Byrd Antarctic Expedition, financed mainly by an appropriation of the United States Government, and carrying, in two ships, about 125 enlisted men, 4 Naval officers subordinate to Byrd, and a number of scientific men. These vessels, the *North Star* and the *Bear*, left Boston, December 15 and 22 respectively, and proceeded by the Panama Canal, the *North Star* touching at Pitcairn Island (q.v.), and reaching Wellington, N. Z., December 27. The two vessels were to unite about Jan. 1, 1940, near Little America, about the 163d western meridian, at the Antarctic ice barrier. The expedition thus had still to reach its scene of operations when 1939 ended.

Though it had not yet begun its task, the character of this expedition, its plan, and the circumstances that sent it forth caused it to overshadow most of what had happened in the Antarctic subsequently to the attainment of the South Pole.

The character of the expedition was strongly governmental. Congress appropriated for it \$340,000 in the deficiency Appropriation Act of June 30. The President, July 7, directed the Secretaries of State, the Treasury, the Navy, and the Interior each to name a representative to a committee designed to advance the investigation of the Antarctic; the organization was by him named the U.S. Antarctic Service; and Rear Admiral Richard E. Byrd (U.S.N., Retired) was put in command of the expedition and made a member of the committee. The *North Star*, motor-driven vessel of the Coast Guard, was assigned to the expedition, and the *Bear*, a 68-year-old wooden barkentine with motor equipment, previously used by the Second Byrd Expedition, was again put into service. The equipment carried by these vessels exceeded in variety anything that had before been taken to

Antarctica; it included a motor vehicle of 27 tons, traveling on huge wheels, its cabin ample to house and shelter a considerable party, its design intended to justify its name of "snow cruiser." In addition to equipment for flying, the expedition took sled-dogs, tractors, and two light military tanks. The party went supplied for a stay until August, 1941, at least.

The main circumstance behind the purposes of the expedition was the manifestation of rising rivalry, among a number of governments, for possessions in Antarctica. All Antarctic land except an area between 80 deg. and 150 deg. W. had been claimed by one or more governments, before the formation of the new Byrd expedition, and early in 1939 the number of claimants had rapidly swelled. Norway asserted, January 14, sovereignty over such of these lands as lay between 20 deg. W. and 45 deg. E. Soon afterward the German press carried reports (March 10, by radio and in April from Cuxhaven) that a German expedition under Captain Ritscher, conveyed in the catapult ship *Schwabenland*, had flown over land (within the Norwegian claim) between 5 deg. W. and 15 deg. E., dropping or planting flags and claiming 135,000 square miles of territory for Germany on the ground of discovery.

Argentina, in turn, created in July a commission to draw up a claim to Argentine sovereignty over Antarctic land between 68 deg. W., approximately the meridian of the southern end of the Argentine boundary in Tierra del Fuego, and 20 deg. W., thus covering the main part of the Falkland Islands Dependency claim, which Great Britain had asserted in 1908 and 1917 (See ARGENTINA under *History*). Meanwhile Dr. Lincoln E. Ellsworth (see below) had dropped a proclamation from an airplane in January, claiming for the United States an area extending to either side of 80 deg. E., within the Australian claim of 1933. Norway, interested in maintaining her Antarctic claim (useful to her whaling industry), proposed early in the year a congress on Polar matters, to be held in Bergen in July, 1940.

Other Expeditions. Dr. Lincoln E. Ellsworth completed the voyage begun in 1938. His ship, the *Wyatt Earp*, reached the neighborhood of the Antarctic glacial barrier, about 80 deg. E. and 68 deg. S., early in January, 1939, and was much delayed by the intervening pack ice. Before heading north again about January 23, Ellsworth made a flight by airplane, extending south over the Antarctic mainland along the approximate line of 79 deg. E.; he viewed the surface over a number of degrees on either side. He reported noting, as evidence of the retrogression of the glacial edge, that the highest parts of islands now fully exposed showed much more erosion than exposed eminences farther to the south.

Ellsworth returned via Tasmania in haste, as Liavaag, his chief officer, had been injured in a fall and needed surgical attention. He asserted a claim, on the ground of discovery, to the inland area (but not the coastal strip) that he had viewed by airplane. This involved the controversion, in part, of the earlier claim of Australian domain, based on the British investigations of the coast prior to 1933 and applying to the whole quadrant below Australia.

The British royal research ship *Discovery II* returned to London in May from her fifth voyage of research in Antarctic waters. This voyage took 20 months. The vessel covered about 100,000 miles. Several scientists were employed; they made ex-

tended observations, chiefly of matters connected with the life-economy of the Antarctic whales; the study was for the advantage of the profitable British whaling industry in these waters.

Arctic Exploration. The manuscript found on Henrietta Island (see YEAR BOOK, 1938, p. 613) and identified as left by the De Long expedition was examined in Moscow and was reported to be undecipherable. It had been regarded as virtually certain that this manuscript was the one cached by Lieutenant Melville of the expedition; hope had arisen that it might prove legible in part at least and might give new light on the experiences of the ill-fated expedition of 1879-80.

Ivan Papanin, who had commanded the Russian ice-drifting expedition of 1937-39, directed thereafter the Russian Soviet government's Northern Sea Route Administration, an effort to establish marine freight service over Arctic waters, along the northern coast of Russia and Siberia. He reported that 104 vessels had engaged in this service in the open season of 1939 and that more had been accomplished than had been projected for the year. Cargoes, Papanin stated, were unloaded at the mouths of the rivers Lena, Yana, Kolyma, Indigirka, Anabara, Oleneka, and Khatanga. Of these outlets, the mouths of the Yana and Indigirka had theretofore been considered impossible of approach by ship.

In North Spitsbergen was found early in the year wreckage apparently from the German Schroeder-Stranz expedition of 1912. On the eastern coast of Greenland a French explorer, Count Gaston Micard, encamped with a party, was taken ill and was brought out in response to an appeal by radio. The Norwegian ship *Vesle Kari* responded to the call. By use of dynamite against intervening masses of ice, the vessel made her way as near as possible and an airplane brought off Micard, later carrying him to Oslo. The Russian ice-breaking ship *Syedoff* (or *Sedov*) held in Polar ice for more than two years, was reported at the end of December as about to emerge into open water, between Greenland and Spitsbergen; this vessel had been borne from the Russian side of the Arctic expanse, to within a few degrees of the North Pole, and thence down the same southward current by which formerly the *Fram* and lately Papanin had emerged.

Canada again sent out the yearly Eastern Arctic Patrol. It departed, July 8, on the Hudson's Bay Company's ship *Nascopie*, bound on a tour of 12,780 miles, to make 22 main visits and serve some 48 posts and outposts. It included a scientific division; in the personnel of this division were men qualified to study physical geography, biology, zoology, diseases of carnivorous mammals, and the dental conditions among the Eskimos. Preparations were made for catching live lemmings, from which to breed a supply for the laboratory at Macdonald College.

POLITICAL ACTIVITIES. See UNITED STATES; COMMUNISM; DEMOCRATIC PARTY; REPUBLICAN PARTY; SOCIALISM.

POLITICAL ACTIVITY, RESTRICTION OF.

It is a well recognized, if not approved, feature of American politics that the official power to confer benefits carries with it the opportunity to win votes. The partisan opposition to the Administration complained in the National campaign of 1936 that the party in power was making undue use of the Federal dispensing agencies to assure to its own candidates the vote of the dependent citizens. The same charge was repeated in the campaign of 1938. The 76th Congress, assembling in 1939, contained enough opponents of the Administration to enact, with the moral aid of a plea for reform, a statute to restrict the political activity of Federal officials and otherwise to protect voters from compulsion.

This measure, the Political Activity Act (signed August 2), or Hatch Act, made unlawful seven methods to put pressure on voters: 1, intimidation, threat, or coercion by any person, affecting any one's free exercise of the right to vote for a candidate for Federal office; 2, a Federal employee's use of his authority to affect the election of such a candidate; 3, promise, by any person, of employment on any Federally supported undertaking, as a reward for any political activity; 4, removal of, or threat to remove any one from a Federally supported employment or other benefit in the classification of poor-relief, for race, creed, color, or political activity; 5, any person's solicitation or receipt of an assessment or a contribution for a political purpose, from anyone getting or entitled to poor-aid out of a Federal appropriation; 6, the revelation, by any person, for political purposes, of a list of names of such persons to a political candidate, committee, or campaign manager, and the receipt of a list, by such a recipient; 7, the use of money out of any such appropriation, or of authority conferred in the appropriating act, in order to restrain or coerce the exercise of an individual's right to vote. Penalty for violating any of these prohibitions was a fine of not over \$1000 and imprisonment for not over a year, either or both. The Act put other restrictions on political activity: no person in the executive branch of the Government might use official authority to interfere with an election or affect its result; nor might any such person take part in political management or in a political campaign (beyond voting and expressing opinions); but the President, Vice-President, those paid from appropriation for the Office of the President, the heads and assistant-heads of departments, and the policy-making appointees confirmed by the Senate were exempted from this sweeping outlawry of political activity; finally all persons in the Federal Government were forbidden to be members of any political party or organization advocating the overthrow of constitutional government in the United States, and those transgressing this prohibition were to be removed from their posts.

This act originated in the Senate, where at the outset of the session Senator Hatch, New Mexican Democrat, and Senator Austin, Vermont Republican, offered measures containing its primary features. The President made no public opposition to the bill, beyond offering the counter-proposal that Congress put the administrative employees of the WPA into the Civil Service. After passing the Senate without great difficulty in April, the bill drew increasing attention while in the House. Here it passed, by vote of 243 to 133, July 20; of those voting for it, 83 were

dissident Democrats chiefly from Southern States, who thus threw in their forces with the Republican block, to overthrow the Democratic regulars. The bill's final prohibition, against Federal employees' membership in subversive groups (which to most minds connoted Communists), came as a late amendment in the House. Sent back to the Senate, the bill passed that body, July 21, "without opposition," a course that obviated a count of the Democratic stalwart minority. The majority leader, Barkley of Kentucky, who had incurred prominence in connection with politics in the WPA during the campaign of 1938 in his State, labored under a handicap in directing whatever opposition the Senate might have mustered; he was reported not to have been in the Senate chamber when the bill passed finally. The President signed it five days later. A measure to restrict some State employees was offered in the Senate.

POLITICAL AND SOCIAL SCIENCE.

THE AMERICAN ACADEMY OF. A national forum for the discussion of political and social questions, founded in Philadelphia in 1889, and incorporated in 1891. The organization takes no sides upon controversial questions. Its aim is to secure and present reliable information to assist the public in forming an intelligent opinion.

The 43rd Annual Meeting held March 31 and Apr. 1, 1939, considered the general subject "Democracy and the Americas." On October 14, the Academy was addressed on the subject of "American Foreign Policy" by Senator Elbert D. Thomas, and Drs. Edwin M. Borchard, Frederick J. Libby, and Charles G. Fenwick. "The Roots of Totalitarianism" (in Economics, in Politics, and in Philosophy) was the topic of the November 18 meeting. The speakers were Drs. Moritz J. Bonn, Robert M. MacIver, and Ralph Barton Perry.

The Annals, issued bimonthly, is the official organ of the Academy. Each issue is devoted to a particular topic of economic, political, or social importance. Topics considered in 1939 were: "Ownership and Regulation of Public Utilities"; "Appraising the Social Security Program"; "Refugees"; "Democracy and the Americas"; "Frontiers of Legal Aid Work"; and "Government Expansion in the Economic Sphere."

The Academy has established a monograph series, the first of which was a study on *Private Police with special reference to Pennsylvania*, prepared by Dr. J. P. Shalloo; the second, a study on *The Negro as Capitalist* by Dr. Abram Harris; and the third, a study on *The Turkey of Atatürk* by Donald Everett Webster.

In the pamphlet series inaugurated by the Academy, the following publications have appeared: No. 1, *Economics of Planning*; No. 2, *Financing New York City*, by William Whyte; No. 3, *Some Statistical Aspects of Marriage and Divorce*, by Dr. I. M. Rubinow; No. 4, *Modernizing Our State Legislatures*, by A. E. Buck; No. 5, *The Economics of Isolation*; No. 6, *Constitutional Rights*, edited by Dr. Herbert F. Goodrich; and No. 7, *Democracy versus the Totalitarian State in Latin America*, by Dr. Samuel Guy Inman.

The officers in 1939 were: President, Ernest Minor Patterson; Secretary, J. P. Lichtenberger; Treasurer, Charles J. Rhoads; Vice-Presidents, Herbert Hoover, Carl Kelsey, and Clarence A. Dykstra. Headquarters are at 3457 Walnut Street, Philadelphia, Pa.

POLITICAL ECONOMY. Subjects in the field of applied economics are treated in this volume under the following heads: BANKS AND BANKING; BUSINESS REVIEW; CO-OPERATIVES; FINANCIAL REVIEW; HOUSING; LABOR CONDITIONS; LABOR LEGISLATION; OLD-AGE PENSIONS. See also such articles as AMERICAN FEDERATION OF LABOR; CONGRESS OF INDUSTRIAL ORGANIZATIONS; SOCIALISM; RELIEF. See also the article on AGRICULTURE and the various crops. Further discussions are to be found in articles on the several industries, minerals, public utilities, etc. Books on political science and economics for the general reader are to be found listed in the article, LITERATURE, ENGLISH AND AMERICAN, under *Economics* and *Politics*.

POLITICAL GEOGRAPHY. See GEOLOGY.

POLITICAL REFUGEES. See INTERGOVERNMENTAL COMMITTEE ON POLITICAL REFUGEES; REFUGEES.

POLITICAL SCIENCE, ACADEMY OF. An international learned society for advancing the political sciences and their application to political, economic, and social problems, founded in 1880 in New York City and incorporated in 1910. Its membership on Dec. 31, 1939, numbered 7076, of whom 6 were honorary members, 225 life members, 5551 annual members, and 1294 subscribing members, chiefly libraries and organizations. At the semi-annual meeting on May 3, 1939, in New York City "The Preservation of Democracy—America's Preparedness" was discussed.

At the fifty-ninth annual meeting on November 15 the topic under discussion was "The Effect of the War on America's Idle Men and Idle Money." The officers for 1939 were: W. Randolph Burgess, president; Albert Shaw and R. C. McCrea, vice-presidents; Noel T. Dowling, secretary; John A. Krout, editor of publications; Leon Fraser, treasurer; and Miss Ethel Warner, director and assistant treasurer. Headquarters were in Fayerweather Hall, Columbia University, New York City.

POPE, SIR WILLIAM JACKSON. A British chemist, died in London, Oct. 17, 1939, where he was born on Mar. 31, 1870. Educated at Finsbury Technical College and the Central Technical College, London, during 1897-1901 he was head of the chemistry department at Goldsmiths' Institute, London. He was professor of chemistry and head of the department at the Municipal School of Technology in Manchester, and in 1905 joined the faculty of the University there as professor of chemistry. In 1908 he joined Cambridge University as professor of chemistry and as a fellow of Sydney Sussex College.

His early researches were in crystallography, and he discovered, with William Barlow, the connection, in relation to valency, of chemical constitution and crystal structure. In 1915 he was a member of the Panel of Consultants of Lord Fisher's Admiralty Inventions Board and his work on poison gases enabled the Allies to produce mustard gas faster than could the Germans. For his work he was knighted in 1919. Other of his researches included a special study of asymmetric compounds.

One of the leaders of British chemistry, Sir William received many honors, including the Longstaff medal of the Chemical Society (1903),

the Davy medal of the Royal Society (1914), the Dumas medal of the Société de Chimie industrielle (1921), the Messel medal of the Society of Chemical Industry (1932). He was Thomas Graham lecturer at Glasgow (1914), Mukherjee lecturer at the University of Calcutta (1921), and James Watt Lecturer at Greenock (1923) and served as president of the Chemical Society (1917-19), the Society of Chemical Industry (1920-21), the International Union for Pure and Applied Chemistry (1922-25) and of the Solvay Chemical Conference, Brussels (1922-36).

His writings on crystallography and organic chemistry appeared mostly in the *Transactions* of the Chemical Society and the *Proceedings* of the Royal Society.

PORTUGAL. A republic of southwestern Europe. Capital, Lisbon (Lisboa).

Area and Population. The area is 35,582 sq. mi. (continental, 34,386; Azores and Madeira, 1196), and the population was estimated at 7,460,000 on Jan. 1, 1939 (6,825,883 at the 1930 census). Living births in 1938 numbered 199,467 (26.9 per 1000); deaths, 115,331 (15.5 per 1000); marriages, 49,016 (6.6 per 1000); divorces, 822. The 1930 populations of the chief cities were: Lisbon (Lisboa), 594,390 (1936 estimate, 650,000); Oporto (Pôrto), 232,280; Setúbal, 46,398; Funchal (in Madeira), 31,352; Coimbra, 27,333; Braga, 26,692; Évora, 22,061.

Colonial Empire. The total area of Portugal's possessions is approximately 808,362 sq. mi.; the total population was estimated at 9,405,000 in 1938. The colonies are treated individually in the YEAR BOOK under the following separate headings: In *Africa*: ANGOLA, CAPE VERDE ISLANDS, PORTUGUESE GUINEA, SÃO THOMÉ AND PRÍNCIPE, and MOZAMBIQUE; in *Asia*: PORTUGUESE INDIA, MACAO, and TIMOR, PORTUGUESE.

National Defense. Military service is compulsory. On Nov. 1, 1939, the army consisted of 55,800 active soldiers and 460,000 trained reserves, according to the Adjutant General's Office, Washington, D. C. The air force comprised 986 men and 150 aircraft. The navy (at the beginning of 1939) was composed of 7 escort vessels, 6 destroyers, 2 torpedo boats, 7 gunboats, 3 submarines, 1 sailing training ship, 3 surveying vessels, 3 river gunboats, 1 transport, and 5 auxiliary service ships. The personnel was 736 officers and 5602 men on Jan. 1, 1938. See MILITARY PROGRESS.

Education and Religion. About 52 per cent of the population over seven years of age are illiterate. School attendance in 1936-37 was: Primary, 519,336; secondary, 31,505; technical, industrial, and commercial, 28,386; university, 7896. The great majority of Portuguese are Roman Catholics but freedom of worship is granted other faiths.

Production. Agriculture, the principal occupation, is supplemented by fishing, mining, and manufacturing. About 60 per cent of the land is culti-

vated, 19 per cent is meadow, 15 per cent is uncultivated but cultivable, and 4 per cent is waste. Production of the chief crops in 1938 was: Wheat, 15,802,000 bu.; rye, 4,051,000 bu.; barley, 1,791,000 bu.; oats, 6,530,000 bu.; corn, 11,662,000 bu.; potatoes, 21,779,000 bu.; wine, 289,412,000 gal.; olive oil, 9,510,000 gal. Cork production in 1937 was 137,638 metric tons; wool, 3761 metric tons; canned sardines, 31,306 metric tons in 1938. Mineral production in 1938 was (in metric tons): Coal, 313,442; pyrites, 558,327; tungsten ore (wolframite), 2419; tin ore (cassiterite), 1525; titanium ore (ilmenite), 568; cement, 264,135. Industrial production in 1938 included 17,044 metric tons of paper, 61,405,334 lb. of cotton (net imports), 374,288 pairs of shoes, 1984 metric tons of enameled iron ware, and 44,146,372 lb. of macaroni and other alimentary paste.

Foreign Trade. Imports in 1938 were valued at 2,279,000,000 escudos (2,353,000,000 in 1937); exports at 1,138,000,000 escudos (1,202,000,000 in 1937). The chief exports in 1937 in the order of value were: Canned sardines, port wine, and textiles. For distribution of trade, see YEAR BOOK for 1938, page 614; consult also article in current volume on IMPORTS AND EXPORTS for trade with the United States in 1939.

Finance. Actual budget receipts in 1938 were 2,472,000,000 escudos (ordinary, 1,994,000,000) and expenditures were 2,469,000,000 (ordinary, 1,988,000,000). Estimates for 1939 placed revenue at 2,815,000,000 escudos (ordinary, 2,029,000,000) and expenditures at 2,813,000,000 (ordinary, 2,020,000,000). The net public debt on Jan. 1, 1939, was 6,354,000,000 escudos. The average exchange value of the escudo was \$0.0448 in 1937, \$0.0443 in 1938, and \$0.0404 in 1939.

Transportation. Portugal has about 2169 miles of railway line (including 450 miles of narrow gauge). Highways in 1939 extended 19,418 miles (see ROADS AND STREETS). The merchant marine consisted of 266 vessels of 100 tons or over, with a capacity of 269,118 gross tons. During 1938 a total of 9457 vessels of 30,309,910 gross tons entered Portuguese ports in the international and coastwise trade. Lisbon became the chief European base of the transatlantic air route opened by Pan American Airways in 1939 via the Azores and Bermuda.

Government. A constitution adopted March 19, 1933, fixes the form of the authoritarian government set up by a directorate of military and civil leaders in 1926. Under this constitution the chief executive power rests in a President elected for a term of seven years by popular vote, not universal, of men and women. The parliament consists of two bodies. One, the Corporative Chamber, has 79 members, all appointed and each representing a local area or an administrative, moral, cultural, or economic activity; the other, the National Assembly, has 90 members, elected for a term of four years, by popular vote. Political parties are not allowed, but the body known as the National Union is in effect a single party, nominating all candidates; the popular vote is cast for one approved candidate in each case. The President's powers are exerted mainly through a cabinet, which is not responsible to the parliament. The present National Assembly, the second under the existing constitution, was elected in October, 1938. The President is Gen. Antonio Oscar de Fragoso Carmona (re-elected Feb. 17, 1935). The Premier, Dr. Antonio de Oliveira Salazar, heads a cabinet reorganized Jan. 18, 1936; he is himself

Minister of War, of Finance, and of Foreign Affairs, and dominates the régime.

History. Portugal's course in foreign relations carried the country without mishap through the months that preceded the start of war between Great Britain and Germany. The peril of this period, for Portugal lay in the possibility that Germany and Italy would nourish their territorial appetite out of the Portuguese colonial empire, either with the support of Spain, whose government owed them a return for aid in overthrowing its predecessor, or by overawing Portugal's traditional protector, the British Government. The conclusion of the civil war in Spain ripened the moment for action on the German and Italian part in March or April. The Portuguese Government, however, negotiated with the Spanish Government of Franco, in March, a treaty of non-aggression, each agreeing to eschew for ten years any combination against the other and to help no aggression against the other. The treaty did not repay others' military services to Franco, but it repaid the Portuguese for the service of about 18,000 volunteers in Franco's forces and for the loss of about 8000 of these volunteers' lives in his cause.

The dispatch of a German fleet to the Mediterranean in April involved the presence of the German vessels for a time on the Portuguese coast; it thus occasioned fear of a rising against the Portuguese Government, for which the warships' arrival might give the cue. The situation in the spring thus led both the Portuguese and the British governments to enhance their estimates of the value of the ancient alliance. Salazar committed himself definitely, May 22, in an address to a special session of the Assembly; he warned that nations hunting for "living-space" might generate war; he reaffirmed the British alliance; and he justified Portuguese aid to Franco as fundamentally in harmony with the British interests.

The insecurity of the Portuguese position could not be said to have abated wholly until the British definitely challenged the moves of Germany in eastern Europe. The British declaration of war on Germany tended to strengthen the Portuguese foreign relations, to the extent of increasing the immediate value of the country's alliance. There arose no question of following Great Britain into war. Premier Salazar, addressing the Assembly on October 9, said: "Great Britain has asked nothing . . . that would oblige us to enter the conflict." The seemingly inconsistent position of neutral ally of a belligerent was maintained without special difficulty throughout the rest of 1939.

War had much to do with the development of Lisbon as a terminal for the first regular aeronautical travel across the North Atlantic Ocean. The Pan American Airways started, May 19, to carry mail between New York and Lisbon, with a stop at the Azores. The service began the transportation of passengers about a month later. After the war had made it difficult for either travelers or mail to make the trip between America and Europe by any other means, flights over this route became more frequent, until the purpose was announced, December 7, to make before long a departure a day, except Sundays.

Portugal suffered some troubles from the existence of a maritime war. Measures had to be taken to regulate the course of the escudo, with a view to its relation to sterling. Speculation in raw materials and essential foodstuffs was forbidden by decree. Failure to receive from England the usual supplies of coal compelled the authorities

to reduce the railroads' services early in October. Cotton for the textile manufactories ran short in September, prior to the season for the receipt of cotton from Portuguese colonies.

Domestic and Colonial Affairs. President Carmona made a trip of three months to visit the Portuguese colonies in Africa (June 18-September 12). The government sought further, during the year, to accelerate its construction of housing for urban classes of earners of low incomes. This policy gave it what was conceived as a long-range weapon for reducing politico-social disaffection, still evidenced in occasional round-ups of plotters and in their departures to places of confinement.

See also **MILITARY PROGRESS**; **NAVAL PROGRESS**; **SPAIN under History**.

PORTUGUESE EAST AFRICA. See **MOZAMBIQUE**.

PORTUGUESE GUINEA. A Portuguese colony in West Africa. Area, 13,944 square miles; population (1938 estimate), 420,000. Capital, Bolama. The principal commercial products are rice; palm oil (900 metric tons, 1938); palm kernels (6000 metric tons, 1938); and groundnuts (31,500 metric tons exported in 1938-39 season). In 1937 imports were valued at 36,641,873 escudos; exports, 38,535,306. The budget for 1938 was balanced at 26,181,396 escudos. (Escudo averaged \$0.0448 in 1937 and \$0.0443 in 1938.) There are about 1863 miles of roads in the colony. In 1936, 104 vessels of 159,761 tons cleared the ports; besides 2808 steamers of 66,121 tons in the coasting trade.

PORTUGUESE INDIA. The Portuguese possessions in India, comprising Goa, Daman, and Diu. Total area, 1537 square miles; total population (1938 estimate), 600,000. Capital, Panjim (or New Goa). Manganese (1800 metric tons, 1937); copra (300 metric tons exported in 1938); spices; and caju-nuts were the chief products. Trade is largely transit. In 1938, the estimated value of merchandise imports (in old U.S. gold dollars) was \$2,400,000; exports, \$500,000. There are about 730 miles of roads and 51 miles of railway lines. The budget for 1938 was balanced at 52,611,577 escudos (escudo averaged \$0.0443 in 1938). Governor-General, Col. José R. P. Cabral.

PORTUGUESE WEST AFRICA. See **ANGOLA**.

POST OFFICE DEPARTMENT. Oldest and largest of Federal functions, a going concern when it was securely fixed in the Constitution, the U.S. Post Office Department is the executive agency for the administration of the laws of Congress in the form of postal service. Over 400,000 persons earn their living in the mail establishment, three-fourths in civil service and the remainder under contract. More than half of all regular government employees are engaged in the inter-communication of 45,000 post offices and the postal contact with the rest of the world, as well. See **STAMP COLLECTING**.

Every known method of transportation is used to collect, move and deliver the flow of letters, parcels and reading matter in motion between people and industry in the never-ending exchange of goods and services. Special delivery, registry, insurance, and air mail are offered at additional fees, and the money-order service and the facilities for postal savings and the purchase of "baby bonds" all go to make up a complete net-work in the fabric of our civilization. It is, too, a strong, vital social force for good.

For the past five years postal earnings have

been increasing because of the greater hire of postal facilities by the public. From a low point in 1934 the total gain has been \$159,228,909, or 27 per cent to the end of the last fiscal year—June 30, 1939. In the same period postal expense has risen in consequence of increased volume of mail and statutory enactments for the benefit of postal employees. Again from a low point in 1934 the total increased cost has been \$153,879,937, or 24 per cent. This is a true measure of postal progress, for while earnings in fiscal 1939 are again an all-time high in postal history, 1939 expense is nineteen millions less than the all-time high of 1930. In sustaining an increase in the volume of business, costs have been controlled.

For the twelve months ended June 30, 1939, the statutory fiscal year in government, the huge transactions from innumerable sources that produce postal service, are seen from the total cash turnover for the year at \$7,860,802,407, as issued by the Comptroller General of the United States. It is more than all money in circulation at any one time and it equals almost fifty dollars from each man, woman, and child in the population, passing through post offices each year in cash. The audited financial result for fiscal 1939 is a net postal surplus of \$14,547,795, the fifth surplus in the past six years. The main statistics are:

| | |
|------------------------|---------------|
| Audited expenditure | \$784,646,938 |
| Audited revenue | 745,955,075 |
| Gross postal deficit | 38,691,862 |
| Deduct Nonpostal items | 53,239,658 |
| Net postal surplus | \$ 14,547,795 |

During the latter part of calendar 1939 there has been serious disruption of postal service with European countries on account of the lack of normal transportation facilities due to war conditions. The volume of both incoming and outgoing mail has decreased about 35 per cent and transportation costs have been increased considerably on account of circuitous dispatch necessary to reach both belligerent and neutral countries.

JAMES A. FARLEY.

POTASH. Conditions in the domestic potash industry in 1939 were in marked contrast to those prevailing in 1914-18, when the United States was dependent on German and other sources for domestic needs. During the World War Germany forced the cancellation of contracts resulting in an estimated loss to American buyers of about \$28,000,000. Subsequently the Congress authorized the Geological Survey to conduct explorations for potash deposits in the United States. Resulting discovery and development of large deposits in the vicinity of Carlsbad, N. M., assured this country of an adequate supply of this mineral fertilizer. In 1939 two producers were active in New Mexico and one in California, all on public land. A third large operator in New Mexico began development work in 1939, and expected to be in production in 1940. During 1938 domestic production was 68 per cent of domestic consumption of 467,000 tons. The industry gives assurance that it can supply all United States needs despite curtailment of imports on account of the war in Europe. Reserves in New Mexico alone are estimated at 70,000,000 tons in the 60 sq. mi. under development. Domestic potash prices were fairly stable in 1938 and 1939 at about 53¢ per unit (20 lb.) contained in muriate salts. Germany is

still the largest producing country, with the United States and France about on equal terms in second place. See FERTILIZERS.

H. C. PARMELEE.

POTATOES. The 1939 potato crop of the United States was estimated at 360,992,000 bu. harvested from 3,031,700 acres averaging 119.1 bu. compared with 374,163,000 bu. in 1938, 3,022,600 acres, and 123.8 bu.; and the 1928-37 average of 372,258,000 bu., 3,343,400 acres, and 111.4 bu. The 18 surplus late potato States produced 258,053,000 bu. and were led by Maine with 38,250,000 bu., Idaho 29,670,000, New York 26,797,000, Michigan 24,250,000, and California 22,644,000 bu. The 12 other late potato States made 39,938,000 bu. with Ohio 12,600,000 bu. leading the group. These 30 late potato States made a total of 297,991,000 bu. The 7 intermediate potato States led by New Jersey with 7,480,000 bu. totaled 27,617,000 bu., and the 11 early potato States led by North Carolina with 8,200,000 bu. and Alabama with 4,860,000 bu. totaled 35,384,000 bu. The seasonal average price per bushel received by farmers in late potato States was 66.9¢, in intermediate States 77.1¢, and in early States 78¢, or a National average of 68.8¢ and an estimated value of production of \$248,226,000 in 1939 compared to 55.8¢ and \$208,835,000 in 1938.

Production (1939) reported from other leading producing countries included Germany 2,067,975,000 bu., Netherlands 110,330,000, Hungary 86,883,000, Lithuania 77,294,000, Sweden 71,469,000, Rumania 66,652,000, and Canada 58,867,000 bu. The 1938-39 crop in France amounted to 636,189,000 bu., Italy 108,356,000, Poland 1,269,777,000; and the U.S.S.R. 1,541,740,000 bu. World production in 1938-39, 32 countries reporting, was estimated at 5,839,544,000 bu. See *Production* under individual countries.

HENRY M. STEECE.

POULTRY. Abundant feed in 1939 resulted in heavy production of various classes of poultry and eggs. There were about 40,400,000,000 eggs produced, amounting to 3 per cent more than in 1938, and 2,380,000,000 lb. of chicken on a dressed weight basis, 6 per cent more than for 1938. Hatching of chicks by commercial hatcheries was the largest on record, about 21 per cent in excess of 1938. The heavy hatching of broilers in commercial hatcheries was attributed to increased farmer purchases and continuation of the shift from home to commercial hatching of broilers. Another new development, to which some consideration at least has been given, involved raising hens in batteries without giving them access to ranges.

Egg production was consistently above 1938 production; however, egg prices were about 11 per cent lower. The feed-egg ratio based on Chicago prices was much less favorable than during 1938, but it was more favorable than during the period 1928-38. This trend suggested that egg production in 1940 would probably show some decrease. Chicken prices were about 9 per cent lower than in 1938.

The turkey crop of 1939 was estimated at 431,000,000 lb., an increase of 22 per cent over 1938 production. Intentions to expand turkey output were confirmed by the increase of some 50 per cent in the hatching of poults at commercial hatcheries. Along with the expansion in turkey production, the U.S. Bureau of Animal Industry

was attempting to breed a so-called streamlined turkey which finished at an earlier age and lighter weight. It was intended to produce carcasses suitable for year round consumption where smaller birds are desired.

Research with poultry progressed in accord with advances made in research with other classes of livestock.

Perosis in chicks was found by the Wisconsin Agricultural Experiment Station to be correlated with the bone and blood phosphatase activity. Low phosphatase activity occurred in birds with perosis. The slipped tendon condition in poultry was found to be related to a manganese deficiency in the ration, in further studies at the same station. Variations in hatchability of the eggs of birds on low manganese rations were associated with the amount of sunlight during the two weeks prior to hatching. How sunlight could have a sparing action on the requirement of manganese was not clear.

Some of the contributions that have been made by research to the poultry industry are admirably and adequately discussed by Dr. L. E. Card in his paper presented before the Seventh Worlds Poultry Congress. This paper gives an account of research conducted over many years, but during 1939 there was special advance in the physiological studies of egg formation, incubation, and artificial insemination. The studies of limits of tolerance for developing embryos with respect to temperature, humidity, oxygen, and carbon dioxide has resulted in the construction and perfection of large incubators, which have been operated largely in an automatic manner, controlling various environmental factors within very narrow ranges. The knowledge of sex linkage was applied to sex determination at hatching, and genetic methods were successfully adapted in solving the problem of broiler feathering and breeding for disease control. See LIVESTOCK; VETERINARY MEDICINE.

The Kansas Agricultural Experiment Station found by alternating feeds of different xanthophyll content, which color the yolk in which it is deposited, that the rate of yolk metabolism decreased slightly during the early morning hours. A test for determining freshness in eggs, based on the buoyancy of the whole egg, was developed at the Indiana Agricultural Experiment Station. As eggs age, they lose buoyancy, as determined by the buoyancy number.

Turkey hens could be brought into earlier production by the use of artificial light in the morning and evening at the Iowa Agricultural Experiment Station. It was thus possible to hatch the poults earlier and get them on the holiday markets with better finish and maturity.

(U.S. Dept. Agr., Misc. Pub. 368; 1939); *Turkey Management*, S. J. Marsden and J. H. Martin (Danville, Ill.: The Interstate Press; 1939).

GEORGE HAINES.

POWER PLANTS. The present installed capacity of power plants supplying energy for public use in the United States is about 39 million kilowatts, of which 28 million is in steam stations and 11 million in water-power plants. Of this total, according to the Federal Power Commission, private ownership accounts for 89 per

cent. Accurate figures on the installed capacity of industrial power plants will not become available until results of the 1940 Census are compiled, but it has been authoritatively estimated that such plants account for about 20 millions kilowatts.

Construction in the power plant field was active during 1939, 1,300,000 kw of steam capacity having been added in central stations and 220,000 kw of hydro power in Federal projects. Work now in progress, for completion in 1940 and 1941, will add 2,800,000 kw to the former and 1,415,000 kw to the latter. Much new industrial power plant construction is also under way. While the greater part of the capacity added during the preceding five or six years was in high-pressure "topping" units or extensions to existing plants, last year marked the beginning of a decided trend toward new plant construction.

An outstanding co-operative arrangement between a utility and industrial plants was consummated on the Pacific Coast where at each of three large oil refineries three 200,000 lb. per hr. boilers are being installed to operate at 1500 lb. pressure and 950°F. total steam temperature. The steam will be supplied to high-pressure turbines, much of the power from which will go to the utility system and the exhaust will be utilized in refinery processes.

In general, there was no tendency to exceed or to equal the capacity of some units long in service; nor, with two exceptions, have previously established high pressures been exceeded. These two exceptions are a central station extension designed to operate at 2400 lb. per sq. in. and an industrial power plant of 10,000 kw capacity which went into service during the year at 2200 lb. pressure. Both installations employ natural circulation boilers.

A survey by the author of new construction in the central station field during 1939, covering 91 steam generating units, showed 33 designed for operation at 1200 to 1500 lb. pressure, as compared with 56 units of 700 to 900 lb. pressure. Incidentally, there were already in service over 90 units operating at the higher pressures. Over two-thirds of the new installations employed steam temperatures of 900 to 950°F. and burned pulverized coal. Only eight units were stoker-fired and the remainder will burn gas or oil with provision in most cases for changing over to pulverized coal if desired. In practically all cases heat-recovery equipment in the form of economizers or air preheaters, or both, was provided. The multi-drum bent-tube type of boiler predominated among the larger units and the two-drum self-contained type for capacities under 200,000 lb. of steam per hour. A number of radiant and special boiler types were included. Superheat control, by means of bypass dampers, and automatic combustion control were employed in the majority of cases. Refinements in design, based on operating experience during the last two or three years, rather than innovations or marked departures from current practice, characterized these units.

With the advent of high steam temperatures, practice in the United States, except in a few special cases, has practically abandoned the reheat cycle, by which steam is resuperheated between the high- and the low-pressure elements of the turbine. In England, however, the reheat cycle is still employed to a considerable extent. Both here and abroad the regenerative cycle of stage

extraction for feedwater heating has now become standard.

For the fourth successive year the Port Washington Station of the Wisconsin Electric Power Co. maintained the world's record for economy, the station heat rate for 1939 being 10,770 Btu per kw-hr. This has one 80,000-kw condensing turbine-generator supplied by a single boiler with steam at 1350 lb. pressure and 830°F.

Industrial steam power plant practice during the year continued to capitalize upon pioneering in the central-station field through the adoption of refinements leading toward greater economy. Pressures of 400 to 750 lb. per sq. in. were employed in the majority of new large and medium size plants, depending upon the proportionate requirements of power and process steam. Some of the smaller plants employed lower pressures and a few large installations higher pressures. In most cases where exhaust or extracted steam is used for process the initial steam temperatures were limited to 700 or 750°F., although in some of the condensing installations high steam temperatures were employed.

The more-or-less standardized, two-drum, self-contained steam generating unit is finding wide acceptance in the industrial power plant field. Firing is with pulverized coal, oil, gas or stokers, depending upon local conditions, although pulverized coal predominates among the larger units and stokers among the smaller. Installations of spreader type stokers have increased, particularly in the Middle West.

Improvements in equipment include a reduction in the power consumption of pulverizers and refinements in stoker design. Motion pictures, employing both colored and infra-red films, have lately been used extensively for studying combustion and furnace conditions.

Steam washers are now regarded as essential with high-pressure boilers and their use is being extended in the field of medium pressures, above 400 or 500 lb. These washers, of which several designs are available, are placed in the steam drum of the boiler and operate on the principle of exchanging the entrained boiler water of high solids concentration for feedwater of low concentration; in other words, the steam is washed with the relatively pure feedwater and as much of the moisture as possible is then removed by passing the steam over screens. In this way excessive deposits are prevented from being carried over into the turbine where their accumulation on blading reduces capacity and necessitates frequent outage for removal.

Feedwater conditioning and control continues as a major problem in the operation of high-pressure boilers, although much progress has been made. Research on caustic embrittlement, or intercrystalline cracking of the metal, was continued during the year at the University of Illinois Experiment Station and by the U.S. Bureau of Mines at the University of Maryland. The latter has developed an embrittlement detector which is now undergoing extensive laboratory and field tests.

Cases of caustic embrittlement are becoming fewer, on account of the extensive use of welded drums, improved design, and better workmanship in their fabrication. No cases have been reported in high-pressure boilers where welded drums are employed, nor in riveted construction for lower pressures where the seams have been properly and exclusively internally caulked. A

few cases of embrittlement of tube ends were reported.

Equipment for fly ash and cinder recovery from the stack gases has now become general in connection with new central-station installations and many industrial plants that burn pulverized coal in densely populated areas have also adopted it.

The high availability of modern steam generating units has been responsible for extension of the practice of providing one boiler per turbine. This applies to both central stations and industrial plants.

Advances in metallurgy have caught up with practice in the design of boilers, piping, and turbines, and both research and test data have enabled closer designing for capacity and performance. Present indications are that the employment of steam temperatures over 950°F. would increase the investment in special alloys to an extent that would not be warranted by the small increased efficiency. The application of welding has been extended greatly in both shop and field fabrication, based upon the results of research in weldable steels and improved methods of stress relieving, testing, and inspection. Carbon-molybdenum steel is now widely used in the construction of boilers, piping, and fittings for high pressures and high temperatures.

Practice in the United States, as concerns steam conditions and designs, is still far from being standardized, although some efforts in that direction are discernible, notably as regards the preferred standards prescribed for steam turbines in 1938 by National Defense Power Committee which are being followed where conditions permit. In contrast to the situation in this country, Germany has adopted rigid standards for all new condensing installations. These prescribe, as applicable to different types of plants, 4 steam pressures, 2 total steam temperatures, 12 boiler capacities, 2 feedwater temperatures, and certain specified boiler types. Turbine sizes are covered and standard plant arrangements provided, as well as standards for all auxiliaries, piping, and fittings. Compliance with these standards is understood to have Government backing.

British practice is now forging to the front in line with American practice. Many new plants have been constructed or projected and extensions made to existing stations. While the majority employ steam generating units of medium capacity and moderate pressures, of the order of 400 to 600 lb., a few have gone to 1200 lb., and during the year one installation went into service with large boilers of the Loeffler type designed for 2000 lb. per sq. in. Another station placed in operation a large unit of the La Mont forced-circulation type. Steam turbines of 50,000 to 60,000 kw capacity are now common in British power stations and one is on order for 100,000 kw, but the practice of employing one boiler per turbine has not met with such favor as in the United States. Stokers rather than pulverized-coal firing seem to predominate in England.

On the Continent, in Germany and certain neutral countries, a number of underground bomb-proof power plants have been built for capacities up to 10,000 kw. These, in general, are designed to serve as emergency standby plants for transmission systems.

In the marine field steam pressures have increased, 400 to 600 lb. now being common. Some experimental installations for 1200 lb. and higher have been made by the Navy, and one boat to

employ 1200 lb. has been projected by the Maritime Commission. Automatic combustion control is gaining favor and many other refinements, previously found only in stationary power plants, are now being employed on shipboard. These, together with higher pressures and temperatures, have improved the economy of the marine steam power plant to the point that it is now comparable with the Diesel.

As for prime movers, with the exception of a 110,000-kw, 1200-lb. condensing turbine-generator placed in service at the Rouge plant of the Ford Motor Company and one central-station unit of 100,000 kw on order, no units of over 60,000 kw were installed in this country during 1939, although several of greater capacity were rebuilt. Hydrogen cooling for generators has received wide acceptance for 3600-r.p.m. machines from 25,000 to 60,000 kw capacity. Some difficulties were encountered with the high-pressure blading of 3600-r.p.m. machines operating with steam at over 1200 lb. pressure and 900°F. or more. These difficulties, however, are responding to changes in design and improved metals.

While the steam turbine has long held the central station field, its use has been increasing greatly in the industrial power plant field, both for condensing operation and where exhaust or extracted steam is employed for process. The advent of higher pressures in industrial plants has also favored it. However, steam engines, mostly of the uniflow type, are still employed for many office buildings, hotels, and institutional power plants where the pressures are under 250 lb. and the low-pressure exhaust steam is used for heating.

Extension of hydroelectric power was confined largely to Federal projects amounting to about 300,000 h.p., although very much more will be added during the next two years. Two additional units were put in service at Boulder Dam, raising its present capacity to 975,000 h.p. and making it the largest hydro plant in the world. Two more 115,000 h.p. units are on order. Capacity on order for the Grand Coulee development, for installation in 1941, will amount to 478,000 h.p. Four 103,000 h.p. units have also been ordered for the Shasta project in California. At Wheeler Dam (TVA) two 45,000 h.p. units were added, making the total capacity at this dam 180,000 h.p.

There have been an increasing number of installations of water turbines having adjustable runners, thus making it possible to develop power from low heads. Corrosion-resistant steel has been employed more generally for certain turbine parts and rolled steel and welding are taking the place of castings.

Because of the drought during the fall the output from hydro plants in the United States was 14 per cent less than that for the same period of 1938, reducing the hydro output for the year to 38 per cent of the total. This emphasized the necessity of adequate steam reserve to supplement hydro power in all cases.

See ELECTRICAL MACHINERY; ELECTRIC LIGHT AND POWER.

ALFRED D. BLAKE.

PRAIRIE PROVINCES. The popular name of the three Canadian provinces of Alberta, Manitoba, and Saskatchewan (q.v.). See CANADA.

PRATT INSTITUTE. A nonsectarian educational institution in Brooklyn, N. Y., founded in 1887 and composed of four schools: Fine and

applied arts, household science and arts, science and technology, and library science. The 1939 autumn enrollment was 5023. There were 253 members on the faculty. The library contained 146,017 volumes. President, Frederic B. Pratt, A.M., LL.D.

PRESBYTERIANS. A religious connection adhering to a system of church government by presbyters or elders. In the United States there are ten Presbyterian bodies, which had a combined membership of 2,570,415 in 1938, according to the Year Book of American Churches. The largest groups follow. (For statistics, see RELIGIOUS ORGANIZATIONS.)

Presbyterian Church in the United States of America. This is the largest body of the Presbyterian communion, being represented by churches in every State of the Union and having official mission stations in Alaska, Cuba, Puerto Rico, and 16 foreign lands. In 1939 its churches in the United States and abroad were organized into 42 synods and 276 presbyteries.

The 151st annual General Assembly was held in Cleveland, Ohio, May 25-31, 1939. Ruling Elder Sam Higginbottom, Philan.D., LL.D., president of Allahabad Christian College in India, was elected Moderator, and the Rev. Dr. Jesse Halsey of Cincinnati, Ohio, was appointed Vice-Moderator. The Assembly approved reports from its Department of Church Co-operation and Union regarding current negotiations with the Protestant Episcopal Church and with the Presbyterian Church in the United States (Southern) looking toward organic union; invited the Reformed Church in America and the United Presbyterian Church of North America to send representatives to confer with its Department of Co-operation and Union on the possibility of organic union; appealed to Congress to enact legislation forbidding the sale by Americans to Japan of munitions and raw materials for war until such time as Japan may cease to violate the Nine Power Treaty; expressed in definite terms the opinion of the Presbyterian Church on peace, race relations, child labor, rural life, civil liberties, and other current national and international problems; and called for a continuance of the "fundamental principles which have guided our nation for 150 years based upon the separation of Church and State."

The Church has its headquarters, including the offices of the General Assembly and the General Council, in the Witherspoon Building, Philadelphia, Pa., in charge of the Rev. William Barrow Pugh, D.D., LL.D., Stated Clerk. The Board of Christian Education and the Board of Pensions also are housed there, while the Board of Foreign Missions and the Board of National Missions are located in the Presbyterian Building, 156 Fifth Avenue, New York City.

Presbyterian Church in the United States (South). This division of the Presbyterian denomination covers the territory commonly known as the Southern States. It was composed in 1939 of 17 Synods and 88 Presbyteries.

Foreign mission work is carried on in six countries: Africa, Brazil, China, Japan, Korea, and Mexico, among 36,000,000 people.

The Seventy-Ninth General Assembly of the Church convened in Montreat, N. C., May 25, 1939, with 342 Commissioners present. Rev. Edward Mack, Ph.D., D.D., LL.D., was elected Moderator. The matter which is receiving the major thought and effort is completion of the \$3,000,000

Accrued Liability Fund in order to make possible the operation of the Pension Fund for Ministers. More than nine-tenths of this capital sum has been raised and a thorough church-wide campaign is in progress looking to consummation of this objective within the year. The meeting of the 1940 General Assembly will be held in First Presbyterian Church, Chattanooga, Tenn., on May 16th. Rev. E. C. Scott, D.D., is Stated Clerk and Treasurer, with office at 1240 Liberty Bank Bldg., Dallas, Texas.

United Presbyterian Church of North America. A member of the family of Presbyterian Churches, of Secession and Covenanter origin, formed by the Union in Pittsburgh, Pa., in 1858 of the Associate and Associate Reformed Churches.

The General Assembly of the church convened in Philadelphia, Pa., on May 24, 1939. The Assembly heard with joy, through the report of the Department of Evangelism, that the accessions by profession of faith were, with one exception, the largest in the last ten years. A "Tour of Evangelism," led by the Moderator of the Assembly, was conducted in practically every presbytery of the denomination. A feature of the Assembly's programme of great interest was the historical pageant and celebration out at the old Octoraro Church, a few miles out of Philadelphia, where in 1753 the first congregation of the Associate Church in America was organized. This was the old "Mother Church" of United Presbyterianism in America.

The Moderator of the General Assembly of 1939 was Judge H. Walton Mitchell of Pittsburgh, Pa. The Rev. O. H. Milligan, D.D., of Avalon, Pittsburgh, Pa., is Stated Clerk. Headquarters of the Board of Administration are at 705 Publication Building, Pittsburgh, Pa.

Cumberland Presbyterian Church. One of the Presbyterian bodies whose chief strength is in the Southern States. It was formed in 1810 when the so-called anti-revival party of the Presbyterian Church in the United States of America objected to the admission into the ministry of men who were not up to the usual literary and theological standards, and to the doctrine of fatality as taught in the third and tenth chapters of the Westminster Confession of Faith.

A general assembly which meets annually is the supreme judiciary; the 1940 meeting will be held in Cookeville, Tenn., June 13-18. Rev. E. R. Ramer, Milan, Tenn., was moderator of the general assembly in 1939 and the Rev. D. W. Fooks, of Nashville, Tenn., was stated clerk, treasurer, and general secretary.

PRESS PHOTOGRAPHY. See PHOTOGRAPHY.

PRICES, WHOLESALE AND RETAIL. See AGRICULTURE; BUSINESS REVIEW; LIVING COSTS AND STANDARDS.

PRINCE EDWARD ISLAND. A maritime province of Canada. Area, 2184 square miles; population (1939 estimate), 95,000 compared with 88,038 (1931 census). During 1938 there were 1971 births (21.0 per 1000); 1029 deaths (10.9 per 1000); and 591 marriages (6.3 per 1000). Chief towns and their 1931 populations: Charlottetown, the capital, 12,361; Summerside, 3759; Souris, 1063. In 1937 there were 19,520 students enrolled in the schools and colleges. There are two colleges—the Prince of Wales College (the head of the provincial school system) and St. Dunstan's.

Production. The gross value of agricultural production for 1938 amounted to \$13,376,000 of which field crops represented \$8,018,000. Fur farming is an important industry and for the year ending June 30, 1937, there were produced a total of 75,178 pelts (almost all silver fox) valued at \$2,182,723. Livestock (1939): 28,960 horses; 99,600 cattle, including milch cows; 46,300 sheep; 48,100 swine. In 1938 the fishing industry had 3310 men employed; the value of the fish caught totaled \$930,800, of which lobsters accounted for \$606,100. Forest production (1937) equaled 12,882 M cu. ft. valued at \$548,074. In 1937, from 240 manufacturing plants, employing a total of 1062 employees, the net value of products was \$1,117,298.

Government. For the year 1937, ordinary revenue totaled \$1,886,702; ordinary expenditure, \$1,943,634. The executive head of the government is the lieutenant-governor who is advised by an executive council of 9 members who are also members of the legislative assembly of 30 members elected for 5 years (15 are elected by real property holders and 15 by universal male and female suffrage). In the Dominion parliament at Ottawa, the province is represented by 4 Senators (appointed for life) and 4 members in the House of Commons. Lieutenant-Governor, George D. DeBlois (appointed Dec. 28, 1933); Premier, Thane A. Campbell (Liberal). See CANADA.

PRINCETON UNIVERSITY. A nonsectarian institution of higher learning for men at Princeton, N. J., founded in 1746. The total enrollment in the autumn of 1939 was 2714, of whom 2415 were undergraduates and 299 were advanced students. Of the undergraduates, 2033 were candidates for the degree of Bachelor of Arts and 382 for the degree of Bachelor of Science in Engineering. Of the advanced students, 269 were in liberal arts and sciences and 30 in the Schools of Architecture and Engineering. The faculty numbered 403. The total of endowment and other non-expendable funds in June, 1939, was \$31,532,296; the total operating income \$3,111,710; and the total operating expenditures \$3,021,338. Gifts and bequests for the year ended June, 1939, totaled \$1,581,625, with \$1,019,037 for endowment, \$160,448 for other funds, \$307,499 for current expenses, \$21,823 for student aid, \$12,702 for buildings, and \$60,115 unallocated. The library contained 940,000 volumes. President, Harold Willis Dodds, Ph.D., LL.D., Litt.D.

PRINCIPE. See SÃO THOMÉ AND PRINCIPE.

PRINTS. According to official report, approximately 92,000 prints in various media were produced by American print-makers working on the WPA Federal Art Project in 1939. Some idea of the variety as well as of the quality of this enormous output was obtained from the black and white section of the Exhibition of Contemporary Art at the New York World's Fair, which included in its catalogue 407 prints—etchings, lithographs, wood-cuts, etc.—selected from a vastly larger number submitted by graphic artists in all parts of the country.

From the fund bequeathed by Joseph Pennell, the Division of Fine Arts of the Library of Congress was enabled to make some notable additions to both its Whistler and Pennell print collections and also to acquire quite a number of excellent prints by contemporary artists both native and foreign. In the Library of Congress at Washington, a distinguished group of etchings by the greatest masters of all time, assembled by Mr.

and Mrs. Robert Woods Bliss, and comprehended in the "Dumbarton Oaks Collection," was shown during the latter half of the year.

On the schedule of practically all the Art Museums were notable exhibitions of prints illustrating either the genius of some one man or the accomplishment of a period—as, for example, the exhibition of engravings by Nanteuil held by the Philadelphia Museum, and that of "Five Hundred Years of Print Making" set forth by the Art Institute of Chicago. At greater distance was an exhibition of etchings and dry points by Rembrandt from the Rosenwald Collection held in the Art Museum of Honolulu.

A complete collection of etchings and dry points by Cadwallader Washburn representing his entire output from 1903 to the present day—about 274 plates—was presented in 1939 to the Art Department of the New York Public Library by an anonymous donor. Also Wesleyan University, Middletown, Conn., received a collection of approximately 300 prints from John Taylor Arms covering his production to date. During the scholastic year 1938-39 Mr. Arms was visiting lecturer on art at this university.

An American National Committee of Engraving was founded in the autumn of 1939 with the purpose of promoting and directing international exchanges in the graphic arts. John Taylor Arms, president of the Society of American Etchers, who has had exceptional experience organizing exhibitions at home and abroad, was elected president, with Ernest D. Roth, vice-president and secretary. Artists of high standing make up the executive committee, while laymen known for their interest in and advocacy of the graphic arts compose an auxiliary committee.

Prints were published and distributed in 1939 by the several Print Societies to their lay members, as follows—*The American College Society of Print Collectors*, "Evening in a Hot Spring" by Hiroshi Yoshida; "Island Watchers" by Armin Hansen, and "Manhattan—1930" by James McBey; *The Society of American Etchers*, "Market Day, Senlis" by Samuel Chamberlain; *The California Print Makers*, "Winter Chores" by H. W. Woiceske; *The Collectors of American Art*, "Cedars" by Alfred Hutty; *The Wood Cut Society*, "The Forest Pool" by John Buchland Wright, and *The Friends of Contemporary Prints*, an etching of the King Hooper House, Marblehead, by Samuel Chamberlain.

Members of the C.I.O. attempted to exclude from a Print Exhibition held in the Brooklyn Museum in the summer of 1939, works by all who were not members of the United American Print Makers, a C.I.O. affiliate, but were unsuccessful.

Carl Zigrosser, author of *Fine Prints Old and New and Six Centuries of Fine Prints*, was given a Guggenheim fellowship in 1939 to enable him to prepare a book on contemporary graphic arts in America.

The outstanding publication in this field in 1939 was *A Treasury of American Prints* by Thomas Craven. Works by forty American print-makers were included in *Fine Prints of the Year 1938*, published in England early in 1939. Unfortunately on account of the war this valuable publication has been temporarily suspended.

Loss by death in this field included C. A. Seward of Wichita, Kan., Ellsworth Woodward of New Orleans and his brother William Woodward of Biloxi, Mississippi, and George Elbert Burr of Phoenix, Ariz. The last was best known for

his etchings of the desert, and had for some years before his death a standing order from the British Museum for a print from every plate he produced.

LEILA MECHLIN.

PRISON ASSOCIATION, AMERICAN. A conferential body organized in 1870 and incorporated in 1871 under the laws of the State of New York. The objects of the association are as follows: 1. Improvement of the laws in relation to public offenses and offenders, and the modes of procedure by which such laws are enforced. 2. Study of the causes of crime, the nature of offenders and their social surroundings, the best methods of dealing with offenders and of preventing crime. 3. Improvement of the penal, correctional, and reformatory institutions throughout the country, and of the government, management, and discipline thereof, including the appointment of boards of trustees and other officers. 4. The care of, and providing suitable and remunerative employment for, paroled and discharged prisoners and probationers, and especially such as may or shall have given evidence of reformation.

The association, the duly qualified medium for the registration of the opinions of prison administrators in the United States, holds an Annual Congress in some city on this continent, attended usually by representatives of more than 40 States of the Union. Printed *Proceedings* of the meeting are available. General Secretary, E. R. Cass, 135 East 15th St., New York City.

PRISONS, PAROLE, AND CRIME CONTROL. America's prison population has continued to grow until it reached an all-time high during 1939. Summary statistics for the institutions reporting to the Bureau of the Census are:

| | 1929 | 1932 | 1935 | 1938 |
|--|---------|---------|---------|---------|
| Prison population on Dec. 31 | 119,429 | 135,597 | 141,216 | 151,929 |
| State Institutions | 106,465 | 123,315 | 126,439 | 134,846 |
| Federal Institutions | 12,964 | 12,282 | 14,777 | 17,083 |
| Percentage previously imprisoned among male prisoners received during the year | 38.1 | 41.8 | 50.4 | 49.0 |
| State Institutions | 37.1 | 43.4 | 51.4 | 48.2 |
| Federal Institutions | 42.4 | 42.3 | 46.4 | 51.7 |
| Median age of male prisoners received during the year | 26.8 | 26.9 | 27.6 | 27.7 |
| State Institutions | 25.9 | 26.0 | 26.6 | 26.7 |
| Federal Institutions | 31.3 | 31.7 | 32.2 | 31.8 |

The foregoing statistics of prison population do not include data for Alabama, Delaware, District of Columbia, Georgia, Idaho, Mississippi, and South Carolina as these jurisdictions did not report to the Census Bureau during all of the years covered. If the prison population of these states and the District of Columbia is added to the foregoing and the figures corrected to Dec. 31, 1939, the total number of prisoners in custody at the end of the year 1939 closely approximates 180,000. This is an increase of about 38.5 per cent during the past ten years. While there has been no significant change in the median age of those committed to prison during the past decade, the proportion of those received in prison who are known to have served previous sentences seems to be measurably increasing. The foregoing figures also show that for the country as a whole 49 per cent of those who entered State and Federal prisons in 1938 had previously served a prison sentence. In some states (Pennsylvania and Mas-

sachusetts among others) the percentage of those received in state prisons who had previously served a sentence reached as high as 67 per cent. In New York, 80 per cent of the men sentenced to prison by the courts had prior records, although not all of them had been previously committed. These figures on recidivism are of tremendous importance when appraising the value of our existing punitive system and when considering the necessity of revising present correctional methods.

The steadily mounting prison population has forced the construction of some new cells in a few states, but the serious overcrowding which exists in most prisons continues to thwart and frustrate all efforts to provide modern means of rehabilitating those committed to penal and correctional institutions. New York, Pennsylvania, Kentucky, Missouri, Georgia, and the Federal Government have recognized the imperative necessity for providing additional prison facilities and either began the construction of new prisons during 1939 or opened new correctional institutions previously authorized.

Even this relatively small addition to the country's prison capacity (estimated at 15,000) could not have been undertaken had funds from the Public Works Administration not been available. All told, the President approved the allotment of about fifty million dollars for new jails, prisons, and reformatories from the PWA appropriation of \$965,000,000 made available by Congress in June, 1938. Much of the new construction followed traditional lines and for that reason seemed to many to be needlessly expensive. It costs from \$5000 to \$6000 per cell to build an institution of the bastille type having high walls, tool-proof steel cells, and elaborate locking devices. Many penologists contend it ought to be possible to secure adequate facilities for about \$3000 a cell if reliance is placed upon qualified personnel and careful classification of the prisoners rather than upon cement and steel. This theory has been shown to be entirely practicable in several jurisdictions.

While the Federal System, New York, New Jersey, and a few other jurisdictions have made important strides in raising personnel standards, politics have continued to prevent the orderly development of a career service for prison officers and administrators. A survey made of those states where political control shifted during the past two years showed that in all but two instances the wardens of the state penitentiary were also changed and much of the guard personnel was replaced as well. The impact upon the penal system and the impartial administration of punishment by such rapid turnover of personnel needs no elaboration.

Moreover, the failure of budgetary authorities to provide adequate funds for the operation and maintenance of penal institutions has also handicapped every effort to provide practical means of rehabilitating and reforming the offender. For the country as a whole only about \$400 a year was available last year to house, clothe, feed, transport, and guard a prisoner. By the time the cost of bare necessities and the cost of a minimum force of guards is deducted from this figure little is left to provide the scientific and technical personnel so essential to the study of the individual prisoner and to his retraining and rehabilitation. Last year New York and Pennsylvania curtailed the funds for prison personnel to such an extent that prison psychiatrists and classification workers had to be dismissed.

It has been reliably estimated that 100,000 of the 180,000 men and women serving sentences in State and Federal institutions do not now come under any intelligent, constructive rehabilitative and reformatory influence whatsoever during the entire period of their sentence. Constructive employment of prisoners, for instance, has declined to the point where many state institutions are now merely vast idle houses with hordes of prisoners aimlessly milling about overcrowded prison yards. Except for a few of the better reformatories for young first offenders, vocational and academic training is given little attention or is simply superficially imposed upon a system of mass treatment.

Parole. The picture, however, is not so dark with respect to parole. The publication in April of the Attorney General's Survey of Release Procedures and the convening of a National Parole Conference made far-reaching contributions to the many perplexing questions involved in the release of prisoners. The survey consists of five volumes dealing with probation, parole, pardon, prison administration, and laws on release procedures. The National Parole Conference was called to meet in Washington last spring by Attorney General Frank Murphy at the request of President Roosevelt. More than 800 delegates attended the Conference and adopted a number of measures looking to improvement of the parole system. For the first time a declaration of the fundamental principles of parole was adopted and a beginning made at their effectuation. The Conference felt that it was of fundamental importance that practical measures be taken to divorce parole completely from politics and that more funds be made available for the supervision of persons released on parole. Massachusetts, California, Missouri, and Illinois have overhauled or are now overhauling their parole procedures, and several other states are studying the problem with new vigor.

The Federal Prison System. During the past year approximately \$14,000,000 was made available to the Federal Bureau of Prisons through the Public Works Administration for the construction and repair of Federal penal and correctional institutions. This money has been allocated and distributed among nineteen projects, which include the construction of a medium-security penitentiary located in Indiana, institutions for short-term Federal prisoners which are to be located in Colorado, Connecticut, Kentucky, and Texas, and funds for additional hospital, receiving, and housing facilities at a number of the existing institutions. The Federal prison camp system is also being expanded and its facilities improved. Also, a new institution for women, located at Dallas, Texas, is nearing completion.

The Federal prison population is today the highest it has ever reached. On June 23, 1939, it reached an all-time high of 18,862. This represented an increase of 56.2 per cent over the same date five years ago. Because of the lag in Federal prison construction in the last several years, overcrowding in existing institutions had made necessary the use of unsatisfactory basements and warehouses for housing purposes.

The Federal prison system has also inaugurated during the past year a complete personnel plan based on five essential elements:

1. It establishes a pay scale for all prison personnel which provides a minimum base pay with regular increases by fixed increments for continued satisfactory work. The base pay for a Junior Custodial Officer is \$1860 a year.

2. It calls for the recruiting of officers, through Civil Service, on the basis of carefully standardized physical, mental, and educational qualifications supplemented by character investigations.

3. It establishes ranks within the custodial service, so that men may look forward to promotion as well as pay increases.

4. It provides an in-service training programme for all ranks which includes physical education, defensive techniques, the care and use of weapons, supervised duty, and the completion of a study course compiled by the Bureau staff and covering all phases of penal administration.

5. It embraces a retirement system and pension programme, one feature of which is an annual physical examination with retirement for those found medically unfit for duty as well as automatic retirement based on age and years of service.

Federal Prison Industries, Inc. By the terms of an Executive Order of the President the Prison Industries Corporation had its status changed from that of an independent corporation to a branch of the Department of Justice. Its Board of Directors, however, was retained and the Corporation continues to supervise and control employment activities of all Federal prisoners. Approximately 30 per cent of the men and women in United States prisons are engaged in the manufacture of articles which are transferred to other Federal departments and agencies. No goods made in Federal prisons are sold in the open market in competition with private industry and free labor. Moreover, the Board of Directors which consists of representatives of industry, labor, agriculture, consumers, and the Attorney General have felt that in view of the unemployment situation new industries should be added only where absolutely necessary to prevent complete idleness. Emphasis has been placed upon utilizing the labor of prisoners on low priority, road, and other projects in National Forests and on other Government reservations. Mr. Emil Schram, Chairman of the Reconstruction Finance Corporation, was appointed to the Board of Directors during the past year, and Hon. John D. Miller resigned. The other members are Mr. Sam A. Lewisohn, Mr. Thomas A. Rickert, Dr. M. L. Brittain, and Mr. Sanford Bates.

International Penal and Penitentiary Congress. The meeting of the Committee to approve finally the programme for the International Prison Congress scheduled to be held in Rome during 1940 was cancelled. No final decision has yet been made as to whether the Congress will be convened as planned. Mr. Sanford Bates remains as Commissioner on the part of the United States to the Congress.

Crime Control. The constantly mounting cost of law enforcement and the steady increase in the number of prisoners as indicated above has focused attention upon methods of crime control and the prevention of delinquency. It has, however, been extremely difficult to co-ordinate the many local units engaged in some phase of crime control. A number of these, like the Sheriff and the County Jail, have resisted all efforts at modernization. To be sure, some progress has been made in the establishment of state police systems, public safety departments, and behavior clinics, but in the main crime prevention is still being discussed only in vague and general terms referring to the home, the school, and the community. Little money is being spent on practical programmes to demonstrate the possibilities of preventing delinquency in the areas where it is known to occur most frequently. The "Community Coordinating Councils" of Los Angeles, the "Area Projects"

in Chicago, and the Bureau of Special Service of the Jersey City Board of Education are illustrations of the efforts being made by a few communities to find practical means of preventing delinquency. The U.S. Children's Bureau has also established a project in St. Paul to demonstrate the techniques and methods which can profitably be followed by forward-looking communities in preventing crime.

It is significant to note, however, that principal reliance is still placed upon controlling crime by punitive methods. The average sentence, for instance, now being imposed by the courts upon various types of offenders as well as the average term actually served in prison has increased appreciably during recent years. Because punishment alone as a method of controlling crime has seemed to many to be, in large measure, futile, more funds (public and private), more experimentation, and further co-operation among all agencies has continued to be urged during the past year by a number of organizations as the only method of securing the amount of social protection the public has a right to expect.

JAMES V. BENNETT.

PRITCHETT, HENRY SMITH. An American astronomer and educator, died in Santa Barbara, Calif., Aug. 28, 1939. He was born in Fayette Co., Mo., Apr. 16, 1857, and was graduated from Pritchett College (A.B., 1875), at Glasgow, Mo., which was founded by his father. Subsequently he studied abroad and received his doctorate degree at Munich in 1894. Upon graduation he studied at the U.S. Naval Observatory under Asaph Hall and in 1878 he became assistant astronomer there. He returned to Glasgow in 1880 to become astronomer at the Morrison Observatory. In 1882 he was astronomer for the Transit of Venus Expedition in New Zealand. Upon his return he was appointed professor of astronomy and director of the observatory at Washington University, St. Louis. Appointed superintendent of the U.S. Coast and Geodetic Survey in 1897, he reorganized the Bureau, applying the Civil Service law, and after the Spanish-American War had the harbors of Puerto Rico surveyed. His success in this position led to his appointment as president of Massachusetts Institute of Technology in 1900.

Six years later he was invited to head the newly formed Carnegie Foundation for the Advancement of Teaching (q.v.). He was instrumental in having the college pension systems placed on a strong actuarial basis and organized investigations of various phases of educational life. One of the first and most important of these investigations was that made by Dr. Abraham Flexner in connection with the medical schools in the United States and Canada. In 1929, *Bulletin* 23, condemning the emphasis laid on college sports, and with an introduction by Dr. Pritchett, caused bitter controversy. He was retired as president emeritus of the Foundation in 1930, and shortly after published *Social Philosophy of Pensions*.

The holder of many honorary degrees, Dr. Pritchett was a member of the advisory council of the National Broadcasting Co., and a trustee of the Carnegie Institution of Washington and of the Carnegie Endowment for International Peace.

PROGRESSIVE EDUCATION ASSOCIATION. An organization formed in 1918 "to pioneer on the frontiers of human development"

in the field of education. It functions through the publication of *Progressive Education* and *Frontiers of Democracy*, books and special reports; through the work of national research committees; by organizing national and regional conferences, special meetings, summer workshops, radio talks; and by organizing and assisting study groups. During 1939-40 the Association's budget was \$50,785, for expenditures, obtained from the sale of publications and services; and \$200,000 for research and experimentation, obtained largely through foundation grants. The officers were: Honorary president, John Dewey, Columbia University; president, Carleton Washburne, Winnetka Public Schools, Winnetka, Ill.; treasurer, Mrs. Frances M. Foster, Lincoln School, Teachers College, New York; executive secretary, Frederick L. Redefer. Headquarters: 221 W. 57th St., New York City. See EDUCATION.

PROPORTIONAL REPRESENTATION. See MUNICIPAL GOVERNMENT; NEW YORK CITY, under Elections; OHIO.

PROTEINS. See BIOLOGICAL CHEMISTRY.

PROTESTANT EPISCOPAL CHURCH. The concurrent observance in 1939 of the 150th anniversaries of the adoption of the Constitution of the United States and of the Book of Common Prayer was another reminder of the common debt which Church and State owed to those Churchmen-Statesmen who, a century and a half ago, played a leading part in starting both the Nation and the Episcopal Church on the road which they have traversed in succeeding years. The Presiding Bishop, the Rt. Rev. Henry St. George Tucker, designated October 15, as the date for the celebration and urged the use in churches on that day of a semi-liturgical office especially prepared by the Rev. Phillips E. Osgood, Chairman of the Church's Commission on Religious Drama. Since the Prayer Book was adopted in 1789, it has undergone thorough revision on at least two occasions, the last being completed by the General Convention of 1928.

Another notable anniversary observed in 1939, also in October, was the semi-centennial of the beginning of the United Thank Offering of the Women of the Church. Since its initiation women in ever increasing numbers have shown their thankfulness for "the blessings of this life" by gifts which have totaled more than seven million dollars. These gifts are used to provide buildings and equipment in the mission field both at home and abroad, to train, send, and support women missionaries and to care for them after their retirement.

When the House of Bishops met in its annual session, November 8-9 in Christ Church Cathedral, St. Louis, Mo., many changes were noted. Five Bishops had died and six Bishops resigned during the year. Eight Bishops were consecrated in 1939 and two Bishops-elect were awaiting consecration in 1940. The new Bishops were: the Rt. Rev. Richard A. Kirchhoffer (Indianapolis), the Rt. Rev. A. R. McKinstry (Delaware), the Rt. Rev. A. H. Blankingship (Cuba), the Rt. Rev. Spence Burton (Suffragan, Haiti), the Rt. Rev. John James Gravatt (Upper South Carolina), the Rt. Rev. William McClelland (Easton), the Rt. Rev. Henry H. Daniels (Coadjutor, Montana), and the Rt. Rev. Edwin J. Randall (Suffragan, Chicago).

The House of Bishops at this meeting acceded to the request of the Bishop of Southern Brazil, the Rt. Rev. William M. M. Thomas, for a Suf-

fragan and elected to that post a young Brazilian priest, the Rev. Athalicio T. Pithan, rector of the Church of the Crucified in Bage, an important centre close to the Uruguay border. Beyond his parish, Mr. Pithan took an active interest in the Brotherhood of St. Andrew work with prisoners and the underprivileged, and has an influential part in the Annual Council and on the Council of Advice of the diocese. It is expected that he will be consecrated early in 1940 in Porto Alegre, Brazil, on the occasion of the fiftieth anniversary there of the first Episcopal service by the pioneer missionaries, Lucien Lee Kinsolving and James W. Morris.

The House, greatly concerned over world conditions issued a significant Pastoral Letter under the title, "In Days of War." The salient points of this Letter were:

1. This is a day in which Christians can demonstrate to the world the vitality of their profession.
2. God has willed men to be free. There can be no morality without freedom; no responsibility without freedom.
3. War as an instrument of national policy is a denial of God.
4. Remember that we are Christians, invaded and controlled by the divine Person and Life and Spirit of Jesus Christ.
5. The only sure foundations of peace are mutual understanding, sympathy, fairness, generosity, good will between nations.
6. The teachings of Jesus are not mere counsels of perfection but sound, sober, practical common sense.
7. Many Christians do not apply His teachings to their own lives, their own business, their own social and economic and political thinking and planning, but abandon Him at the Church door.
8. The one international, interracial fellowship in a divided world today is the Christian Church.
9. It is easier to shoot straight than to think straight and to live straight. It is easier to combat a physical enemy without than a spiritual enemy within.
10. Let us do everything in our power to succor the suffering victims of man's inhumanity to man and bring to all men everywhere the compassionate ministries of Jesus Christ.

The headquarters of the National Council which is the Board of Directors of the Domestic and Foreign Missionary Society are in the Church Missions House, 281 Fourth Avenue, New York. The President of the National Council is the Presiding Bishop, the Rt. Rev. Henry St. George Tucker, Bishop of Virginia. For statistics, see RELIGIOUS ORGANIZATIONS.

PSYCHICAL RESEARCH. See PARAPSYCHOLOGY

PSYCHOLOGY. Increasing interest in conduct and motivation is reflected in *Introduction to Psychology* edited by E. G. Boring, H. S. Langfeld, and H. P. Weld with the collaboration of 17 eminent psychologists (New York: Wiley). In *Time Budgets of Human Behavior* (Cambridge, Mass.: Harvard Univ. Press), P. A. Sorokin and C. Q. Berger report a study of the way 103 unemployed and relief workers spend their time. Their data definitely contradict hedonistic theories of human motivation. J. Dewey's "Theory of Valuation" (*Int. Encycl. Unified Sci.*) defines

values as attitudes attaching to means which are expected to mediate desired ends, both being modifiable in the course of experience. *Principles of Conditioning in Human Goal Behavior* by A. J. Mitrano (Columbus, O.: American Psychological Assn.) is an experimental study. *Frustration and Aggression* (New Haven: Yale Univ. Press), by J. Dollard, L. W. Doob, N. E. Miller, O. H. Mowrer, R. R. Sears, C. S. Ford, C. I. Hovland, and R. T. Sollenberger, defines aggression as an act directed toward the injury of an organism or organism surrogate, and contends that it is always a consequence of frustration, and that frustration always leads to some form of aggression. J. F. Brown has studied the reactions of 150 unselected psychiatric patients and 20 controls in a frustrating situation. "The exercise of authority benevolently . . . to avoid creation of resentment, hostility, and destruction becomes the central problem of human life," according to L. K. Frank. He finds the dilemma of leadership in the fact that a domineering leader motivated by hostilities can always gather a following who find release from their own repressed hostilities by obeying the leader's destructive demands, whereas the rare creative individuals who offer valuable discoveries and improved methods usually meet only opposition from dominant personalities who have pushed their way to power. He suggests the need for sweeping changes in the traditional methods of educating potential leaders. Harsh early discipline, he thinks, is responsible for the repressed hostilities that motivate criminals, rebels, tyrants, and war breeders alike. Even the irrational acquisitiveness of persons who amass fortunes beyond their needs he thinks is caused by some childhood deprivation, such as early or sudden weaning.

Child Psychology and Educational Psychology. J. Levy describes an experiment in training nurses to help mothers in preventive mental hygiene. *Parent Education* by E. A. Davis (Univ. Minn. Child Welf. Monogr. Ser., 1939, No. 7) presents evidence that trained leaders can succeed in imparting many established principles of child psychology. *The Psychology of Parent-Child Relationships* by P. M. Symonds (New York: Appleton-Century) presents significant new data. *Biographies of Child Development* by A. Gesell, B. M. Castner, H. Thompson, and C. S. Amatruda (New York: Hoeber) presents brief summaries of the developmental progress of 84 atypical babies. *Time-Sampling Studies of Child Behavior* by R. E. Arrington (Columbus, Ohio: American Psychological Association) is also an observational study of children. New books on the nursery school period are *Nursery School Education* by J. C. Foster and M. L. Mattson (New York: Appleton-Century), *The Influence of Nursery School Experience on Children's Social Adjustments* by A. T. Jersild and M. D. Fite (Bur. Pub., Teach. Coll., Columbia Univ.), and *Practice in Preschool Education* by R. Updegraff, H. C. Dawe, E. E. Fales, B. C. Stormes, and M. G. Oliver (New York: McGraw-Hill). *The Sociology of Childhood* by F. J. Brown (New York: Prentice Hall), is a textbook for courses in educational sociology. F. J. O'Brien in his presidential address at the 16th annual meeting of the American Orthopsychiatric Association stressed the importance of teachers' personalities in influencing the lives of children. M. D. Nichols, J. Worthington, and H. Witmer find that unfavorable attention from

a teacher is detrimental to the development of kindergarten children and that a teacher's favorable attitude is helpful to most of them. H. H. Anderson has made a study of domination and social integration in children and teachers. In integrative behavior, as Anderson uses the term, "the individual responds voluntarily and without coercion to differences in other persons" and "finds a common purpose among differences." "Dominative behavior resists differences, resists change, resists growth." "In dominative behavior, a person disregards the desires of others, uses commands, threats, or force to gain his unyielding objectives, "attacks the status of others" and "adds to their insecurity." "Domination is the behavior of an insecure person." "Domination does not induce integrative behavior in a companion." Domination incites resistance, which is one form of dominative behavior. *The Secret of Childhood* by M. Montessori, translated by B. B. Carter (New York: Stokes) stresses the need of allowing normal development unimpeded by adult repression.

According to G. D. Stoddard, the new concept in educational planning is that the child should be its determiner. W. Reichenberg has shown by experiment that children do better work under the influence of a joyful emotion. G. P. Harnwell points out that "the real student is not taught, he learns." Dr. Harnwell emphasizes the role of curiosity in the learning process. Education should seek to minimize any situation which penalizes the display of natural curiosity on the part of the very young. R. Rallison learned from 1659 boys and 1855 girls that biology, chemistry, mechanics, and electricity dominate the interests of both sexes. B. B. Greenberg, Assistant Superintendent of Schools of New York City, is developing a socialized and vitalized program for gifted children. J. E. Anderson points out that every curriculum represents a compromise between the demands of society and those of the child's needs, interests, and abilities. B. Hansburg has made *An Experimental Study of the Effect of the Use of the Print Shop in the Improvement of Spelling, Reading, and Visual Perception* (Teach. Coll. Contrib. Educ., No. 776). *The Curriculum and the Child* by L. B. Stretch (Minneapolis: Educational Publishers) is written for superintendents and others who are constructing and revising curricula. *Education as Cause and as Symptom*, by F. L. Thorndike (New York: Macmillan), is a challenging book.

Factors that affect learning in both human and animal subjects continue to inspire laboratory research which may shed light on the problems of the educator. E. Poe, C. F. Poe, and K. F. Muenzinger have found that deficiency of vitamin B₂ in the diet of young rats has a deteriorating effect on their learning ability. R. C. Travis finds that excessively long practice periods are extremely deleterious in motor learning. The longer the practice period, the longer must be the rest period. C. L. Thiele's experiments indicate that the old-fashioned drill method is less effective for teaching new facts than the generalization method, which emphasizes the discovery and use of relationships.

"Intelligence is the aggregate or global capacity of the individual to act purposefully, to think rationally, and to deal effectively with his environment," according to D. Wechsler in *The Measurement of Adult Intelligence* (Baltimore: Williams and Wilkins), which describes the new

Bellevue Scale, and offers new formulations of mental deficiency and mental deterioration. Wechsler opposes the current notion that mental deficiency is a unitary entity. He also insists that mental decline sets in at least by the age of thirty. In place of the traditional I. Q., he substitutes the quotient obtained by dividing the actual score by the average score for age. *Tests of Mental Development* by F. Kuhlmann (Philadelphia: Educ. Test Bur.) describes tests evaluated in 75,000 or more individual examinations. Among other new books are *The Factorial Analysis of Human Ability* by G. H. Thomson (Boston: Houghton Mifflin); *Testing in the Elementary School* by L. W. Webb and A. R. M. Shotwell (New York: Farrar & Rinehart); *A Dictionary of Terms Used in Measurements and Guidance* by E. B. South (New York: Psychological Corporation); *Measurement* by W. A. McCall (New York: Macmillan); and *Meeting the Needs of the Mentally Retarded* by L. K. Ade (Bull. Dep. Publ. Instruct. Pa. No. 420). The second revised edition of G. H. Hildreth's *Bibliography of Mental Tests and Rating Scales* (New York: Psychological Corporation) lists 4279 titles. The second edition of F. N. Freeman's *Mental Tests* (Boston: Houghton Mifflin) contends that "the group factors or primary abilities are probably not native abilities but habits of thought formed by experience and training. All abilities, both special and general, are affected by training," though some appear to have an underlying organic basis.

A. W. Brown, I. P. Bronstein, and R. Kraines report an increase in I. Q. in cretins treated with thyroid, the increase being greatest for those who began treatment early. D. Straker studied 5000 rural children in England and found that eight per cent had I. Q.'s below 85. Bad health and poor home conditions were significant causes of retardation in at least a third of the cases. T. M. Livesay at the University of Hawaii found evidence of increases in intelligence during the years at college. M. E. Smith has studied the problem of bilingualism in Hawaii. The late T. R. Garth (1872-1939), after a generation of fruitful psychological research, culminating in comparative studies of Indian children reared in white homes and their siblings reared in the Indian environment, seemed at the time of his death to be approaching the hypothesis that differences in mental ability between races are largely dependent on environment. J. Wells and G. Arthur have shown that children of feeble-minded parents tend to develop a higher I. Q. in foster home placement than their siblings brought up by their own parents. M. Skodak's studies of children in foster homes have added to the growing body of evidence that children gain in I. Q. with improved environment. E. A. Cowan and E. Stout report a comparative study of the adjustment made by foster children after complete and partial breaks in continuity of home environment. They found that partial breaks are less likely to be followed by behavior indicating insecurity. This finding is opposed to the policies of placement agencies that insist on a complete break. *Rehabilitation of Children* by M. H. Baylor and E. D. Monachesi (New York: Harper) is a study of child placement by social agencies.

For behavior problems, G. Arthur reports that tutoring proved to be a therapeutic measure for children whose behavior difficulties resulted from educational maladjustment. A. Bennett has found that in reading difficulties, the dominant problem

is often an emotional one, due to repeated failure in reading. J. H. Conn and others have been using a play therapy in which the child is treated as an equal and allowed to express himself freely. O. H. Mowrer and others report desirable results from the installation of self-government in a children's center.

Among new books are *Mental Hygiene in Education* by P. A. Witty, C. E. Skinner, and others (New York: Farrar and Rinehart); *The Clinical Treatment of the Problem Child* by C. R. Rogers (New York: Houghton Mifflin); *The Child and His Family* by C. Bühler and others (translated by H. Beaumont) (New York: Harper); *Educational Psychology* by C. H. Judd (Boston: Houghton Mifflin); *Differential Fore-cast of Achievements and their Use in Educational Counseling* by R. R. Wolfe (Columbus, Ohio: American Psychological Association); *Psychology Applied to Teaching and Learning* by C. R. Griffith (New York: Farrar and Rinehart); *Psychology of Individual Differences* by A. R. Gilliland and E. L. Clark (New York: Prentice-Hall); *Educational Psychology* by J. L. Mursell (New York: Norton); *Introductory Psychology for Students in Education* by E. S. Conklin and F. S. Freeman (New York: Holt); *The Failing Student* by K. L. Heaton and V. Weedon (Chicago Univ. Press); *Coming of Age: a Frank Study of the Problems of Adolescence* by E. M. Grant (New York: Revell); *Love Problems of Adolescence* by O. M. Butterfield (Teach. Coll. Contrib. Educ., No. 768); and *Psychology and Teaching of Secondary School Subjects* by H. B. Reed (New York: Prentice-Hall). H. Hartshorne is editor of *From School to College* (New Haven: Yale Univ. Press), a study of the transition experience of 1200 boys. *The Maturing Mind* by T. H. Pear (New York: Nelson) emphasizes adult learning.

Mental Health and Mental Disease. This year the psychological world mourns the loss of three of its most penetrating students of feeling and emotion, M. F. Washburn, H. Ellis (q.v.), and S. Freud (q.v.).

Mental Health, edited by F. R. Moulton and P. O. Komora, (Science Press) is the fourth symposium of the American Association for the Advancement of Science in the field of public health. *Mental Hygiene*, by W. H. Mikesell (New York: Prentice-Hall), treats everyday mental and emotional problems of the normal person.

C. L. Hull, seeking to further growing rapprochement between psychoanalysis and experimental psychology, has redefined several psycho-analytic concepts in his own behavioristic terms. *Explorations in Personality*, by H. A. Murray and 27 other psychologists of the Harvard Clinic, utilizes both experimental techniques and Freudian interpretations, with an imaginative, subjective outlook. Most interesting is the proposed Thematic Apperception Test, in which the person tested reveals his preoccupations. *Fulcrum of Conflict, a New Approach to Personality Measurement*, by D. Spencer (Yonkers: World Book), offers a pencil-paper test for disclosing conflicts between an individual's behavior and his ideals, his parents' ideals, or the behavior of his parents or his associates. J. P. Guilford and R. B. Guilford have begun an investigation seeking a physiological basis for certain personality traits by the factor-analysis method. W. E. Moore has studied personality traits and voice quality in college students. He finds that students with

breathy voices are likely to be high in neurotic tendencies and introversion and low in dominance and to rate themselves lower than disinterested critics, whereas students with harsh or metallic voices rate themselves higher than disinterested critics.

Popular books in the field of personality include *Improving Your Personality* by E. G. Lockhart (Chicago: Walton); *Personality and Character* by J. D. Messick (New York: Revell); *The Art of Being a Person* by G. R. Wells (New York: Appleton-Century); *Your Brain and its Story* by R. J. A. Berry (New York: Oxford Univ. Press); and *Mastering Your Nerves* by P. Fletcher (New York: Dutton).

The Logic of Modern Psychology, by C. C. Pratt (New York: Macmillan), seeks to excuse or justify the psychologist who invents his own physiological hypotheses in the absence of direct evidence. Meanwhile, experimental neurologists, psychologists, and clinicians are making many significant discoveries. In *The Starlike Pattern* (New York: Farrar & Rinehart), C. Landis and W. Hunt report an extensive experimental study. This year marks a decade of work in electroencephalography since the pioneer experiments of Berger in 1929, and an increasing number of investigators have applied this technique to a wide variety of problems. Among new books on the nervous system are *La Psychologie Organique des Systemes Nerveux* by Pierre Jean (The Organic Psychology of the Nervous Systems) (Paris: Editions Correa), and *Textbook of Neuro-anatomy and the Sense Organs* by O. Larsell (New York: Appleton-Century). A year book of neurology, psychiatry, and endocrinology is now published by the Yearbook Publishers, Chicago. *The Organism*, by K. Goldstein (New York: American Book), is a holistic approach to biology based on pathological data in man.

Outstanding among the new periodicals is *Psychosomatic Medicine*, sponsored by the Committee on Problems of Neurotic Behavior of the Division of Anthropology and Psychology of the National Research Council, and concerned with the psychological approach to general medicine, and the interrelation between emotional life and bodily processes, both normal and pathological. The first issue contains a symposium of six articles on hypertension (high blood pressure), suggesting that hypertension is largely confined to occidental civilizations, that arteriosclerosis is not the cause but the result, and that the pathological changes are preceded by an early phase of functional disturbances based on excessive and inhibited hostile impulses. O. D. Anderson, R. Parmenter, and H. S. Liddell have shown that sheep in which an experimental neurosis has been produced reveal a cardiac disorder with rapid, irregular pulse and extreme sensitivity of the heart's action to stimulation. *The Patient in the Unit of Practice*, by D. W. Propst (Springfield, Ill. and Baltimore, Md.: Charles C. Thomas), includes a discussion of psychotherapy in general medicine. In *One Hundred Thousand Days of Illness* (Ann Arbor: Edwards), D. Ketcham stresses medical and social needs of the child patient. *The Psychology of Common Sense*, by A. A. Roback (Cambridge, Mass.: Sci-Art), maintains the extraordinary thesis that sanity is relatively rare. *Studies of Abnormal Behavior in the Rat: the Neurotic Pattern and an Analysis of the Situation which Produces It*, by N. R. F.

Maier (New York: Harper), suggests some interesting parallels with human neuroses.

In *Hereditary and Environmental Factors in the Causation of Manic-Depressive Psychoses and Dementia Praecox* (Utica, N. Y.: State Hospitals Press), Pollock, Malsberg, and Fuller argue that the type of mental disease is dependent primarily on the organism, but *Mental Disorders in Urban Areas*, by R. E. L. Faris and H. W. Dunham (Chicago: Chicago Univ. Press), a study of 34,864 cases in four state hospitals and eight private sanitariums, reveals a close relationship between insanity and the ecological structure of the city. Catatonic schizophrenics were found to come mostly from slum areas where poverty and culture conflict are combined, paranoids and hebephrenics from rooming-house areas where individuals live in social isolation, and general paresis from areas where there is a disproportion between the sexes. In *New Ways in Psychoanalysis* (New York: Norton), K. Horney stresses the influence of competitive culture in causing neuroses. Competitive tendencies lead to isolation and fear, and increase the wish for dependence, but the latter hurts self-esteem and drives the individual back into competitiveness and self-assertion, making a vicious circle. *Social Forces in Personality Stunting*, by A. H. Khamat (Cambridge, Mass.: Sci-Art), also finds the cause of widespread psychological immaturity in the exploitive, autocratic, and competitive structure of society. G. Devereux contends that schizophrenia is rare among primitives, and probably results from an attempt to become adapted; but in *Sex, Custom, and Psychopathology, a Study of South African Pagan Natives* (New York: McBride), B. J. F. Laubscher reports that the psychoses of the tribesmen correspond closely to those found in Europe. G. L. Freeman suggests that certain personality maladjustments may depend on relationships between the tonic or postural segment of response and its phasic or kinetic aspect. If frustration is encountered, postural activity is heightened. If postural tensions exceed appropriate levels, higher responses become disorganized. A. Harrasser reports that athletic types most often show the catatonic form of schizophrenia.

An increasing number of psychiatrists report favorable results from shock therapy, and nitrogen is gaining favor in delicate cases where insulin and metrazol are contra-indicated. L. L. Bryan reports that in shock therapy the best results are obtained when occupational therapy and psychotherapy are used conjointly. *The Occupational Treatment of Mental Illness*, by J. I. Russell (Baltimore: William Wood), shows the value of occupational therapy in integrating and socializing the personality and restoring self-confidence. *Psychopathic States*, by D. K. Henderson (New York: Norton), stresses the importance of socializing the psychopath. A. Myerson favors altering the life of the patient in the direction of more sunshine, exercise, feeding, and entertainment. *The Language of the Dream*, by E. A. Cuthell (New York: Macmillan), advocates active use of dream analysis in therapy. J. L. Moreno employs a psychodramatic shock therapy. N. Reider, D. Olinger, and J. Lyle find amateur dramatics a therapeutic agent in the mental hospital far more important than just recreation. At Bellevue Hospital, F. J. Curran employs dramatic treatment for adolescent boys. The boys write and act their own plays. P.

Schilder finds that in severe neuroses group therapy has two advantages over individual therapy, (1) the associations of one patient will stir up associations in the others, and (2) patients accept hitherto unacceptable facts when they find the same experiences and attitudes in other patients.

The second edition of *A Textbook of Abnormal Psychology*, by R. M. Dorcus and G. W. Shaffer (Baltimore: Williams and Wilkins), includes a discussion of the new chemical therapies. *Elements of Abnormal Psychology*, by L. F. Kuntz (Notre Dame, Ind.: Notre Dame Bookstore), is a text for advanced college students, with emphasis on psychiatric treatment. *The Troubled Mind* by H. Roberts (New York: Dutton) includes chapters on the insanities by M. N. Jackson. *Outline of Psychiatric Case Study* by P. W. Preu (New York: Harper) is a useful guide for taking complete psychiatric histories. There is growing recognition of the importance of the nurse in the whole therapeutic process, and several recent books have been written to give nurses more psychological insight.

Social Psychology. Numerous investigators have attempted studies of social attitudes and prejudices and the possible techniques for modifying them. C. Bird has prepared a bibliography of suggestion and suggestibility, comprising 233 titles. L. L. Ramseyer has shown that statistically reliable shifts of attitude can be produced by the showing of documentary motion pictures. C. R. Miller, S. S. Sargent, and others have made significant contributions to the detection and analysis of propaganda. *Public Opinion*, by W. Albright (New York: McGraw-Hill), deals with the psychological techniques employed in creating public opinion. S. P. Hayes, Jr., has made a study of the consistency of voters' attitudes. H. Meltzer has studied attitudes of American children toward peaceful and warlike nations. M. Handman debunks current arguments in favor of war. *Civilization, War, and Death*, by the late S. Freud, edited by J. Rickman (London: Hogarth Press and Institute of Psychoanalysis), is made up of excerpts from longer works previously published. *Life: a Psychological Survey*, by S. L. Pressey, J. E. Janney, and R. G. Kuhlén (New York: Harper), begins with a discussion of the socio-economic and cultural environment of modern life.

E. S. Dexter, M. H. Krout, R. Stagner, and others have made comparative studies of radicals and conservatives. Their data are to be regarded not as attempts to evaluate radical theory but as an effort to learn the factors which sensitize some individuals to certain ideologies. E. Nelson has found that student attitudes seem to depend more upon father's vocation than upon classification in college. In *Race Against Man* (New York: Putnam), H. J. Seligman shows that behavior changes with social status, regardless of race. *After Freedom*, by H. Powdermaker (New York: Viking Press), is a study of negro-white relations in a town of the deep south. In *Migration and Environment* (New York: Oxford Univ. Press), H. L. Shapiro reports a study of Japanese immigrants to Hawaii, their relatives in Japan, and their children born and brought up in Hawaii. Astounding divergences were found. S. C. Dodd believes that societal behavior is determined by societal tensions, which arise when desire exceeds the quantity of what is desired. In *Superstition and Society* (London: Hogarth

Press), R. Money-Kyrle argues that superstitions have much in common with neurotic beliefs. Taboos are institutionalized obsessional protections against the satisfaction of repressed desires. Collaboration between psychoanalysis and social anthropology is needed. J. Ratner is the editor of *Intelligence in the Modern World* (New York: Modern Library), a representative selection from John Dewey's published and unpublished writings. The psychiatric approach to sociological problems is gaining favor.

The Journal of Criminal Psychopathology (Woodbourne, N. Y.: Woodbourne Institution for Defective Delinquents), edited by V. C. Branham, was begun last July. *Problems in Prison Psychiatry*, by J. G. Wilson (Caldwell, Idaho: Caxton), finds the value of imprisonment to be limited and contends that more would be gained by psychiatric attention to probationers. N. S. Hayner and E. Ash find that the prison community, made up of outcasts, devoted to obtaining goods and services denied by the administration, re-enforces those behavior tendencies which society strives to prevent. C. R. Shaw finds that delinquencies of boys appear to be purposive adjustments to the practices and norms of the group (gang) to which the individual belongs. M. A. Saffir points out that there are two major approaches in the prevention of delinquency: (1) the establishing and strengthening of the social impulses, and (2) the legitimate satisfaction of those impulses that conflict with the social impulses. After studying records from 18 countries of Europe, L. S. Penrose concludes that the more provisions are made for the insane and the defective, the fewer facilities are required in providing for criminals.

Crime and The Man, by E. A. Hooton (Cambridge, Mass.: Harvard Univ. Press), summarizes anthropometric, morphological, and sociological data from 13,873 convicts and 3203 nonconvicts from ten states. He finds that criminals are on the whole physically and mentally inferior to law-abiding citizens of the same ethnic origin. *Familial Feeble-mindedness* by C. H. Town (Buffalo: Foster & Stewart), a study of 141 families, points out that these families, selected because they are foci of feeble-mindedness, are also foci of disease, alcoholism, destitution, criminality, and vice.

N. Bell is editor of *The Offender in the Community*, the yearbook of the National Probation Association (New York: National Probation Association). M. Ihns finds that women criminals are of three types, the negativistic, the emotionally unstable, and the affected,—that is, those with a psychological need to appear more than they are. C. A. Wright's research has convinced him that treatment with endocrine preparations will often control delinquency and rehabilitate the patient.

Sex and Internal Secretions (2d ed.), edited by E. Allen, C. H. Danforth, and E. A. Doisy (Baltimore: Williams & Wilkins), includes a chapter on sex drive by C. P. Stone. Among other books are *Crime and Society: An Introduction to Criminology* by N. F. Cantor (New York: Holt); *Punishment and Social Structure* by G. Rusche and O. Kirchheimer (New York: Columbia Univ. Press); *The Psychological Treatment of Crime* by W. N. East and W. H. de B. Hubert (London: H. M. Stationery Office); and *Organization and Teaching of Social and Economic Studies in Correctional Institu-*

tions by G. M. Kendall (Bur. Pub., Teach. Coll., Columbia Univ.).

Psychotechnology. Extensive psychotechnical research in Italy has led to the construction of machines that have three or four speeds and rhythmical patterns, to lessen the strain of rhythm patterns enforced on the worker. Personnel for Swedish State Railways has been selected with the aid of psychological tests since 1934. In Germany, before the outbreak of war, it was reported that 40,000 candidates were being examined annually for such work as motor driving, signaling, wireless telegraphy, and aviation. In Budapest, promotion to a commissioned rank in the army is conditioned upon passing certain psychological tests. Other tests are required of army motor drivers. In America there have been numerous studies of the choice, enjoyment, and educational value of radio programs, and a whole issue of the *Journal of Applied Psychology* has been devoted to radio research. An increasing number of American psychologists report research on the prevention of automobile accidents. Tests and training of drivers and safety education of children have accomplished much. The need to educate elderly pedestrians is now being stressed. K. Münnich finds that 10 years' flight statistics in the United States show that human failure causes more than half the accidents in noncommercial and nonmilitary aviation, indicating the need of rigid selection to eliminate unfit pilots in advance. C. E. Ferree and G. Rand have designed an instrument to test pilot fitness for night driving. Among new books are *Psychology for Business and Industry* by H. Moore (New York: McGraw-Hill); *Mental Tests for Civil Service Examinations* by W. J. Barse (New York: Grosset); and *Counseling Young Workers* (New York: Vocational Service for Juniors) by J. P. Culbert and H. R. Smith. D. T. Dyer finds that the earlier in life vocational decisions are made and the more in line with boyhood occupations and hobby, the more stable they are. In Transylvania, Rumania, vocational guidance is now compulsory in the sense that no factory or small industrialist can receive apprentices without a psychotechnical certificate. The subjects are not compelled to choose only the jobs that have been advised but employers usually prefer to receive only the candidates recommended for their special jobs.

Books. *Human Development and Learning*, by F. S. Salisbury (New York: McGraw-Hill), introduces the beginning student to some of the new psychologies. *General Psychology*, by L. E. Cole (New York: McGraw-Hill), has a mechanistic bias. *Introduction to Methods in Experimental Psychology*, by M. A. Tinker and K. H. Baker (New York: Appleton-Century), stresses measurement of aptitudes and personality. *Lecture Demonstrations for General Psychology*, by N. V. Scheidemann (Chicago Univ. Press), utilizes no special apparatus or material other than that available to all teachers. *American Psychology before William James*, by J. W. Fay (New Brunswick, N. J.: Rutgers Univ. Press), covers the period from 1640–1890. *Emotions: their Psychological, Physiological, and Educative Implications*, by F. H. Lund (New York: Ronald Press), gives a comprehensive account of neural, glandular, and other physiological factors in emotions. *Thus We are Men*, by W. Langdon-Brown, is a collection of addresses by a distinguished physician (New York: Longmans, Green). *Let*

Me Think, by H. A. Overstreet (New York: Macmillan), is the first volume of a new series planned and edited by the American Association for Adult Education. *How to Think Straight*, by R. H. Thouless (New York: Simon & Schuster), is a popularly written book on psychology and applied logic. *The Psychology of Making Life Interesting*, by W. White (New York: Macmillan), stresses the value of variety. Among other new books are *Cognitive Psychology* by T. V. Moore (Philadelphia: Lippincott); *General Psychology* by J. P. Guilford (New York: Van Nostrand); *Principles of General Psychology* by E. Freeman (New York: Holt); *Psychology of Individual Differences* by A. L. Gililand and E. L. Clark (New York: Prentice-Hall); *The Mechanism of Thought, Imagery, and Hallucination* by J. Rosett (New York: Columbia Univ. Press); *Taste and Temperament* by J. Evans (New York: Macmillan; London: Jonathan Cape); *Scientific Hypnotism* by R. B. Winn (Boston: Christopher); *How to Use Psychology in Everyday Living* by W. S. Casselberry (Burbank, Cal.: Ivan Deach.); and *Use Your Head* by B. Fürst (New York: Funk & Wagnalls).

MABEL F. MARTIN.

PSYCHOTECHNOLOGY. See PSYCHOLOGY.

PUBLIC AFFAIRS, INSTITUTE OF. An organization inaugurated in 1927 at the University of Virginia for the purpose of discussing problems of current political, social, and economic importance. Begun as a purely national forum it was enlarged in 1932, after the closing of the Institute of Politics at Williamstown, to include international problems as well.

The attendance at the 1939 session, which was held from July 3 to July 15, consisted of 1251 registered members and visitors, representing 29 states and 9 foreign countries. Membership in the Institute is open to men and women who have taken part in public life and to all those interested in the discussion of public affairs. While contributions are solicited, there is no set membership fee and all sessions are open to the public without charge.

The general topic of the 1939 session was "New Problems of Government: National and International." This topic was broken down into four sub-topics, each the subject of round table discussion as follows: "Foreign Affairs," Prof. Bruce C. Hopper of Harvard University, Leader; "National Affairs," Mr. Ernest K. Lindley of Washington, D. C., Leader; "The Position of the Individual in Rival Political Systems," Prof. Robert L. McElroy of Oxford, Leader; "The Relation of Religion to Government," Dr. Deane Edwards of New York, Leader. The programme included morning addresses, afternoon round table discussions, and evening addresses with some 70 authorities in the various fields participating. All addresses are preserved in mimeographed form and are available to the public at small cost.

The officers of administration in 1939 were: John Lloyd Newcomb, president of the University of Virginia; Hardy Cross Dillard, acting director of the Institute; and Marjorie McLachlan, secretary of the Institute. Headquarters are at the University of Virginia, Charlottesville, Virginia.

PUBLIC FINANCE. As a result of a growing Congressional revolt against the heavy government spending policies of recent years, as well

as the improvement in business conditions, a trend toward curtailing the size of Federal expenditures made its appearance during 1939. The Administration, before its plans were upset by Congress, proceeded early in the year to draft a new spending-lending program designed to implement the principles laid down in the annual message of the President early in January, 1939. It was proposed therein that Federal expenditures be stabilized around \$9,000,000,000 yearly, in order to sustain the level of national purchasing power, regardless of revenues, which would be determined by fluctuating national income. The President sent Congress a special message on June 22 calling for the blanket approval of a program of Federal financing of public works, slum clearance, railroad equipment rehabilitation, farm electrification, and foreign loans through the Export-Import Bank that would aggregate \$3,860,000,000. A storm of opposition from conservative Democrats and Republicans caused the complete defeat of this program in Congress, after which the Administration, recognizing the change in popular attitude toward mounting Federal expenditures, itself favored a curtailment of Government outlays.

In the latter months of the year, as well as in his annual budget message to Congress on Jan. 3, 1940, the President emphasized the need for reducing other Federal expenditures because of the sharp increase in armament outlays made necessary by the war in Europe. This message proposed not only a decline in total expenditures, including debt retirement, to \$8,424,000,000 for the fiscal year ended June 30, 1941, as compared with \$9,099,000,000 scheduled to be spent in the fiscal year ended June 30, 1940, but also proposed that the Treasury obtain \$700,000,000 in cash, to reduce its borrowings, through calling upon various Government corporations to redeem, out of surplus funds on hand or to be raised through their own bond issues, \$700,000,000 of their stocks held by the Treasury. At the same time, the President asked Congress to impose \$460,000,000 of additional taxation to finance added national defense outlays, which would reduce the excess of expenditures to \$1,716,000,000 for the 1940 fiscal year, most of which would be raised through direct sales of United States savings bonds to the public and sales of special issues of Treasury obligations to the social security funds. Under the budget as presented, therefore, virtually no special other financing by the Treasury to raise new money was made to appear needful.

Federal Revenues. The total receipts of the Federal government were \$5,668,000,000 in the year ended June 30, 1939, a decline of \$574,000,000 as compared with the preceding fiscal year. The decline in revenues resulted from the poorer business conditions of 1938 and the liberalization of the income tax laws of 1938 and 1939. Income tax collections declined by \$452,000,000 in the 1939 fiscal year, as compared with the year before. The Treasury did not determine what proportion of this contraction in receipts was due to the changes in the law, particularly the elimination of the undistributed profits tax and the modification of the capital gains and losses provision, but started inquiries into this question to furnish a basis for future legislative proposals. Corporate income tax collections in the year ended June 30, 1939, were \$963,000,000, a decline of \$182,000,000 from the year before, while individual income tax collections of \$937,000,000 were down \$252,000,000. Social security tax collections by the Federal

RECEIPTS FOR THE FISCAL YEAR 1939 AND ESTIMATED RECEIPTS FOR THE FISCAL YEARS 1940 AND 1941

| | Estimated, 1941 | Estimated, 1940 | Actual, 1939 |
|--|-----------------|-----------------|--------------------|
| Internal revenue: | | | |
| Income tax | \$2,302,000,000 | \$1,953,000,000 | \$2,182,300,486.97 |
| Miscellaneous internal revenue | 2,482,210,000 | 2,356,195,000 | 2,231,983,302.37 |
| Unjust enrichment tax | 4,000,000 | 6,000,000 | 6,456,802.43 |
| Federal Insurance Contributions Act Taxes | 632,500,000 | 598,600,000 | 530,354,779.41 |
| Federal Unemployment Tax Act Taxes | 93,900,000 | 104,800,000 | 100,868,935.68 |
| Taxes upon carriers and their employees | 135,000,000 | 123,750,000 | 109,256,539.77 |
| Railroad Unemployment Insurance Act | 6,750,000 | 4,950,000 | |
| Customs | 273,000,000 | 283,000,000 | 318,837,311.27 |
| Miscellaneous receipts | 221,400,000 | 273,500,000 | 187,765,467.69 |
| Total receipts | \$6,150,760,000 | \$5,703,795,000 | \$5,667,823,625.59 |
| Deductions | | | |
| (1) Net appropriation for Federal old-age and survivors insurance trust fund representing an amount equal to taxes collected and deposited under the Federal Insurance Contributions Act, less reimbursement to general fund for administrative expenses | 602,800,000 | | |
| (2) For purposes of comparison net transfers to old-age reserve account (trust fund) | | 537,355,000 | 503,000,000.00 |
| Net receipts, general and special accounts | \$5,547,960,000 | \$5,166,440,000 | \$5,164,823,625.59 |

government of \$740,000,000 were down only \$14,000,000.

The chief sources of Treasury revenue for the 1939 fiscal year, with estimates for 1940 and 1941 as presented in the annual budget message to Congress, are shown above.

Federal Expenditures. Federal expenditures during the fiscal year ended June 30, 1939, totaled \$8,765,000,000, not to count \$503,000,000 shifted to old-age reserve; they ran \$1,577,000,000 over the preceding fiscal year. National defense outlays increased by \$76,000,000 to \$1,056,000,000, but a very sharp further increase in such expenditures was assured for the following fiscal year as the result of a number of supplementary appropriations passed by Congress. Public works expenditures aggregated \$1,111,000,000, a rise of \$231,000,000 over the 1938 fiscal year. Unemployment relief was responsible for expenditures of \$2,677,000,000, the bulk of which went for work relief, as compared to \$1,996,000,000 in the preceding year. A change was made in the form of the Federal accounts for 1941 through eliminating the appropriations for the Federal Old-Age and Survivors' Insurance Trust Fund as an expenditure, this item now being carried as a direct deduction from receipts, as shown in the table of receipts above.

Estimated expenditures for the fiscal year that began July 1, 1939, with estimates for the two following fiscal years, are shown on pp. 651-652.

Treasury Financing Policy. Despite its huge excess of expenditures, the Treasury did not find it necessary to resort to public financing for new money on a large scale during the fiscal year ended June 30, 1939. It sold \$461,000,000 of 2½ per cent Treasury bonds of 1952 and \$342,000,000 of 1½ per cent Treasury notes due in 1943 for cash on Sept. 15, 1938. On Dec. 15, 1938, it raised \$402,000,000 of new money through the sale of 2¾ per cent bonds due in 1965 and \$328,000,000 by the sale of 1½ per cent notes due in 1943. The Treasury raised \$605,000,000 net during the fiscal year by the sale of baby bonds, while \$1,094,000,000 was secured through the issuance of special series of Treasury securities to the social security and other funds managed by the Treasury. The gross public debt on June 30, 1939, was \$40,439,000,000, an increase of \$3,274,000,000 for the fiscal year. This rapid increase in the debt brought up the question of raising the limit of \$45,000,000,000.

The status of the public debt during the fiscal year ending June 30, 1939, and the estimates of debt changes for the two following years con-

tained in the President's message of Jan. 3, 1940, were as follows:

GROWTH IN THE PUBLIC DEBT IN FISCAL YEARS ENDING JUNE 30, (000,000, OMITTED)

| | Estimated 1941 | Estimated 1940 | Actual 1939 |
|--|-------------------|-------------------|----------------|
| Public debt at beginning of year | \$43,222 | \$40,439 | \$37,164 |
| Increase in public debt during year: | | | |
| To meet deficiency in revenues and receipts, general and special accounts | 2,276 | 4,033 | 3,600 |
| Less debt retirements included in deficit | 100 | 100 | 58 |
| New taxes | -460 | | |
| Increase in working balance (+) decrease (-) on general and special account | | -1,150 | -261 |
| Total increase in public debt during year | 1,716 | 2,783 | 3,280 |
| Decrease in public debt during year due to retirement of national bank notes, chargeable to working balance—on trust account, etc. | | | 5 |
| Net increase in public debt during year | 1,716 | 2,783 | 3,275 |
| Public debt at end of year | 44,938 | 43,222 | 40,439 |

The Treasury extended further during 1939 the policy of financing a number of its agencies through the sale to the public of obligations of their own. The Reconstruction Finance Corporation, the Commodity Credit Corporation, the U.S. Housing Authority, and the Home Owners' Loan Corporation issued their obligations for cash or for refunding purposes on several occasions through the year. The contingent liability of the Federal government on all guaranteed obligations amounted to \$5,469,000,000 on June 30, 1939, an increase of \$591,000,000 for the fiscal year. That the Treasury planned to rely even more largely upon the sale of guaranteed, rather than direct debt, obligations, because of the adverse political implications of the extremely rapid increase in the direct debt, was indicated by the fact that the 1941 budget provided for the repayment of \$700,000,000 by Government corporations to the Treasury through redemption of their stock issues held by the latter.

The Social Security Act amendments enacted in 1939, by retaining the 1 per cent payroll tax payable by employers and employees for another three years and liberalizing benefits, will greatly curtail the eventual size of the reserve fund. Instead of

‡ Includes payments to States †

the former Old Age Reserve Account, which was to be operated on an actuarial basis to provide old age pensions, the amendments approved Aug. 10, 1939, substituted a Federal Old-Age and Survivors' Insurance Trust Fund, which will constitute merely a reserve of moderate size to facilitate the smooth operation of the old-age pension scheme. Benefit payments are to come out of current tax receipts, without material reliance upon income earned on the reserve. This change greatly reduces the prospective volume of Federal obligations to be absorbed by the social security funds as investments for their reserves.

The Public Debt. The gross public debt of the United States at the end of the calendar year 1939 consisted of \$41,445,000,000 of direct obligations and \$5,700,000,000 of guaranteed obligations. This represented an increase for the calendar year of

\$2,546,000,000 in direct obligations and \$708,000,000 in indirect obligations.

The most remarkable feature of the public debt during 1939 was the rapid acceleration in sales of United States savings bonds, as the Treasury's active campaign to promote the distribution of these baby bonds brought substantial results. Since these bonds yield 2.9 per cent to buyers who hold them for 10 years, and since the Treasury redeems them in cash at any time on demand, the question was raised whether the rapid growth in the popularity of these securities was an unmixed blessing for the Federal government. They are not only a costly financing instrument, but also expand the Treasury's potential cash liabilities.

The public debt at the end of the calendar year 1939 was as follows, according to the Treasury's preliminary statement:

PRELIMINARY STATEMENT OF THE PUBLIC DEBT, DEC. 31, 1939

BONDS:

JULES I. BOGEN.

PUBLIC HEALTH SERVICE. The important functions of the U.S. Public Health Service authorized by law are the prevention of the introduction of disease into the United States from abroad, research in the cause and prevention of disease, co-operation with the States in all health matters and assistance, through grants-in-aid, in the development and improvement of their health services, control of the manufacture and sale of biologic products used in the prevention and treatment of disease, and hospitalization and medical care of certain legal beneficiaries.

During the fiscal year 1939 the quarantinable diseases prevailed in practically the same areas and to about the same degree as in the preceding year; but no case of any of these diseases passed the barriers of quarantine, although cholera was unusually prevalent in the Orient and yellow fever was present in South America. During the fiscal year, quarantine officers of the Public Health Service inspected 15,525 vessels carrying 1,926,529 persons (passengers and seamen), and fumigated 830 vessels. At various ports of entry, a total of 1,852,338 alien passengers and seamen were examined under the immigration laws, and 23,336 were certified as being afflicted with some mental or physical defect or disease. Of 72,488 applicants for immigration visas examined by medical officers of the Public Health Service at American consulates in foreign countries, 1021 were found to have defects or diseases requiring exclusion, and 13,466 were afflicted with a disease or condition likely to affect their ability to earn a living. Inspection for quarantine and immigration purposes were made at airports of entry of 1878 airplanes, carrying 25,842 passengers, of whom 8521 were aliens.

The research work of the Public Health Service is conducted at the National Institute of Health (of which the National Cancer Institute is a part), located at Bethesda, Md., near Washington, D. C., and at field stations. Three of the five buildings of the National Institute of Health were occupied during the fiscal year 1939, and the National Cancer Institute building, erected at a cost of \$750,000, was completed Sept. 26, 1939.

The investigations have for their purpose the securing of additional knowledge regarding the cause and prevention of disease and include studies in epidemiology, chemistry, pharmacology, zoology, pathology, chemo-therapy, immunization, biologies, statistics, and public health methods. Important research during the fiscal year 1939 included infectious diseases, virus diseases, heart disease, cancer, industrial diseases, basic chemical and pharmacological studies with reference to practical application in medicine and the biological sciences, and the standardization of biologic products. New foci of spotted fever were found in the eastern States, and 495 liters of protective vaccine were prepared and distributed. Endemic typhus fever prevalence was noted in additional areas in the South, and the disease was found to have lost its urban limitations. The tick was identified as a carrier in three acute febrile diseases in addition to spotted fever. In laboratory experiments, several sulfanilamide derivatives showed a chemotherapeutic activity superior to sulfanilamide in streptococcic infections, and beneficial results were obtained from sulfanilamide and sulfapyridine therapy in the marine hospitals. In investigations made on heart disease, no infectious agent was found, but indications pointed to the possibility of heredity as a predisposing factor. In the study of dietary deficiency diseases, such as pellagra, rickets, and scurvy, a new vitamin- (riboflavin-) deficiency disease was discovered which had probably existed in this coun-

try for many years. The name "ariboflavinosis" was suggested for the condition.

The greatest advance in public health services in 1939 and in recent prior years has come as the result of Federal grants-in-aid to the States, under the health provisions of the Social Security Act of 1935 and the Venereal Disease Control Act of 1938, for the improvement and expansion of State and local health services and the training of their personnel. As a result of this financial aid and of the consultative and technical assistance of the Public Health Service, more effective public health administration has been secured in such fields as engineering, nursing, nutrition, industrial hygiene, and communicable disease control. Many States have enacted new health legislation and created special divisions in their health departments, such as those relating to industrial hygiene and venereal disease control.

The oldest function of the Public Health Service—the treatment and hospitalization of American merchant seamen (authorized by the original act of 1798) and other legal beneficiaries—was continued through 26 marine hospitals, 124 relief stations located in the chief ports of the United States and its possessions, and 133 contract hospitals located in ports not served by the marine hospitals. During the fiscal year 1939, a total of 405,424 accredited beneficiaries were furnished 2,028,264 hospital days relief and 1,391,785 office treatments. A total of about 6000 beds are provided by these hospitals, of which at the close of the fiscal year, 5163 were occupied.

The Public Health Service also conducts two hospitals, one at Lexington, Ky., and one at Fort Worth, Tex., for the confinement and treatment of drug addicts, mostly Federal prisoners. The Fort Worth hospital was opened for admissions on Nov. 8, 1938, and had 295 patients at the end of the fiscal year. An additional unit, with a capacity for 717 patients is under construction. The Lexington hospital, which was opened on May 29, 1935, had a daily average population of 960 during the year. See NARCOTICS CONTROL.

Medical, psychiatric, and other services in Federal penal and correctional institutions under the Bureau of Prisons were furnished and supervised, and psychiatric service was provided for 10 United States courts.

Health conditions in the United States were good during 1938 and 1939. The provisional death rate for 1938, 10.6 per 1000 population, was the lowest ever recorded for this country; and while the figure for 1939 may be slightly higher, preliminary reports indicate a continuance of favorable health conditions as revealed by the general mortality rate. (See VITAL STATISTICS.)

On July 1, 1939, the Public Health Service was transferred from the Treasury Department, where it had functioned administratively since it was created in 1798, to the Federal Security Agency, established in accordance with the Reorganization Act, approved Apr. 3, 1939, and the first plan on Government reorganization submitted by the President to Congress on Apr. 25, 1939.

Detailed accounts of the activities of the Public Health Service may be found in the Annual Reports of the Surgeon General.

PUBLIC UTILITIES. See BUSINESS REVIEW; ELECTRIC LIGHT AND POWER; TENNESSEE VALLEY AUTHORITY.

PUBLIC WORKS ADMINISTRATION. On June 16, 1933, the Federal Emergency Administration of Public Works came into existence when President Roosevelt signed the National Industrial Recovery Act. Creation of jobs through the construction of useful and permanent public works, with the resultant stimulus to the heavy goods industries, was the goal.

There have been five Public Works programs and, as of Nov. 1, 1939, allotments had been made to 17,819 Federal projects and 16,657 non-Federal projects. These are located in 3068 of the 3071 counties. The estimated cost of all of the projects is \$5,860,746,362, the non-Federal costing \$4,199,772,482 and the Federal projects, \$1,775,232,880. The share of the applicant in the non-Federal projects is approximately \$1,800,000,000, and as of Nov. 1, 1939, there were 1809 of these, allotted under the 1938 program, still under construction.

The greater part of PWA's work in 1939 has been on projects allotted under the 1938 appropriation. Construction under this program was started by Jan. 1, 1939, and it will be substantially complete by June 30, 1940. As in all except the first program when 30 per cent of the labor and material costs was allowed as a grant, PWA made grants on non-Federal works of 45 per cent of the total estimated cost. The sponsor furnished the remainder of the cost.

With all funds allotted, PWA in the fall of 1939 returned to sponsors 5043 non-Federal applications for projects with a total estimated cost of \$1,748,868,777.

By Nov. 30, 1939, PWA construction had produced 7,010,941,000 man-hours of employment, of which 2,003,126,000 were at the site of construction and 5,007,815,000 in the production, fabrication, and transportation of materials and supplies.

Charged with direct supervision of all Federal projects were 70 Governmental Departments and Agencies. Twenty-nine per cent of Federal PWA expenditures has been for control and improvement of waterways and harbors, to provide irrigation, navigation, flood control, and water power, to prevent soil erosion and to deepen harbors and add to coastal facilities. Twenty-six per cent has gone for transportation, chiefly in the construction of Federal-aid highways. Seventeen per cent has been for Federal buildings, including post offices, courthouses, hospitals and penal institutions, warehouses, residences and laboratories. Fifteen per cent has been for construction of naval and Coast Guard vessels, and additional sums for improvement of Army camps, aviation fields and National Parks. See PRISONS, PAROLE, AND CRIME CONTROL.

Thirty-two railroads received PWA loans to the sum of \$200,974,500 for work in 45 States which included electrification, improvements of road beds, purchase of rails and modern rolling stock.

The Public Works Administration started a low-cost housing and slum-clearance program. There were 51 projects with an allocation of \$147,000,000 for the program and of this amount, \$136,669,759 had been allotted up to Oct. 27, 1937, when the projects were transferred to the United States Housing Authority.

Funds for the five PWA programs were supplied by appropriations and authorizations as fol-

lows: 1933—\$3,300,000,000 (appropriation); 1934—\$394,000,000 (appropriation); 1935—\$313,000,000 (authorization); 1936-37—\$291,000,000 (authorization); 1938—\$965,000,000 (appropriation).

Thirty per cent of non-Federal allotments have been for educational facilities. Twenty-seven per cent has been for transportation, including aviation. Twenty-two per cent has gone to water and sewerage systems, and 7 per cent to hospitals. A breakdown of major types of non-Federal PWA projects as of Nov. 1, 1939 follows:

| Type of project | Number of projects | Estimated cost | Loan | Grant |
|--|--------------------|----------------|---------------|---------------|
| Roads and Highways | 605 | \$286,282,043 | \$ 11,786,000 | \$115,849,318 |
| Streets | 779 | 125,719,726 | 3,633,114 | 48,631,823 |
| Grade Crossing Elimination | 29 | 27,668,506 | 870,000 | 10,573,714 |
| Sewer Systems | 1,525 | 467,950,727 | 106,653,425 | 171,847,380 |
| Water Systems | 2,412 | 309,093,849 | 53,924,916 | 112,833,652 |
| Electric Distribution Systems | 53 | 9,069,543 | 3,997,500 | 2,994,746 |
| Power Construction | 228 | 86,639,831 | 18,931,200 | 36,061,190 |
| Secondary Schools | 6,450 | 940,580,711 | 61,528,688 | 386,215,486 |
| Colleges and Universities | 662 | 201,781,484 | 29,130,535 | 81,467,137 |
| Public Libraries | 105 | 11,933,437 | 183,100 | 4,877,477 |

E. W. CLARK.

PUBLISHING. See BOOK PUBLISHING.

PUERTO RICO, pwě'r-tō rě'kō. A West Indian island forming a territory of the United States; acquired from Spain under the terms of the Treaty of Paris, signed Dec. 10, 1898. Capital, San Juan. Small adjacent islands, Vieques and Culebra, are included in the jurisdiction and statistics.

Area and Population. Puerto Rico has an area of 3435 square miles; its inhabitants number 1,805,480 (estimate for July 1, 1938); it had, in 1935, 1,723,534 (census of December 1). Colored inhabitants (1938) were stated as 417,401; whites, 1,388,079. Yearly births (1938) numbered 69,823; they came to 38.7 per 1000. Deaths, 33,870, came to 18.8 per 1000. The births ran to more than double the deaths; the excess of births, 19.9 per 1000, for 1938 and near this figure in previous years, tended to increase the population by almost 2 per cent a year; emigration to the Continental United States and to some of its possessions had worked to moderate this increase. Despite this, the density of the population, now one of the highest among agricultural countries, has risen from 280.3 to the square mile for 1899, to 525.6 (1938). Nearly four persons out of nine were below the age of 14 years. Of the population of 1935, 563,616 were classed as urban; 1,159,918, as rural. Spanish is still the prevailing language, but English is widely understood. The predominant religious allegiance is to the Roman Catholic Church.

The populations of the chief cities (1935) are: San Juan, 137,215; Ponce, 60,867; Mayagüez, 44,907; Caguas, 22,599; Rio Piedras, 16,849; Guayama, 16,075; Arecibo, 14,332; Bayamón, 13,873; Aguadilla, 11,133.

Education. At the end of the academic year 1938-39 enrollments of pupils in free public schools numbered 281,359; of these, only 15,835 were in grades 9-12. The great mass of pupils were in the elementary grades. Conditions worked against developing secondary schools; though two-fifths of the insular budget went for education, the pupils in the public schools came to only one-half of the

number of persons classed as of school age. Facilities were still scanty for even elementary teaching to all the young, particularly among the rural population. The year's appropriations for public schools totaled \$5,802,873. Teachers and field personnel numbered 6562; schools, 1846, including 48 high schools and 7 trade schools. The University of Puerto Rico had, in the year 1938-39, 3186 students at its main site in Rio Piedras and 754 in its College of Agriculture and Mechanic Arts, at Mayagüez; it had also 754 taking extension courses.

A commission of educators, sent from the United States by the President, visited the University in 1939 and reported favorably on a plan for establishing in connection with it an Inter-American University for students from other Latin-American lands.

Production. The growing of sugar cane is by far the main cash-yielding crop of the island. The crop of cane ready for harvest in 1939 contained an estimated 1,200,000 tons of sugar. Puerto Rico's quota for the year, as revised, allowed sales of only 806,642 tons for the Continental United States and 70,812 for use in the island. The harvest was limited to 858,000 tons (sugar content); over 667,000 tons of sugar were left in unharvested cane. According to the Governor's report the income from sugar produced in 1939 consequently fell by \$23,285,000 below that for 1938. The quotas for sugar (see UNITED STATES) were suspended early in September, and Puerto Rico had opportunity to sell an additional 150,000 tons, more or less, at improved prices. About 870,000 tons of sugar, mainly raw, were extracted from cane in the crop year 1938-39; the equivalent in refined sugar was 823,020 tons. For the year 1937-38, the corresponding tonnages were 1,077,149 and 1,018,983. See *History*.

The Federal and Insular authorities donated unused cane land for "co-operative subsistence gardening," under official supervision. Plots thus donated, none over three acres, exceeded 10,000 acres in all by the middle of 1939. The cultivation of tobacco also suffered sharp reduction. Harvested acreage fell to 18,688 (1939) from 63,000 (1938); production, to 11,688,384 lb. (1939) from the exceptionally big total of 44,069,272 lb. (1938); but the average price to the farmers rose to 19 cents a lb. (1939) from 11 cents (1938). The production of coffee in the crop year 1938-39 totaled 18,949,198 lb.; the price obtained by the grower averaged 14 cents a lb.

External Trade. Puerto Rico's trade with the outside world, by fiscal years ended with June 30, made the following totals: imports fell to \$82,724,182 (1939) from \$93,314,783 (1938); exports rose to \$86,486,570 (1939) from \$82,077,178 (1938).

Trade with the United States accounted for more than nine-tenths of imports and more than 97 per cent of exports. Imports from the United States came to \$75,684,719 for 1939 and \$84,987,994 for 1938; corresponding exports, to \$84,782,650 and \$79,808,113. Over three-fifths, by value, of exports to the United States (1939) consisted of sugar, totaling \$53,604,381; exports of tobacco and its manufactures amounted to \$7,464,394; those of textiles and their manufactures—chiefly garments of cotton, linen, or silk—to \$15,162,738. From the United States, Puerto Rico got (1939) \$14,798,894 in textile fibers and manufactures, chiefly of cotton; \$7,846,834 in grains and preparations thereof, chiefly rice; \$7,672,811 in machinery and vehicles, largely automobiles.

Finance. For the fiscal year ended with June 30, 1939, collections of revenue for the general fund of the Insular government totaled \$15,424,505. The year's disbursements amounted to \$15,844,409. Internal revenue, \$12,078,672, supplied most of the collections. Of the year's disbursements, \$5,896,030 went for education, \$1,934,567 for the work of the Department of Health, and \$1,341,133 for the Insular Police. The government's bonded indebtedness at the end of the fiscal year totaled \$26,215,000; this was less by \$1,185,000 than a year before.

Transportation. The Island was credited (1939) with having 11,252 miles of roads (see **ROADS AND STREETS**). Railroads, aggregating 922 miles, included 574 miles of lines built to serve the sugar industry. Pan American Airways maintained frequent service between San Juan and Miami, Fla. There was also service by airplane between the Island and South America and West Indian points.

Government. In accordance with the organic act of March 2, 1917 (the Jones Act), as later amended, Puerto Rico has the political status of an organized territory of the United States. Its citizens are American citizens. Governor in 1939, Blanton Winship, resigned; successor, Admiral William D. Leahy, U.S.N. retired, who took office September 11.

HISTORY

Relations with Federal Government. Governor Blanton Winship departed from Puerto Rico, June 25, amid a demonstration of popular good will reportedly without precedent in the Territory. He had held office for about 5½ years, had won credit for industry, capability, patience, pluck, and sympathetic insight, and had helped to effect many changes welcome to the Islanders. At a public dinner in his honor, June 19, at San Juan, he proposed a toast to Puerto Rico's desire to become a State of the Federal Union. It was reported that President Rafael Martínez Nadal of the Insular Senate, Speaker García Méndez of the lower legislative house, and other leaders had requested that he be kept in office. Disagreement with U.S. Secretary of the Interior Ickes over the proper treatment for the Island was reported to have led to the ending of Blanton's tenure.

Admiral W. D. Leahy, who became Governor September 11, had lately been Chief of Naval Operations. He had thus full means to know the Navy's plans for defense in West Indian and Central American waters and to help with the construction intended, to this purpose, in Puerto Rico. His inaugural speech admitted the need of a change in the sugar quota and a modification of the Federal regulation of wages and hours.

A reduced quota of exportation of sugar to the Continental United States went into effect in 1939. The Federal act regulating wages and hours applied to Puerto Rico as well as to the States of the Union. These two influences, combined with low prices for sugar, caused further grave impairment of the Islanders' livelihood. Minimum wages of 25 cents and in some cases 30 cents an hour tended to make Puerto Rican sugar too dear to produce for the United States' market. The consequence appeared in a strike won in April by some 20,000 workers in the sugar centrals, for 25 cents an hour, and the premature shutting down of a great part of the centrals early in May. The number of persons thrown out of work was put at 40,000; the apparent value of sugar cane left in the fields, at \$20,000,000.

U.S. District Judge Cooper, in San Juan, September 26, held the Federal regulation of wages and hours valid in Puerto Rico. Concurrently the provisions of the U.S. Sugar Act of 1937 cut down, below the level of 1938, the quantity of sugar that Puerto Rico was allowed to supply in 1939. The situation of the Island, with regard to its chief source of income, was bad and threatened to grow worse. It was mended, temporarily at least, by a dearth of sugar in the States, felt shortly after the start of the European War, which moved the President to suspend the quotas. There followed a resumption of sugar-grinding and exports in the autumn.

Federal Aid. The chief provision made by Congress for aid to the Puerto Ricans was the appropriation of \$7,000,000 to be dispensed by the Puerto Rican Reconstruction Administration. An Insular Reconstruction Authority was projected, to aid Puerto Rico and the Virgin Islands with about \$20,000,000. Congress provided for the expenditure of about \$30,000,000 for additional defenses in Puerto Rico, and of this sum it was expected that part would go for Insular labor of divers sorts. A contract for construction to the total of \$8,300,000 on an air base at San Juan was let, November 1.

Renewed Plea for Statehood. A joint commission created by the Insular Legislature in its regular session sent to the President and Congress, June 4, a memorial renewing the request that Puerto Rico be made a State; Resident Commissioner Santiago Iglesias introduced in the U.S. House of Representatives, June 26, a bill for granting Statehood. The significance of these moves lay less in any likelihood of early Federal action than in the evidence, afforded by such a move, of renewed disquiet in the Island, over prospects under the existing status.

Political Parties. The Nationalists, seeking entire independence, were under eclipse because of the terrorist attempt on the life of Governor Winship in 1938. The courts continued the trial of Nationalist leaders accused of complicity in that attempt or other conspiracies against the United States. Pedro Albizu Campos, at the time a prisoner in the Federal prison at Atlanta, was nevertheless re-elected, February 22, president of the Nationalist party. The President of the Puerto Rican Senate, Rafael Martínez Nadal, who was also the leader of the Union-Republican majority coalition of parties, won strong support among his followers by a speech of March 26 condemning the treatment of the Island by the United States.

Legislation. The regular session of the Legislature voted the transfer of the Isla Grande lands to the United States for a military air base; au-

thorized the Insular government's acquisition of the Porto Rico Railway, Light, and Power Company; and restored the franchise to voters who had failed to vote in previous elections. A special session, convening May 10, increased the rates of the income tax, provided for the annual budget of the Puerto Rico Housing Authority, and remitted arrears of the tax on property, up to totals of \$400.

Santiago Iglesias, Resident Commissioner, died in Washington on December 5 (see *NECROLOGY* for obituary) and his son-in-law, Senator Bolívar Pagan, was appointed by Governor Leahy to the vacant post late in December.

PULITZER, pŭl'it-sēr, RALPH. An American publisher, died in New York, June 14, 1939. He was born in St. Louis, Mo., June 11, 1879, the eldest son of Joseph Pulitzer. After graduation from Harvard University in 1900 he went to work on the New York *World* in an editorial capacity and in 1906 was made vice-president of the Press Publishing Co., which published that newspaper, and of the Pulitzer Publishing Co., publishers of the St. Louis *Post-Dispatch*. He left the former Company to become president of the *Dispatch* during 1907-11, when he rejoined the Press Publishing Co., as president, succeeding his father. He retired in 1930. From 1924 to 1929, Mr. Pulitzer edited the New York *World*.

During the World War, he served in the U.S. Naval Reserve Corps and made a tour of the French battlefields, about which he wrote *Over the Front in an Aeroplane* (1915). A big game hunter and sportsman, in 1930 he conducted a scientific expedition to Portuguese West Africa for the Carnegie Museum of Pittsburgh to collect specimens of birds, insects, and reptiles. For a brief period in 1934, he was Newspaper Code Administrator of the National Recovery Act, but resigned because of the protests of the American Newspaper Guild. Mr. Pulitzer also wrote *New York Society on Parade* (1909).

PULITZER PRIZES. A series of awards established in 1915 by the will of Joseph Pulitzer, publisher of the New York *World*, presented annually by Columbia University on recommendation of the advisory board of the Pulitzer School of Journalism, for outstanding achievements in letters and literature.

In 1939, as announced on May 1, the awards in literature were: Novel, *The Yearling*, by Marjorie Kinnan Rawlings; play, *Abe Lincoln in Illinois*, by Robert E. Sherwood; history, *A History of American Magazines*, by Frank Luther Mott; verse, *Selected Poems*, by John Gould Fletcher; biography, *Benjamin Franklin*, by Carl Van Doren.

In journalism, awards were made to Louis P. Lochner, Berlin correspondent of The Associated Press, "for distinguished service as a foreign or Washington correspondent during the year"; to R. G. Callvert of *The Portland (Ore.) Oregonian*, "for distinguished editorial writing during the year," as exemplified in his editorial "My Country 'Tis of Thee . . ." published Oct. 2, 1939; to *The Miami (Fla.) Daily News*, "for the most disinterested and meritorious public service rendered by an American newspaper during the year," in recognition of a successful campaign for the ousting of a majority of the Miami City Commissioners; to Thomas L. Stokes of the Scripps-Howard Newspaper Alliance for "a distinguished example of a reporter's work during the year," in recognition of his investigations of WPA con-

ditions in Kentucky. For distinguished examples of a cartoonist's work, Charles George Werner of *The Daily Oklahoman*, Oklahoma City, for his cartoon "Nomination for 1938," published Oct. 6, 1939.

PULP. See *PAPER AND PULP*.

PURDUE UNIVERSITY. A State technological institution in Lafayette, Ind., founded in 1869. The enrollment for the autumn of 1939 was 7121; registration in the 1939 summer session was 1651. There were 645 members on the faculty. The endowment amounted to \$340,000, and the income for the year was \$2,916,545. The library contained 147,357 volumes. During the year a flight training course was introduced, a Division of Education and Applied Psychology was organized, and Metallurgy added to the curriculum of the School of Chemical Engineering. President, Edward C. Elliott, Ph.D.

PWA. Public Works Administration (q.v.).

QATAR. See *ARABIA*.

QUAKERS. See *FRIENDS*.

QUARANTINE. See *PUBLIC HEALTH SERVICE*.

QUEBEC, kwê-běk'. An eastern province of Canada. Area, 594,534 square miles; population (1939 estimate), 3,210,000 compared with 2,874,255 (1931 census). Quebec had 13,281 Indians in 1934. During 1938 there were 78,145 births (24.6 per 1000); 32,609 deaths (10.3 per 1000); 25,044 marriages (7.9 per 1000). Chief cities (with 1931 population figures except where otherwise indicated): Quebec, the capital (130,594); Montreal (818,577); Verdun (64,144 in October, 1939); Three Rivers (35,450); Hull (29,433); Sherbrooke (28,933); Outremont (28,641); Westmount (24,235). In 1937 there were 704,660 students enrolled in schools of all kinds, including 36,476 students in the colleges and universities. The province has four universities—McGill, Bishop's, Laval, and Montreal.

Production. The gross agricultural revenue for 1938 was \$188,580,000 of which field crops represented \$81,023,000. Other important items were: Dairy products, \$55,702,000; farm animals, \$27,894,000; poultry products, \$8,829,000; maple products, \$2,910,000. Livestock (1939): 297,000 horses; 1,816,700 cattle, including milch cows; 646,700 sheep; 744,000 swine. Fur production for the year ended June 30, 1937, totaled 286,278 pelts valued at \$2,516,012. Output of the forests during 1937 equaled 1,050,087 M cu. ft. valued at \$58,577,529. In 1938 the fisheries catch was valued at \$1,954,000.

Mineral production (1938) was valued at \$68,965,594 of which gold (881,263 fine oz.) accounted for \$30,998,426; silver (1,189,495 fine oz.), \$517,157; asbestos (289,793 tons), \$12,890,195; copper (112,645,797 lb.), \$11,233,039; zinc (5,315,852 lb.), \$163,356; selenium (217,952 lb.), \$378,147. In 1937, from the 8518 manufacturing plants, with a total of 219,033 employees, the net value of products was \$445,885,666.

Government. For the year ended June 30, 1938, revenue amounted to \$53,344,037; expenditure, \$50,335,750. Ordinary revenue for the year ending June 30, 1939, was \$60,836,000; ordinary expenditure, \$55,948,091; net funded public debt totaled \$252,489,090. The government is vested in a lieutenant-governor who is advised by a responsible ministry, a legislative council of 24 members (appointed for life by the lieutenant-governor), and a legislative assembly of 90 members elected for a term of five years by popular

vote of the people (women do not vote nor are they eligible for legislative office). Quebec is represented in the Canadian parliament at Ottawa by 24 members in the Senate and 65 members in the House of Commons. Lieutenant-Governor, Maj. Gen. Sir Eugene Fiset (inaugurated Dec. 30, 1939); Premier, Adelard Godbout (Liberal). The Union Nationale party of Maurice Duplessis, who had been Premier since 1936, was voted out of power on Oct. 25, 1939, and succeeded by a Liberal government under Premier Adelard Godbout. See CANADA under History.

QUEENS COLLEGE. A college (formerly known as Queens-Chicora College) for women in Charlotte, N. C., founded in 1857; nonsectarian in purpose but under the direction of the Presbyterian Church. The enrollment for the autumn term of 1939 was 415. There were 35 members of the faculty. The income for the year was: From endowment \$12,000; from benevolences \$10,000; from student fees \$68,000. The library contained approximately 14,000 volumes. President, Hunter B. Blakely, D.D., Th.D., inducted in July, 1939.

QUEENSLAND. An Australian State. Area, 670,500 square miles; population, exclusive of full-blood aboriginals, 1,008,461 (Mar. 31, 1939, estimate), compared with 947,534 (1933 census). During 1938 there were 18,992 births (18.98 per 1000); 9201 deaths (9.19 per 1000); and 8853 marriages (8.85 per 1000). The principal cities are Brisbane, the capital, with 325,890 inhabitants (including suburbs) on Dec. 31, 1938; Rockhampton, 30,000 (1936); Townsville, 28,535 (1936); Toowoomba, 27,968 (1936); Ipswich, 22,885 (1936). During 1936 the 1690 State schools had an enrollment of 146,984 pupils; and Queensland University had 1145 students.

Production. Sugar cane, wheat, maize, hay, potatoes, cotton, grapes, tobacco, pineapples, and oranges are the main agricultural products. In the 1938-39 season, wheat production from 400,000 acres totaled 8,448,000 bu. Sugar (1936-37) aggregated 744,676 tons. The chief dairy products for 1937-38 were butter, 118,244,260 lb.; cheese, 11,963,445 lb.; bacon and ham, 19,607,223 lb. Wool (greasy) produced during 1938 totaled 174,751,280 lb. Livestock (Dec. 31, 1938): 22,500,000 sheep; 6,000,000 cattle; 445,000 horses; 320,000 swine.

The estimated value of mineral production for 1938 was £A3,966,119 of which gold accounted for £A1,334,788; coal, £A958,884; silver and lead, £A926,614; copper, £A203,967; tin, £A141,547. In 1938, from the 3063 factories, with 52,119 employees, the net value of production was £A18,602,958 (Australian £ averaged \$3.8955 in 1938).

Government. For the year ended June 30, 1938, revenue totaled £A17,339,731; expenditure, £A17,568,000; public debt (1939), £A127,503,000. Executive power is vested in a governor, assisted by an executive council of ministers who are also members of the legislative assembly. Parliament consists of a legislative assembly of 62 members elected by universal suffrage for three years. The legislative assembly elected on Apr. 2, 1938, was composed of 43 Laborites and 19 members of Independent Labor, United Australia and Country parties. Governor, Col. Sir Leslie Orme Wilson (appointed June, 1932; reappointed June, 1937); Premier, William Forgan Smith. See AUSTRALIA.

QUICKSILVER. Until the Spanish Civil war dislocated the quicksilver industry in that country, Spain was the principal world producer of the metal. Thus in 1936 Spain produced 43,424

flasks (76 lb.) against 42,732 flasks for Italy. But in 1937 Italy took the lead, producing 66,963 flasks, against only 28,357 flasks for Spain, and continued to hold first position in 1938. The United States ranks third in quicksilver production, the normal output ranging from 15,000 to 18,000 flasks per annum. California is the largest producer, followed by Oregon and Texas. Fifteen mines in these three States produce about 90 per cent of the domestic output.

The principal uses for quicksilver are in the manufacture of detonators for high explosives; gold recovery by amalgamation; manufacture of chemicals, dental amalgam, and barometers. No satisfactory substitute is known for the principal uses of the metal.

On account of the importance of quicksilver as a "strategic" metal in the economy of the United States, domestic resources have been carefully surveyed. Normal annual consumption runs from 25,000 to 35,000 flasks, about half of which has been imported. In 1939 the Bureau of Mines began publication of statistics showing the domestic position of the metal from month to month. The following summary is given in flasks of 76 lb.

SUMMARY OF STATISTICS, 1939

| | Sept. | Oct. |
|---|--------|--------|
| Consumption | 2,600 | 2,800 |
| Production, domestic | 1,500 | 1,500 |
| Imports | 189 | 200 |
| Exports | 128 | 364 |
| Consumers' stocks* | 9,200 | 8,500 |
| Stocks in dealers' and importers' hands | 3,000 | 2,400 |
| Stocks held by producers ^b | 318 | 178 |
| Total stocks | 12,518 | 11,078 |

* Stocks at consumer's plant, in bonded warehouses, and owned by consumers, and in transit. ^b Stocks held by companies reporting to the Bureau (34 mines)

Following its usual war pattern the price of quicksilver in the United States rose sharply toward the end of 1939, although the rise was not justified with respect to available supplies. Opening the year at \$77 per flask of 76 lb., the price rose to \$90 in April, receded slightly during the summer and rose abruptly in September to \$140, closing the year at about that level.

RADCLIFFE COLLEGE. A nonsectarian college for women in Cambridge, Mass., founded in 1879. The enrollment for the autumn of 1939 was 1010. Instruction was given by approximately 400 teachers from Harvard University. The productive funds amounted to \$5,694,394 and the income, including tuition, for college purposes, was \$589,996. The library contained 90,000 volumes, exclusive of pamphlets. President, Ada Louise Comstock, A.M., Litt.D., LL.D., L.H.D.

RADIO. Again in 1939, events made the world radio-conscious. Through this medium of instantaneous communication, peoples in all parts of the world learned of Europe's tragic events while they were happening—from the invasion of Poland to the undramatic end of the *Graf Spee* off Montevideo, Uruguay.

In standard broadcast receivers, 1939 closed with indications of renewed efforts to improve circuits rather than cabinets. An experimental

model of a midget set is reported as being but a third the size of today's smallest. Its case was formed by placing the assembled set in a mold and then pouring the case in liquid form into the mold in which the case then solidified. Attention has been given to very small tubes and batteries for 1940 "pocket" sets. Built-in antennae were applied to more standard sets, eliminating aerial and ground connections; wide use of new permanent-magnet materials for speakers eliminated the usual field coils and enabled the use of lower voltages, a special advantage for small sets. Portable sets enjoyed a new spurt of public acceptance—to the discomfiture of those who like to get away from a loudspeaker once in awhile. Improvements made to mobile equipment for policemen, firemen, and public utility companies include improved frequency stability, a remote-control unit for the operation of a transmitter several miles away, and adaptation of a mobile transmitter for use as a public-address system for traffic direction or emergencies where commands must be given to firemen at work, to crowds, etc.

An order of the FCC effective Apr. 13, 1939, covering allocation of frequencies ranging from 30,000 to 300,000 kilocycles vitally affected such important services as television, facsimile, relay, and experimental broadcasts. The U.S. Army is reported as having ordered two completely radio-controlled planes for anti-aircraft target practice. A miniature radio beacon mounted on a buoy in Boston Harbor helps ships to find their way in thick weather. KDKA, the world's pioneer broadcasting station, was moved from Saxonburg to Allison Park, Pa., nearly 20 miles closer to Pittsburgh, where new buildings and the latest in equipment improved its service. The Morris Liebmann Memorial Prize for 1939 was awarded by the Institute of Radio Engineers to H. T. Friis of the Bell Telephone Laboratories, New York, in recognition of "his investigations in radio transmission, including the development of methods of measuring signals and noise, and the creation of a receiving system for mitigating selective fading and noise interference." (See ADVERTISING; BROADCASTING STATIONS, BUSINESS REVIEW, RADIO PROGRAMS, TELEPHONY, and TELEVISION.)

G. ROSS HENNINGER.

Equally important, from a technological standpoint, as the introduction of television last year was the further development of the radically different system of radio transmission known as "frequency modulation" (see 1938 YEAR BOOK). This new means of sending sound and electrical impulses through the air, the indirect result of a search for a static-eliminating circuit in 1915, promises to revolutionize every department of the broadcasting industry. By contrast, its potentialities dwarf even the future possibilities of television.

Outstanding among its advantages over the present amplitude modulation system are freedom from fading and static, both natural and man-made; absolute fidelity of reproduction and greater efficiency with less power. Added to these are numerous engineering practicabilities hitherto not possible. In an everyday application of one of these it was demonstrated that a radio-linked chain of low-power, low cost "fm" senders, relaying full range sound against a dead silent background, effectively replaced expensive telephone-wire connections between outlets. In another it was shown that two separated stations

could operate simultaneously on the same wavelength without interference, even at the midway point where both waves met. In the realm of fantasy, where economics can be disregarded, it would be possible to set up thousands of "fm" stations as against the 806 American broadcasting stations now forced to share time and facilities on the country's 109 wave-lengths.

Operating against the immediate widespread use of "fm," however, are the facts that it would cause the obsolescence of more than 46,000,000 receiving sets now in use and bring about the replacement of \$70,000,000 of station equipment. Nevertheless there are already more than a dozen "fm" stations in operation or under construction and at least five manufacturers are prepared to make the special receivers required for the static-free programs.

In the state and municipal realm, legislative action outlawed man-made static in several sections of the country, as the first move in a national campaign to silence radio noises. Three states and more than a dozen cities passed ordinances prohibiting the use of any motor or electrical device capable of generating interference. In general, however, the laws lacked strong enabling clauses to insure their enforcement. (See also FEDERAL COMMUNICATIONS COMMISSION.)

The radio manufacturing industry had its greatest boom in 1939 with a production of more than nine million models, an all-time record high. Factory and retail sales records showed an increase of 25 to 30 per cent over 1938, when sales exceeded seven million sets. Unit values were up, and console sales in some cases were more than double last year. Dealers' reports indicated that only one half of the new models replaced existing sets which would mean an increase of nearly five million in the potential radio audience. On this basis, the year closed with an estimated forty-six million radios in America.

TOM A. BROOKS.

RADIOACTIVITY. See PHYSICS.

RADIO IN EDUCATION. THE NATIONAL ADVISORY COUNCIL ON. An organization established in 1930 to promote the more effective utilization of the art of broadcasting in the general field of American education. It was incorporated in December, 1931, and membership, which is open to those interested in the development of educational broadcasting, is active and associate. Active membership is limited, but associate is unlimited. Funds for the basic administration and maintenance of the organization, for a minimum period of three years, were provided by John D. Rockefeller, Jr., and by the Carnegie Corporation of New York. The Council is now maintained by a grant from the Carnegie Corporation.

Pending broadcasting developments in Washington and a clearing of the European situation, the Council has ceased active work it formerly conducted and is devoting its resources to research in connection with various agencies. Bulletins and publications relating to the Council's work and kindred subjects are issued at intervals.

The officers in 1939 were: President, Robert A. Millikan; vice-presidents, Livingston Farrand, Robert M. Hutchins, Meta Glass, Walter Dill Scott, Robert G. Sproul; treasurer, William J. Donovan; secretary, Levering Tyson. Headquarters are at 60 East 42d St., New York City.

RADIO PROGRAMS. Never since the advent of public broadcasting in 1920 did the micro-

phone so feverishly leap back and forth across the sea as in 1939. It was the long wavelengths of wireless that swooped across the Atlantic with the war story of 1914-18. Out of it all came the talkative radiophone heralded as an instrument for the good of all mankind. Here was a device to reach into the home, not with dots and dashes, but in languages the masses could understand; nations could speak peace to nations.

But in 1939 short waves were skipping across the hemispheres, many of them speaking hate. Europe was at war again. America eavesdropped throughout the spring and summer on the distant rumble of Mars; it heard the thunderous crack of the "Blitzkrieg" in the autumn. Declarations of war were in the air; defiance sputtered, challenges were hurled and accepted. Censors put clamps on the microphones overseas. American broadcasters took steps to preserve their neutrality and to avoid being embroiled in the distribution of foreign propaganda.

With television and the regular routine of broadcasting "blackened out" in Europe, Uncle Sam's 800 or more broadcasters sought to get back to normal programming in the "public interest, convenience and necessity." The talk of war was left very much in the hands of the newscasters and news analysts, prominent among them Raymond Gram Swing, H. V. Kaltenborn, and Elmer Davis.

Domestically, radio in '39 is remembered for its quizzes. These public participation programs drew a crowd, because they are interesting and informative, coupled with the fact that while the listener has a chance to see how much he knows too, also he may win a prize. American listeners like to win something. And so, for broadcasts, prizes are good bait. The '39 headliner among the question marks was "Information Please" with its challenge to America to stump the erudite, four-man board of experts—Clifton Fadiman, the witty interlocutor, and John Kieran, Franklin P. Adams, Oscar Levant, and a guest.

Always far out in front in listener survey polls of the year was Edgar Bergen, the ventriloquist, and his impish pal Charlie McCarthy. With banter freshly and cleverly written, delivered with a human touch that rings with an appealing naturalness wherever it falls to earth from coast to coast, this man and dummy starred. For every month in the year, as in 1938, again the blockhead Charlie set the pace in broadcasting.

With the insatiable radio consuming jokes faster than they can be written it is no wonder that 1939 sparked with fewer comedians than a few years back. Theirs is a most difficult task, since a pun does not withstand the onslaught of repetition as does a song. Therefore, to stay on the air from year to year and still draw laughs and high ratings in popularity polls is something to merit a bouquet. So the flowers were tossed to the ever-sharp, spontaneous Fred Allen, to Jack Benny, Bob Hope, Bob Burns, Walter O'Keefe, and to Lou Holtz for his funny storytelling on the air.

When the curtain of 1939 dropped on the "theater of the air" it left behind the memories of a number of good shows. The broadcasters have always looked upon drama as the one field in which radio might create an art form of its own, built upon sound with the scenery painted by the listener's imagination. To Orson Welles, the unforgettable Martian of '38, goes the acco-

lade for individualism in dramatic production, acting, and showmanship in '39. And among the others who may step to the footlights for a curtain call are Cecil B. DeMille for his consistently good "Theatre of the Air," abetted by a script usually ideally adapted for broadcasting and acted by Hollywood stars; to the Screen Guild for its performances; to Arch Oboler for his original radio plays; to the Columbia Workshop and to Norman Corwin for experimental broadcasts in drama; to the planners of "the Great Plays" adapted from the classics.

Dr. Walter Damrosch continued his excellent work as a teacher of music appreciation. Now he counts his audience in the millions; his is one of the few programs for which schools are willing to interrupt their routine to tune-in regularly. The "American School of the Air" expanded and brightened the invisible teachers' work through a studied use of music, drama, and storytelling that go to sugarcoat education and make it entertaining as well as informative. To further their missionary work in education the broadcasters increased their efforts to assist in the supply and distribution of follow-up material. The winged and ever-fleeting broadcast lesson is but to whet the appetite for those who listen; it is supplementary to teaching and reading. It is no substitute for school or library, teacher or book.

Classed as education are the numerous forums, roundtables, councils and all forms of free and open discussion on the air, prominent among them the "America's Town Meeting of the Air," the University of Chicago Roundtable, and "the People's Platform." Freshness of topic is their spice coupled with timeliness and authoritative or representative voices. The war gave the forums much to feed upon; along with such fat on the fire as "neutrality," "Hitlerism," "totalitarianism," "pocket battleships," and "propaganda" there was much to chat about at home: "third term," "social security," "balanced budget," "national defense," "free speech," "free press," "democracy," etc. Tongues had their innings in 1939.

With the flow of words so torrential, the broadcasters through the National Association of Broadcasters adopted a new code for self-regulation of the industry, based on freedom of speech, impartiality, and fairness. Important among the new rules is the provision banning the selling of time on sponsored programs for broadcasting controversial subjects. Time for such topics would be free, and free to both sides of the question so that no one with the largest fund might buy up more time and watts than the opposition which might have a smaller treasury. Equality is the keynote.

Musically and classically, the NBC Symphony Orchestra led by Arturo Toscanini and guest conductors; the New York Philharmonic-Symphony directed by John Barbirolli; the symphonic concerts under Alfred Wallenstein's baton, that of Howard Barlow and the Sunday evening concerts microphoned in Detroit, also the Metropolitan Opera Saturday matinees, topped the list.

In the popular or semi-popular music classification the honors went to Andre Kostelanetz for his fine band and novel arrangements; to Benny Goodman for his entrancement of the jitterbugs. Deems Taylor leads as music narrator; the "Beer Barrel Polka" and "Deep Purple" will probably be remembered as the year's hit songs.

Radio has its vaudeville shows. After a ten-year run the "Vallee Varieties" staged its finale

in '39. As 1940 opened, the badges of merit in variety for 1939 were worn by Bing Crosby, Kate Smith, and by Major Bowes for his amateur hour. In what radio programmers catalogue as "human interest" are such shows as "Vox Pop" and "We, the People." They were headliners under that heading in 1939.

Telecasting on a regular program basis got under way when the Fair opened. Since then marked progress has been observed, both scientifically and artistically, but economically 1939 left television still an enigma. Prize fights, wrestling, football, and baseball were telecast with remarkable clarity, almost binocular-like in results. There were probably about 1000 tele-radios in the New York area at the year end. Lower price receivers, more and better programs, and wider distribution of the pictures are the tonics needed. And while on the subject of telepictures it is worthy of mention that a number of experimental ultra-short wave facsimile stations printed miniature newspapers.

Industrially, radio reached a new peak with 9,000,000 new sets produced, including about 600,000 phonograph combinations; the record business boomed. Gross income for the broadcasting industry was approximately \$170,000,000. See ADVERTISING; BROADCASTING STATIONS; TELEVISION.

ORRIN E. DUNLAP, JR.

RAILROAD RETIREMENT BOARD.

See RAILWAYS.

RAILWAYS. For the men actually in charge of the operation and maintenance of the railways of the United States 1939 was a year of bewilderment. It had been upsetting when they had been told to put quality of service ahead of economy, but that had been a private ambition of many of them. The loss of their power to discharge men, arbitrarily, had been like the loss of a leg, disabling but understandable; but when they were blamed for improving service while failing to show interest earned they felt that they were in a nightmare world.

In the years since 1932 there have been huge government loans to railway companies and labor in general has benefited, but it was not until 1939 that railway employees began to receive direct aid from the Federal government.

Railroad Retirement Board. On July 1, 1939, contributions and benefits under the Railroad Unemployment Insurance Act went into effect. This is one of the three acts that are administered by the Railroad Retirement Board. The other two acts deal with a retirement system under which employees who leave railroad service either because of age or disability receive annuities. The board in 1939 consisted of Murray W. Latimer (chairman), M. R. Reed, and Lee M. Eddy.

In general the acts cover Class I, II, and III railroads, express companies, the Pullman Co., switching companies, electric railroads, car loan companies, railroad associations, and railroad labor organizations. They do not cover motor carriers. The latest comprehensive figures available are the Board's estimates for the first quarter of 1938. They show that the acts cover a total of 1,399,230 employees, of which 1,210,740 are railway employees.

Funds to make retirement annuity payments are provided by taxes on both employers and workers. These taxes were thus summarized by Chairman Latimer:

Employers must pay an excise tax levied upon pay rolls and employees must pay an income tax based upon the wages received. The tax begins at 2½ per cent in 1937 for both employers and employees and continues at that rate for three years. For the next three years, beginning with 1940 the tax is to be increased to 3 per cent. It gradually increases until by 1949 both workers and employers will pay 3½ per cent.

The amount of the annuity payable under the retirement system is arrived at by a calculation that has to be complex enough to cover widely varying conditions but a clear conception of it may be had from some of the examples that Mr. Latimer gives.

A man whose average wage has been \$50 a month and who retires after five years' service receives \$5 a month. A man with an average monthly wage of \$50 who retires after 30 years' service receives \$40 a month.

A man whose average wage has been \$100 a month and who retires after five years' service will receive \$8.75 a month while the man with the same average wage who retires after 30 years will receive \$52.50 a month.

A man with \$300 a month average wage retiring after five years' service receives \$20 a month or after 30 years' service receives \$120 a month.

Minimum annuity payments of \$40 a month are specified for workers with 20 years of service who averaged \$50 or more a month and who are employees at the age of 65.

Funds are provided for unemployment insurance by "contributions" collected by the board from employers at the rate of 3 per cent of wages payable to any employee.

Benefits are payable to employees for each day of unemployment in excess of seven days during any period of 15 consecutive days.

The amount payable is based on wages received during the preceding calendar year if the "benefit" year begins in the second half of the year and on the next to the last calendar year if the "benefit" year begins in the first half of the year.

If the total compensation during the base year has been \$150 the daily payment will be \$1.75 with a total maximum payment during the benefit year of \$140.

If the total compensation during the base year has been \$1300 or over the daily benefit payment will be \$3 and the maximum amount paid during the benefit year will be \$240.

In the July 6, 1939, weekly review of the Retirement Board the total appropriations and interest on investments to date was shown as \$266,427,123 and total payments to June 30, 1939, as \$194,440,151, leaving a balance of \$71,986,972 of which \$67,200,000 was invested in 3 per cent special Treasury notes.

Federal tax collections from carriers and their employees from the beginnings of operations of the Railroad Retirement Board to the end of

| | 1939 millions | 1938 millions |
|-----------------------------|------------------|------------------|
| Revenues | | |
| Freight revenues | \$3,260 | \$2,858 |
| Passenger revenue | 422 | 406 |
| Mail revenue | 99 | 96 |
| Express revenue | 54 | 48 |
| All other | 175 | 157 |
| Total | \$4,010 | \$3,565 |
| Expenses | | |
| Maintenance of way expenses | \$ 473 | \$ 420 |
| Maintenance of equipment | 764 | 677 |
| Traffic expenses | 106 | 103 |
| Transportation | 1,421 | 1,361 |
| General and other | 161 | 161 |
| Total | \$2,925 | \$2,722 |

October, 1939, was \$289,352,190. Total payments from the beginning of operations through October, 1939, amounted to \$152,623,000 on employee annuities, \$72,604,000 on pensions, \$1,474,000 on survivor annuities, \$1,585,000 on death benefit annuities, and \$1,972,000 on lump sum death benefits. A total of \$230,258,000.

Financial Results. The total operating revenues of Class 1 railways, those earning a million dollars a year or over, were \$4,010,000,000 in 1939 as compared with \$3,565,000,000 in 1938. Total operating expenses were \$2,925,000,000. Taxes were \$365,000,000 in 1939 and \$341,000,000 in 1938. Net operating income was \$590,000,000; \$373,000,000 in 1938. After fixed charges there was left for the stock in 1939 a profit of \$85,000,000 as against a deficit of \$123,000,000 in 1938. The break up of revenues and expenses is shown in the table on page 662.

Dividend Changes. All of the few dividend changes that took place in the year were upwards.

The Pennsylvania Railroad increased its dividend from 50 cents to one dollar per \$50 share.

The Louisville and Nashville paid \$5 on its common stock as compared with \$4 in 1938.

The Virginia Railway in 1939 declared a special dividend of \$4 on its common stock.

The Norfolk and Western, of which the Pennsylvania Railroad is the largest stockholder, declared, in November, an extra dividend of \$5 on its common stock which was in addition to the regular dividends of \$2.50 paid quarterly on that stock.

The Chesapeake and Ohio increased the rate paid on the common from 8 per cent to 10 per cent and in addition paid an extra dividend on the common of 50 cents. The par value of the common is \$25.

The Atlantic Coast Line resumed the payment of its preferred dividend which had not been paid for a year.

The Cincinnati, New Orleans, and Texas Pacific in effect raised its dividend rate on the common stock from \$10 to \$20. The method was to split up \$100 shares paying \$10 each in to 20 shares paying \$4 each.

The Pittsburgh and Lake Erie, one of the New York Central Lines, paid \$3.50 in 1939 as compared with \$1.75 in 1938.

The Wheeling and Lake Erie declared a \$4 dividend on its common in 1939 comparing with nothing declared in 1938.

The Alabama Great Southern paid \$8 each on its preferred and ordinary stocks in 1939, as compared with \$6 paid on each in 1938.

Receiverships. There were three railways, with a total mileage of 733, total funded debt of \$50,392,000, and total stock of \$28,466,800, that went into receivership in 1939. This compares with nine railways with 6194 miles, having a total funded debt of \$367,840,469 and stock of \$293,157,200 that went into receivership in 1938. Only one of the three that went into receivership in 1939 was of any importance. That was the Central of New Jersey with a mileage of 710, funded debt of \$49,531,000 and \$27,436,800 stock. The receivership followed a dispute over taxes levied by the State of New Jersey.

Traffic. Freight traffic measured in ton miles increased in 1939 by 15 per cent as compared with 1938, and passenger traffic measured in passenger miles increased 6 per cent. The total ton mileage carried by the railways in 1939 was 332,500,000,000, as against 290,084,000,000 in the previous year, and total passenger mileage was 22,900,000,000 as against 21,629,000,000.

Employees. The average number of employees on railways in 1939 was 989,000, comparing with 939,505 in 1938. The average pay was \$1878 for the year 1939 and \$1859 in 1938.

Equipment Owned. On Oct. 31, 1939 the total number of freight cars owned was 1,651,160 and on the same day in the previous year was 1,698,646. The total number of locomotives owned on Oct. 31, 1939, was 42,197, and exactly a year earlier was 43,402. There were 20,085 freight cars installed during the first 11 months of 1939 and there were 94 steam locomotives and 216 electric and Diesel locomotives installed during those 11 months.

Equipment Ordered. In 1939 there were 375 locomotives ordered for use in the United States, against 228 ordered in 1938. There were 54,439 freight cars ordered for use in the United States in 1939, as against 16,539 ordered in 1938. There were 325 passenger train cars ordered for use in the United States in 1939, compared with 269 ordered in 1938.

New Construction and Lines Abandoned. Fifty-eight miles of new railway were completed in the United States in 1939 comparing with 38 completed in 1938 and with 13,081 in 1887, the year in which the largest number of miles of railway was built in the history of the United States. But during 1939, 1783 miles of railway were abandoned, comparing with 1897 abandoned in 1938 and with 1995 abandoned in 1934, the peak year to date. Of the new construction the longest line was 33.14 miles on the Union Pacific from Nevens to Lewellen, Neb. Of the railway abandoned the longest single line was from Guthrie to McCurtain, Okla., 176 miles.

Passenger Trains and Service. Passenger service has never been as directly profitable to railway companies per dollar of outlay as has freight service, but there has always been an indirect gain—advertising—that induced railway executives to sanction outlays where the rate of profit would be small. Of late years there has been another incentive for the improvement of passenger service. J. L. Reven, president of the Illinois Central, in an address on Oct. 12, 1939, stated in words what has been at the back of many railway executives' minds, when he said that improvement of passenger service was insurance against government ownership of railways. This gives an understandable explanation of expenditures made during a period when net revenue often failed to meet fixed charges.

Improvement of passenger service has taken the form of putting into operation fast, lightweight trains, popularly called "streamline" trains. Of the 38 streamline trains listed as being in service in October, 1939, by *Railway Age* 10 were put in operation in 1939. Of these two went into service between Chicago and St. Paul, two went into service between Chicago and San Francisco, two between Chicago and Denver, one between New York and Chicago, one between New York and Florida, one in service between St. Louis and Kansas City, and one between Jackson, Miss. and New Orleans.

Below is a comparison of one of the earliest streamline trains put in operation, one put in

| | Burlington Pioneer | Burlington General Pershing | Union Pacific City of San Francisco |
|-----------------------------|-----------------------|--------------------------------|--|
| Weight of train | 302,800 lb. | 609,820 lb. | 2,545,496 lb. |
| Consists | 4 cars | 4 cars | 17 cars |
| Between | Omaha-Kansas City | St. Louis-Kansas City | Chicago-San Francisco |
| Date put in operation | 1934 | 1939 | 1936 |
| Daily mileage | 500 | 978 | 22,600 per month |
| Average overall speed | 47 m.p.h. | 55.8 m.p.h. | 56.8 m.p.h. |
| On time percentage | 93.8 | 95.2 | 95.3 |
| Average passenger per train | 43 | | 132 |
| Revenue per train mile | \$1.09 | | \$3.72 |

operation by the same railway company in 1939 and one of the longest distance streamline trains. This third one was put in service in 1936.

Reduction in train weight per passenger, while

an insurance against bankruptcy rather than an insurance against government ownership, has been achieved. Thus compare the Chicago, Burlington, and Quincy's *General Pershing*; a similar train of four coaches with a steam locomotive would weigh approximately 714,000 lb., and one of four Pullman cars and a steam locomotive would weigh about 960,000 lb., while the *Pershing* weighs but 610,000 lb.

The overall speed as used in the table means the figure arrived at by dividing the distance by the time consumed from the moment of departure to the moment of arriving at destination. No allowance is made for time out for stops. This method of reckoning train speed is now being used in England. An impression of what is being done in England may be had from two examples: From London to Leicester is 91.1 miles and the average speed in 1914 was 53.6 miles per hour; in 1939 it was 58.3 m.p.h. The distance from London to Liverpool is 193.7 miles and the average speed in 1914 was 48.2 m.p.h.; in 1939 it was 54.1 m.p.h.

Collection and Delivery Service. A Collection and Delivery Service is being tried out by the South Australian Government Railways. In this service they are using 16 motor trucks and 10 Morris delivery vans in service every day except Sunday from 7:30 a.m. to 6 p.m., and making an average monthly mileage of 6000 miles. Each truck has a capacity of about 1 ton and hauls a 4 ton trailer. They collect and deliver all classes of freight for which they have capacity to any addresses in Adelaide and its suburbs. The vans deliver and collect parcels and baggage. The public are said to find the service satisfactory and the railway finds it useful for advertising purposes. Being a government operation cost figures are not available.

The Argentine Government gave the railways of that country permission, in 1939, to supplement rail service with motor or horse drawn collection and delivery of baggage and freight to or from points "within the zone of influence of the company concerned." It is provided that a railway company may not establish such service to points served by or "within the zone of influence" of another railway company.

England. Co-ordination of railway and road transport in England was covered in a report made in April, 1939, by the Transport Advisory Council. The setting up of a consultative committee to be called the Road and Rail Central Conference (having the power of appointing regional committees) is being recommended. Railway companies, shippers, and road transport agencies may present to this conference rules covering rates and services and the findings of the conference would be legally enforceable, but it is specifically pointed out that the success of co-ordination will depend on the spirit with which it is undertaken, and to show this the Council recommends relaxation of statutory rate control. It is implied that legal enforcement is only a means of obtaining uniformity. Throughout the discussions of the Council and throughout its findings the reliance on getting together as a means of protecting present investment while securing the benefits of new forms of transportation is noteworthy.

The *Coronation Scot*, a train built for the London, Midland, and Scottish Railway of England, was sent first on a tour of the United States and then put on exhibit at the 1939 World's Fair at New York as an example of the best of English

passenger trains. It consists of a locomotive and eight cars. The locomotive weighs 164½ tons (English) and the eight cars 262½ tons. One of the cars in the exhibition train was a sleeping car, though this car will not be in the train on its regular run between London and Glasgow. Seating accommodation in the exhibition train was 173, but will be more, it is said, in regular service. High tensile steel was largely used to reduce the weight. As a departure from English practice heretofore the wheel base of the cars is articulated and there are three trucks instead of four per pair of coaches. Two luxury features, new to English railway trains, are added—a cocktail lounge and a club saloon car. The kitchen-car range burns solid smokeless fuel, with a boiler of black enamel and chromium plate. The locomotive is streamlined and of the 4-6-2 type. The overall length of the locomotive with tender is 79 ft. 9¾ in.

Two luxury, air-conditioned trains of steel cars were being built in Birmingham, Eng., in 1939 for the South African Railways to run between Cape Town and Johannesburg.

Italy. The Italian railways have succeeded in greatly reducing the time consumed between terminals in recent years. For instance, the run between Rome and Naples which took 4 hours in 1914 was made in 1 hour and 59 minutes in 1939. The railway distance in 1914 was 154¾ miles and in 1939 was 130½ miles. The fastest schedule run in February, 1939, was that between Milan and Bologna, 136.1 miles, where the overall rate was 72.3 m.p.h. The train making this fast run is for first class passengers only. The run between Florence and Bologna passing through the 11½-mile Apennine tunnel has an average speed of 69.4 m.p.h. The *Railway Gazette* of London says that for a run of 500 miles or over the Italian railway train between Naples and Milan, 523 miles, making an average speed of 65.4 m.p.h. is the fastest train in Europe.

Germany. The German railways in connection with the Italian railways have put on a train that makes the run from Berlin to Milan, a distance of 720 miles, in 15 hours, an overall speed of 48 m.p.h.

From such news dispatches as have come past the censors it is likely that accidents on German railways during 1939 have been many and serious. (See CHRONOLOGY.) Since German and Polish railways are standard gauge and Russian railways broad gauge it has been impossible, news dispatches say, to transport to Germany any large part of the supplies that Russia can spare.

France. The French National Railways during 1939 made various speed tests, the most noteworthy of which was a short run of an electric locomotive hauling four cars and making a speed of 112 m.p.h.; but this was not in regular service and is rather an indication of what may be attempted in the future than an example of what is being done now. The non-stop run from Paris to St. Pierre-des-Corps, 145.9 miles in 141 minutes, is included in the regular run to Bordeaux, a total of 362.4 miles in an overall speed of 64.1 m.p.h. This schedule is now in force, but in general the trend in France in 1939 was to discontinue the very fast trains, as a means of retrenchment. For example the train making the run from Paris to Lyons in 5 hours and 5 minutes was taken off and the running time is now 6 hours and 38 minutes.

Belgium. The Belgian National Railways put

in service in July a train hauled by a steam locomotive (4-4-2 type) between Brussels and Ostend, 70.8 miles, which makes the run in one hour.

Russia. Russian railway development figures are not up to date, but it is possible to give an idea of the progress that has been made in the last five years. The Far Eastern section of the Trans-Siberian Railway has been double-tracked and various cut-offs have been built. This was considered a military measure rather than an economic one. During five years 200 miles of new route have been opened within Russia, though 6800 miles were planned. There were 3100 miles double-tracked, comparing with 6000 miles planned. Six hundred and fifty miles were converted to electric traction as against 3000 miles planned.

During these five years freight traffic over the main trunk lines has increased 500 per cent; the number of freight cars has increased 160 per cent during this period, and 4200 locomotives were built. The standard freight locomotive is the 2-10-2 type. The ratio of freight locomotives built to passenger locomotives has been 5 to 1. The average locomotive mileage per day has increased from 260 km. to 270 km. (161½ m. to 167¼ m.).

Denmark. In Denmark an experiment is being made with two moving-picture, talkie, cars. The seating capacity is 54 and the former lavatory is being used as an operator's room, with a second room built in for the speaker. The cars are being used in connection with excursion trains and also to give instruction to employees.

Diesel-Electric Locomotives. As of Apr. 1, 1939, there were 92 Diesel locomotives on order for 21 railway companies in the United States and experiments were being made in many foreign countries in the use of Diesels for motive power. L. K. Sillcox, Vice President of the New York Air Brake Co., presented a paper at Yale on March 8 comparing the cost and performance of steam and Diesel-Electrics in which he concluded: "It seems unreasonable to expect the Diesel to displace the steam locomotive in road freight and passenger service as it has in the performance of yard work, yet it will, unless steam can attain full stature to meet the work to be done." Mr. Sillcox paper began with the statement that: "Seventeen barrels of oil in a Diesel-Electric locomotive will haul a high speed, de luxe train at 80 m.p.h., non stop, from New York to Boston. Sixteen barrels of fuel oil, fed into the firebox of the steam locomotive will scarcely move the same 12 heavy cars as far as Bridgeport, Conn., eastbound. There is a 4.5 to 1 advantage shown in favor of the Diesel."

The consensus among railway operating men seems to be that the Diesel fitted in with the steam locomotive may be an important factor in conserving the great bulk of the present investment in railways. This is founded on the belief that main-line long haul of both freight and passengers is now being done by steam locomotives economically enough to pay a fair return on the investment if only operations essential to the main line haul can be performed in a more economical manner than that in use heretofore.

Switching is one of the essentials. The Diesel-Electrics in operation in 1939 indicated that the cost of switching could be greatly reduced. For instance the General American Transportation Corporation has placed in operation two 44-ton Diesel-mechanical switchers, known as Flexomo-

tives, in its Chicago and Sharon, Pa., plants which are expected to show an increased return on the investment of 50 per cent as compared with the cost of former steam operation. They have shown ability to handle trains of as many as 66 large empty hoppers in one test.

If the economies to be effected by the use of Diesel engines were to be confined to switching service they would be but a minor factor in the salvaging of the huge investment in the fixed plant of steam railways, but there are many other functions that the Diesel can take over from the steam locomotive which, in regard to freight, come under the head of feeder and distribution, and in passenger service come under the head of local runs and short line operation. Rapid acceleration is of great importance in this class of passenger business.

The following figures given by Mr. Sillcox in the paper presented at Yale are suggestive.

| | Steam | Diesel |
|-------------------------------------|----------|----------|
| First cost..... | \$41,000 | \$70,000 |
| Cost per hour of operation | | |
| Fuel (cents)..... | 82 | 29.6 |
| Repairs (cents)..... | 72.5 | 53.5 |
| Enginehouse expense (cents)..... | 50.5 | 1.6 |
| Total including wages..... | \$3 620 | \$1.542½ |
| Maximum force at starting (lb.).... | 34,000 | 66,000 |

WILLIAM E. HOOPER.

Accidents. Casualties on steam railroads in connection with the operation of trains in the United States during the calendar year 1938, as reported by the Interstate Commerce Commission, resulted in the death of 4289 persons as compared with 5118 in 1937, and in the injury of 15,502 persons, as against 20,149 in 1937. The following table shows the class of persons killed or injured.

| Class of persons | Persons killed | Persons injured |
|--------------------------------------|----------------|-----------------|
| Trespassers | 2,229 | 2,094 |
| Employees | 386 | 6,481 |
| Passengers on trains | 6 | 2,272 |
| Travelers not on trains | 9 | 66 |
| Persons carried under contract | 1,590 | 251 |
| Other nontravellers | 1,590 | 4,338 |
| Total | 4,289 | 15,502 |

In addition there were 210 persons killed and 11,751 injured in nontrain accidents, in comparison with 232 killed and 16,543 injured in such accidents during the preceding calendar year.

Steam railroads carried 452,999,000 passengers 21,633,138,000 miles; there were 69 fatalities to passengers on trains, or an average of 1 for each 313,523,739 miles traveled.

There were 6 employees killed and 244 injured in coupling or uncoupling locomotives and cars, as compared with 22 killed and 376 injured during 1937. Eighteen employees on duty were killed and 123 injured from coming into contact with fixed structures, and 23 employees on duty were killed and 1363 injured in getting on or off cars and locomotives. Seventy-five passengers on trains and travelers not on trains were killed, as compared with 27 killed during the preceding year. Of these 75 fatalities, 9 resulted from collisions and 43 from derailment of trains; 17 passengers on trains and

6 travelers not on trains were killed when getting on or off cars, being struck or run over, or in other miscellaneous ways. A total of 355 employees on duty were killed in train and train-service accidents, as compared with 516 during the preceding year. During the first 6 months of 1939, 6 passengers, 3 travelers not on trains, and 237 employees on duty were killed in railroad accidents.

For an account of the major accidents during 1939 see CHRONOLOGY.

RANDOLPH-MACON WOMAN'S COLLEGE. An institution for the higher education of women in Lynchburg, Va., under the auspices of the Methodist Church, founded in 1893. The enrollment for the autumn of 1939 was 665. The faculty numbered 71. The endowment amounted to \$1,246,130, while the income for the year was \$534,968. The library contains 50,045 volumes. The new curriculum was adopted in 1938 and provisions made for majors in music and art and general examinations in 1939. President, Theodore H. Jack, Ph.D., LL.D., Litt.D.

RAPID TRANSIT. With the 6th Avenue subway in New York City practically completed, interest in subway building has shifted to Chicago where the first shaft for the new 7½ mile subway system in the business district was started late in 1938. This was an auxiliary shaft 26 ft. in diameter near Chicago Avenue and Lake Street. The work has gone forward during the year and has included both excavation in the heavy clay which underlies Chicago and the sinking of tunnel caissons for the river crossings. Some difficulty has been encountered due to the settlement of adjoining buildings and it seems probable that progress will not be as rapid as expected.

The demolition of the old (60 years) elevated railroad on 6th Avenue, New York City, over the line of the new subway, has opened up a new and wide avenue that had been almost lost under the old "El." It has also made many wonder why the expense of supporting this structure during the construction of the subway could not have been avoided.

RATTI, ACHILLE AMBROGIO DAMIANO. See PIUS XI.

RAYON. The precaution that has come to us from the ancients, "Do not refine fine gold," is subject to exceptions. In the case of rayon every effort had been made by the skilled chemists of the world to improve the textile strength and the qualities of the various types of yarn, whether by viscose, cuprammonium, or acetate process. With the dawn of 1939, it was thought that rayon had taken its place with cotton, silk, wool, and flax, as a "constant"—something that the textile world could depend upon as performing just so under all circumstances.

But rayon is not to be denied its further period of expansion. Almost with the opening of the new year came the statement by DuPont of their discovery of "nylon," a textile produced from a mineral base—coal oil. This new fiber was reported to possess remarkable qualities of elasticity and was heralded as a direct competitor to silk in the hosiery industry. The DuPonts backed their faith in nylon by beginning construction of

a ten-million-pound unit, and before the middle of the summer announced the expansion of the plant by a duplicate ten-million-pound unit.

Other expansions in the rayon industry during the year have called for the installation of equipment for the production of a total of ninety million pounds of rayon staple fiber and the increased poundage of filament rayon from 285-million-pound capacity for 1938 to 325-million pounds for 1939.

More remarkable than anything else in connection with the development of the industry has been the increase in the demand for the finer multi-filament yarns and there are now demands in the textile trade for 100-filament, 100-denier yarns and commercial production of 50-filament, 50-denier yarns. These yarns are available for hosiery and for fine knitting purposes and constitute a further extension into the field heretofore held exclusively by silk.

There has been nothing in the career of rayon from its inception that depended upon European sources of supply for either the raw materials in the form of spruce pulp or cotton linters, or any of the chemicals necessary for the conversion of pulp and linter into filament or staple fiber. So, the war conditions abroad, both in Asia and in Europe, have no adverse bearing upon the operation of the rayon industry in the United States of America. One of the advantages to the industry, as it is now constituted, is that the diversion of other fibers to the war requirements of all of the belligerents and the neutral countries abroad, intensifies the demand for rayon in our own market.

A careful analysis of the use of rayon for the past 12 months shows that something in the neighborhood of 37 per cent was used in connection with cotton, 27 per cent constituted fabrics of all-rayon construction, that silk and rayon combination fabrics represented close to 30 per cent, and that the remaining 6 per cent was used in connection with the woolen industry, chiefly in wearing apparel.

Installed capacity of American rayon plants at the close of 1939 was 420,000,000 lb. of yarn; 65,000,000 lb. of rayon staple fiber. The industry was operating at the close of December at a capacity of 375,000,000 lb. of yarn and 55,000,000 lb. of rayon staple fiber.

A definite expansion program is under way that will raise installed capacity of yarns by July, 1940, to 440,000,000 lb. and rayon staple fiber up to 130,000,000 lb.

The price range for the year on 150-denier, 24-filament, viscose rayon, which is the standard for estimating price movements, was held between 50 and 55 cents in January, and bookings closed for December on the basis of from 52 to 55 cents. This is in startling contrast to the rapid advances on wool and silk, as well as the erratic movements on cotton. Again in 1939 rayon established the fact that its adequate production in this country and its stability of price make it an indispensable fiber.

RECIPROCAL TRADE AGREEMENTS.

See TRADE AGREEMENTS, RECIPROCAL.

RECLAMATION, BUREAU OF. The Bureau of Reclamation, a bureau of the Department of the Interior of the United States Government, was created by an Act of Congress, June 17, 1902,

for the purpose of survey, examination, construction, and operation of works for the reclamation by irrigation of arid and semiarid lands in the western states. It is engaged in the construction, operation, or supervision of the operation of 63 irrigation projects or divisions of projects in 15 arid and semiarid states of the Far West, comprising a total irrigated area of more than 3,000,000 acres. The funds for this work have come from repayments by the water users, from oil leasing and other mineral operations, from the sale of public lands, and by allotments and direct appropriations by the Congress. The money expended is returned to the United States Treasury for deposit in the Reclamation Revolving Fund by payments of settlers and from sales of power and water.

The construction program of the Bureau of Reclamation during the fiscal year ending June 30, 1939, was the largest in its history. Work was in progress on 30 projects in 12 states. Since the Bureau was organized in 1902, construction results include 20,101.4 miles of canals, ditches, and drains, 156 storage and diversion dams with an aggregated volume of 52,807,194 cu. yd., 48 power houses, 2812 buildings, 81.8 miles of tunnels, 4661.6 miles of telephone lines, 20,597 culverts, 13,738 bridges, 2918.1 miles of road, 172.1 miles of railroad, 4635.1 miles of transmission lines, and 198,521 other irrigation structures. Reservoir capacity created by this construction has totaled 47,121,170 acre-feet. This work has involved the excavation of 520,485,130 cu. yd. of materials, and the Bureau has used 22,659,681 bbl. of cement.

An outstanding project under construction is the Grand Coulee Dam on the Columbia River in Washington, which, upon completion, will be the most massive masonry structure in the world, and with a maximum height of 553 feet, it will be the third highest concrete dam. The second major contract for completion of the dam, left power house, and foundation for the pumping plant, awarded late in the previous fiscal year, was in progress and was about 38 per cent completed at the end of the fiscal year. Ultimately the project will irrigate 1,200,000 acres of land.

Another major undertaking of the Bureau in progress is the Central Valley project in California, designed to alleviate critical water shortage and problems in important agricultural areas through the conservation of waste flood waters of the Sacramento and San Joaquin Rivers. At the end of the fiscal year construction work was about 25 per cent complete on Shasta Dam, to be 560 feet in height, 3500 feet in length along the crest, and to contain a volume of 5,610,000 cu. yd. of concrete, the second highest and most massive concrete structure in the world. The work in progress also includes the 46-mile Contra Costa Canal, the Southern Pacific Railroad relocation around Shasta Dam reservoir site and the Friant Dam.

The principal work at Boulder Dam, the highest dam in the world, located on the Colorado River in Arizona and Nevada, consisted of the erection of machinery and the installation of electrical equipment. With the eighth large generator going into operation in August, 1939, the present installation includes six of the large 82,500-kilowatt generators in the Nevada wing and two of the large and one of the smaller 40,000 kw generators in operation in the Arizona wing, totaling 700,000 kw. Ultimately there will be 15 of the large and two of the small generating units

in operation with a capacity of 1,317,500 kw. Present power contracts will not only return the cost of Boulder Dam and Power Plant to the Federal Government with interest in fifty years but will also pay certain revenues to the States of Arizona and Nevada.

The 80-mile All-American Canal now virtually completed and its 130-mile Coachella branch will ultimately bring to fruitfulness approximately 1,000,000 acres of land in the Imperial and Coachella Valleys of Southern California.

At the end of the fiscal year over 900,000 persons were living on the 52,552 farms irrigated by the Bureau and in the 258 towns and cities served by Federal projects. Of the 3,106,699 acres irrigated, 3,040,695 acres were harvested in 1938, producing crops worth \$113,463,460, or an average of \$37.31 per acre.

Projects now being constructed by the Bureau will add approximately 2,300,000 acres to the cultivated area of the arid and semiarid states. In addition, supplemental water will be provided for about 1,700,000 more acres which now have insufficient water to produce good crops. When completed, it is estimated that these new projects will provide opportunities for a total of 825,000 people on farms and in cities and towns as yet unlocated.

JOHN C. PAGE.

RECONSTRUCTED GLASS. See GLASS.
RECONSTRUCTION FINANCE CORPORATION. The Reconstruction Finance Corporation, one of ten agencies grouped under the Federal Loan Agency, may perform all its functions to the close of June 30, 1941, or such earlier date as the President may authorize. The Corporation was created by Act of Congress approved Jan. 22, 1932, to provide emergency financing facilities for financial institutions, to aid in financing agriculture, commerce, and industry, and for other purposes. Legislation subsequently enacted by the Congress increased its powers and extended its operations, or otherwise affected the Corporation. The Corporation was organized and began its operations on Feb. 2, 1932.

The management of the Corporation is vested in a board of directors consisting of five persons appointed by the President by and with the advice and consent of the Senate. The Corporation functions through a principal office at Washington; special representatives in Salt Lake City, Utah, and San Juan, P. R.; and loan agencies located in the following cities:

Atlanta, Ga.
 Birmingham, Ala.
 Boston, Mass.
 Charlotte, N. C.
 Chicago, Ill.
 Cleveland, Ohio
 Dallas, Tex.
 Denver, Colo.
 Detroit, Mich.
 Helena, Mont.
 Houston, Tex.
 Jacksonville, Fla.
 Kansas City, Mo.
 Little Rock, Ark.
 Los Angeles, Calif.

Louisville, Ky.
 Minneapolis, Minn.
 Nashville, Tenn.
 New Orleans, La.
 New York, N. Y.
 Oklahoma City, Okla.
 Omaha, Nebr.
 Philadelphia, Pa.
 Portland, Oreg.
 Richmond, Va.
 St. Louis, Mo.
 San Antonio, Tex.
 San Francisco, Calif.
 Seattle, Wash.
 Spokane, Wash.

Federal Reserve bank act as depositories, custodians, and fiscal agents for the Corporation. The Insular Treasurer acts as custodian for the Corporation at San Juan, P. R. Funds of the Corporation are kept on deposit with the Treasurer of the United States.

The capital stock of the Corporation is \$500,-

000,000 fully subscribed and paid in by the Secretary of the Treasury and held for the benefit of the United States.

The functions of the Corporation include loans to—financial institutions, insurance companies, and railroads, business enterprises and public agencies; drainage, levee, irrigation, and similar districts; and political subdivisions; mining and fishing industries; public school districts or other public school authorities; repair of damage caused by floods or other catastrophes; Administrator of Rural Electrification Administration; loans for carrying and orderly marketing of agricultural commodities and livestock; exportation of agricultural or other products; subscriptions for and loans upon preferred stock of banks, trust companies, and purchase of capital notes or debentures of such institutions; subscriptions for preferred stock and purchases of capital notes, etc., of insurance companies, and loans secured by such stock or notes; subscriptions for or loans upon nonassessable stock and purchase of capital notes or debentures of national mortgage associations, mortgage loan companies, etc.; purchase of marketable securities from the Public Works Administration, and purchase of debentures and obligations of the Federal Deposit Insurance Corporation.

Through Dec. 31, 1939, total authorizations by the Corporation and tentative commitments outstanding at the end of the month were \$10,626,895,058. Cancellations and withdrawals were \$2,436,668,638, and \$650,830,440 remains available to borrowers and to banks in the purchase of preferred stock, capital notes, or debentures, etc. Total disbursements were \$7,539,395,980, repayments and other credits \$5,808,731,659 (over 77 per cent).

In addition to the foregoing loans and investments, the Corporation has allocated \$2,921,413,841 for relief and to other Governmental agencies by direction of Congress. Under an Act of Congress passed in February, 1938, the Secretary of the Treasury was directed to cancel notes of the Reconstruction Finance Corporation to the extent of funds outstanding in connection with allocation and relief disbursements; but no part of the notes canceled was for loans made to borrowers, or for investments made by the Corporation, and no debt due to the Government by any one was canceled. The total amount of notes canceled up to Dec. 31, 1939, was \$2,720,243,677.

After the payment of all expenses and interest on the money borrowed to lend, the Corporation has accumulated an operating surplus in excess of \$269,000,000, which it is thought will be ample to cover any and all individual losses. The operating expenses of the Corporation have been substantially less than 1 per cent of the amount disbursed.

JESSE H. JONES.

RECREATION ASSOCIATION, NATIONAL. An association organized in 1906, under the name of the Playground Association of America, for the purpose of uniting in a national movement the efforts made in various parts of the United States to provide safe and adequate areas where children might play under experienced leadership. In recent years, however, its work has expanded to include the community as a whole, a staff of field workers being maintained to assist cities in organizing year-round programmes for adults as well as for children.

The association carries on its work through such services as correspondence and consultation,

music, drama, park recreation, recreation for girls and women and for institutions, a bureau of colored work, and, in co-operation with the U.S. Department of Agriculture, a service to rural leaders. It conducts institutes for the training of recreation workers and an annual Recreation Congress, and prepares and distributes literature. Its official magazine is *Recreation*, a monthly. The officers in 1939 were: President, John H. Finley, Ph.D.; treasurer, Gustavus T. Kirby; and secretary, Howard S. Braucher. Headquarters are at 315 Fourth Avenue, New York City.

RED CROSS, AMERICAN NATIONAL. A quasi-governmental organization chartered by the Congress, January, 1905. Its chartered obligations are: "To furnish volunteer aid to the sick and wounded of armies in time of war . . . to perform all duties devolved upon a national society by each nation which had acceded to the Treaty of Geneva . . . to act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the people of the United States and their Army and Navy . . . to continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great national calamities, and to devise and carry on measures for preventing same."

Upon the outbreak of hostilities in Europe, September 1, the American Red Cross organized for war relief. In the weeks that followed, chapter volunteers started the production of garments for refugees, surgical dressings, and hospital clothing. Funds were allocated for the emergency relief of Polish refugees and an Inquiry and Information Service was set up to handle communications between this and the war zone. To meet the expenses of these operations, the Central Committee of the American Red Cross set up a fund of \$1,000,000 from reserves of the organization and from contributions received from individuals and groups throughout the country.

The American Red Cross had 3716 chapters, with 7133 chapter branches in the United States and the insular possessions on June 30, 1939.

In the 12 months preceding June 30, 1939, the American Red Cross recorded the highest annual incidence of disaster in its 58-year history. Relief operations were carried on by the organization at the scene of 217 disasters in the United States and its insular possessions. One hundred and fifty-seven disasters occurred in Continental United States, resulting in relief programs for 130,000 persons at a cost of \$2,194,779.

During the year 100,361 life saving certificates were issued, and 187,643 persons were qualified as beginners or swimmers under Red Cross supervision. Through the same period 355,110 first aid certificates—60,000 more than were issued last year—were granted to students who successfully completed the course prescribed by the Red Cross.

The problems of 150,606 disabled veterans or their families were dealt with by chapter workers. In hospitals and regional offices of the Veterans' Administration and in other Government hospitals, representatives of the national organization dealt with 54,792 ex-service men or their families. Chapters aided 10,653 men now in regular service, or their families. Red Cross field directors in Army, Navy, Coast Guard, and Marine Corps stations and workers in Government

hospitals handled the cases of 41,125 men in active service or their families.

On the active list of the Red Cross Nurses' Reserve are 44,479 nurses ready to respond to calls from Army, Navy, and Red Cross disaster service.

Public health nurses made 1,046,933 nursing visits to or on behalf of patients; inspected 595,575 school children within the 12 months. At the close of the fiscal year 674 public health nurses were employed in 494 communities.

Hygiene and home care of the sick was taught by 1826 graduate nurses. Under them 61,296 who received instruction satisfactorily completed the course and were awarded certificates. During the year, the millionth person was trained in this field.

Accomplishments of 53,115 volunteers in special services included: Production of 342,849 garments; 382,355 pages of Braille transcribed by hand for blind readers, and 507,738 pages printed by duplicating process; 18,395 Christmas bags for distantly stationed men of the Army and Navy; the making of 58,334 calls by members of motor corps; the preparation of 5,061,082 surgical dressings; the feeding of 67,777 persons by canteen workers.

Membership for the year ended June 30, 1939, was 5,668,680 men and women—an increase of 145,095 over the previous year.

The American Red Cross was active in the field of international relief. It contributed \$200,000 to the work of the International Red Cross Committee at Geneva to assist non-combatants and prisoners of war in Spain, to facilitate the exchange of news between anxious relatives and persons stranded in Spain, and to purchase food-stuffs. The Red Cross has spent a total of \$828,000 for Chinese war relief. These expenditures have been administered by the American Advisory Committee composed of representative Americans resident in Shanghai, and which has procured food and clothing for destitute Chinese civilians as well as helped establish medical and refugee units. In addition the American Red Cross helped finance the repatriation of American citizens in China. In both Spain and China the Red Cross offered assistance impartially to both factions.

The President of the United States is president of the American Red Cross. Norman H. Davis is chairman of the Central Committee, having been named by President Roosevelt on Apr. 12, 1938, to succeed the late Rear Admiral Cary T. Grayson. The Central Committee is composed of 18 members, 6 of whom are appointed by the President of the United States to represent the Government.

REED COLLEGE. A non-sectarian, coeducational college of liberal arts and sciences in Portland, Ore., established in 1911. Enrollment for the first semester, 1939-40: men, 323; women, 223; total, 546, classified as: freshmen, 152; sophomores, 155; juniors, 108; seniors, 72; graduate students, 9. Faculty, 47. Endowment assets for 1938-39, \$1,854,904; new endowment income (exclusive of gifts), \$53,234; college operating budget for 1938-39, \$190,789 (does not include Commons or Dormitory). Volumes in the library, 65,884, with 276 periodicals. A Student Union Building completed during the year. President, Dexter Merriam Keezer.

SWITZERLAND under *History*; CALIFORNIA; OHIO. **REFORMED CHURCH IN AMERICA.** A church having a government of the Presbyterian type, composed originally of settlers from the Netherlands. Headquarters, 156 Fifth Ave., New York City, N. Y. See RELIGIOUS ORGANIZATIONS.

REFUGEES. The year 1939, which saw the defeat of Republican Spain, the conquest of Albania, the occupation of the remnants of Czechoslovakia, the destruction of Poland, the war in the West, and the attack upon Finland—an exceptional year in the annals of warfare—was notable not only for the outbreak of new areas of combat, but for the terrible dislocation of large numbers of persons, hundreds of thousands of whom became homeless wanderers. The plight of the refugees, like the wars themselves, was a direct consequence of the policy of the dictators to keep the European cauldron boiling.

These transigrations were not the usual fortunes of war even when they followed in the wake of war, as in Spain and Poland. They were the desperate attempts of the marked men and women and their children somehow to escape the tyranny and vengeance of the totalitarian conquerors. By 1939 the ferocity of the Nazi and Fascist terrors as an effective means of dealing with their picked victims was so well understood throughout Europe, that whenever and wherever the turn of political events appeared to favor the dictators, a new stream of refugees was started. The flood of German refugees let loose in 1933 after the Nazis had seized power, was swelled in March, 1938, with the forcible annexation of Austria, and in March, 1939, with the occupation of Czechoslovakia. At first the fury of the terror in the Third Reich had been directed against the Jews as Jews and against Communists, Social Democrats, and other political persons, as well as unpolitical intellectuals and humanitarians, whose points of view ranged them in opposition to National Socialism. Later the disciplinary arm of the Reich was turned also against Catholics and Protestants who demonstrated their inability to reconcile their religious beliefs with Nazi doctrine.

Up to November, 1938, approximately 130,000 refugees had left Germany and Austria. After the Anti-Semitic pogrom of November 10 of that year pressure for Jewish and non-Aryan emigration was increased; and by October, 1939, according to the report of Sir Herbert Emerson, League of Nations High Commissioner for Refugees, some 400,000 Germans had by hook or crook left Greater Germany. Countries bordering on Germany that had allowed refugees a temporary haven, in the early months of 1939 refused admission to further numbers. Overseas quotas had been, or were rapidly being, filled and other avenues of emigration were being closed. It appeared as if no more potential refugees in Germany could find a way of escape. But once the Reich's unwanted citizens had been stripped of every possession—by decrees, flight taxes, forfeits, penalties, and plain thefts—no device to rid the country of them was too mean or inhuman to try. At the close of 1938, as a pretext of retaliation against a Polish measure affecting Germans, thousands of Polish Jews residing in Germany were rounded up without previous notice and driven penniless across the Polish frontier. During the ensuing year thousands of German Jews were forced into boats and thrust on the seas to

seek entry at ports in Cuba, South America, and Palestine. (See also JEWS.)

The outbreak of the war between Germany and the Western Allies—Great Britain and France—further restricted the possibilities of finding permanent homes for the émigrés; while the wars in Spain, Poland, and Finland greatly increased the number of homeless. Thus during the year 1939, parts of Europe were overrun by over a million refugees: about 500,000 from Spain poured into France; some 200,000 from Poland crossed into Rumania, Hungary, and the Baltic countries; of the 400,000 that had fled from Greater Germany by October, 1939, about 140,000 remained dispersed in Europe under the necessity of re-emigrating (some 250,000 had over a period of six years found permanent homes in Palestine, the United States, Great Britain, the dominions, Latin America, and China) and just as the year closed, about 400,000 Finns, mostly women and children crossed into Norway and Sweden. This leaves out of consideration the millions uprooted by the war in China which constituted an internal problem. See ALASKA; INTERGOVERNMENTAL COMMITTEE ON POLITICAL REFUGEES.

JAMES G. McDONALD.

REGULAR ARMY, U.S. See **MILITARY PROGRESS.**

RELIEF. The year 1939 brought a number of events of immediate, and possibly future, significance to the huge relief structure which had mushroomed into existence with the depression and had shown, by the end of 1938, little sign of contracting with the passing of the immediate emergency. The realization that the current fiscal year (1938-39) had witnessed no diminution in the country's relief bill brought about in Congress a determined and at least partially successful effort toward retrenchment, accompanied by the first serious attempt to dictate the terms under which relief funds were to be expended. A House committee inquiry into relief activities, an attempted strike on the part of disgruntled WPA workers against the government, and the co-ordination of the Federal program under two controlling agencies were other significant events of the year.

At the outset of 1939, 21,738,000 persons in the United States were receiving some type of public assistance or earnings from the Federal works program. This figure was roughly comparable to the average for 1938 and higher than any single month in 1937. These persons were receiving funds in three major categories: (1) General relief, paid from State and local funds alone; (2) the three special types of public assistance provided under the Social Security Act; i.e., assistance to dependent children, the aged, and the blind; (3) the Federal work program. During 1939, general relief payments showed a slight decline. The three special types of public assistance continued to increase, a trend which had been apparent since grants-in-aid to the States from the Federal government began in 1936. But the Federal work program decreased sharply as a result of the Work Relief Act passed in June (see below), with the result that the total number of persons receiving public assistance and earnings declined to 16,505,000 for September; for December the number had increased to 17,661. The amounts paid out were \$316,251,000 for January, \$258,248,000 for September, and \$273,452,000 for December.

The accompanying tables, compiled by the Social Security Board, gave a comprehensive picture of the relief situation in continental United States. Table 1 shows the number of recipients and Table 2 the amount they received from all types of public assistance and earnings on Federal work programs. For details of the various programs, the reader is referred to the articles on the separate agencies.

It will be noted that the tables exclude the cost of administration and materials, equipment, and other items incident to the operation of the works programs, and that they include in certain categories payments from State and local funds. The actual cost of the relief program to the Federal government is, therefore, not apparent in the tables, but it may be ascertained from the Treasury Department's reports of the amounts actually disbursed in Treasury checks for relief purposes.

The Treasury reported that between Apr. 8, 1935 (when the first Relief Act was enacted), and Dec. 31, 1939, the Federal government expended \$11,776,501,569 in relief and other such emergency funds. The funds were disbursed through 80 Federal agencies with the WPA alone handling about 63 per cent. The outlay in each fiscal year was: For the last 12 weeks of 1935, \$525,848,046; 1936, \$2,898,716,470; 1937, \$2,860,508,932; 1938, \$2,001,240,379; 1939, \$2,617,974,768; and for the first half of the fiscal year 1940, \$872,212,975. The largest amounts were expended, in the order named, for roads and streets, educational, professional and clerical projects, conservation, public buildings, and housing.

It had been optimistically predicted in many quarters that the outbreak of a war in Europe would relieve domestic unemployment and solve at one stroke the country's relief problems. Work Projects Commissioner Harrington, in a radio address of September 27, promptly discouraged any such prediction. He estimated that our unemployment of 10 millions might be reduced one-sixth or even one-fourth by the summer of 1940, but that a very large number of unemployed would remain. For a report on employment and unemployment, see **LABOR CONDITIONS** and **WORK PROJECTS ADMINISTRATION.**

Deficiency Appropriations for 1939. In spite of the substantial appropriations made by the 75th Congress for the fiscal year 1939, the Federal relief agencies found themselves without sufficient funds to round out the fiscal year, and the President, in his message to the 76th Congress early in 1939, called for a deficiency appropriation of \$875,000,000 for this purpose. After a bitter fight, resulting in a one-vote margin in the Senate, Congress passed a Relief Deficiency Act (February 4), which appropriated \$725,000,000 (\$150,000,000 less than the President's figure). At the same time, Congress demanded that the WPA make an investigation of its rolls and eliminate therefrom all "deadwood" and aliens. About 30,000 aliens were removed from the rolls, and 88,975 persons were found to be not actually in need of relief. Although these cuts were estimated to produce a saving of about \$23,300,000, the total rolls were not reduced.

The President requested that the \$150,000,000 cut in his relief estimate be restored in a second deficiency bill and warned that, unless the sum were enacted, relief rolls must be reduced by 400,000 in April and by 600,000 in May. When hearings on this request opened in the House Appropriations subcommittee, Representative Woodrum

TABLE 1. AMOUNT OF PUBLIC ASSISTANCE AND EARNINGS OF PERSONS EMPLOYED UNDER FEDERAL WORK PROGRAMS IN THE CONTINENTAL UNITED STATES, FROM THE SOCIAL SECURITY BULLETIN¹
[In thousands]

| Year | All public assistance and earnings of persons employed under Federal work programs | Special types of public assistance ² | General Relief | Special Programs of the Federal Emergency Administration | Subsistence payments certified by the Farm Security Administration | Civilian Conservation Corps | National Youth Administration | Work Projects Administration | Other Federal work and construction projects |
|-------------------|--|---|----------------|--|--|-----------------------------|-------------------------------|---------------------------------|--|

¹ Figures exclude administrative employees. Figures are partly estimated and subject to revision. ² Estimated by the Work Projects Administration and the Social Security Board. ³ Includes recipients of the 3 special types of public assistance in States administering these programs under the Social Security Act and recipients of similar types of assistance in States not participating under the act. ⁴ There were also 311,000 persons employed under the Civil Works Program in January, 1934. ⁵ This figure is for April of 1933.

demanding a full investigation of the WPA and a reconsideration of the government spending policies. Authority for such an inquiry was vested in the House Appropriations Committee by a House Resolution of March 27.

On March 29 the House Appropriations Committee recommended that an additional \$100,000,000 be appropriated for relief, as contrasted with the President's request for \$150,000,000. The Committee stated that its figure was "on the side of liberality" and embodied in its report some sharp criticisms of WPA administrative expenditures and choice of projects. However, it was decided not to press the economy issue until a permanent relief policy could be proposed, and the \$100,000,000 appropriation was enacted in April, the vote in the Senate being 49-28. This brought the total appropriations for the fiscal year 1939 to \$2,163,868,406, as compared with \$1,427,701,994 for 1938.

House Inquiry. The authorized inquiry was immediately undertaken. The House Appropriations Committee devoted a main part of its investigation to the Workers Alliance, an organization formed some five years before as the bargaining agent of the unemployed with the WPA. The Workers Alliance claimed in 1939 that it had from 85,000 to 150,000 dues-paying members in 45 States, in addition to many members whose dues (which range from 15 cents to a dollar a month) were waived. The organization had as its aim the maintenance of relief appropriations at a high level and claimed openly that it could secure and keep WPA jobs for its members. The investigating committee charged that the Workers Alliance controlled the relief program in urban centers and that it was in turn controlled by the Communists. Sixteen of the 25 directors were accused of being Communists; the secretary and treasurer, Herbert Benjamin, admitted that he was a Communist, and the president, David Lasser, that he had been. The investigation was responsible for certain of the measures incorporated into the Work Relief Act (see below), notably the requirement for an oath of allegiance. The Committee's inquiry shifted to the new act following its passage.

Work Relief Act. This Act, approved June 30, 1939, appropriated \$1,755,600,000 to finance the relief program for the fiscal year 1940, the various items being as follows: Work Projects Administration, \$1,477,000,000; National Youth Administration, \$100,000,000; Farm Security Administration, \$143,000,000; rural rehabilitation in Puerto Rico, \$7,000,000; Office of Indian Affairs, \$1,350,000; U.S. Employees' Compensation Commission, \$5,250,000; Office of Government Reports, \$850,000; National Resources Planning Board, \$750,000; and for administrative expenditures by various agencies, \$20,400,000. With the fight over the 1939 deficiency appropriations vividly in mind, Congress wrote into the bill a provision that the funds should be so administered as to constitute the total expended up to June 30, 1940. This limitation on the funds for the year was expected to reduce the relief rolls by about one-third. (Commissioner Harrington announced that on December 13 the rolls had been cut by more than a million during 1939.)

More significant than the sums appropriated were certain restrictions imposed in the Act on the relief program, notably the abolition of the prevailing hourly wage requirement and of wage differentials. A uniform standard of 130 hours a month was established for all WPA workers and,

wherever hours were reduced, wages were correspondingly reduced. The Commissioner of Work Projects was required to fix a monthly earning schedule which should not substantially affect the current national average labor cost per person, and this schedule was not to vary for different parts of the country to any greater extent than the cost of living varied; previously the subsistence wage had varied from \$26 in some southern States to \$56 in some northern and eastern cities. Furthermore, in the effort to prevent workers from making a career of the WPA, all persons who had been continuously employed for more than 18 months were removed and could be re-employed only after a 30-day interval and after recertification of their eligibility. The Commissioner was required periodically to investigate the rolls and eliminate persons not in actual need, and to report on the operation of the projects on the first day of each session of Congress.

Employment on work programs was forbidden to aliens, to persons refusing reasonable private employment for the time such employment would last, and to persons advocating (or belonging to organizations which advocate) overthrow of the United States government. Workers were required to take an oath to support the Constitution and were forbidden to solicit political funds. Preference in employment was given on the basis of need and, needs being equal, to veterans.

Certain limitations were also enacted as to projects. None of the funds were to be used for military or naval purposes and none for enterprises in competition with existing industries, except in the case of municipal electric plants in communities not adequately served. In the construction of buildings, Federal buildings were limited to \$50,000 and Federal contributions to other buildings to \$52,000. The Commissioner of Work Projects was authorized to allocate \$60,000,000 to other Federal agencies for the operation of projects, but non-relief persons employed thereon could not exceed 10 per cent.

The Federal Theater Project was abolished outright as of June 30, 1939, with the provision that administrative employees on the Project could be carried on the payroll for an additional month and certified relief workers for three months. The other art projects (art, music, writing, and historical records) were permitted to continue with Federal funds up to August 31. After that date, they were required to have some local sponsorship, which, beginning with 1940, must contribute 25 per cent of the cost. More than 30,000 workers had previously been employed on the art projects, some 8000 of whom were in the Theater Project. The abolition of this phase of Federal work aroused public protest from a number of organizations and leading individuals of the theater.

The Work Relief bill was rushed through Congress at a late hour on June 30, only a few hours before the beginning of the fiscal year, and the administration leaders were forced to accede to a number of provisions which they bitterly opposed. The strongest economy sentiment was apparent in the House, and the figure finally reached was \$53,000,000 below the appropriation recommended by the Senate and \$20,000,000 above that recommended by the House. The debate centered on the refusal of workers to accept private employment, communist activity in the WPA, and the abolition of the Theater Project.

The provision eliminating WPA workers who had been employed continuously for 18 months re-

sulted in the dismissal of 775,000 from the rolls in July and August. On the basis of a survey made in November, covering 138,000 of the workers dismissed, the WPA reported that only 13 per cent had obtained jobs in private industry, and that half of them were earning less than they had earned from the WPA. Of the remainder, 28 per cent were on local relief rolls, 27 per cent had been re-employed by the WPA, and 32 per cent were without support.

WPA Strike. The elimination of the prevailing wage provision under the new Work Relief Act provoked widespread opposition among WPA workers and in the ranks of labor in general, and a protest strike was initiated by WPA construction workers in a number of States on July 5. Previously, construction workers had received the WPA monthly wage, ranging in various localities from \$56 to \$94, for as little as 44 to 80 hours of work. Under the new law, they were required to work 130 hours for the same wage or, in the case of fewer hours, to receive proportionately smaller pay.

WPA Commissioner Harrington promptly stated that he had no choice but to enforce the law as enacted by Congress. Warning that the strike could not succeed, he issued an order that strikers absenting themselves from work for five days should be automatically dropped from the WPA rolls. This stand was strengthened by the announcement of certain State and local welfare commissioners that WPA workers thus dismissed would not be eligible for home relief rolls. The expiration of the five-day period was marked by a return to work in some quarters and renewed orders for strikes in others. The dismissal order proved to be more than an idle threat; by July 14, 8543 workers had been dismissed in New York City and 6864 in Illinois.

Both the A. F. of L. and the C.I.O. brought all their influence to bear in the effort to secure restoration of the prevailing wage, but neither national organization appeared willing to assume any responsibility for the strike. The C.I.O. headquarters announced that too few C.I.O. members were affected by the WPA wage change to warrant national action. The A. F. of L. left the responsibility for calling strikes to its local councils, and most of the strikes were initiated by A. F. of L. affiliates, in some cases with the support of C.I.O. locals. Subsequently, William Green asserted that the remedy lay, not in a strike, but in Congressional action. He called a conference in Washington of A. F. of L. leaders with the object of securing revision of the law. When this objective proved to be unattainable for the time being, the A. F. of L. transferred its campaign to a demand for increased appropriations for the WPA, where workers' wages remained relatively high. The Workers Alliance asserted that, while it supported the strike, it had not instigated it and was more concerned with the layoffs than with wage rates; a one-day stoppage in New York State was voted by a mass meeting of the Alliance. The Workers Security Federation, another organization of the unemployed, stated that its 30,000 members staged one-day walkouts in various States as a protest measure.

It was estimated in the press that about 100,000 workers had walked out. WPA officials were inclined to minimize the extent of the strike, estimating on July 8 that only 3 per cent of WPA workers had struck and that the stoppages were of a minor nature except in New York, Ohio,

Wisconsin, and Minnesota. Disorders were not serious except in Rochester, N. Y., where the assistance of FBI agents was required, and in Minnesota, where a policeman was killed and a number of persons were indicted. (See MINNESOTA.)

Administration of Relief. The charge of extravagance in the administration of relief funds contained in the report of the House Appropriations Committee was one manifestation of a growing discontent with the manner in which the relief problem was being handled. The Republicans generally advocated placing of the administration in the hands of the States and localities, but no concrete steps were taken in this direction. A bill introduced by Senator Byrnes, which would provide for unification of the relief agencies, was withdrawn when the President announced his plans for reorganizing the administrative agencies of the government. By the President's reorganization plan, effective July 1, all the relief and security agencies were placed under a new Federal Works Agency (q.v.) and Federal Security Agency (q.v.).

State and Local Problems. Although the work relief program has remained a Federal undertaking, relief as a whole is by no means to be considered purely from the Federal standpoint. Even work projects are required to be locally financed in part, and to a larger extent than formerly under the new Act. The Social Security fund is financed by matching grants from Federal and State funds, and general relief has been left entirely to States and localities since the close of 1935, when the Federal Emergency Relief Administration was liquidated and the Federal government withdrew from that field.

That the States and localities were unable to cope adequately with the problem is seen in the continued decrease in sums spent by them for general relief. The curtailment of the Federal works program for the fiscal year 1940 placed an additional burden on the States in caring for the needy and has in some localities resulted in acute problems. (See the articles on the States, notably ARKANSAS, CALIFORNIA, MICHIGAN, OHIO, PENNSYLVANIA.) Furthermore, the conditions under which general relief is administered in various areas show startling variations. The American Association of Social Workers, in a study of this problem made during 1939, pointed out that in some sections in the South and Southwest there is no provision whatever for general relief, regardless of the need, and that in other localities the relief is shockingly inadequate. In some States the pauper's oath is still used, and, on occasions, persons receiving poor relief are disfranchised. The Association concluded that no uniform and adequate system of general relief can exist unless it is established by the Federal government. This opinion was, however, in marked contrast to a strong sentiment, especially apparent among Republican leaders, that the Federal government should withdraw further from the field of relief.

RENSSELAER POLYTECHNIC INSTITUTE. A nonsectarian institution for the technical training of men in Troy, N. Y., founded in 1824. In 1939 there were 1468 students enrolled. The teaching staff numbered 150. The productive funds amounted to \$5,165,786 as general endowment; the total income was \$998,112. As gifts for endowment \$22,262 was received. The library contained 31,000 volumes and 32,000 pamphlets. President, William O. Hotchkiss, C.E., Ph.D., D.Sc.

REORGANIZATION ACT. See UNITED STATES.

REPARATIONS AND WAR DEBTS.

Following the fate that Austria underwent in 1938, Czecho-Slovakia and Poland fell under the domination of conquerors in 1939 and ceased to have any power of paying the debts of their former governments to the United States Treasury. As the United States continued to recognize the fugitive governments of these nations it could not take the same step with regard to the intergovernmental debts of Czecho-Slovakia and of Poland that it had taken in giving notice that it held the German government responsible for the similar debt of Austria. On the contrary the Secretary of State sent a note, December 2, to the Ambassador of Poland, presenting a statement of sums due the United States on the 15th, and received a reply to the effect that the invasion of Poland had enhanced reasons formerly given for requesting the deferment of payments.

In the case of Finland, though the government of that country was already at grips with Russia, it made its usual payment in full of the sum coming due on December 15, thus emphasizing its claim to particular consideration in its plight (see also NEUTRALITY). President Roosevelt expressed the purpose of returning the current payment to

^a Armenian and Russian debts are not funded.

^b According to a computation issued by the U.S. Treasury, Germany owed the U.S. \$1,259,870,431, apart from the sums against any debtor listed above, and not classed as war debts

Finland, provided that the forthcoming session of Congress should allow this step.

Senator Lundeen of Minnesota carried on in December an agitation to press the chief defaulting powers for payment, in cash, on the intergovernmental debts or, as the alternative, for their cession of insular possessions in the Western Hemisphere.

An accompanying table of *Sums Due and Payments Made in 1939* shows what sums came due and what sums were paid in that year, as well as the accumulated total standing due up to November 15. The other accompanying table, *State of Debts, November 15, 1939*, shows, by countries, the totals owed at that date, the totals of funded principal in particular, and the sums of debtors' payments up to then.

REPTILES. See ZOOLOGY.

REPUBLICAN PARTY. John D. Hamilton, chairman of the Republican National Committee, rejected in 1939 two informal proposals that the Republicans join the Democrats in an agreement on some matters of procedure prior to the campaign of 1940: after the opening of the special session of Congress he rejected the suggestion of the President that partisanship be suspended; and later he likewise replied negatively to an intimation that the President would welcome the calling of the National conventions, in 1940, at later dates than in previous Presidential years, in order to abbreviate the candidates' campaigns and cut the consequent expense.

The Republican National Committee announced, December 10, its reapportionment of the States' allotments of votes, in the Republican National convention of 1940. On account of the States' respective totals of popular votes for the National candidates in 1936, the reapportionment allowed 1000 convention votes in all, as against 1003 in the convention of 1936, and deprived four States of three votes each—they were Connecticut, Delaware, New Hampshire, and Pennsylvania—while New York gained two, and one vote more apiece went to seven States—Arkansas, Illinois, Massachusetts, Oklahoma, Tennessee, Texas, and Virginia. New York had had 90 votes to Pennsylvania's 75 in 1936; New York now received 92, to Pennsylvania's 72.

Some work was done that might help toward shaping a platform in 1940; the dislike of followers of some types of agriculture for the Government's reciprocal trade agreements with foreign countries and for other features of the farmers' treatment inspired Republicans to give increased attention to courting the farm vote; Representative Martin, Republican leader in the House, appointed (October 22) a committee of 36 colleagues of his party to study out ways for the Government's dealing with divers specific features of the agricultural problem, while McNary of Oregon, Republican leader in the Senate, proposed (November 20) a plank extending the Soil Conservation subsidies to all agricultural commodities.

One contender for the Republican Presidential nomination, Thomas E. Dewey, started an open campaign to gain it. Dewey, District Attorney of New York County (in New York City) received formal notification (December 1) from the New York State Republican Committee that it had chosen him for the preferred candidate. He followed up his acceptance with a speaking tour to Minneapolis, where (December 6) he denounced the New Deal as defeatism and as fomenting the spirit of despair.

RESEARCH COUNCIL, NATIONAL. An organization of American scientists, originally established in 1916 by the National Academy of Sciences for the purpose of co-ordinating the research facilities of the United States for work on war problems involving scientific knowledge, and reorganized in 1918 as a permanent body for the general encouragement of research in the natural sciences. The Council has close relationship with governmental scientific agencies, and has the formal recognition and co-operation of over 80 national scientific and technical societies, its membership being composed mainly of appointed representatives of these societies.

Among the major undertakings of the Council during 1939 were the administration of postdoctorate fellowships (numbering 36); the publication of the twelfth report of the Committee on Catalysis; the issuing of the sixth edition of the list of industrial research laboratories of the United States; the establishment of a journal for the publication of contributions in the field of psychosomatic medicine; investigations upon educational uses of the radio, motion pictures, phonograph, microphotography for record purposes, and the development of special calculating machines for research uses; and research upon problems relating to the physics of the earth, highway construction and highway safety, electrical insulation, heat transmission, the preservation of books and records, the chemistry of cellulose and allied substances, problems of mathematics as related to chemistry, density currents, sedimentation, the chemistry and pharmacology of narcotic drugs, psychobiological aspects of sex, endocrinology, the effects of radiation on living organisms, genetics of pathogenic organisms, aerobiology, and problems of neurotic behavior.

The general administrative officers of the Council for 1939-40 are: Chairman, Ross G. Harrison, Sterling professor of biology, emeritus, Yale University, New Haven, Conn.; Treasurer, Arthur Keith, geologist, 2210 Twentieth Street, N.W., Washington, D. C.; Executive Secretary, Albert L. Barrows. The headquarters of the National Research Council are in the National Academy of Sciences Building, 2101 Constitution Avenue, Washington, D. C.

RÉUNION, rā'ū'nyōn'. A French island colony 420 miles east of Madagascar. Area, 970 square miles; population (1938 estimate), 210,000, as against (1931) 197,933 including 194,272 French, 2242 Chinese, 302 Africans, 921 natives of Madagascar, and 196 British Indians. Chief towns, with 1936 population in parentheses: St. Denis (30,762); St. Paul (21,485); St. Louis (19,195); St. Pierre (17,924). The chief port is Pointe-des-Galets.

Sugar (80,000 metric tons, 1939), rum, manioc, coffee, tapioca, vanilla, and spices are main products. Spirits manufactured in 1937 totaled 1,198,340 gallons. In 1938, total imports were valued at 263,900,000 francs; exports at 206,400,000. The budget for 1937 was balanced at 61,620,700 francs. (Franc averaged \$0.0405 in 1937 and \$0.0288 in 1938.) Administration is under a governor assisted by a privy council, and an elective council-general. Réunion is represented in the French Parliament by a senator and two deputies. Governor, M. Truitart.

RHODE ISLAND. Area and Population. Area, 1248 square miles; included (1930) water, 181 square miles. Population: Apr. 1, 1930 (census), 687,497; July 1, 1937 (Federal estimate), 681,000; 1920 (census), 604,397. Providence, the capital, had (1930) 252,981 inhabitants.

Agriculture. Rhode Island harvested, in 1939, 62,100 acres of principal crops. Of this area, almost three-fourths was in tame hay, which took up 45,000 acres and gave 52,000 tons (estimated farm value, \$879,000); potatoes, on 4100 acres, made 779,000 bushels (\$779,000); 10,000 acres in corn yielded 410,000 bushels (\$291,000).

Manufacturing. As shown in 1939 by the U.S. Census of Manufactures covering 1937, totals for Rhode Island (with figures for 1935 in parenthesis) were: Active manufacturing establishments, 1409 (1420); wage-earners there employed, 108,031 (100,852) wages paid to such earners, \$112,933,084 (\$94,321,904); factories' output, \$517,196,193 (\$411,885,779); part of this value contributed by processes of manufacture, \$240,457,582 (\$186,296,070).

Weaves of worsted, the manufactured product leading in aggregate value of output, totaled \$100,345,663 for 1937; the related production of worsted yarn was \$26,815,335. Weavers of rayon produced \$23,870,926 in broad fabrics and \$957,793 in narrow ones. The output of cotton fabrics amounted to \$27,590,210 for the broad fabrics and \$11,369,180 for the narrow. Weaves of silk totaled \$2,434,553. The output of dyers and finishers attained \$20,675,576 in cotton fabrics, \$4,876,606 in rayons and silks, and \$1,753,403 in woollens and worsteds. Jewelers' output amounted to \$21,581,110. Electrical machinery, apparatus and supplies to the value of \$16,548,287 were made.

Over three-eighths of the manufactured product of the State, for 1937, was made in Provi-

dence; here 42,270 wage-earners were employed in manufacture, receiving \$15,716,989, and factories produced goods to the value of \$198,783,-188. Pawtucket, second in rank, attained \$73,567,-668 in total of goods manufactured.

Education. For the academic year 1938-39 Rhode Island's inhabitants of school age (from 4 through 20 years) were stated at 195,109. Enrollments of pupils in all public schools numbered 117,541; this comprised 68,790 in elementary study, 25,449 in junior high schools, and 23,302 in high schools. In addition, other than public schools reported 34,256 enrollments. The year's expenditure for public-school education, \$10,824,-011, included pay for 4410 teachers, averaging \$1791.52.

Legislation. The regular annual session of the General Assembly, controlled in both houses by the Republicans, worked in accord with Governor Vanderbilt on important measures for the improvement of the State government. It appropriated \$15,196,445 for the next fiscal year. To make up the remainder of a deficiency of \$2,500,000, left by the previous administration and partly offset by reduced prospective expenditure, several taxes were created or increased; to yield the main part of the requisite sum, sales of cigarettes were taxed at two cents a package and other tobacco at 10 per cent of the price; the tax on public utilities' gross incomes was increased; that on inheritances was raised, as to those of medium size. A new system of civil service was created; it was to supersede the existing civil-service commission and to cover a much wider field, including nine-tenths of the State's servants; statutory civil service under the new plan was to go into effect at the start of 1940, and in the meantime a Civil Service Director, to receive pay of \$6000 a year, was to be chosen by public examinations held in divers parts of the country; a beginning was made with the process of writing the scheme of civil service into the State's constitution, a proceeding that called for the passage of a constitutional amendment by two-thirds majority in two successive Legislatures and thereafter by popular vote.

Failure, by accidental omission, to enact an extension, for another year, of the period of emergency in which the local governments might use special powers for meeting the cost of poor-aid necessitated a brief special session to remedy the oversight.

Political and Other Events. William H. Vanderbilt, whose two-year term as Governor began in January, was the leading spirit in legislation for civil service and for State economy; the support of Republican legislative majorities and the general reaction against the methods of the outgoing regime afforded him an unusual opportunity to put the State government in better order. Although he found a deficit in the State's operating accounts, reported as totaling \$2,500,000 awaiting him, he was credited with making up the amount by the end of June. There had been heavy enlistments of Democrats on the State payrolls in the incumbency of Governor Quinn; Vanderbilt reduced the number of the State's employees to about 3000, from 4000. This course helped substantially toward effacing the deficit, and reductions in salaries and additional taxation did the rest of the task. The State's new tax on retail sales of tobacco and cigarettes went into force about the same time as that of Massachusetts; consequently the citizens of neither State could

long shop with advantage for cigarettes across the mutual border.

A strike of truck-drivers in Rhode Island and adjoining States started on March 20, upon the failure of the drivers' union to win an increase in wages. To prevent renewal of the attacks made on non-striking truckers in the predecessor strike of 1937, the State police, on the authority of a statute, warned the union's pickets off Rhode Island's highways. The strike ended, April 11, in agreement upon a contract expected to settle for four years the status of unionized employees in the region's highly developed trucking activity.

The Federal Government had under development in 1939 plans for coastal defences at Point Judith and Little Compton and for a naval airbase at Quanset Point. Newport celebrated its tercentenary on May 23.

Officers. Rhode Island's chief officers, serving in 1939, were: Governor, William H. Vanderbilt (Rep.); Lieutenant-Governor, James O. McManus; Secretary of State, J. Hector Paquin; Attorney-General, Louis V. Jackvony; General Treasurer, Thomas P. Hazard; Director of Coordination and Finance, Preston F. Arnold; Comptroller, Samuel A. Place; Director of the Department of Education, James F. Rockett.

RHODESIA, NORTHERN. A British protectorate in Africa. Area, 290,320 square miles; population (1937), 1,377,346, including 1,366,425 Africans, 10,500 Europeans, and 421 Asiatics. Chief towns: Lusaka (capital), Livingstone, Broken Hill, Fort Jameson, and Mazabuka. On June 1, 1937, a total of 127,000 pupils were enrolled in 1460 recognized schools.

Production and Trade. Maize (18,700 metric tons, 1938); wheat (500 metric tons, 1938); tobacco, coffee, oil seeds, citrus fruits, and teakwood are important products. In 1938 there were 619,000 cattle in the territory. Mineral production in metric tons, 1938, was: Copper, 213,000; manganese, 800; zinc, 10,400; vanadium, 374; lead, 300. Gold (1113 fine oz., 1938), and silver (88,237 fine oz.) are also mined. In 1938, imports were valued at £5,223,693, exports, £10,134,861.

Government. For 1938 revenue totaled £1,593,504; expenditure, £1,417,776. Revenue for 1939 was estimated at £1,480,590. The protectorate is administered by a governor, aided by an executive council of 16 members. Governor, John A. Maybin (appointed, June 27, 1938).

History. A royal commission, headed by Lord Bledisloe, to investigate the possibilities of closer co-operation among Northern and Southern Rhodesia and Nyasaland, published its report on Mar. 22, 1939. The commission rejected federation and amalgamation because of the different stages of social and political development in the three territories; but recommended an inter-territorial council (1) to co-ordinate existing government services and (2) to frame plans for joint economic development.

A suspension bridge across the Zambesi River at Chirundu, connecting Northern and Southern Rhodesia, was formally opened on May 24, 1939. The bridge is the final link in a modern motorway extending from Salisbury to Lusaka.

RHODESIA, SOUTHERN. A British self-governing colony in Africa. Area, 150,344 square miles; population (June 30, 1938, estimate), 1,375,540 including 1,311,000 natives, 58,870 Europeans, and 5670 Asiatic and colored persons. Chief towns: Salisbury, the capital, including suburbs, had 32,846 inhabitants; Bulawayo, with suburbs,

29,126; Umtali; Gwelo; Gatooma; Que Que; Shabani; Selukwe; Sindura; Wankie; and Fort Victoria. During 1937 there were 1308 births of Europeans (22.92 per 1000), 536 deaths (9.39 per 1000), and 686 marriages (24.04 per 1000). On Dec. 31, 1937, the 1418 schools of all kinds had 116,475 pupils enrolled.

Production and Trade. Principal agricultural products were maize (129,900 metric tons, 1938); wheat (3400 metric tons, 1939); cotton; tobacco; groundnuts; fruits; butter (600 metric tons, 1938); and cheese (200 metric tons, 1938). Live-stock in the country included 2,316,832 cattle (1938), 319,000 sheep (1938), and 105,610 swine (1936). Gold production, 1938, totaled 814,078 fine oz.; silver, 166,419 fine oz. Other minerals (1938) in metric tons were: Coal, 998,000; tin ore, 300; chrome ore, 91,000; tungsten ore, 196; antimony ore, 79; pyrites, 27,000. Total imports, 1938, were valued at £8,400,000; exports, £10,500,000.

Communications. The total length of railway line in operation (Sept. 30, 1937) was 2709 miles. Road motor services with an aggregate length of 1629 miles supplement the railways. There is a network of airways covering the country and connections are made with Imperial Airways' service between London and South Africa. There were 39,924 miles of telegraph and telephone lines in 1937.

Government. For the fiscal year ended Mar. 31, 1939, revenue totaled £3,320,000; expenditure, £4,865,471; public debt, £12,367,224. The government is headed by a governor who is assisted by an executive council. There is a legislative assembly of 30 members elected for five years by popular franchise. Governor and Commander-in-chief, Sir H. J. Stanley (appointed in 1934); Prime Minister and Minister of Native Affairs, G. M. Huggins.

History. The Huggins government was continued in power with an unchanged majority in the election of Apr. 14, 1939. The United party held 23 seats and the Laborites 7 in the parliament. In August, 1939, as European war tension heightened, the Assembly passed an Emergency Powers (Defense) Bill giving drastic powers to the government, including the right to conscript industry and curb profiteering. Earlier in the year the government began compiling a "compulsory national register" in which men were classified for various war time or emergency duties. When war came, the colony rallied to the aid of the mother country, contributing men, and materials for the Empire's defense. The government announced November 20 that its war commitment involved recurrent expenditure of £1,300,000 a year.

For details of the Bledisloe report rejecting amalgamation of Northern and Southern Rhodesia and Nyasaland, and for an account of the new Chirundu suspension bridge, see RHODESIA, NORTHERN, under *History*. Also see BRIDGES.

RHODES. See *ÆGEAN ISLANDS, ITALIAN*.

RICE. Rice production in the United States in 1939 was estimated to total 52,306,000 bu. from 1,039,000 acres v. 52,506,000 bu., the large crop of 1938 from 1,076,000 acres, and compared with the 1928-37 average of 43,387,000 bu. and 913,000 acres. Yields per acre averaged 50.3 in 1939, 48.8 in 1938, and 47.5 bu. over the 10-year period. Yields in producing States were Louisiana 20,597,000 bu., Texas 13,988,000, California 9,000,000, and Arkansas 8,721,000 bu. Conditions were generally favorable for high production. The

season average price per bushel received by farmers was 77.3¢ and the value of production was estimated at \$40,424,000 compared to 64.2¢ and \$33,714,000 in 1938.

The 1938-39 crop of rough rice in other producing countries was for India 1,762,148,000 bu., Japan 598,914,000, Burma 400,412,000, Siam 241,887,000, Chosen 218,975,000, and Philippine Islands 119,000,000 bu. World production in 1938-39, 18 countries including U.S.S.R. reporting, was estimated at 3,727,646,000 bu. See *Production* under individual countries.

HENRY M. STEECE.

RICE INSTITUTE. A coeducational institution for higher education in Houston, Texas, opened in 1912. The enrollment in the autumn of 1939 was 1434, and the faculty numbered 93. The plant equipment and productive funds of the institution were estimated at \$17,000,000, and the income from endowment for the fiscal year 1938-39 was in excess of \$600,000. The library contained 140,000 volumes. President, Edgar Odell Lovett, Ph.D., Sc.D., LL.D.

ROADS AND STREETS. Renamed as Public Roads Administration, the Bureau of Public Roads was transferred on July 1 from the Department of Agriculture to the newly created Federal Works Agency, under Federal Reorganization Plan No. 1. During the year ended June 30, the Bureau participated in over 17,000 miles of highway improvements of various types, from grading and draining roadbeds, constructing sand-clay and gravel roads, to highest classes of road surfacing, to bridge construction and the elimination of railroad and highway grade crossings. For 13,482 miles of construction, the leading mileages of road surfacing were: low-cost bituminous mix, 2568; Portland-cement concrete, 2517; treated gravel, 2368. Texas led with 1710 miles of roads improved, of which 684 were treated and 321 untreated gravel and 210 miles Portland-cement concrete. Hawaii had 28 miles of treated macadam. Of the 13,482 miles improved, 9786 were in the Federal-aid system outside of municipalities; 586 miles of extension of the system into and through municipalities, 139 miles of secondary roads within, and 2971 miles outside municipalities. The cost of the completed work was \$196,566,311 in Federal and \$139,524,945 in State funds. Under contract on June 30 were 10,012 miles, while 2718 miles additional had been approved only.

The foregoing figures do not include road construction through public lands and Federal reservations, of which 244 miles were completed and 200 miles were under construction or contract. Of 21,981 miles of forest highways in 36 States, Alaska, and Puerto Rico, 413 were brought to completion during the fiscal year, but only 164 miles of these were improved for the first time. During the year 146 miles of road had been constructed in the 36 States having national parks and monuments, bringing the total to 1577 miles completed. Federal aid for restoration of flood-damaged roads and bridges in 11 States has been carried on under special acts of Congress authorized in 1928-31. This has been completed in seven States. Allocation to the several States of \$156,000,000 for highway improvement and elimi-

nation of hazards at railway crossings for work in 1940 was announced December 30 by the Federal Works Agency. The allotments range from \$9,728,530 for Texas and \$8,299,635 to New York to \$780,000 each for Delaware, Rhode Island, Vermont, and Hawaii. In addition, \$2,000,000 was apportioned for roads through public lands and reservations in thirteen States. Assistance to Central American countries engaged on an Inter-American Highway from Laredo, Texas, to Panama City was continued by the Bureau of Roads. Bridge erection was aided in Panama, Costa Rica, Nicaragua, Honduras and Guatemala.

Construction of the South Penn Toll Road, extending 161 miles from Middlesex, 15 miles west of Harrisburg, to Irwin, 20 miles east of Pittsburgh, was pushed by the Pennsylvania Highway Commission. The road will utilize as much as may be of the grading and tunnels of a railway project started and abandoned fifty years ago. It will be a four-lane highway, by-passing all towns, with no grade crossings of either highways or railways. Grades will be three per cent or less compared with a maximum of eight to nine per cent on the existing route. There will be $6\frac{1}{2}$ miles of tunnels and 300 bridges and culverts. The estimated cost of \$60,000,000 will be met by bonds. The first contracts were let late in October, 1938, but most of them in 1939. Completion by June 29, 1940, is proposed.

The Highway Research Board held its 19th annual convention in December. Its membership is drawn from Federal bureaus, State highway departments and colleges. Its work is carried on by seven departments: Finance, economics, design, materials and construction, maintenance, traffic, and soil investigations. (See *Engineering News-Record*, Dec. 14 and 21, 1939.) Among other conventions that considered roads and pavements during the year were the Asphalt Institute, the American Concrete Institute, the Association of State Highway Officials and the Roadbuilders' Conference. See also PLANNING.

World Highways. According to the annual survey published by the U. S. Bureau of Foreign and Domestic Commerce, there were 10,036,233 miles of road throughout the world in 1939 and 43,819,929 motor vehicles, as compared with 6,582,001 miles and 32,034,572 vehicles in 1929, the year of the first survey. Figures for the leading countries are given in the accompanying table. The number of automobiles is computed on the basis of registration and includes passenger cars, trucks, and busses.

M. N. BAKER.

ROCHESTER, UNIVERSITY OF. A nonsectarian, privately endowed institution of higher education for men and women at Rochester, N. Y., founded in 1850. It includes three schools: The College of Arts and Science, composed of a College for Men and a College for Women, on separate campuses; the Eastman School of Music, and a School of Medicine and Dentistry. A School of Nursing is also maintained in conjunction with the Strong Memorial Hospital, property of the University. An Institute of Optics is part of the arts college. The enrollment for the first term of 1939-40 was 2359 (exclusive of extension

division, 1921) and was distributed as follows: Arts and Science, 1136; music, 379; medicine and dentistry, 200; nursing, 132; graduate students, 512. For the summer session, 469 were enrolled in the art college and 508 in the music school. There were 550 members of the faculties, including 340 full-time. The amount of endowment as of June 30, 1939 was \$52,279,018, besides reserve funds of \$3,723,408. Expenditures for 1938-39 were \$4,126,332, including old-age pensions and insurance for all employees. The library contained 345,522 books. President, Alan Valentine, LL.D., L.H.D., Litt.D.

ROCKEFELLER FOUNDATION, THE.

An organization chartered in 1913 for the permanent purpose of promoting the well-being of mankind throughout the world. Its programme is concerned with certain definite problems in the fields of the medical, natural, and social sciences, the humanities, and public health. For work in these fields the Foundation during 1939 appropriated approximately \$9,400,000. A statement of the major grants follows.

Medical Sciences. In the field of medicine the Foundation's interest is centered on mental and nervous diseases and its contributions are largely for the furtherance of research and teaching in psychiatry and allied subjects. Among the appropriations made in 1939 for investigations and teaching in psychiatry were \$106,080 to the University of Toronto, \$85,000 to the Catholic University of America, \$71,000 to the Johns Hopkins University School of Medicine, \$60,000 to the Institute of the Pennsylvania Hospital, \$68,000 to the Harvard Medical School and the Massachusetts General Hospital. Other grants in the field of medicine were \$50,000 to the Forman Schools, Litchfield, Connecticut, for support of studies on apraxia and related phenomena in children; \$75,000 to the University of California for research on hormones and vitamins; \$50,000 to the Medical Research Council of Great Britain for research in endocrinology, psychiatry, neurology, and allied subjects; \$400,000 to Harvard University toward endowment of a School of Dental Medicine; \$350,000 to the Johns Hopkins University School of Medicine toward support of a new department of preventive medicine and public health; \$90,000 to the Johns Hopkins University School of Medicine for a fluid research fund.

Natural Sciences. In the field of the natural sciences the Foundation's programme is confined almost entirely to experimental biology. Appropriations in 1939 were practically all for studies of the phenomena of life. They included \$500,000 to the Johns Hopkins University for endowment of the departments of the biological sciences; \$200,000 to Stanford University for research in biology; \$189,000 to Yale University toward the support of its laboratories of primate biology; \$115,000 to Oxford University for construction and equipment of a laboratory for research in organic chemistry; \$80,000 to the University of Missouri toward the construction of a laboratory for research in genetics and \$20,000 to this university for the support of research in genetics; \$70,000 to the California Institute of Technology for the development of chemistry in its relation to biological problems; \$60,000 to Washington University, St. Louis, toward the construction of a cyclotron in the Institute of Radiology for use in biological and medical experimentation; \$50,000 to the University of California toward the expenses of cyclotron research in biology;

and \$241,956 to the National Research Council toward its administrative budget and for conferences, special studies, and fellowships in the natural sciences.

Social Sciences. The Foundation has three spheres of special interest in the social sciences at the present time: social security, public administration, and international relations. Appropriations made during 1939 for projects in these fields were as follows: \$940,000 to the National Bureau of Economic Research toward its research and co-operative programmes; \$225,000 to Brookings Institution toward the support of its research programme; \$165,000 to the Social Science Research Council for the work of its Committee on Social Security and its Public Administration Committee, and \$105,000 for the general administrative expenses of the Council; \$55,000 to Harvard University toward the support of its Graduate School of Public Administration; \$50,000 to Syracuse University for training courses in public administration under the direction of its School of Citizenship and Public Affairs. Other grants were \$60,000 to the University of Chicago toward the budget of the School of Social Service Administration, and \$51,250 to the London School of Economics and Political Science.

The Humanities. The programme in the humanities is concerned with the techniques, such as museums, motion pictures, radio, drama, and libraries by which cultural levels of contemporary society are being influenced, and with the promotion of better international understanding through cultural interchanges. Appropriations in 1939 included \$75,000 to the Museum of Modern Art for rotating funds for circulating exhibitions and for publication purposes; \$60,000 to the American Film Center toward the support of advisory service to educational and public service agencies wishing to use motion pictures for their purposes; \$60,000 to the American Library Association for European activities of its Committee on International Relations and \$30,000 to this association for studies of library co-operation with Latin America; \$80,000 to the American Council of Learned Societies for fellowships, planning committees, and international activities; and \$50,000 to Harvard University for research in criticism and in uses of language.

Public Health. The Foundation appropriated \$2,200,000 for the work of its International Health Division during 1939. This work included research on a number of selected diseases, among them yellow fever, malaria, tuberculosis, influenza, the common cold, rabies, syphilis, and intestinal parasitism; demonstrations in the control of certain of these diseases in their environment; co-operation with governments in the organization or improvement of important services of central or local health departments; and the development of public health education.

Officers. The executive officers of the Foundation in 1939 were John D. Rockefeller, Jr., Chairman of the Board of Trustees; Raymond B. Fosdick, President; Thomas B. Appleget and Selskar M. Gunn, Vice Presidents; Alan Gregg, M.D., Director for the Medical Sciences; Warren Weaver, Director for the Natural Sciences; Joseph H. Willits, Director for the Social Sciences; David H. Stevens, Director for the Humanities; Wilbur A. Sawyer, M.D., Director of the International Health Division; Norma S. Thompson, Secretary; Edward Robinson, Treasurer; George J. Beal, Comptroller; Thomas M.

Debevoise, Counsel; and Chauncey Belknap, Associate Counsel. Offices were maintained at 49 West 49th Street, New York City.

ROGERS, JAMES HARVEY. An American economist, died in an airplane accident at Rio de Janeiro, Aug. 13, 1939. Born in Society Hill, S. C., Sept. 25, 1886, he was educated at the University of South Carolina (A.B., 1906; B.S., M.A., 1907) and Yale University (A.B., 1909, Ph.D., 1916). After study abroad at the University of Geneva, Switzerland (1914-15), he joined the faculty of the University of Missouri as an instructor in economics, but resigned in 1920 in protest against the suspension of two members of the faculty. Until 1923 he was at Cornell University, but then returned to the University of Missouri as a full professor. He became professor of political economy at Yale University in 1930 and Sterling professor in 1931.

During 1926-35, Dr. Rogers lectured at the Geneva School of International Studies five times; in 1917-18 he was statistician for the Council of National Defense in Washington; from 1933 to 1937 he was a member of the Economic Committee of the League of Nations, and in 1934 he was a special representative for the U.S. Treasury in China, Japan, and India. One of the nation's leading economists, he was one of the first members of President Roosevelt's "brain trust," and with the late George F. Warren played an important role in shaping the Administration's monetary policy. He was an advocate of inflation.

Besides the section on "Foreign Markets and Foreign Credits" of the *Report of the Committee on Recent Economic Changes* of the President's Conference on Unemployment (1929), Dr. Rogers was the author of *Stock Speculation and the Money Market* (1927); *The Process of Inflation in France, 1914-27* (1929); *America Weighs Her Gold* (1931), and *Capitalism in Crisis* (1938).

ROLLINS COLLEGE. A nonsectarian, co-educational institution of higher learning in Winter Park, Fla., founded in 1885. The enrollment for the fall term of 1939-40 was approximately 400. The full-time faculty members numbered 56. The productive endowment, and other invested funds serving as endowment, amounted to approximately \$1,250,000, yielding an annual income of about \$33,000. The net income from all other sources was in excess of \$290,000. The library contained approximately 57,000 volumes. President, Hamilton Holt, Litt.D.

ROMAN CATHOLIC CHURCH. At few periods in history have the eyes of the world been so carefully directed toward the Vatican. The death of Pius XI (q.v.) and the election and coronation of Eugenio Cardinal Pacelli as Pope Pius XII were dominant events in the first part of the year; and, since the outbreak of the war, the new Pontiff's efforts for peace have been watched by statesmen in all world capitals. On the eve of the 17th anniversary of his coronation and the 10th of the settlement of the Italian Question, Pius XI died on February 10, at the age of 82. Immediately the members of the Sacred College of Cardinals not in Rome commenced their journeys to the Eternal City to participate in the Conclave, the solemn assembly at which they elect a successor to the See of Peter. By decree of Pius XI, issued shortly after his accession, the date of the Conclave was changed from 10 to 15 days after the Pontiff's death. Cardinal Pacelli's position as Secretary of State ceased with the Pope's death, but,

since he also occupied the post as Cardinal Camerlengo of the Church, he continued as first in authority, assisted in administrative duties by Cardinal Granito Pingatelli di Belmonte, William Cardinal O'Connell, and Caccia Cardinal Dominoni. These and all other Cardinals in Rome held a General Congregation each day and arranged for the funeral of the dead Pontiff, as well as the details of the Conclave which was opened on March 1 with a Solemn Mass of the Holy Ghost in the Pauline Chapel. Later the College adjourned to the Sistine Chapel and its adjacent rooms, where all participating in the Conclave took oaths to observe the law of elections, prime among which is that prohibiting any communication with the outside world save for those vested with special authority. As earnest of this, the Sistine apartments were sealed. The balloting began on March 2 and since no two-thirds majority was attained in the first two ballotings, a third was held the same day. This resulted in a vote for Cardinal Pacelli of 61 to 1, the one vote presumably cast by the man thus designated as Successor of Peter. The Cardinal-Dean then informed Cardinal Pacelli of the election and the latter, in accepting his elevation chose the name, Pius XII. Donning the papal robes, the New Pontiff received the homage of the Cardinals, his election was announced to the thousands congregated in the Piazza of St. Peter and shortly after Pius XII appeared on the loggia above the square and gave his benediction "Urbi et Orbi"—to the City and the World. On March 12, not according to custom in the Basilica of St. Peter's but on the central balcony overlooking the square, Pius XII was crowned with the triple tiara by the Cardinal-Dean with all the pomp of the Church and before the representatives and special legations of many nations. Whereas the election of the former Papal Secretary of State was not gratifying to Germany, it was hailed in almost every quarter of the world as an event of great auspiciousness. The quick decision of the Conclave and the breaking of precedent—no Secretary of State has been elected to the papacy for three centuries—were regarded as happy circumstances, and there was rejoicing throughout the world that one so familiar with international conditions and statescraft should be chosen.

The appointment of Luigi Cardinal Maglione as Papal Secretary of State was one of the first actions of the new Pope, who received in audience the special emissaries of various nations, including the United States' representative, Joseph P. Kennedy. He also received Queen Elena of Italy, the nine-year old Crown Prince Baudouin of Belgium, Crown Prince Umberto of Italy, and Minister for Foreign Affairs, Count Ciano. Another early action of the Pope was to send, although German papers had attacked his election, a special blessing to Germany: "Tell everyone how I love Germany and am disposed to do much for her." In a later statement, he made "special mention of our gratitude for the tokens of reverent homage which we have had from the sovereigns, heads of state and governments, of those nations with which the Holy See is in friendly relations." He placed the administration of Vatican City and its civil offices and the care of the papal villa at Castelgandolfo under a commission of cardinals, of which Cardinal Canali is president, and named Msgr. Alberto Arborio-Mella di Santi'Elia as Maestro di Camera. Later in May he requested a crusade of prayer for peace by all the faithful; but it is not true that

the Pope then sought to initiate a Peace Conference among nations, as had been rumored. He had, however, moved in diplomatic channels and directed papal nuncios to communicate to heads of governments his ardent desire that peace may not be compromised so that any questions at issue might be settled by pacific means.

Another more dramatic appeal to the world for peace was broadcast on August 24: "We, armed only with the word of truth, and standing above all public disputes and passions, speak to you in the Name of God . . . The tension of minds seems to have arrived at such a pass as to make an outbreak of the awful scourge of war appear imminent . . . but there is yet time. Nothing is lost with peace; all may be lost with war. Let men return to mutual understanding! Let them begin negotiations anew, conferring with good-will and with respect for reciprocal rights." With the outbreak of war the Holy Father appealed to all the world for prayers that its horrors may be minimized. In all his utterances, the position of the Vatican in the conflict was reconfirmed as one of strict neutrality. The conquest of Poland, a country whose people are profoundly and traditionally attached to Catholicism, moved the Pope deeply and he expressed particular concern for those in Soviet-occupied territory. When a pilgrimage from Poland headed by the Primate, Cardinal Hlond, was received he praised their "national history, during almost 10 centuries consecrated to the service of Christ" and assured them that "Poland will not die."

On October 27, Pius XII issued his first encyclical, "Summi Pontificatus." In this document he sternly arraigned statism and the evils it breeds, and exhorted Christian solidarity to save world civilization. A second encyclical "Sertum Laetitiae" was issued to the hierarchy of the United States on the occasion of the celebration of its 150th anniversary.

Receiving the Lithuanian Minister on October 18, the Pope definitely indicated he would, if requested, direct his activities toward settlement of temporal controversies between States. He gave notice, however, that, unless requested, he would, as Supreme Pastor, be concerned only with combatting the menace to Christian Europe and the dangers which threaten the salvation of souls. Twelve days later when he personally officiated at the consecration of 12 missionary Bishops from all parts of the world, His Holiness said while hatred and jealousy too often divide men in the world at large, the Catholic Church, with its immense charity, embraces all the human family without distinction as to race or rank. The first Consistory of Pius XII's reign was held on December 11 but was confined to the naming of bishops. In his first Christmas address to the Sacred College, Pius XII listed five fundamental points of a "just and honorable peace":

That "the right to life and independence" be guaranteed to all nations; "large, small, strong or weak"; and that where this equality of rights has been destroyed, just reparation be made.

That nations be "liberated from the heavy slavery of armaments" and the danger of the rule of force.

That international institutions be established or reconstructed, but that past errors be avoided, and juridical bodies be formed to aid in carrying out of treaties and, if necessary, revising them.

That the needs and just demands of nations, peoples, and ethnical minorities be met.

Observance of true Christian principles by statesmen and peoples.

At the conclusion of his talk, the Holy Father announced the receipt of President Roosevelt's

message advising that he was sending Myron C. Taylor to serve as the President's personal representative at the Vatican. An exchange of calls between the Pope and the King and Queen of Italy were significant events in December. King Victor Emmanuel had called upon Pius XI in 1930 on the signing of the Lateran Treaty; on December 21 both the King and Queen in all pomp visited the Vatican and thereafter, on December 28, the Pope visited the Quirinal, the first time since 1870 that a Pontiff has visited the Sovereigns of the Italian Kingdom.

No canonizations took place in 1939, but the canonizations of Blessed Mary of St. Euphrasia Pelletier, Foundress of the Sisters of the Good Shepherd, and Blessed Gemma Galgani were authorized and will take place in 1940. The first two beatifications in the reign of Pius XII were those of Blessed Emilie de Vialar, foundress of the Sisters of St. Joseph of the Apparition, on June 18, and of Blessed Justin de Jacobis, a missionary bishop, on June 25.

For the first time since the Reformation an Apostolic Delegate, Most Rev. William Godfrey, was assigned to London. Relations between Italy and the Holy See continued most encouraging. The relentless systematic persecution of the Catholic Church in Germany and its annexed territories increased in 1939. Uruguay resumed diplomatic relations with the Holy See for the first time since 1898. The following countries now maintain diplomatic representatives at the Vatican: Argentina, Belgium, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Ecuador, Estonia, France, Germany, Great Britain, Guatemala, Haiti, Honduras, Hungary, Ireland, Italy, Latvia, Liberia, Lithuania, Luxemburg, Monaco, Nicaragua, Panama, Peru, Poland, Portugal, Rumania, Salvador, San Marino, Santo Domingo, Slovakia, Spain, Uruguay, Venezuela, and Yugoslavia.

The Cardinals. No new Cardinals were created in 1939. Deaths reduced the Sacred College to 57, 13 short of its full complement. Alexander Cardinal Kakowski, Archbishop of Warsaw died Jan. 2, 1939 at the age of 76. He was known for his sound patriotism and ecclesiastical labor and for the fact that Pope Pius XI had received episcopal consecration at his hands. Leo Cardinal de Skrbensky-Hrste, Archbishop of Prague died at the age of 76. Domenico Cardinal Mariana, newly appointed by Pope Pius XII as one of three commissioners to administer the Goods of the Holy See, died April 23. Donato Cardinal Sbaretta, formerly archbishop of Havana and vice-dean of the Sacred College of Cardinals, died March 31 at 83. George Cardinal Mundelein, archbishop of Chicago, died October 2 at 67 (q.v.).

The Hierarchy. The following episcopal appointments were made during the year: Rev. Walter Fitzgerald, S.J., was named Coadjutor-Bishop of Alaska; Rev. Theodore Subr, O.S.B., titular Bishop of Balicio and Vicar Apostolic of Denmark; Rev. William A. Rice, S.J., Vicar Apostolic of Belize, British Honduras; Rev. Richard J. Cushing, titular Bishop of Mela and Auxiliary Bishop of Boston; Very Rev. William O. Brady, Bishop of Sioux Falls; Rev. A. C. Barneschi, first Vicar Apostolic of Swaziland; Msgr. William J. Condon, Bishop of Great Falls, Mont.; Rev. Donald A. Campbell, Bishop of Argyll and the Isles; Most Rev. Joseph Schrembs, Bishop of Cleveland was raised to an Archbishop's rank although the diocese was not made an archdiocese; Most Rev. Edwin V. O'Hara, Bishop of Great

Falls, was made Bishop of Kansas City; Most Rev. Francis J. Spellman, Auxiliary Bishop of Boston, was named Archbishop of New York; Most Rev. Francis J. Monaghan, Coadjutor Bishop of Ogdensburg, N. Y., was raised to the full bishopric; Most Rev. Jose Manriquez y Zarata resigned as Bishop of Huejutla, Mexico, and was named titular Bishop of Verbe; Rev. Louis LaRavoire Morrow, S.C., Bishop of Krishnagar, India; Rev. William F. O'Shea, M.M., Vice Apostolic of Heijo, Korea; Rev. Thomas Thien, S.V.D., Vicar Apostolic of Yanghu, China; Rev. Rocco Agniswami, S.J., Bishop of Kattar, India; Rev. John Larregain, Vicar Apostolic of Yunnanfu, China; Rev. Blaise S. Kruz, O.F.M., Vicar Apostolic of Kokstad, S. Africa; Rev. Urban Morlion, Coadjutor to Vicar Apostolic of Baudouinville, Belgian Congo; Rev. Henry Martin Mekkelholt, Vicar Apostolic of Palembang, Dutch E. Indies; Rev. Benedict F. Cialeo, O.P., Bishop of Multan, India; Rev. James Colbert, Vicar Apostolic of Pt. Elizabeth, S. Africa. Most Rev. Alexander Vachon, titular Archbishop of Acrida and Coadjutor Archbishop of Ottawa; Most Rev. Gabriel Joseph Elie Breynat, O.M.I., Vicar Apostolic of Mackenzie, named titular Archbishop of Garella; Rev. Arthur Douville, titular Bishop of Vito and Auxiliary Bishop of St. Hyacinthe, Canada; Rt. Rev. Msgr. Albert Lewis Fletcher, Auxiliary Bishop of Little Rock; Most Rev. Francis J. Spellman, Archbishop of New York, appointed Bishop Ordinary of the diocese of the U.S. Army and Navy, and Very Rev. John F. O'Hara, C.S.C., Auxiliary Bishop; Most Rev. Vincent Wehrle, O.S.B., resigned Bishop of Bismarck, named titular Bishop of Teos; Most Rev. Michael J. Curley, Archbishop of Baltimore, also named Archbishop of Washington, D. C.

The following bishops died in 1939: Most Rev. Thomas Lillis, of Kansas City; Most Rev. Joseph H. Conroy of Ogdensburg; Most Rev. Bernard J. Mahoney of Sioux Falls; Most Rev. Tihamer Toth of Veszprem, Hungary; Most Rev. August John Schwertner of Wichita, Kan.; Most Rev. Laurence Youens of Northampton, England; Most Rev. Francis Joseph Mostyn, of Cardiff, Wales; Most Rev. Alban Goodier, S.J., titular Bishop of Hierapolis; Most Rev. Alexis Lemaitre, Archbishop of Carthage and Tunis and Primate of Africa; Most Rev. Timothy Corbett, titular Bishop of Vita and retired Bishop of Crookston, Minn.; Most Rev. Joseph A. Murphy, S.I., Vicar Apostolic of Belize; Most Rev. Paul Bruchesi, Archbishop of Montreal; Most Rev. Joseph A. Murphy, retired Vicar Apostolic of British Honduras; Most Rev. Thomas Gilmartin, Archbishop of Tuam, Ireland.

Statistics. The total Catholic world population is approximately 350,000,000 or about 19 per cent of all. Figures compiled by the Official Catholic Directory for 1939 lists the Catholic population of the United States at 21,406,507, a decrease of 44,853. The number of converts was 65,943 or 3247 more than in the previous year. The hierarchy numbers 19 Archbishops, 2 of whom are Cardinals, and 111 Bishops. The secular priests number 22,569, an increase of 524 over 1938; and the priests of religious orders number 10,971, an increase of 348. The churches total 18,757, an increase of 329, and include 13,114 churches with resident pastors and 5643 missions with churches. The number of seminaries increased by three, the total being 209; and the seminarians increased by 762, the total being 16,746. There are 181 colleges

for boys, a decrease of 5. Colleges and academies for girls total 677, an increase of 2. There are 1362 high schools, 56 more than in 1938, with a total attendance of 441,273, a gain of 34,252. The number of parochial schools is 7561, an increase of 133, and an attendance of 2,106,970, an increase of 5594. The number of orphanages is 311, a decrease of 15, and the number of orphans cared for was 33,206, or 3339 less than in 1938. There are 167 homes for the aged poor, a decrease of 1; and 679 hospitals, a decrease of 5, with 412 nursing schools. Catholic chaplains attached to the U.S. Army number 31; to the Navy, 19; with 67 assigned to veteran hospitals. There are 64 chaplains assigned to the National Guard; and 24 Auxiliary and 212 Military Reserve chaplains.

JOHN GILLAND BRUNINI.

ROME-BERLIN AXIS. See GERMANY and ITALY under *History*.

ROOSEVELT, FRANKLIN D. See UNITED STATES; ROOSEVELT LIBRARY.

ROOSEVELT LIBRARY. In December, 1938, President Roosevelt announced his intention of donating to the Federal government his collection of historical material, together with a tract of twelve acres at Hyde Park, N. Y., as the site for a permanent repository. In making the gift, the President announced that his entire Hyde Park estate, including the family residence and about 100 acres of ground, would also revert to the government upon his death. The gift was accepted by an act of Congress, approved July 18, 1939, which pledged the United States to provide upkeep and operating expenses after the completion of the repository, to be erected with publicly subscribed funds. The Library will be administered by a board of trustees, consisting of the National Archivist as chairman, the Secretary of the Treasury as ex officio member, and five other members to be appointed by the President for life.

In the Roosevelt collection are more than 6,000,000 documents and manuscripts, some 15,000 books, a valuable naval collection, and numerous historical documents relating to the Hudson River Valley region. It includes all Mr. Roosevelt's correspondence over a period of 28 years, including his terms of office as senator and governor of New York State, Assistant Secretary of the Navy, and President. A non-profit organization known as the Franklin D. Roosevelt Library, Incorporated, undertook to solicit the building fund, toward which Mr. Roosevelt donated the net proceeds received from his writings. The building plans provided for a one and one-half story building of Dutch colonial design, to be erected at a cost of \$350,000. On Nov. 19, 1939, the cornerstone was laid by President F. D. Roosevelt.

ROSE ISLAND. An island of the central Pacific (approximately 14½° S. and 168° W.), included in American Samoa. The Naval Appropriations Bill of 1939 provided for the establishment of a naval air base on the island. See *American Samoa* under SAMOA.

ROSICRUCIAN ORDER. An international, philosophical fraternity, known as the Ancient, Mystical Order Rosae Crucis, whose name is derived from the emblem—a cross with a single rose in the centre—adopted by Johann Valentine Andrea, erroneously regarded as the restorer of

the Order in Germany in the Seventeenth Century. In 1939, the Order in North and South America had 13 lodges, 100 local chapters, and 3 colleges combined as the Rose-Croix University.

In June of 1939, it erected a large building of Egyptian design, which was dedicated as the Rosicrucian Research Library. The library houses several thousand volumes, specializing in works concerning art, philosophy, science, history, and alchemy. The library is not only made available to the students of the Rose-Croix University, but, by a unique method, members of the A.M.O.R.C. The structure also houses classrooms and a research biology laboratory.

The Rosicrucian Egyptian, Oriental Museum has, during the year 1939, greatly added to its collection, and as a result it is now recognized by the American Association of Museums, of which it is a member, as having the largest collection of Egyptian antiquities in Western America. Its annual attendance increased 40 per cent, or several thousand visitors, due to the increasing number of visiting college and school classes. The Rose-Croix Research Institute and Sanitarium, dedicated in January, 1939, in San Jose, California, augmented its staff and increased its patient capacity.

Dr. H. Spencer Lewis, Imperator or Chief Executive of the Order for North and South America, and the one who re-established the work of the Order in America in 1915, died Aug. 2, 1939. By traditional transmission of authority from his predecessor, and election by the Board of Directors of the Supreme Grand Lodge, Ralph M. Lewis, son of H. Spencer Lewis and former Supreme Secretary for sixteen years, was made the Order's Imperator.

ROSS DEPENDENCY. The area in the Antarctic comprising the coasts of the Ross Sea—with the adjacent islands and territories south of 60° S. and between 160° E. and 150° W., proclaimed a British Settlement and placed (by Order in Council, July 30, 1923) under the administration of the governor-general of New Zealand.

ROSS (RUBY) DAM. See DAMS.

ROTARY INTERNATIONAL. Rotary undertakes to inspire men to realize fully their individual capacity for patriotic citizenship in their states and nations; to deal justly with their customers or clients, their employees, and others with whom they may have business or professional relations; to have concern for the welfare of their neighbors; and, individually and through their association in Rotary clubs, to bring about international understanding, good will, and peace.

The 30th annual convention of Rotary International was held June 19 to 23, 1939, in Cleveland, Ohio. There were approximately 9200 Rotarians and members of their families present representing Rotary clubs in 54 geographical regions. Officers elected for 1939-40 are: President: Walter D. Head, Montclair, N. J.; Vice Presidents, T. A. Warren, Wolverhampton, England; G. Ramirez Brown, Managua, Nicaragua; Frank Phillips, Ithaca, N. Y.; Secretary, Chesley R. Perry; Treasurer, Rufus F. Chapin. The 1940 convention will be held in Rio de Janeiro, Brazil, June 9 to 15.

On Dec. 1, 1939, Rotary International consisted of 5020 clubs with an approximate membership of 210,000. There were 3198 clubs in the United States, 155 in Canada, 485 in Great Britain and

Ireland, and 1182 in other parts of the world. The International secretariat is at 35 East Wacker Drive, Chicago.

RUANDA-URUNDI. See CONGO, BELGIAN.

RUBBER. The year of 1939 was of special interest in and to the rubber industry in that it marked the one hundredth anniversary of the discovery of vulcanization by Charles Goodyear. Suitable ceremonies commemorating this historic achievement were held in Akron, Ohio, and in Boston and Woburn, Mass. It was in Woburn that the inventor finally discovered that rubber and sulphur combine with the application of heat. The ceremonies in Boston were part of the 98th Meeting of the American Chemical Society in September. See CHEMISTRY, INDUSTRIAL.

WORLD CONSUMPTION OF CRUDE RUBBER—1939

A distinct contribution to rubber manufacturing methods, one which will ease the burden of mold costs, was the perfection during the year of an electroforming method of making molds by engineers of the United States Rubber Co. at its Detroit plant. Known as the Ekko Process, it produces molds and dies by electroforming iron against a pattern, not necessarily rubber. The major difference between this method and ordinary electro-plating methods is that deposits up to 1/2-inch thickness are built up in the Ekko Process as compared to the 1/1000ths to 2/1000ths of an inch in the electro-plating processes.

An example of the savings inherent in the new process is presented by electroformed tire molds. Duplicate molds made by standard methods, that is, by cutting the tread design out of a steel forging with special engraving machines, take

the same approximate 165 man-hours that original molds take. With the Ekko Process, operatives insert a spacer ring between two halves of a master model, prepared by standard engraving methods, and mold a tire whose cross-section is about $\frac{1}{4}$ -inch thicker than a standard tire. The cast tire is then brushed with a light coating of graphite to make its surface conductive to electricity and is immersed in the electroforming bath and the current turned on.

WORLD STOCKS OF CRUDE RUBBER DURING 1939

Without further attention, other than occasional routine inspection, the duplicate mold forms itself around the model. After 10 or 12 days of continuous plating, during which the $\frac{1}{2}$ -inch coat of iron is built up, the resulting mold is sawed in half, the extra thickness provided by the spacer ring allowing plenty of room for machining the duplicate mold halves to the original dimensions of the master. Actual man-hours of labor for duplicating the mold are only a fraction of the former 165 man-hours required. Although pioneered for use in connection with rubber molds, the Ekko Process has already been adapted to such widely diversified industries as plastics, glass, and metal stamping.

Whereas tires and tubes formerly accounted for 85 to 90 per cent of all crude rubber consumed in the United States, this branch of the industry has steadily been losing some of its percentage advantage to other branches in recent years, although still far the larger proportion of consumption. This trend continued throughout 1939. Expanded uses of rubber in the automotive and other fields, particularly those absorbing mechanical rubber goods, contributed largely to this changing picture.

For instance, at the 1938 Automobile Show only one car, Hudson, featured latex foam cushioning for seats as standard equipment, while

such seats were optional on one or two other cars. At the 1939 show, however, 15 of the 19 American makes on exhibition were equipped with this new type of seat cushion, including all of the General Motors models with the exception of Chevrolet. Dunlop, holder of the basic patent, Firestone, Goodrich, Goodyear, and U.S. Rubber are all making latex foam cushioning material, from which mattresses and upholstery are made, as well as seat cushions. While each company designates its material with a special brand name, they are all made by a similar process in which the latex is virtually whipped until it forms millions of minute air-filled cells which give exceptional buoyance to the finished vulcanized material.

Definite advances were recorded in the use of rubber in another branch of the transportation field. A new streamlined, air-conditioned subway car, literally cushioned on rubber, made its appearance on one of New York City's subway lines. This car utilizes both rubber "sandwiches" and rubber springs, developments of the B. F. Goodrich Co. of Akron, Ohio. The "sandwiches" are made of rubber $1\frac{1}{2}$ inches thick and are placed between the steel tires which run on the rails and the wheels themselves. They dampen out shocks imparted to the wheel by rail joints, switches, and other roadbed equipment.

An interesting method of packing meatstuffs in rubber was developed during the year by the Dewey and Almy Chemical Co. of Cambridge, Mass. The method embraces the use of "Cryovac" wraps, made from specially compounded latex so as to be completely odorless, impart no taste, and absolutely moisture and vapor-proof. In its original form the wrap resembles a deflated, wide-mouthed balloon. In use the "Cryovac" wrap is inserted in a container in the deflated position. It is then expanded with air and a vacuum is drawn around the outside of the container. Thus, the wrap takes the shape of the container while the chilled sides "freeze" it into expanded size. Into this "frozen" package a chicken or side of beef or other meatstuff is placed, following which a vacuum hose removes the inside air and draws the wrap close to the solid. The neck of the wrap

is then twisted and clamped to make the package thoroughly air-tight and vapor-proof. The completed package is next immersed in warm water, the effect of which is to "thaw" the "frozen" rubber so that the wrap attempts to shrink to its original size, thus forming a taut, transparent wrap around the inner object. Shrinkage, the bane of the meat packing industry, is said to be minimized with this method.

Expansion activities were common in the industry during 1939, indicative of improved positions generally. Chief among construction work was the erection of a tire factory by the Armstrong Tire & Rubber Co. at Natchez, Miss. This factory, in which Sears, Roebuck & Co. has a financial interest, is expected to supply all Sears' southern stores with their tire requirements. The Bata Shoe Co. which has had distributing centers in various parts of the United States for several years, finally began the construction of an oft-rumored shoe factory at Belcamp, Md. One unit of this plant is already in operation, and rubber footwear is being made.

M. E. LERNER.

RUMANIA. A monarchy of southeastern Europe. Capital, Bucharest. Sovereign in 1939, Carol II, who was proclaimed King on June 8, 1930.

Area and Population. Rumania has an area of 113,887 square miles, as compared with 60,643 square miles before the World War. The estimated population on Jan. 1, 1939, was 19,852,000 (17,888,992 at the 1930 census). About 81.6 per cent of the population is rural and 18.4 per cent urban. Living births in 1938 numbered 585,197 (29.6 per 1000); deaths, 379,282 (19.2 per 1000); marriages, 173,639 (8.8 per 1000). Estimated populations of the chief cities on Jan. 1, 1937, were: București (Bucharest), 643,293; Chisinău (Kishinev), 114,101; Cernăuți (Czernowitz), 110,357; Iași (Jassy), 104,541; Galati (Galatz), 102,349; Cluj (Klausenburg), 99,546; Timișoara (Temeswar), 90,177; Oradea-Mare (Grosswardein), 81,181; Ploesti, 77,000; Arad, 75,143; and Brăila, 68,817.

National Defense. Military service is compulsory. On Nov. 1, 1939, the army consisted of 800,000 active soldiers and 1,000,000 trained reserves, according to the Adjutant General's Office, Washington, D. C. The air force comprised 15,472 men and more than 800 aircraft. The Black Sea naval squadron included 4 destroyers, 1 submarine, 3 ex-Austrian torpedo boats, 4 motor gunboats, and a depot ship. Several river craft patrol the Danube. See MILITARY PROGRESS.

Education and Religion. School enrollment in 1936-37 was: Primary, 2,480,091; secondary, 190,272; university, 34,093 (see EDUCATION). There were in Rumania in 1934 about 13,300,000 members of the Orthodox Church, 1,800,000 Greek Catholics, 1,200,000 Roman Catholics, 900,000 Jews, 720,000 Reformists, 400,000 Lutherans, 260,000 Moslems, 75,000 Unitarians, and 140,000 others.

Production. About three-fourths of the population is engaged in agriculture. In 1937 there were 34,448,000 acres of arable land (47.3 per cent). Yields of the principal cereals in 1939 were (in metric tons): Wheat, 4,488,600; barley, 1,005,600; rye, 474,500; oats, 475,900; corn, 6,239,400. The output of other crops in 1938 was: Potatoes, 61,157,000 bu.; sugar beets, 731,000 metric tons; beet sugar (1938-39 season), 167,000 metric tons; wine, 260,000,000 gal.; tobacco, 27,207,000 lb.; alfalfa

and clover, 1,196,000 metric tons. Livestock statistics for 1937 showed 4,184,000 cattle; 12,373,000 sheep; 3,170,000 swine; 408,000 goats; 2,083,000 horses, mules, and asses; and 185,000 buffaloes.

Mine and factory production (in metric tons) in 1938 was: Petroleum, 6,603,000; lignite, 2,084,000; coal, 297,000; salt, 370,000; rayon, 842; paper, 67,000. Output of petroleum in 1939 was 47,476,000 bbl.; of salt, 779,467,000 lb.; of gold, 155,767 troy oz. In 1937, iron ore production was 129,060 metric tons; pig iron, 127,234 metric tons; natural gas, 87,678,000,000 cu. ft. Total national income in 1937 was 295,000,000,000 lei.

Foreign Trade. Imports were valued at 18,768,000,000 lei in 1938 (22,896,000,000 in 1939) and exports at 21,527,500,000 lei (26,808,000,000 in 1939). In 1937 the value of imports from Germany was 5,333,000,000 lei; Austria, 1,842,000,000; Czecho-Slovakia, 1,806,000,000; United Kingdom, 1,780,000,000; France, 1,175,000,000; Italy, 794,000,000. Exports to Germany were valued at 6,208,000,000 lei; United Kingdom, 2,795,000,000; Czecho-Slovakia, 2,587,000,000; Italy, 2,285,000,000; Austria, 2,201,000,000; France, 1,834,000,000. See IMPORTS AND EXPORTS.

Finance. Budget returns for the fiscal years ended March 31 were: Ordinary receipts, 27,601,000,000 in 1937-38 (31,675,000,000 in 1938-39); ordinary expenditures, 26,643,000,000 in 1937-38 (30,304,000,000 in 1938-39). For 1939-40 the ordinary budget estimates balanced at 32,229,000,000 lei. Annexed to the ordinary budget for 1939-40, but not included in the totals, is the budget of special funds, with revenues and expenditures balanced at 1,436,000,000 lei. The budget for the army for 1939-40 amounted to 7,704,000,000 lei. No details of actual extraordinary receipts and expenditures are available. The public debt on Apr. 1, 1939, was 104,127,400,000 lei. The nominal average exchange value of the leu (singular of lei) was \$0.0073 for both 1937 and 1938, and \$0.0071 for 1939.

Transportation. Rumania has more than 7000 miles of railway line and the freight carried in 1938 totaled 2,935,000,000 ton-miles. Highways in 1939 extended 61,794 miles (see ROADS AND STREETS). Planes of the Rumanian state air line flew 727,531 miles in 1938, and carried 32,313 passengers. On June 30, 1938, the Rumanian merchant marine consisted of 33 vessels (of 100 tons or more) aggregating 101,337 tons.

Government. Under the Constitution of Feb. 27, 1938, Rumania became a corporate state with the dictatorial powers vested in the King. Responsible parliamentary government was abolished, the old parties dissolved, and the Front of National Regeneration established as the only official party, controlling all candidates and voters. There is a Chamber of Deputies of 258 members elected for six years on an occupational basis and a Senate of 176 members—half elected and half appointed or serving *ex-officio*. See 1938 YEAR BOOK, p. 661, for details of Constitution.

HISTORY

Throughout 1939 Rumania lived in imminent danger of invasion and dismemberment by a ring of hostile nations covetous of her territories and natural wealth (see the accompanying map). Within the kingdom the numerous minority groups (also shown on the map) and the pro-Nazi Iron Guard movement strove unceasingly to undermine and destroy King Carol's semi-feudal regime. By adroit fencing with the great powers and ruthless repression of internal enemies Carol managed to

A MINORITIES MAP OF RUMANIA

Courtesy of New York Times

keep his shaky kingdom intact and to enter 1940 with at least some hope of its survival.

Pressure from Berlin. The Czecho-Slovak bastion barring a Nazi advance into Rumania had been shattered by the Munich Accord of Sept. 29, 1938. With the collapse of Czech military power, the Little Entente alliances, designed to block Hungary's territorial claims on Rumania, Czecho-Slovakia, and Yugoslavia likewise lost most of their effectiveness. Nevertheless King Carol in the last months of 1938 and early in 1939 offered vigorous opposition to German diplomatic pressure and intrigues within his kingdom (see 1938 YEAR BOOK, p. 662).

German intimations that Carol's regime was doomed because of this opposition appeared to be on the point of realization in March. Early that month a German delegation arrived in Bucharest seeking far-reaching economic concessions. At the same time the German, Hungarian, and Bulgarian minorities in Rumania, whose revisionist aspirations had been stirred by the Munich Accord and later deliberately fanned by the German, Hungarian, and Bulgarian governments, respectively, demanded political autonomy and other special privileges.

The demands upon Bucharest were given threatening emphasis by the destruction of Czecho-Slovakia on March 15 and the massing of Hungarian troops along the Rumanian border following Hungary's seizure of Ruthenia. Carol mobilized troops to meet the threatened Hungarian invasion, but

his poorly equipped army was more than ever dependent upon arms and munitions from the giant Skoda arms factory in Czecho-Slovakia, now in German hands. When the Germans threatened to prevent further arms shipments to Rumania, the King capitulated in part to German demands for a monopoly of Rumanian trade.

On March 23 a German-Rumanian economic accord was signed under which Rumania agreed to increase its trade with the Reich, adjust its production to German needs, and permit German capital and German technical experts to exploit Rumanian petroleum and other minerals as well as to develop the kingdom's transportation facilities. In return Berlin agreed to sell Bucharest war materials and give technical aid in certain farm processing industries. There was an immediate influx of German technicians, engineers, and diplomats, but they met what appeared to be calculated non-co-operation from the Rumanian Government. The extension of German economic control over Rumanian resources did not proceed according to the Nazi schedule.

Anglo-French Guarantee. In fending off German economic control, King Carol obtained important support from Britain and France, then in process of organizing their "stop-Hitler" front. On April 13 they promised Rumania all military aid in their power if its independence was threatened by the Reich and the Bucharest Government decided to fight. This pledge was unilateral, imposing no obligation upon Rumania. Moreover it

was followed on May 11 by an Anglo-Rumanian economic pact under which Bucharest received a £5,000,000 credit for the purchase of British goods. France also gave Bucharest substantial economic concessions to lessen its dependence upon the German market, and in July another British arms credit was granted.

Rumanian Neutrality. The effort to enlist Rumania definitely in the Anglo-French military combination received a sharp setback through the conclusion of the German-Soviet non-aggression pact of August 24, insuring the Soviet Union's neutrality in the ensuing European War. On August 23, after preliminary announcement of the Nazi-Soviet pact, the Rumanian Foreign Office announced that the kingdom would remain neutral in any European conflict unless attacked. Fearful of sharing the fate of Czecho-Slovakia and Poland, the Bucharest Government forbade the transit of arms, war materials, and troops across its territory to either side, thus completely blocking the sole avenue available for Anglo-French assistance to the Poles.

When the Polish Government and thousands of defeated troops fled into Rumania during the third week of September, the leading officials and officers were interned upon the demand of the German Government, despite appeals from Britain and France for their release. Late in the year, however, ex-President Moscicki and certain other important Polish leaders were permitted to leave, while others remained in Rumanian custody for the duration of the war. The thousands of Polish refugees who entered Rumania along with the Polish troops imposed a serious burden upon the Rumanian Government and people.

German-Allied Struggle in Rumania. With the partition of Poland and the failure of efforts to end the war between Britain, France, and Germany, Rumania became the focus of an even more intense diplomatic, economic, and financial warfare between the belligerents. Deprived of overseas supplies by the Allied blockade, the Reich brought every form of pressure short of actual military invasion to bear upon Rumania to secure increased shipments of oil and other vital war supplies. The Allies, on the other hand, bought up large quantities of Rumanian products to prevent them from going to the Reich, and used their financial control over Rumanian oil and other resources, and the threat of blockade, to force Rumanian compliance with their plans. On December 21 Germany scored a triumph by concluding a new agreement with Bucharest after protracted negotiation. This accord raised the value of the mark nearly one-quarter as compared with the leu, thus making it cheaper for the Reich to buy Rumanian products. It also provided for an increase of Rumanian oil shipments to Germany to 130,000 tons monthly. The Allies, in turn, demanded compensatory advantages. The year ended with this competition becoming ever more intense and threatening to give way to military pressure.

The Soviet Menace. While playing Germany and the Allies off against one another, King Carol was obliged to face an even greater threat of aggression from the Soviet Union. Rumanian fortifications and troop concentrations previously had been concentrated largely along the Hungarian and Bulgarian frontiers. But early in September there were reports of heavy Soviet troop movements near the Bessarabian frontier. King Carol began to strengthen his defenses against a Russian invasion, while seeking assurances of Moscow's inten-

tions. He also made overtures for Italian aid in countering the Soviet menace.

In mid-November King Carol's fear of Russian invasion of Bessarabia was so great that he withdrew his troops from the frontier to more defensible positions. On December 6 the official organ of the Communist International at Moscow called for immediate conclusion of a Soviet-Rumanian accord similar to those imposed on the Baltic states. But this alarming statement was disavowed by the Soviet Foreign Office when the proposal met with Rumanian and other foreign resistance. On December 23 it was reported that the Bucharest Government, encouraged by Russian difficulties in Finland, had decided to reject any and all Soviet claims for Rumanian territory.

Relations with Other Neighbors. King Carol adopted the same attitude toward Bulgarian and Hungarian territorial claims. He acted on the presumption that if one of these claimants obtained territorial satisfaction, it would be the signal for the partition of Rumania by all three. This refusal to consider any territorial concessions was partly responsible for the collapse of Italian and Yugoslav efforts to build a neutral bloc of Danubian and Balkan powers to resist pressure from Germany and Russia alike. Hungary's refusal to moderate her territorial claims upon Rumania was another important factor.

When Hungary rejected a Yugoslav-Rumanian proposal for a non-aggression pact, the Rumanian Government turned to Turkey, Greece, and Yugoslavia, its partners in the Balkan Entente (q.v.), and sought to induce them to extend the Balkan defensive alliances to apply in case of attack from any source whatever. This move was favorably received in Turkey, but Greece and Yugoslavia remained non-committal or opposed. Meanwhile King Carol was busily engaged in strengthening his army and constructing lines of fortifications along the Bulgarian, Hungarian, and Soviet borders. Some 800,000 men were under arms at the year end.

Internal Affairs. Political developments in Rumania during the year reflected King Carol's struggle against his foreign and domestic foes. He steadily strengthened his Fascist-like regime in order to undermine the political appeal of the Iron Guard's Nazi doctrines and to stiffen Rumanian resistance to German and other foreign pressure. Minister of Interior Armand Calinescu, a leading supporter of the King in the establishment of his authoritarian regime and in his war with the Iron Guard, was named Vice Premier and acting Minister of Defense on February 2. On February 13 scores of Iron Guard members were arrested following discovery of a plot to assassinate him. When Premier Miron Cristea (q.v.) died shortly afterwards, Calinescu succeeded him as head of the Cabinet (March 7).

The Calinescu Government further relaxed the anti-Semitic measures instituted by the Goga Government in 1938. There was a marked improvement in commerce and industry. On June 1-2 the elective members of the new corporative Parliament were chosen. The Parliament, deprived of all except advisory functions, assembled on June 8 in time to join in the celebration of the ninth anniversary of Carol's return from exile. His all-inclusive dictatorship was challenged, however, by some leaders of the former political parties. Vintila Bratianu of the former Liberal party, Dr. Iuliu Maniu, Ion Mihalache, and Nicolei Lupu of the former National Peasant party, and others were

ousted from the Senate on July 8 after they had refused to take the oath decreed for Senators and had declared their intention not to recognize laws passed by the new Parliament.

Calinescu Assassination. On September 21, during the crisis produced by the collapse of Poland, the Iron Guard made a new effort to overthrow King Carol's Government. Premier Calinescu was shot to death on a busy Bucharest street by a group of young men. They then seized the radio broadcasting station and announced the Premier's death as a signal for a nation-wide Iron Guard revolt. However the conspiracy was immediately crushed by the arrest of the assassins and hundreds of Iron Guard members. That evening nine of the assassins were taken to the scene of the crime and executed by troops at the King's orders, their bullet-shattered bodies being left in the street as a warning to their sympathizers. This was followed by wholesale executions of Iron Guard members in concentration camps and by numerous arrests of others suspected of Iron Guard membership or sympathies. Some reports placed the number of executions as high as 2000.

Governmental Changes. Immediately after Calinescu's assassination, the King named Gen. George Argeșeanu, commander of the Bucharest military district, as Premier. As soon as the Iron Guard menace was eliminated, Carol on September 28 appointed Constantin Argetoianu, president of the Senate and member of the Crown Council, as Premier of a reconstructed cabinet. His government, strictly neutral in its foreign policy, extended the powers and activities of the Front of National Regeneration and made a further effort to conciliate the minorities by extending additional rights.

The replacement of the Argetoianu Cabinet on November 24 by a ministry headed by George Tatarescu was the direct result of a speech made by Hungary's Foreign Minister, Count Stephen Csaky, reiterating Hungarian claims upon Rumania and stressing Hungary's friendly relations with Germany and Italy. The appointment of Tatarescu, well-known for his pro-French sympathies, represented a modification of Carol's policy of strict neutrality in favor of closer relations with the Allies.

Another event of the year was the coming of age of Crown Prince Michael on his 18th birthday (October 25). On November 25 Michael was sworn in as Rumania's youngest Senator.

RUPPERT, JACOB. An American brewer and sportsman, died in New York, Jan. 13, 1939, where he was born, Aug. 5, 1867. Educated at the Columbia Grammar School, he intended entering the Columbia University School of Mines, but his father prevailed upon him to enter the brewing business. He became the manager of the Jacob Ruppert Brewery in 1888 and its president, succeeding his father, in 1896. Under his management the Company expanded and became one of the largest brewing houses in the country. He was president of the U.S. Brewers Association from 1911 to 1914 and again from 1922 to 1937, and was one of the founders, and first chairman, of the United Brewers Industrial Foundation in 1937.

A member of the 7th Regiment, he served with

the rank of colonel on the staffs of Governor Hill (1889-92) and of Governor Flower (1892-95) of New York. In 1899 he was a Democratic candidate for Congress. Elected, he served until 1907 when he refused to be a candidate for re-election.

A keen sportsman, Colonel Ruppert at one time kept a racing stable and a large kennel of St. Bernard dogs. In 1914, with Col. T. L. Huston, he purchased the New York Yankees, then called the Highlanders—a second rate ball club in the American League—for \$450,000, culminating a lifelong desire to own a baseball team. He made several attempts to purchase the New York Giants but was unsuccessful. With the acquisition of Miller Huggins as manager of the team in 1918, and Babe Ruth, whose phenomenal succession of home runs brought thousands to see him, in 1920, the fortunes of the club rose and the first pennant was won in 1921, although the first World Series was not won until 1923 when the Yankees beat the Giants. In 1923 Ruppert purchased Huston's share of the Yankees and in the same year the Yankee Stadium was opened. The Yankees, the Colonel's pride and joy, was the most successful baseball team in the history of the game, holding world championship from 1935 to 1939.

In 1933, Colonel Ruppert was one of the sponsors of the second Byrd Antarctic Expedition and the flagship was named in his honor. In recent years he had made extensive real estate investments and was believed to be one of the largest realty owners in New York City. He was president of the Astoria Silk Mills and a director of several other enterprises.

RURAL ELECTRIFICATION ADMINISTRATION. See ELECTRIC LIGHT AND POWER; AGRICULTURE.

RUSSELL SAGE FOUNDATION. This Foundation was created by Mrs. Sage as a memorial to her husband. The original endowment was \$10,000,000 to which \$5,000,000 was added by her will. The Foundation was established for the purpose of promoting the improvement of social and living conditions in the United States of America. Its charter provides that it may "use any means which from time to time shall seem expedient to its trustees, including research, publication, education, the establishment and maintenance of charitable and benevolent activities, agencies and institutions, and the aid of any such activities, agencies or institutions already established." Its general aim is the study of the causes of adverse social conditions in order to disseminate information which will be of assistance to citizens and organizations seeking to ameliorate, remedy or prevent such conditions.

It is the policy of the Foundation not to make grants to colleges, universities, local agencies, hospitals, or to religious institutions. It does not directly relieve either individual or family need.

While the Foundation is not primarily a contributing organization, it does make grants of approximately 40 per cent of its income, chiefly to agencies with similar purposes, and in fields where it is believed that a specific piece of work might be done better by an outside agency. Among the types of activities carried on by its Departments, or through such outside agencies financially assisted are adult education; city and regional research and planning; the improvement of housing; family welfare; education and training for social work; the study, co-ordination and planning of community social work programmes;

child welfare; placement and vocational service; leisure time activities; legal aid; penology and the prevention of delinquency; service to travelers and transients; social welfare publications; professional organization of social workers; improvement of race relations; research in the social sciences; and social phases of the arts.

The trustees and officers of the foundation are: Lawson Purdy, president; Morris Hadley, vice president and treasurer; John M. Glenn, secretary; Lindsay Bradford, Joseph P. Chamberlain, Harry Woodburn Chase, Johnston de Forest, Frederic A. Delano, John H. Finley, and Harold T. White. Shelby M. Harrison is general director.

RUSSIAN LITERATURE. In 1938, 28,361 books of all types, from scientific works to poetry, had been published in the country; judging by incomplete preliminary reports, the figure for 1939 was well over 31,000.

Fiction. If generalizations are permissible, the year's great mass of fiction was not very rich in literary skill and artistic quality.

Among the novels picturing the contemporary Russian life and "the new classless Socialist society", "Courage" (*Muzhestvo*), by V. Ketlinsky, and "The Ocean's Brother" (*Brat okeana*), by A. Kozhevnikov, won especially warm praise from Soviet reviewers. The first is the story of Soviet youths who, despite overwhelming difficulties, succeed in building an industrial plant in Siberia; their "Socialist enthusiasm for work" strikes one as exaggerated and artificial. The second, told in the form of the chronicle of a family of skippers on Enissey River, is, on the whole, forceful and effective. "Derbent", the Tanker" (*Tanker "Derbent"*), a novel by G. Krymov on a similar subject, also received much notice. In "High Pressure" (*Vysokoe davlenie*), L. Soloviov skilfully drew an interesting picture of "the new Soviet man"; luckily, this picture is free from the inartistic idealization which ruins many similar novels. "Two Captains" (*Dva kapitana*), by the talented V. Kaverin, contains a vivid portrayal of Russia's young generation. A trace has been left in fiction by Stalin's "great purge" with its trials and executions: conspiracies contrived by "wreckers" and "Trotzkysts" provide plots for a number of the year's novels. S. Guecht's "Edifying Story" (*Pouchitelnaia istoria*) and A. Mitrofanov's "Irene Godunov" (*Irina Godunova*) are among the more readable of such works.

Of the year's historical novels, quite a few are devoted to the Civil (Revolutionary) Wars of 1918-21, a subject for which Soviet authors have always had a strong predilection. In "Parkhomenko" (*Parkhomenko*), V. Ivanov produced a portrait of a hero of these wars and a panorama of the whole epoch; "This Began at Kokand" (*Eto nachalos v Kokande*) by N. Nikitin resurrects the same epoch as it had been lived in the picturesque Turkestan and Bokhara (Russian Central Asia). Both Ivanov and Nikitin are interesting authors; unfortunately, these are not the best of their works. Among historical novels treating other subjects, "Batash and Batai" (*Batash i Batai*), by I. Libedinsky, is probably the best one: it is a remarkably well-written and colorful story of pre-revolutionary Mohammedan nobility in the Caucasus. "The Fatal Book" (*Pagubnaia kniga*), an 18th century story by Mrs. O. Forsh, is also a good piece of work; its central figure is Radischev, an early Russian revolutionary thinker.

In most of the novels referred to in the foregoing, romance plays but a secondary part. The treatment of love and of human psychology unrelated to social problems in works of fiction and drama is no longer frowned upon in the Soviet Union as severely as it had been in former years. Yet Communist ideologists still regard sex for the sake of sex and "too much introspective subtlety" as subjects unworthy of the "Socialist society"; and it is these ideologists (with the Communist Party standing behind them) who are the autocratic lawmakers of Soviet literature.

Autobiography and Biography. A great success was enjoyed by Marina Raskov's "Notes of a Pilot" (*Zapiski shтурмана*), which relates the experiences of three aviatrices—the author herself, G. Grizodubov, and P. Ossipenko. A number of popular biographies of Russian national heroes and great military leaders of past centuries appeared; among them *Ivan Sussanin* by E. Gerasimov, *Bagration* by E. Borisov, and *Suvorov* by S. Kalinin stand out. The appearance of such works in the Soviet Union became possible only after 1934-35, when the Soviet Government had passed from internationalism to nationalism and lifted the ban from the teaching of Russian history. In the great mass of literary documents, "Letters to Chekhov by His Brother Alexander" (*Pisma A. P. Chekhovu ego brata Alexandra*) is one of the most interesting items—it holds much new biographical material on the great writer. Another good biography of Chekhov (*Chekhov*) came from the pen of A. Derman. G. Chulkov wrote an excellent volume on "How Dostoevsky Worked" (*Kak rabotal Dostoevsky*).

Drama. A huge number of new plays was produced both in Moscow and in provincial cities. "The Path to Victory" (*Put k pobeде*) by A. Tolstoy, uncrowned king of Soviet authors (and a distant relative of Leo Tolstoy), gave rise to much praise and criticism; it pictures the Civil Wars (1918-21) and has Lenin and Stalin among its acting persons. *Pavel Grekov*, a play on a similar subject by L. Lench and B. Voitekhov, was a hit in Moscow. L. Leonov, one of the most gifted Soviet writers, dramatized in "Wolf" (*Volk*) the conflict between old and new type Russians. Among the plays of the lighter type, the humorous and lyrical "Fairytale" (*Skazka*), by M. Svetlov, was a great success.

Poetry. Among the year's best poetic works was the original, semi-phantastic "Poem of Poets" (*Poema poetov*) by S. Kirsanov. A. Tvardovsky wrote "The Road" (*Doroga*), a volume of short poems which contains pieces of considerable merit.

History. In the rapidly expanding field of historical treaties, monographs, textbooks, etc., there were a number of important items. Only a few can be mentioned here. The Ukrainian Academy of Sciences at Kiev issued the first volume of "A History of the Ukraine" (*Istoria Ukrainy*); it is a detailed and scholarly work. N. Gratziansky issued an interesting volume on "The Middle Ages" (*Srednie Veka*). A concise and informative "Modern History of Colonial and Dependent Nations" (*Novaia istoria zavisimyykh i kolonialnykh stran*) was written by E. Steinberg; it covers India, China, Iran, Afghanistan, and Turkey.

Emigré Literature. Besides the Soviet Union, Russian literature lives also in exile. During and after the Bolshevik revolution of 1917-18, quite

a few outstanding Russian writers fled from Russia, settled in Paris, Berlin, etc., and continued to write in their native tongue. In 1939, I. Bunin, the winner of the 1933 Nobel Prize in Literature, issued the second volume of "Arseniev's Life" (*Zhizn Arsenieva*; Brussels); it is a brilliant autobiographical novel and a highly impressive panorama of pre-revolutionary Russia. M. Aldanov wrote "The Beginning of the End" (*Nachalo kontsa*; Paris), a subtle and witty "international novel" in which Soviet diplomats, French politicians and writers, and international adventurers pass in a colorful procession. From D. Merezhkovsky's pen came a two-volume life of Dante (*Dante*; Brussels).

ALEXANDER NAZAROFF.

RUSSIAN ORTHODOX CHURCH IN AMERICA. See RELIGIOUS ORGANIZATIONS.

RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC. The largest of the 11 constituent republics of the U.S.S.R. It comprises the northern and western part of the country from the western border to the Pacific. The subdivisions of the republic are:

(1) Territories: Altai, Khabarovsk, Krasnodar, Krasnoyarsk, Maritime, Orjoniokidze; (2) Regions: Archangel, Chelyabinsk, Chita, Chkalov, Gorki, Irkutsk, Ivanovo, Kalinin, Kirov, Kuibyshev, Kursk, Leningrad, Moscow, Murman, Novosibirsk, Omsk, Oriol, Penza, Perm, Rostov, Ryazan, Saratov, Smolensk, Stalingrad, Sverdlovsk, Tambov, Tula, Volgoda, Voronezh, Yaroslavl; (3) Autonomous Regions: Adighey, Circassian, Jewish, Kakas, Karachayev, Oiroi; (4) Autonomous Soviet Socialist Republics: Bashkirian, Buryat-Mongolian, Chechen-Ingush, Chuvash, Crimean, Daghestan, Kabardino-Balkarian, Kalmyk, Karelian, Komi, Mari, Mordovian, North Ossetian, Tatar, Udmurt, Volga German, Yakut.

Total area, 6,375,000 square miles (78 per cent of the Soviet Union); total population (1939), 109,278,614. Chief cities (with 1936 populations): Moscow (capital), 3,641,500; Leningrad, 2,739,800; Gorki, 522,000; Rostov-on-Don, 479,400; Sverdlovsk, 450,000. There were, in 1937-38, 7,830,200 students in elementary schools, 12,037,600 students in secondary and technical schools, and 356,500 students in universities and colleges.

Production, etc. The republic produces about 70 per cent of the industrial output of the Soviet Union. In 1937 the grain crop (wheat, rye, maize, oats, buckwheat, barley, millet, etc.) amounted to 81,700,000 tons. Sugar beets, cotton, flax, and hemp are other agricultural products. Minerals produced include coal (50,000,000 tons in 1937), iron, gold, nickel, potassium, and other minerals. See UNION OF SOVIET SOCIALIST REPUBLICS.

RUTGERS UNIVERSITY. A nonsectarian institution for higher learning in New Brunswick, N. J., founded under the name of Queen's College in 1766. The University consists of the following schools and colleges: Arts and sciences, engineering, agriculture, pharmacy, chemistry, education, ceramics, New Jersey College for Women, and University College. The registration for the autumn of 1939 was 3569, of whom 985 were enrolled in the college for women. The 1939 Summer Session enrollment was 1104. Of the 426 members of the faculty, 283 were professors and 112 instructors. The endowment funds amounted to \$5,176,205 and the income for the year, exclusive of the State agricultural experiment station, was \$3,611,737. The library contained 291,508 catalogued books, 20,000 uncatalogued books, and many thousand unbound items. President, Robert C. Clothier, LL.D.

RUTHENIA. See CZECHO-SLOVAKIA.

RYE. The rye crop of the United States in

1939 of 39,249,000 bu. was 29 per cent below the large 1938 crop of 55,564,000 but 8 per cent above the 1928-37 average production. The current reduction was due largely to much smaller crops in six north-central States accounting for two-thirds of the United States rye production. The 3,811,000 acres of rye harvested for grain represented 53 per cent of the total acreage sown for all purposes versus 4,021,000 acres and 60 per cent in 1938. Acre yields averaged 10.3 bu. in 1939 and 13.8 bu. in 1938. Major rye States were Minnesota with 7,350,000 bu., North Dakota 7,106,000, South Dakota 4,752,000, Nebraska 3,568,000, Wisconsin 2,380,000, Indiana 1,608,000, and Ohio 1,232,000 bu. The season average price per bushel received by farmers was 40 8¢ and the value of production was estimated at \$16,028,000 in 1939 compared to 33.8¢ and \$18,788,000 in 1938. World rye production, as estimated by the International Institute of Agriculture, would total 1,066,000,000 bu. excluding the crop of the U.S.S.R., compared to the 1938 crop of 1,072,000,000 bu. See *Crop Production in 1939* under AGRICULTURE.

SAFETY COUNCIL, NATIONAL. A cooperative association, devoted to the conservation of human life through a continuous campaign of accident prevention in industry, on the highway, in the home, and elsewhere. In 1939 there were more than 5000 members, including corporations, firms, individuals, public officials, schools, chambers of commerce, clubs, civic organizations. About 70 per cent of the members were industrial concerns. Affiliated with the national organization were 51 local councils in as many communities throughout the United States.

During recent years the Council's activities laid especial emphasis on the highway accident problem. The Council reports a lower total of traffic accident fatalities for 1938 than for any of the preceding four years. Nine months' reports indicate a still lower total for 1939.

The Eighth Annual National Traffic Safety Contest was conducted, in which 1230 municipalities in 48 States participated.

The Council publishes the *National Safety News* and *The Industrial Supervisor* for industry; *Public Safety*, a magazine that treats all phases of the automobile traffic accident problem, for public officials, police chiefs, etc.; *Safety Education* for schools; *The Safe Worker* and *The Safe Driver* for industrial employees. It also issues Safe Practices and Health Practices Pamphlets for industry. The 28th National Safety Congress was held in Atlantic City, N. J., Oct. 16-20, 1939. Managing Director and Secretary, W. H. Cameron. National Safety Council Offices: Civic Opera Building, 20 North Wacker Drive, Chicago, Ill.

SAFETY GLASS. See GLASS.

SAGHALIEN. See SAKHALIN; KARAFUTO. **ST. CHRISTOPHER-NEVIS.** See LEEWARD ISLANDS, BRITISH.

ST. HELENA. A British colony in the South Atlantic, consisting of the islands of St. Helena (47 sq. mi.) and its dependency—Ascension (34 sq. mi.). Estimated population (Jan. 1, 1939), 4633 including 159 on Ascension. Capital, James-

town (1381 inhabitants in 1931). By Letters Patent of Jan. 12, 1938, the islands of Tristan da Cunha, Nightingale, Inaccessible, and Gough were made dependencies of St. Helena. The principal products are New Zealand hemp, lily bulbs, and tow. In 1938, imports were valued at £37,613 and exports (including re-exports) at £8714; revenue amounted to £26,912 and expenditure to £29,930. The colony is administered by a governor (who makes all ordinances) assisted by an executive council. Governor, Henry G. Pilling (appointed June, 1937).

ST. JOHN'S COLLEGE. A college of liberal arts and sciences for men in Annapolis, Md., founded as King William's School in 1696. The enrollment for the first half year of 1939-40 was 124. There were 29 faculty members. The income for the year 1939 was \$206,198. The library contained 33,627 volumes. President, Stringfellow Barr.

ST. KITTS. Same as St. Christopher. See **LEEWARD ISLANDS, BRITISH.**

ST. LAWRENCE UNIVERSITY. An institution for the higher education of men and women at Canton, N. Y., founded in 1856. The registration for the autumn term of 1939 was 746. For the summer session of 1939, 278. The faculty numbered 68 members. The endowment funds amounted to \$5,334,454 and the income for the year was \$457,864. The law school of the University is located in Brooklyn, N. Y. Its enrollment for the autumn term of 1939 was 1008. The library contained approximately 68,000 volumes. President, Laurens Hickok Seelye, M.A., LL.D.

ST. LUCIA. A British island colony in the Windward Islands group of the West Indies. Area, 233 square miles; population (1939 estimate), 69,084. Chief towns: Castries, the capital, 12,000 inhabitants in 1938 (the port of Castries has one of the best harbors in the West Indies); Soufrière, 7309 inhabitants. The principal products are sugar, copra, limes, cacao, and bananas. The 1939 sugar crop was estimated at 8350 tons. In 1938 imports totaled £189,303; exports, £135,313; public revenue, £88,511; expenditure, £105,205; public debt, £102,276. Revenue in 1939 was estimated at £82,371; expenditure, £95,498. An administrator (under the governor of the Windward Islands) governs the colony, assisted by an executive council. The legislative council consists of the governor of the Windward Islands, 3 ex officio members, 3 nominated members, and 5 elected members. Administrator, Arthur Alban Wright (appointed June 10, 1938).

ST. PIERRE AND MIQUELON, mīk'ē-lōn'. The main islands in two small groups, near the south shore of Newfoundland, owned by France. Area of St. Pierre group, 10 square miles; Miquelon group, 83 square miles. Total population (1939 estimate), 4000. Capital, St. Pierre. Cod fishing is the principal industry. In 1937 imports were valued at 19,771,000 francs; exports, 14,585,000. The budget for 1938 was balanced at 10,371,900 francs (franc averaged \$0.0405 in 1937 and \$0.0288 in 1938). The islands are under an administrator who is assisted by a council of administration made up of government officials and seven members elected by popular vote.

ST. THOMAS. See SÃO THOMÉ AND PRINCEPE; VIRGIN ISLANDS.

ST. VINCENT. A British island colony in the Windward Islands of the West Indies. Area, 150.3 square miles; population (1938 estimate), 57,586, compared with 47,961 (1931 census).

Kingstown (capital) had 4269 inhabitants (1931). On Dec. 31, 1937, there were 10,457 pupils enrolled in the 37 primary schools and 151 pupils in the 2 secondary schools.

Arrowroot, sirup, sugar, coconuts, sweet potatoes, cotton, cassava, and plantains are the chief products. The 1939 production of arrowroot starch totaled 38,611 bbl., as against 38,962 in 1938. In 1938, imports aggregated £198,786; exports, £210,642; public revenue, £102,016; expenditure, £96,762; public debt, £95,390. St. Vincent is under the governor of the Windward Islands but has its own executive and legislative councils. The islands of the Lesser Grenadines are administered from St. Vincent. Administrator, Maj. William Bain Gray (appointed July 2, 1938).

SAITO, HIROSHI. A Japanese diplomat, died in Washington, D. C., Feb. 26, 1939. Born in Gifu, Japan, Dec. 24, 1886, he was educated at the Peers College (1904-07) and at the Tokyo Imperial University (1907-10). Entering the diplomatic service, he was appointed attaché at Washington in 1911 and shortly after, 3d secretary. In 1917 he was transferred to the London Embassy until 1921, when he was named consul at Seattle, Wash. Consul general in New York City during 1923-28, he then returned to Japan to head the bureau of information of the Foreign Office. He returned to London as counselor in 1931, and in 1932 went to Washington as chargé d'affaires. In 1933, Saito was appointed Japanese minister to The Hague to negotiate an arbitration treaty with The Netherlands.

In the following year he was appointed Ambassador to the United States, which office he held until the fall of 1938 when he retired because of ill health. Mr. Saito served his country in America during the difficult days of rapidly growing anti-Japanese feeling, which reached a peak by the sinking of the *Panay* in December, 1937, by Japan. His conduct was unprecedented when he expressed his Government's regret over the *Panay* on a commercial radio-broadcast. Held in high esteem by the American Government, his ashes were sent to Japan on a cruiser.

Mr. Saito represented his country at the Paris Peace Conference (1919), the 1st Assembly of the League of Nations (1920), at the Washington Naval Conference (1921-22), the London Naval Conference (1930), the Disarmament Conference, Geneva (1931-33), the Assembly of the League of Nations, Geneva (1931-33), and the Economic Conference at London (1933). He was the author of a *Life of Ramsey MacDonald* (1931) and *Japan's Policies and Purposes* (1935).

SAKHALIN, sā'kà-lēn'. An island off the east coast of Siberia. Area, about 29,800 square miles; population, about 400,000. The area north of 50° N. is a district of the Far Eastern Territory of Soviet Russia and consists of 15,826 square miles with a population (1933) of 69,000. Fish, oil, and lumber are the principal products of the Soviet section. Aleksandrovsk-on-Sakhalin (8100 inhabitants) is the capital. For the Japanese part of the island, see **KARAFUTO.**

SALVADOR, EL, ēl sāl'vā-dōr'. A republic of Central America. Capital, San Salvador.

Area and Population. The smallest and most densely populated of the Central American states, El Salvador has an area of 13,176 square miles and a population estimated at 1,704,000 on Jan. 1, 1939 (1,549,000 at the 1933 census). Indians and mestizos constitute the vast bulk of the population, but the small ruling class is largely of Spanish descent.

Living births in 1938 numbered 70,608 (41.9 per 1000); deaths, 29,461 (17.5 per 1000); marriages, 6050 (3.6 per 1000). Population of the chief cities: San Salvador, 102,316 (1937); Santa Ana, 83,302; San Miguel, 44,793; Santa Tecla, 33,331; Ahuachapán, 31,245; San Vicente, 28,760; Zatecoluca, 26,676; Sonsonate, 21,138.

Education and Religion. Illiteracy remains widespread, although elementary education is nominally free and compulsory. For school enrollment, see 1938 YEAR BOOK, page 665. Roman Catholicism is the dominant religion.

Production. Coffee accounts for more than 90 per cent of the value of all exports. Production in the 1938-39 season totaled 60,000 metric tons (51,200 in 1937-38). The rice harvest in 1937 was 11,400 metric tons; cane sugar, 30,100 metric tons; beer production, 396,256 gal. Forests yield indigo and cabinet woods. Cattle and hog raising are important industries.

Foreign Trade. In 1938 imports were valued at \$9,147,000 (in U.S. currency) and exports at \$10,935,000 (1937 imports were \$9,982,000; exports, \$15,516,000). The principal export was coffee. The exports (valued in American dollars) were distributed chiefly as follows: United States, \$6,755,000; Germany, \$1,074,000. Of the imports, the United States supplied \$4,275,000; Germany, \$1,926,000; United Kingdom, \$833,000; Italy, \$480,000. See IMPORTS AND EXPORTS.

Finance. Actual returns of budgetary operations for the fiscal year ended June 30, 1939, placed ordinary revenues at 16,727,000 colones and ordinary expenditures at 17,283,000 colones. For 1939-40, total budget estimates placed revenues at 24,267,000 colones and expenditures at 24,258,000 colones. Beginning Jan. 1, 1940, budgets were to be computed on a calendar-year basis. The public debt on Aug. 31, 1939, was 40,026,000 colones, of which 35,382,000 was external and 4,644,000 internal. The unit of currency is the colon, the exchange value of which remained practically stable at 2.50 to the U.S. dollar during 1939 and several preceding years.

Transportation. At the beginning of 1939 there were 375 miles of railway line; and 3648 miles of highway (see ROADS AND STREETS). By the end of 1939, the Pan-American highway was completed from the Guatemalan border through Santa Ana and San Salvador to the town of Cojutepeque, a distance of 87 miles and grading of the same road was carried out from Cojutepeque to a point within two miles of San Miguel. Air lines connected the capital with Tegucigalpa, Guatemala City and all points on the inter-American air network. In 1937, 740 vessels entered the three chief ports—La Unión, La Libertad, and Acajutla.

History. Despite widespread opposition to extension of the term of office of President Maximiliano H. Martínez (see 1938 YEAR BOOK, p. 666), he was re-elected on Jan. 21, 1939, by the Constituent Assembly for the term ending Jan. 1, 1945, and was inaugurated March 1. General Martínez had seized power by a *coup d'état* Dec. 2, 1931, and was re-elected by a hand-picked Congress in 1932 and 1935.

Provision for extension of the Presidential term from four to six years and for continuance of General Martínez in office was made in the new Constitution drafted by the Constituent Assembly, which met on Nov. 20, 1938 and approved the text of the new fundamental law on Jan. 20, 1939. The new Constitution provided that the President was to be elected for only one term by popular suffrage,

but stipulated that the incumbent for the first presidential term was to be chosen by the Constituent Assembly and the no-re-election provision waived on this occasion.

The adoption of constitutional measures giving the President greatly increased dictatorial powers and the extension of his term of office provoked an abortive revolt late in January, but it was easily suppressed with the arrest of the ringleaders. (For a detailed summary of the Constitution, see *Bulletin of the Pan American Union*, June, 1939, p. 353 f.) Among measures enacted under the new Constitution were a press law restricting the editing and publishing of all publications, except scientific ones, to native-born Salvadoreans; forbidding circulation of various other publications; denying admittance to persons expelled from other countries; and providing for Presidential appointment of all mayors, who were formerly elected by popular vote of municipalities.

In a speech of March 1 to the National Assembly, President Martínez summarized the accomplishments of his regime as follows: Punctual payment of civil servants; rehabilitation of the national finances without recourse to foreign loans; suppression of parties "with destructive tendencies"; reduction of interest rates; stimulation of public works; more efficient and honest management of public funds; extension of education; and reduction of the public debt. However the country was adversely affected by the outbreak of the European War in September. Prices rose and import duties produced markedly less revenue. The government established an Economic Consultative Board to watch prices and prevent profiteering. Exports of specified commodities were restricted to surpluses to curb price rises. The government was also authorized to import cotton, construction materials and other supplies needed to support domestic industry.

The war produced a noticeable switch of Salvador's trade from German and other European markets to the United States and a decline in German influence. A number of government contracts were transferred from German to United States firms. Col. Eberhardt Bohnstedt, German director of Salvador's Military College, resigned on September 6 and was succeeded by a Chilean. Salvador's resignation from the League of Nations became effective July 21, 1939.

See GUATEMALA and NICARAGUA under *History*.
SALVATION ARMY, THE. A world-wide organization with international headquarters at 101 Queen Victoria St., London, England, whose purpose is the salvation of mankind from all forms of distress—spiritual, moral, temporal. The movement was first organized as The Christian Mission in the East End of London in 1865 by William Booth, and, in 1880, was extended to the United States. The government is military in character with General George L. Carpenter as international head. The doctrine of The Salvation Army is a simple evangelical creed based on the Methodism from whence it came. It does not concern itself with fine theological differences, but bases its activities on the belief that "They serve God best who serve their fellow-men."

The Salvation Army is now active in 97 countries and colonies, carrying on its work in 104 languages. There were in its service in 1938, 27,417 officers and cadets; 11,003 persons without rank wholly employed; 160,203 honorary local officers and bandmen; 84,961 songsters; 34,-

219 corps cadets; and 17,816 corps and outposts in operation. Social welfare institutions and agencies numbered 1684, free day schools 1132, and Naval and Military Homes 35. It published 126 periodicals, with a total average circulation of 1,441,783 copies per issue.

There were in the United States in 1938, 1631 corps and outposts, 4 Training Colleges, 4787 officers and cadets, and 37,500 honorary local officers and bandsmen. Converts during the year numbered 74,235. Social Welfare institutions included 120 men's hotels and 17 residential hotels for young women, accommodating a total of 11-120. Men's Social Service Centers numbered 107 with accommodation for 4735; 9 children's homes and hospitals with accommodations for 848; 36 women's homes and hospitals with accommodations for 2147; and 2 dispensaries which treated 19,564. At Thanksgiving and Christmas free dinners were given to 446,467 persons and toys to 374,270 children. During 1938, 4595 prisoners on discharge were assisted by The Salvation Army; 97,908 mothers and children were given summer outings; 76,930 men and women were given employment through the Army's free employment bureaus; and 903 missing persons found.

The National Headquarters of The Salvation Army in the United States are at 120 West 14th Street, New York City. National Secretary, Commissioner Edward J. Parker.

SAMOA. A group of 14 islands in the Southern Pacific, about 4000 miles southwest of San Francisco. The islands of the group east of 171° W. longitude belong to the United States; those west of that line are administered by New Zealand under a mandate of the League of Nations.

American Samoa. American Samoa comprises the islands of Tutuila, Tau, Olosega, Ofu, Annuu, and Rose Island. Swains Island is included in the administrative district of American Samoa. The total area is 76 square miles and the estimated population on July 1, 1939, was 12,785, mostly Polynesians and half-castes. The Naval Station at Pago Pago is the seat of government. The population of the town was approximately 1000. The harbor is one of the best in the South Seas. The average school enrollment in 1938-39 was 3260. Instruction is in English. Copra produced and exported in the fiscal year 1938-39 was 1401 tons valued at \$55,324. The value of imports during the same year was \$194,138; exports, \$102,818. Governmental revenues in 1938-39 were \$106,231; expenditures, \$127,317. The islands are under the jurisdiction of the U.S. Navy Department and are administered by the commandant of the naval station at Pago Pago. There is a native advisory council called the Fono, which meets annually. Governor in 1939, Capt. Edward W. Hanson, U.S. Navy (assumed office, June 4, 1938).

Western Samoa. The islands under New Zealand's control are officially known as the Territory of Western Samoa. Area, 1133 square miles. Apia, on Upolu, is the chief harbor and seat of government. The population at the census of Apr. 1, 1938, was 57,759 (Samoan natives, 54,160; Europeans, 397; half-castes, 2770; others, 432). The natives are Christians. The 1938 school enrollment was over 1700. The chief products, with 1938 export figures, are: Copra, 11,241 tons, (£103,529); cacao, 1647 tons (£59,699); bananas, 205,815 cases (£77,143). Imports in 1938 totaled £196,272; exports, £248,605. Governmental revenues and expenditures for the fiscal year ended

Mar. 31, 1938, £139,450 and £139,070, respectively. There were 183 miles of roads in 1939. Ninety-five vessels of 115,048 tons entered the chief port, Apia, in 1937. Regular shipping services connect the port with Fiji and New Zealand. Acting Administrator in 1939, A. C. Turnbull. Viscount Galway, the Governor-General of New Zealand, and Lady Galway visited Western Samoa in August, 1939, and were warmly welcomed by a mass meeting of 5000 natives.

SAN FRANCISCO. See CALIFORNIA; MUNICIPAL OWNERSHIP.

SANITATION. See GARBAGE AND REFUSE DISPOSAL; SEWERAGE AND SEWAGE PURIFICATION; WATERWORKS AND WATER TREATMENT.

SAN MARINO, *sän mā-rē'nō.* An independent republic near the town of Rimini, encircled by Italian territory. Area, 38 square miles; population (September, 1938), 14,389. Capital, San Marino (2000 inhabitants). Cattle, wine, and building stone are the chief exports. The financial estimates for 1938-39 balanced at 5,474,673 lire (lire averaged \$0.0526 in 1938). Legislative power is vested in a grand council of 60 members from whom two are appointed every six months to act as regents.

SANTA CRUZ DE TENERIFE. See CANARY ISLANDS.

SANTO DOMINGO. See DOMINICAN REPUBLIC.

SÃO THOMÉ (*soun'tō-mā')* **AND PRINCIPE,** *prên'sē-pē.* Two islands in the Gulf of Guinea, West Africa, belonging to Portugal. Area, 384 square miles; population (1936), 59,000. São Thomé (capital) had 3187 inhabitants. The chief products are coffee, cacao, coconuts, palm oil, and cinchona. In 1937 imports totaled 20,500,000 escudos; exports, 46,400,000. The budget (1938) was balanced at 12,073,226 escudos. (Escudo averaged \$0.0443 in 1938 and \$0.0448 in 1937). In 1937 there were 169 miles of roads. The colony is administered by a governor.

SARAWAK, *sā-rā'wāk.* An independent state in northwest Borneo, under British protection. Area, 50,000 square miles; population (1938 estimate), 600,000. Kuching, the capital, had 25,000 inhabitants in 1931. The chief products are rubber (28,000 metric tons in Sarawak and North Borneo, 1938); sago; pepper; rice (163,000 metric tons, 1938); petroleum; gold (18,520 fine oz., 1938); jelutong and cutch. In 1938 public revenue (in Sarawak or Straits Settlements dollars) totaled \$4,261,899; expenditure, \$4,272,140; imports, \$22,371,939; exports, \$26,135,097. (Straits \$ averaged \$0.5692 in 1938). Rajah, Sir Charles Vyner Brooke (succeeded, 1917).

A contribution of £110,000 to Great Britain's war chest was made by the Rajah of Sarawak in October, 1939.

SARGENT, JOHN GARIBALDI. American lawyer, died in Ludlow, Vt., Mar. 5, 1939, where he was born, Oct. 13, 1860. Graduated from Tufts College in 1887, he read law with William W. Stickney and was admitted to the bar in 1890, subsequently becoming a member of the firm of Stickney, Sargent & Skeels. Entering politics, Sargent was elected State's attorney for Windsor County, Vt., in 1898, and was thereafter secretary of civil and military affairs (1900-02), and attorney general (1908-12). He returned to the practice of law, and in 1925 President Calvin Coolidge appointed him attorney general of the United States, where he served until 1929. Thereafter he was a member of Stickney, Sargent &

Chase, and president of the Ludlow Saving Bank and Trust Co. In April, 1935, Mr. Sargent was appointed a referee in the reorganization of the railroads, and in that year also took the presidency of the Calvin Coolidge Memorial Corporation.

An expert in corporation law, Mr. Sargent had appeared before the U.S. Supreme Court as representative of Vermont in a boundary dispute with New Hampshire, and had served at one time as chairman of the Vermont Commission on Uniform Laws. He was an opponent of woman suffrage, and while attorney general fought for the enforcement of the 18th Amendment.

SASKATCHEWAN, sās-käch'ê-wōn. A prairie province in western Canada. Area, 251,700 square miles; population (1939 estimate), 949,000 compared with 930,893 (1936 census). During 1938 there were 18,162 births (19.3 per 1000); 6060 deaths (6.4 per 1000); 5857 marriages (6.2 per 1000). Chief cities (with 1936 census figures in parentheses): Regina, the capital (53,354); Saskatoon (41,734); Moose Jaw (19,805); Prince Albert (11,049); Swift Current (5074). In 1937 there were 237,260 students enrolled in schools of all kinds, including 5162 in the colleges and universities.

Production. The gross value of agricultural production for 1938 was \$136,471,000 of which field crops accounted for \$118,303,000; farm animals, \$12,662,000; dairy products, \$15,669,000; poultry products, \$5,872,000. Livestock (1939): 800,100 horses; 1,170,200 cattle including milch cows; 341,000 sheep; 470,000 swine. Fur production for the year ended June 30, 1937, totaled 1,839,203 pelts valued at \$1,327,116. The 1937 output of the forests equaled 79,627 M cu. ft. valued at \$2,099,475. In 1938 the fisheries catch was valued at \$473,600.

Mineral production (1938) was valued at \$7,782,847, of which gold (50,021 fine oz.) accounted for \$1,759,489; copper (18,156,157 lb.), \$1,810,532; zinc (29,962,597 lb.), \$920,751; coal (1,022,166 tons), \$1,380,416; sodium sulphate (62,920 tons), \$552,180; silver (898,413 fine oz.), \$390,603. In 1937, from the 689 manufacturing plants, with a total of 6107 employees, the net value of products was \$17,068,655 (\$15,185,500 in 1936).

Government. For the year ended Apr. 30, 1939, revenue was \$20,958,913; expenditure, \$21,342,013; the bonded debt (exclusive of treasury bills—\$82,637,576) totaled \$123,800,273. Estimates (1939-40): revenue, \$23,325,439; expenditure, \$23,656,200.

The government is vested in a lieutenant-governor, advised by a ministry of nine members who also are members of the legislative assembly of 52 members elected for a term of five years by popular vote of the people. The number of members in the legislative assembly was reduced from 55 to 52 by a redistribution bill of March, 1938. At the provincial general election of June 8, 1938, the standing of the parties in the legislative assembly was: Liberal, 36; Co-operative Commonwealth Federation, 10; Social Credit, 2; Independent, 2. In the Canadian parliament, the province is represented by 6 members in the Senate (appointed for life) and 21 members in the House of Commons. Lieutenant-Governor, A. P. McNab (appointed Oct. 1, 1936); Premier, W. J. Patterson (Liberal).

SAXONY. See GERMANY.

SCANDINAVIAN LITERATURE. Danish. Fiction. Johannes Buchholtz in *Vanda Venzel* relates how a Copenhagen girl succeeds in attaining happiness and spreading joy around her although she began life with a handicap. The action of *Barbara*, Jørgen-Frantz Jacobsen's posthumous novel, takes place on the Faroe Islands about the middle of the eighteenth century. The work is outstanding for its intensely dramatic action, its vivid descriptions of primitive nature, and its interesting portrayal of old Faroe customs. Hans Kirk's *De ny Tider* (The New Age) shows how social and economic changes influence life in a post-war community. The story is well told. Even the happenings of everyday existence are invested with a certain charm. The third volume of Knuth Becker's *Uroligt Foraar* (Restless Springtime) maintains the same epic tone and realistic character delineation as the earlier volumes mentioned in last year's article. Aase Hansen shows especially good understanding of feminine psychology in *Drømmen om i Gaar* (The Dream about Yesterday) when she has the main character tell the sad story of her life to a former classmate. Gunnar Gunnarsson departed this year from his usual epic style. His *Trylle* (Charming) is a volume of three short tales which picture the interaction of human and animal life in a direct and pleasing way.

Miscellany. Recently the scientist Aage Krarup Nielsen visited several South Sea Islands. In *Aloha* he gives interesting and life-like accounts of the peculiar people and quaint traditions of these islands. Often these accounts are supplemented with enlightening historical sketches. *Ira Frisaterne* (From The Free States), by Johannes V. Jensen, is an accurate and interesting description of present-day life in the United States. It is based largely on Jensen's latest visit to this country. Martin Andersen-Nexø continued his autobiography in *Vejs Ende* (The End of the Road), which relates his experiences as a university student and later as a teacher and writer.

Norwegian. Fiction. In *Fortid* (The Past) Peter Egge shows how a person's past can become a force strong enough to threaten his happiness. Lars Berg's new book, *Og landet tog till å leve* (And the Country Began to Live), portrays the struggle between the communistic and the democratic-capitalistic ideologies. The hero is a man who although born in poverty attains a position of leadership and succeeds in being elected as a representative of the communistic party in the *Storting*. Most of the action of *Gøsta Hammerlund's Møte med fru Brontze* (Meeting Fru Brontze) takes place on a Norwegian steamer which carries passengers from Dieppe to the Canary Islands. The author seems to transport the reader into a miniature world. He absorbs and reproduces the atmosphere of the southern countries and identifies himself with his characters. Sigrid Undset went to the latter part of the eighteenth century for the material for *Madame Dorethea*, a creative work of rare epic power and, at the same time, a faithful picture of Norwegian culture at that period.

Miscellany. Already the armed conflict of Europe has become the subject of serious treatment. In *Nordens insats* (The Contribution of Scandinavia), Eivind Berggrav asks, What should be the attitude of the Scandinavian countries? His answer is that they should observe a strict neutrality, refrain from passing judgments, mitigate the evil effects of the war, and

prepare for active co-operation in the eventual rebuilding of a post-war Europe. In *Mennesket søker fotfeste* (Man Seeks a Foothold), Ragnar Vold attributes the present crisis to wrong attitudes. He maintains that success is not the chief criterion of cultural values and that the misery or happiness of a country does not depend on its use of this or that "system." The extreme northern part of Norway, Finnmark, with its romantic nature and its interesting people has often appealed to Scandinavian writers. This year Lillian Bye wrote *Finner i Finnmark* (Finns in Finnmark) and Mona Beichmann, *Forunderlige Finnmark* (Wonderful Finnmark).

Swedish. Poetry. In *Gamla gudar* (Ancient Gods) Bo Bergman expresses an ardent love for liberty and a strong hatred for its enemies. Einar Malm's *Pejlingar* (Soundings), a lyric journal, expresses emotions of different kinds, often that of restlessness and inward struggle. The soul's inward discord is a recurrent theme also in Johannes Edfelt's *Vintern är lång* (The Winter is Long). This collection of poems is characterized by a highly individual diction, a strong musical quality, and a picturesque use of metaphors.

Fiction. In *Stop! Tänk på något annat* (Stop! Think of Something Else) Olle Hedberg gives expression to a gloomy yet not hopeless philosophy of life. Although he fails to find any order or logic in the universe, he contends that man need not be bound by this lack of logic but can invest life with a meaning. The pessimistic note is more pronounced in Irja Browallius' *Två slår den tredje* (Two Strike the Third One), a cheerless, yet powerful description of peasant life. In *Giv oss jorden* (Give Us the Earth), Vilhelm Moberg completed the story of Knut Topping which he began a few years ago in *Sänkt sedebetyg* (see NEW INTERNATIONAL YEAR BOOK, 1935). In the new volume he treats the problem of finding peace and happiness on earth. Martin Koch, the literary champion of the working man, broke his silence of nearly 20 years with *Mauritz*, a series of sketches portraying scenes from the author's own childhood and youth. Ivar Thor's *I ditt anletes svett* (In the Sweat of Thy Brow), gives a clear and delightful insight into modern farm life as it has developed under new economic and industrial conditions. Sigfrid Siwertz' *Jag fattig syndig* (I Poor Sinner) is a collection of short stories told in the first person.

Criticism. In his work on *Bertil Malmberg*, Alf Ahlberg differs somewhat from earlier critics in his interpretation of the poet. Among other things, he stresses the essential continuity of Malmberg's authorship. In *Carl Linnaeus*, Knut Hagberg shows a clear understanding of the great botanist not only as a scientist, but also as a man and a poet.

SCHOOLS. See EDUCATION; sections on Education under the States and countries and articles on various institutions. Also, see ARCHITECTURE.

SCHOOLS, ELEMENTARY AND SECONDARY. The U.S. Office of Education estimated that about 21,750,000 pupils were enrolled in the elementary schools of the United States in September, 1939, and about 7,200,000 in high schools. About 2,060,000 entered the first grade for the first time, of whom 650,000 had attended kindergartens and 50,000 had attended nursery schools. The annual cost for education throughout the

country was estimated at \$1,300,000,000 for elementary schools and kindergartens and \$800,000,000 for high schools. The average school term is 181 days in cities and 163 days in rural communities. Teachers' salaries average \$1,818 in urban areas, as compared with \$827 in rural areas. There are still 124,000 one-teacher schools throughout the country, enrolling 2,725,000 pupils, but these schools are being eliminated at the rate of 2,000 a year.

Although the number of high schools has increased from 16,300 in 1918 to 25,600 in 1936, only 7 of every 10 persons of high-school age are enrolled in school. Of the more than seven million enrolled, about 400,000 are attending private secondary schools and about 40,000 are enrolled in high-school postgraduate classes. More than 200 different subjects are offered in the high schools of today. The typical student takes during his high-school career one or more courses in English, social science (including history), science, commercial work, physical education, home economics (for girls), agricultural or industrial work (for boys), and probably mathematics. Of the 1,110,000 high school graduates of 1939, about 400,000 entered college.

The latest final statistics for the United States school system were issued for the year 1936. In that year the public schools enrolled 26,367,098 pupils or 83.6 per cent of all persons of school age (5 to 17 years). Average daily attendance was 22,298,767; average session, 173 days. There were 870,963 teachers (179,073 men and 691,890 women), who worked for an average annual salary of \$1,283. The cost of public school education for that school year was \$1,968,898,000, about \$75 per pupil. Private elementary and secondary schools expended an additional \$168,590,000 and reported enrollments as follows: elementary and kindergarten, 2,263,357; high school, 387,309. In addition, there were 42,035 students in college preparatory schools and 21,087 secondary students in normal schools. Kindergarten enrollment (public and private) totaled 644,559. Later information is to be found in the articles on the various States in the section entitled *Education*. See also the article on EDUCATION, and the section on *Education* in articles on foreign countries.

The Office of Education estimated that there were about 300 hospital schools in the United States in 1939, offering educational facilities to children who are hospitalized for long periods of time.

SCHWAB, CHARLES M (ICHAEL). An American industrialist, died in New York, Sept. 18, 1939. Born in Williamsburg, Pa., Feb. 18, 1862, he was educated in Loretto, Pa., and at St. Francis' College there. In 1880 he entered the employ of the Carnegie Co., as a stakedriver in the engineering corps of the Edgar Thompson Steel Works, becoming assistant manager in 1887. With the acquisition of the Homestead Steel Works in 1887, he was sent there as superintendent, but two years later was recalled to be general superintendent at Edgar Thompson. During the strike disturbances at Homestead in 1892, Schwab took over the superintendency of that Works too. In 1897 he was elected president of the Carnegie Steel Co., Ltd., and in 1901 he accepted the presidency of the newly formed U.S. Steel Corporation, a merger of the Morgan and Carnegie steel interests.

In 1902, Schwab bought control of a moribund concern, the Bethlehem Steel Co., and in 1903 he

retired from U.S. Steel to devote all his efforts to his newly acquired company. Under his direction it became one of the foremost manufacturers of armor plate for the U.S. Navy, and by 1913 was one of the largest builders of steel ships. In 1914 he secured British, Russian, and French contracts for the building of ships, and when the United States entered the War, Bethlehem Steel prospered. From April to December, 1918, Schwab was director general of shipbuilding of the U.S. Shipping Board Emergency Fleet Corporation. After the armistice he returned to Bethlehem and the Company again entered upon a period of expansion and huge profits were made. In recent years Mr. Schwab had served as chairman of the board of directors of Bethlehem Steel, and several times his ouster was asked at meetings of the stockholders, but after a vote he was retained in that position. The bonus system of the corporation was frequently under fire, but was always defended by Schwab who referred to it as an "incentive" system and one that he had inherited from Carnegie. Bethlehem Steel, which he served for more than 35 years, might well be called his monument.

In 1905 Mr. Schwab built his famous chateau in New York City, in which he housed his many art treasures, a pipe organ and a private chapel. After the death of Mrs. Schwab on Jan. 12, 1939, the residence was put up for sale. Mr. Schwab made many benefactions to the Catholic Church. He succeeded Judge Gary as president of the American Iron and Steel Institute in 1926, and upon his retirement in 1932 received the British Melchett medal "for distinguished service in industry." He was a member of the French Legion of Honor.

SCIENCES, NATIONAL ACADEMY OF. The National Academy of Sciences was incorporated by Act of Congress in 1863 for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art whenever called upon by any department of the United States Government. Membership is by election, in recognition of outstanding achievements in scientific research, and is limited to 350 active members and 50 foreign associates. Members must be citizens of the United States.

At the Annual Meeting held in Washington, D. C., April 24, 25, 26, 1939, fifteen new members were elected, as follows: Gregory Breit, Detlev Wulf Bronk, William Bosworth Castle, Frederick Gardner Cottrell, Frederick Parker Gay, Albert Baird Hastings, Vladimir Nikolae-vich Ipatieff, Merkel Henry Jacobs, Zay Jeffries, Donald Forsha Jones, George Bogdan Kistia-kowsky, Warren Judson Mead, Oscar Riddle, Adolph Hans Schultz, Philip Edward Smith. Three additional foreign associates were elected: Sir Joseph Barcroft, of Cambridge, England; Sir William Bragg, of London; and F. A. Vening Meinesz, of Utrecht, The Netherlands.

Four gold medals were presented at the dinner on Apr. 25, 1939: The Agassiz Medal for Oceanography, to Harald Ulrik Sverdrup, of the Scripps Institution of Oceanography, of the University of California, for his personal oceanographic explorations in Arctic regions and his numerous contributions to physical oceanography and the interrelations between the sea and the atmosphere; the Daniel Giraud Elliot Medal for 1933 and an accompanying honorarium of \$200 to Richard Swann Lull, of the Peabody Museum of Natural History, Yale University, in

recognition of his work entitled: "A Revision of the Ceratopsia or Horned Dinosaurs"; the Daniel Giraud Elliot Medal for 1934 and an accompanying honorarium of \$200 to Theophilus Shickel Painter, of the University of Texas, in recognition of his work on the chromosomes of the salivary glands in *Drosophila* in relation to the problems of mutation and genetics, published in "Genetics" and in the "Journal of Heredity" in 1934; and the John J. Carty Medal and an accompanying honorarium of \$3000 to Sir William Bragg, of The Royal Institution, London, England, in recognition of his fundamental work in X-ray crystal analysis.

The Autumn Meeting was held at Brown University, Providence, Rhode Island, Oct. 23, 24, and 25, 1939. The Academy publishes an Annual Report, Biographical Memoirs of its deceased members, occasional scientific Memoirs, and monthly Proceedings.

The officers of the Academy are: Frank B. Jewett, president; Arthur L. Day, vice-president; L. J. Henderson, foreign secretary; F. E. Wright, home secretary; Arthur Keith, treasurer; Paul Brockett, executive secretary. The Academy building is at 2101 Constitution Avenue, Washington, D. C.

SCOTLAND. See GREAT BRITAIN.

SCULPTURE. Sculpture was given especial prominence both at the New York World's Fair and at the Golden Gate Exposition. In the former the dominant work was a colossal statue of George Washington, approximately 50 feet high and resting on a 12-foot pedestal, by James Earle Fraser. More than sixty works in sculpture adorned the various buildings, thoroughfares, and plazas. As far as possible, these lent emphasis to certain exposition themes. For example, in the transportation zone was "The Spirit of the Wheel" by Rene P. Chambellan and "Riders of the Elements" by Chester Beach, symbols of man's progress in transportation; while in the Court of Communications was placed a work entitled "Speed," by Joseph Renier, a woman astride a winged horse, suggesting the rapidity with which man's thought may be carried around the world today by modern methods. Thirty-five sculptures were produced as commissions given by the New York Fair Corporation. All of these, with the exception of three, were in plaster. "Textiles," by Robert Foster, was made of sheets of steel electrically welded; "The Tree of Life," by Lawrence Tenney Stevens, was carved from the trunk of a huge elm; "The Fountain of the Atom," by Waylande Gregory, consisted of ceramic groups and four large adult figures surrounding a 30-foot shaft of glass brick. The works in plaster were cast by skilled union workmen under the direction of the Fair management. While modern in character, greatly simplified and unrealistic, this sculpture was well adapted to the purpose for which it was created.

On Treasure Island in San Francisco Bay, the dominant work, conveying the theme of the Exposition, was the gigantic statue of "Pacifica," by Ralph Stackpole, which stood 80 feet high. It was both western and eastern in character and stressed the idea that art is ageless. Nearby, encircling a fountain, were smaller statues symbolizing Pacific races, by various sculptors, almost all of whom belonged to the West Coast group.

Sculpture produced under the aegis of the Division of Fine Arts, Public Buildings Administra-

tion, Federal Works Agency, constituted one of the most interesting sections of the exhibition held under these auspices at the Corcoran Gallery of Art in November. Many of the models shown were of works produced for the Federal Building and its surroundings at the New York World's Fair. Others were for Post Offices and other Federal buildings throughout the country. Included in this display was the statue of "The Young Lincoln—Rail Joiner," by Louis Slobodkin which, enlarged to fifteen feet in height and cast in plaster, after being set up in the Garden Court at the New York World's Fair, had been removed by a Fair official because of adverse criticism. This statue had been approved by a professional jury appointed by the Division of Fine Arts, and was later cast in bronze, life-size, at Government expense, and given prominent placement in the building occupied by the Department of the Interior in Washington. As a whole, the Government commissions for sculpture seemed to have brought forth works of exceptional spirit and originality.

The Sculptors' Guild, an off-shoot from the National Sculpture Society and essentially "left-wing," held an open-air exhibition again in 1939, on a vacant lot at Park Avenue and 39th Street in the heart of the business district of New York City.

The Society of Medallists issued to its members two medals: one by Edward McCartan, contrasting differences between life in the Old World and the New; the other by John Gregory, illustrating the last lines of Ceres' Song from "The Tempest."

Two notable competitions for sculpture were held in 1939, one for a statue of Thomas Jefferson to be permanently placed in the Jefferson Memorial under construction in Washington, D. C., and the other for an equestrian statue of Stonewall Jackson to be erected on the battlefield of Manassas, commonly known as "Bull Run." One hundred and one sculptors entered the first competition, which closed June 30, from among whom six were selected to prepare models for re-submission, each receiving \$1000, with the possibility of executing the work. The second stage of this competition closed December 31, with the promise of a decision shortly thereafter. Eighty sculptors entered the Stonewall Jackson competition, of whom Joseph Pollia of New York City was declared the winner. The Jefferson statue competition was under the auspices of the Jefferson Memorial Committee, and that of the Stonewall Jackson commission, under the State of Virginia. Competitors in both instances were registered from all parts of the country.

During 1939, two competitions for sculpture were held by the Division of Fine Arts, and numerous commissions previously given for the decoration of Federal buildings were completed. Under the WPA Federal Art Project 37,000 works were executed, the majority of which were distributed to tax-supported institutions.

Jo Davidson's statue of Walt Whitman, commissioned by W. Averill Harriman, found placement in 1939 in Bear Mountain State Park. A collection of portraits modeled by Jo Davidson of "Loyalist Leaders in Spain" was exhibited in Washington and other cities before the close of the Spanish war to raise money for the Spanish Children's Milk Fund. The statue of William Cooper Proctor, by Ernest Bruce Haswell of Cincinnati, was unveiled on the grounds of the

Proctor and Gamble industrial plant Ivorydale, Ohio.

Lehmbruck's "Kneeling Woman," shown in the famous Armory Show in New York, 1913, came back to this country in 1939 to take up permanent residence here. Discarded from a German Museum as "degenerate art," it was purchased by the Museum of Modern Art, New York.

Two important books on sculpture were published during 1939: *The Sculptor's Way*, by Brenda Putnam, and *Sculpture Inside and Out*, by Malvina Hoffman.

SEISMOLOGY. The Seismological Committee of the British Association initiated, in 1911, the work of collating the records of earthquakes all over the world. The work of computing the epicenters was first undertaken by Milne and on his death H. H. Turner continued it. The determination of the epicenters is based on least square solutions of the recorded times of arrival of P waves at the different stations and now covers accurately the earthquakes recorded in the 20-year period 1913-32. During this period 7940 shocks have had epicenters computed, and these shocks originated in 2865 separate and distinct epicenters. These epicenters are scattered all over the globe, but are much more dense in some regions than in others. Epicenters are especially dense in the Mediterranean region and along the western boundary of the Pacific Ocean and are considerably dense on the eastern boundary of the Pacific. Of the 2865 epicenters, 30 were classed by Turner as shallow focus and 350 as deep focus. The deep focus epicenters are concentrated on the western boundary of the Pacific and appear to be lacking in the Mediterranean region. Miss Bellamy has pointed out from these data the need for a more uniform distribution of seismological stations. While approximately one-third of the recorded earthquakes in this 20-year period occurred in the southern hemisphere, not one-eighth of the existing 500 seismological stations are located in that hemisphere. It is evident that this uneven distribution of stations affects the distribution of recorded epicenters, and it is to be desired that new stations, with the accurate timing now made possible by the wireless broadcast of time signals, should be established in the Southern Hemisphere.

A new seismological station was established at Lincoln, Neb., jointly by the U.S. Coast and Geodetic Survey and the Wesleyan University. Another new seismological station was established near Bogotá, Columbia. It is at a height of about 9000 feet above sea level in the Northern Andes mountains and is thus one of the highest seismological stations in the world. It was made possible by a grant of the Carnegie Corporation of New York to the Jesuit Seismological Association. This new station fills a very noticeable gap in the map of seismological observatories and will supply a definitely seismic area with good observational facilities.

The United States Antarctic Expedition proposes to install a seismograph, if possible on a rock foundation, near the place where the expe-

dition will establish its base. See EARTHQUAKES.

SELIGMAN, sē'lig-man, EDWIN ROBERT ANDERSON. An American economist, died at Lake Placid, N. Y., July 18, 1939. He was born in New York, Apr. 25, 1861, and educated at Columbia University (A.B., 1879). After studying for three years in the universities of Berlin, Heidelberg, Geneva, and Paris, he returned and entered the schools of political economy and law at Columbia (LL.B., 1884; Ph.D., 1885). He then joined the faculty of the University as a lecturer on economics, becoming successively adjunct professor of political economy (1888-91), professor of political economy and finance (1891-1904), McVickar professor of political economy (1904-31), and professor emeritus in residence thereafter.

The cloistered halls of a university, however, were not for him. In 1894 he joined the Committee of 70, which effected a clean-up of municipal politics and elected a reform administration in New York City. Subsequently he was a member of the Committee of 250 and of the Committee of 15. A recognized authority on taxation, he served on many city, state, and national committees, including the Mayor's advisory committee on taxation and finance (1905), a special State Tax Committee (1906), and President Theodore Roosevelt's committee on Statistical Reorganization (1908). During 1905-10 he was chairman of the trustees of the Bureau of Municipal Research and of the Mayor's Tax Committee during 1914-16. Also, he was expert adviser to the Joint Legislative Tax Committee (1919-22) and a member of the N. Y. State Tax Commission (1929-31). During 1918-25 he was adviser to the committee of ways and means of Congress and during 1919-22, a member of the Advisory Committee on the U. S. Census. In 1921 he was a member of the President's Unemployment Conference. Outside the United States his advice was as eagerly sought. He was an expert for the League of Nations Committee on Economics and Finance during 1922-23, and in 1931 he was invited by the Cuban government to make a study of the Cuban fiscal system. His report was considered a model of its kind.

The dean of American economists, Dr. Seligman was one of the founders of the American Economic Association in 1885 and served as its president in 1902-04. He organized the *Political Science Quarterly* in 1886 and was thereafter its editor, and also edited the *Columbia Series in History, Economics and Public Law*, and the 15-volume *Encyclopedia of the Social Sciences*. In 1930 he sold his economics library, valued at \$1,000,000 and which he had collected for 30 years, to Columbia University for half its cost. Dr. Seligman was an opponent of the sales tax and, although admitting its abuses, he favored installment selling. In national affairs he was an ardent advocate of the gold standard and favored cancellation of the war debts.

A prolific writer on economic subjects, his works included *Railway Tariffs and the Interstate Commerce Law* (1887), *Finance Statistics of American Commonwealths* (1889), *The Shift-*

ing and Incidence of Taxation (1892; 5th ed., 1927), *Progressive Taxation in Theory and Practice* (1894; 2d ed., 1908), *Essays in Taxation* (1895; 10th ed., 1925), *Two Chapters on Medieval Guilds of England* (1887), *Economic Interpretation of History* (2d ed., 1937), *Principles of Economics* (1905; 12th ed., 1929), *The Income Tax* (1911; 2d ed., 1914), *Currency Inflation and Public Debts* (1921), *Essays in Economics* (1925), *Studies in Public Finance* (1925), *The Economics of Installment Selling* (1927), *Double Taxation and International Fiscal Cooperation* (1928), *The Economics of Farm Relief* (1929), and *Price Cutting and Price Maintenance* (1932).

The recipient of honorary degrees, Dr. Seligman held membership in many organizations, American and foreign, and served as president of the National Taxation Association (1913-15) and the National Urban League (1912-14), and after 1932 was vice president of the Citizens Budget Commission, New York.

SEWERAGE AND SEWAGE PURIFICATION. Notwithstanding the many communities that, thanks to Federal Aid, have been provided with sewerage systems in the past few years, only a little over half of the 13,000 municipalities that have public water supplies are blessed with sewers to carry away the polluted water from plumbing systems. Of perhaps 7000 cities and towns having sewers the sewage of about 4700 is treated. In many of the communities not all the population has running water and not all of the houses with water-service pipes are connected with the sewers. Moreover, some of the sewage-treatment works serve only a part of the city. Many do not attempt to do more than can be effected by screening or by sedimentation—which in some cases is sufficient. Nevertheless, great progress is being made in this branch of municipal cleansing. (For a detailed summary by States, with number of sewerage systems, purification works, and the many types of treatment, see *Engineering News-Record*, Jan. 19, 1939.)

The largest urban center in the world in which all sewage is treated to a high degree is the Sanitary District of Chicago. On November 6 the district put into use its Southwest activated-sludge plant, with a daily capacity of 400-million gallons. Besides this activated-sludge plant, which is the largest in existence, the district also has two other plants of that type in use. These, with an Imhoff tank installation adjacent to the newest plant, serve an estimated population of 4,684,000, besides industrial wastes equivalent to the sewage of 1,810,000 people. At the new activated-sludge plant the raw sewage is pumped to preliminary settling tanks, then flows to aeration tanks for activation, then to final settling tanks. From the latter the effluent goes to the Chicago Sanitary and Ship Canal and thence through the Des Plaines and Illinois rivers to the Mississippi River. Final sludge is passed through concentration tanks, vacuum filters, disintegrators, and then either blown into incinerators or diverted for

sale as fertilizer. (See article by W. H. Trinkhaus, chief engineer, Sanitary District, *Civil Engineering*, May, 1939.)

At Buffalo, N. Y., a 150-million-gallon partial treatment plant, although put in use in 1938, was fully completed and dedicated on Sept. 12, 1939. Before sedimentation, the sewage is chlorinated for odor control and to protect downstream water supplies. Four incinerators with a daily capacity of 100 tons each have been provided to burn either raw, partly digested, or digested sludge. After flash-drying, the sludge may be applied to the furnaces through nozzles, like powdered coal, or it may be diverted for sale as a fertilizer, as at Chicago. Including a large item for intercepting sewers, the Buffalo project cost \$15,000,000. A large further outlay to rectify the sewerage system, particularly storm drainage, is contemplated. A unique sewage-treatment plant was completed by the city of Niagara Falls, N. Y. Coke-mat filters resting on fine screens remove suspended matter. Chlorine kills bacteria not intercepted by the screens. Sludge is incinerated. The plant is located in Niagara River Gorge. The chimney stack of the incinerator is carried above the level of the banks of the Gorge. (See *Municipal Sanitation*, July, 1939.)

At Cleveland, Ohio, a sewer rental plan to meet operating and maintenance charges of the city's intercepting sewers and three sewage treatment works was being studied by an advisory board of engineers. If adopted, Cleveland will be the largest of many American cities which charge for the use of sewers. Nearing completion in November for Detroit, Mich., was a plant to remove 50 to 60 per cent of suspended solids and to disinfect the effluent. It was designed for a population of 2,400,000, but immense intercepting sewers, a pump house, grit chambers, and effluent outlet conduit are provided for an ultimate population of 4,000,000. After passing through rough screening racks and grit chambers the sewage goes to rectangular settling tanks equipped with mechanism for removing scum and sludge. Nine 600-ton tanks deliver chlorine for disinfection of the effluent from the settling tanks. Before incineration an eighth of the sludge will be pumped to a huge elutriation or washing plant to decrease the quantity of chemicals used to prepare it for reduction in volume by digestion in tanks with floating covers. Gas from the digestors will be used to heat the sludge being digested and to produce gas-engine power. The elutriated and digested sludge, with sludge direct from the settling tanks, will be conditioned with chemicals and then dewatered on rotary cylindrical vacuum filters. The resulting sludge cake, together with screenings, grit, and solids, will be burned in four circular, multiple-hearth incinerators, each with a daily capacity of 300 tons of 70 per cent moisture filter-cake. Waste waters from the elutriation and digestion tanks and the vacuum filters will be returned to the sedimentation tanks for retreatment. The cost of the intercepting sewers and treatment works will be about \$22,635,000. (Condensed from a statement supplied for *THE INTERNATIONAL YEAR BOOK* by G. R. Thomson, city engineer of Detroit. See also article by Thomson and Morrill, *Municipal Sanitation*, November, 1939.)

In continuation of New York City's extensive long-time programme, a 40-million gallon a day plant on Tallman's Island and a 40-million gallon plant on Bowery Bay were put into use; a 65-

million plant on Jamaica Bay was under construction; a 60-million plant for the 26th ward, Brooklyn Borough, was being designed; all are of the activated-sludge type. At Baltimore, Md., the sewage-treatment plant put into use in 1911 has been largely improved in the past few years. The original plant consisted of bar screens and settling tanks, trickling filters, and open-air sludge-drying beds, all but filters being manually cleaned. Additions completed or in progress include mechanically-cleaned bar screens and detritors or grit chambers, sludge digestion tanks; means for the elutriation and vacuum filtration of sludge; and a 20-million gallon activated-sludge plant. (See *Engineering News-Record*, Jan. 5, 1939.)

At Hibbing, Minn., two trickling filters, covered for protection against severe winter conditions, were completed. For structural economy, the beds were made circular in plan and the domes were semi-elliptical shells of reinforced-concrete only $3\frac{1}{2}$ to 6 in. thick. By using elliptical instead of spherical-shaped domes the height was only 32 ft. instead of 75 ft. (See *Engineering News-Record*, Nov. 9, 1939.) An ocean outfall at Miami Beach, Fla., was giving satisfaction after a year's use. It rests in a rock trench 7000 ft. long and discharges sewage at a depth of 40 ft. into northward-flowing currents for disposal by dilution. Plans have been made for an ocean outfall at Puerto Cabello, Venezuela. See also GARBAGE.

M. N. BAKER

SEYCHELLES, sā'shēl'; -shēlz'. A British colony consisting of 92 islands in the Indian Ocean. Mahé (55 sq. mi.; pop., 25,367) and Praslin are the largest islands. Total area, 156 square miles; total population (Jan. 1, 1938, estimate), 30,940. Capital, Victoria (on the island of Mahé).

Copra (5600 metric tons in 1937), cinnamon, phosphate guano, patchouli and other essential oils, and fresh fish are the chief products. In 1937 imports totaled Rs1,263,351; exports, Rs1,503,310; revenue, Rs1,008,872; expenditure, Rs903,902 (Rupee averaged \$0.3733 for 1937). The government is administered by a governor assisted by an executive council and a legislative council. Governor and Commander-in-Chief, Sir Arthur F. Grimble.

SHEEP. See LIVESTOCK.

SHIPBUILDING. At the outbreak of war in Europe, early in September, 1939, there was increased activity in the shipbuilding industry. Reliable data on foreign construction is not available. Doubtless warships were given preference over merchant, and the merchant shipbuilding activities of the U.S. Maritime Commission exceeded that of any country in Europe. The Commission's present program calls for 500 ships to be built during the 10 years ending 1948, a goal of 4,000,000 gross tons. During 1939, contracts for 91 vessels were awarded, and on December 21 the twenty-first vessel, *S. S. Lightning*, was delivered to the American Pioneer Line for service from North Atlantic ports to the Far East and Australia and

MERCHANT VESSELS UNDER CONSTRUCTION IN THE WORLD*

| Where building | Steamers | | Motorships | | Sail & barges | | Total | |
|------------------------------|----------|---------------|------------|---------------|---------------|---------------|-------|---------------|
| | No. | Gross tonnage | No. | Gross tonnage | No. | Gross tonnage | No. | Gross tonnage |
| Great Britain & Ireland..... | 111 | 432,605 | 75 | 357,995 | 3 | 855 | 189 | 791,455 |
| Other Countries | 179 | 789,007 | 335 | 1,266,712 | 16 | 12,118 | 530 | 2,067,837 |
| Total for the World... | 290 | 1,221,612 | 410 | 1,624,707 | 19 | 12,973 | 719 | 2,859,292 |

* Under construction, June 30, 1939. The total gross is 155,625 tons more than for the quarter ending Mar. 30, 1939, and 32,390 tons more than of June 30, 1938. Figures given are from *Lloyd's Register*

New Zealand. The shipbuilding program for 1940 will include at least two passenger liners of about the same size as the *America* for transpacific service.

Returns compiled by Lloyd's Register of Shipping, which take into account only vessels 100 gross tons and upwards the construction of which has actually commenced, show that there were 719 merchant vessels of 2,859,292 gross tons under construction in the world, excluding U.S.S.R. at the close of the quarter, June 30, 1939.

In the United States, the *America*, the largest passenger vessel ever built in an American yard, was launched August 31, 1939, at Newport News, Va. Of about 35,440 tons displacement, she is 723 ft. long, 93 ft. beam, and has a loaded draft of 32 ft. 6 ins. Over 1200 passengers will be carried in first, tourist, and third class.

The U.S. Maritime Commission placed orders for several standard types of vessels known as C-1, C-2, and C-3, also for others that were designed for specific runs as from New York to East Africa. C-1 type were designed to run on trade routes where speed is not an important consideration and large cargoes are not continuously available. They are the smallest of the Commission's vessels, being 390 ft. long, 60 ft. beam, 37 ft. 6 ins. deep. Some are driven by steam turbines and others by Diesel engines. The C-2 type is larger than the C-1, has accommodations for 12 passengers, is 435 ft. long, 63 ft. beam, 40 ft. 6 ins. deep, and is driven by either a steam turbine or a Diesel engine at a speed of 15½ knots per hour. The C-3 type has greater speed and cargo capacity than C-1 or C-2, yet this type can be converted without drastic alterations into passenger vessels. C-3 vessels are 465 ft. long, 69 ft. 6 ins. beam, 42 ft. 6 ins. deep, and have a speed of 16½ knots.

See ELECTRICAL MARINE ENGINEERING.

The first ocean-going merchant vessel to be launched on the Pacific coast since the World War, was launched at Oakland, Cal., on Sept. 15, 1939. This vessel, christened *Sea Arrow*, is of the C-3 type. The sailing of the *Cristobal*, August 17, 1939 from New York to the Panama Canal Zone, marked the completion of the present shipbuilding program of the Panama Line. Included in the program were the steamships *Panama* and *Ancon*, which like the *Cristobal* are 471 ft. 6 ins. long, 64 ft. beam, 26 ft. draft, gross tonnage 10,021, service speed 16½ knots.

The December bulletin of the American Bureau of Shipping, covering vessels under construction or under contract in United States shipyards on Dec. 1, 1939, lists 240 craft of 1,181,795 gross tons compared with 159 of 555,310 gross tons on Dec. 1, 1938. In the 1939 list, the sea going vessels number 144, with a total gross tonnage of 1,144,350.

Relative to foreign tonnage under construction, according to Lloyd's Register of Shipping on

June 30, 1939 (no reports later than this date were published in 1939), the outstanding vessels are, one of over 40,000 gross tons and another of over 30,000 being built in Great Britain, one of over 30,000 in Germany, and a motorship of over 25,000 in Italy. Of those completed in 1939, from the standpoints of size, power, and speed, the motorship *Oranje*, of the Netherland Steamship Co., is one of the finest of her class. The *Oranje* was built for service between Amsterdam, Holland, and Dutch East Indies. She is 630 ft. long, 83 ft. 6 ins. beam, draft 28 ft. 10 ins., is driven by three 12-cylinder Diesel engines of 12,500 h.p. each, at a speed of 21 knots, and can carry 747 passengers.

France, according to Lloyds on June 30, 1939, had under construction 11 vessels with a total gross tonnage of 95,130. Included in these figures, were three cargo motorships 459 ft. 4 ins. long, 61 ft. 8 ins. beam, 26 ft. 5 ins. draft, speed 15 knots, for the account of the French government. Although built for the government, the motorships were scheduled to be chartered to private companies.

In Germany on June 30, 1939 there were being built 125 vessels of 347,832 gross tons. There was considerable congestion in German shipyards due to orders for foreign customers. Although no statistics are available for 1939, foreign orders accounted for 57 per cent of the output of German yards in 1938 compared to 6 per cent in 1913.

Prior to the European War, shipyards in Holland, Italy, Norway, and Sweden were busy on merchant construction. Particular attention is called to two turbine electric-driven passenger and cargo liners being built by the Netherland Shipbuilding Co., Amsterdam, for the Soviet Union. These vessels are 436 ft. long, 60 ft. 2 ins. beam, 20 ft. 2 ins. draft, and will have a speed of 20 knots. A large passenger and cargo ship, the *Klipfontein*, was built in Holland for the United Netherlands Navigation Co. for their Holland-Africa service. This vessel is 490 ft. long, 62 ft. 6 ins. beam, 30 ft. 3 ins. draft, is driven by two sets of Diesel engines, at a speed of 20½ knots. Still another was the *Oranje* previously mentioned. Tonnage in Italian yards amounted on June 30, 1939, to 42 ships of 224,616 gross tons. Included in these figures are two passenger and cargo motorships built on the barter principle for Norwegian owners. Main dimensions of these vessels, 400 ft. long, 55 ft. 6 ins. beam, 25 ft. 5 ins. draft, speed 13 knots. Norway on June 30th was building 33 ships of 52,026 gross tons, and Sweden 27 of 160,620 gross tons.

Ships under construction at Japan's leading yards at the end of August, 1939, numbered 243 vessels of more than 1,000 tons each, with an aggregate of 1,179,240 gross tons, according to the Japan Shipping Club. Included in this tonnage were 201 cargo ships with a total of 958,770 tons, 36 passenger and cargo ships with a total of 188,420 tons, 2 tankers aggregating 27,000 tons, and

4 special ships aggregating 5050 tons. See NAVAL PROGRESS.

CHAS. H. HUGHES.

SHIPPING. The breaking out of war in Europe early in September, 1939, seriously disrupted normal shipping operations throughout the world. At the opening of hostilities, merchant ship tonnage was distributed thus:

| Country | Gross tons | Country | Gross tons |
|-------------------|------------|-----------------|------------|
| British Empire... | 21,215,261 | Netherlands.... | 2,972,871 |
| United States... | 14,631,991 | France..... | 2,952,975 |
| Japan..... | 5,629,845 | Greece..... | 1,780,666 |
| Norway..... | 4,834,902 | Sweden..... | 1,581,919 |
| Germany..... | 4,492,708 | U.S.S.R..... | 1,315,766 |
| Italy..... | 3,448,453 | Denmark.... | 1,176,173 |

German mines in the North and Baltic seas, the use of submarines and warships to seize and sink British and French vessels, and to search those of neutral nations for contrabands of war, soon involved Sweden, Norway, United States, and other nations in protests and discussions.

The passage of the Neutrality Act by Congress in November, 1939, naturally caused a serious loss of business and employment to U.S. steamship companies. Some to keep their ships active, changed their routes to South American ports, others changed the registry of their vessels to neutral countries, as Panama, intending to sail in the war zone, but this was opposed by the Federal government. To take care of officers, engineers, and seamen thrown out of employment, steps were taken by the Maritime Commission to find them shore positions, or to give them opportunities for further training in the Marine Service, an organization set up by the Commission to train men for deck, engine room, and steward departments.

See EUROPEAN WAR under *Shipping Losses*.

Italian shipping was particularly active during the latter part of 1939. The operation of the U.S. Neutrality Act and the French-British embargo of December 2d on all shipments to and from Germany, caused ship owners to avoid the Bay of Biscay and the English Channel and to select Naples, Genoa, and other Italian ports. Thus vessels from the Far East with shipments to Holland and Belgium, stop at Naples, where passengers and cargo are landed and are then transported overland. The Norwegian port of Bergen, outside of the area covered by the Neutrality Act, has increased in importance as a shipping center. The American Scantic Line resumed its service between New York and Bergen late in November. Other lines are using Bergen and transshipping overland to different parts of Norway, Sweden, and Northern Europe. All such shipments may become more and more difficult as time goes on.

Quite different from the uncertain shipping conditions on the Atlantic Ocean were those on the Great Lakes. Iron ore, wheat, and other products shipped through the Soo Locks (Sault Ste. Marie, Mich.) during the month of November amounted to 10,437,879 tons, surpassed only three times in recent years—1917, 1923, and 1928. Total shipments to the close of navigation for 1939 are estimated at 70,000,000 tons.

Of interest to shipping men was the publishing in 1939 of the Register of Shipping of U.S.S.R. According to the register, the Soviet has 664 vessels of all types and classes. There are few passenger vessels and tankers, but 303 cargo vessels

ranging from 1000 to 5000 tons. The register is very complete, giving more details of ships than is found in other registers. Of the ships over 1000 tons, most have been built at Leningrad Shipbuilding Co., Baltic Shipbuilding & Engineering Works, and at Sormovo Works, Sormovo.

Maritime Commission. According to Merchant Marine Act of 1936, and subsequent marine and shipping acts passed by Congress, the Maritime Commission is given broad authority over the building and operating of U.S. vessels. Not only does the Commission build for its own account, but also regulates, or is in a position to, companies that are operating coastwise and overseas vessels, it is also interested in the personnel employed on ships, and in the establishing of schools for training young men to become officers and engineers. The Commission's financial interests include operating and construction subsidies paid only to ships in the overseas or foreign trade, and mortgages. During the past year the Commission has continued its policy in changing indirect subsidies based on foreign mail contracts to direct subsidies based on the difference between U.S. and foreign costs of shipbuilding and operating. Operators of Commission's ships include the following companies, U.S. Lines, Standard Oil Co. of N. J., Am. Export Lines, Mississippi Shipping Co., Keystone Tankship Corporation, Moore-McCormack Lines, Am. Hampton Road-Yankee Line, Am. Pioneer Line, Grace Line, and Seas Shipping Co. The Commission expects by the sale of services it now operates, to be out of the operating business early in 1940.

Before starting on its shipbuilding activities the Maritime Commission made a thorough study of foreign trade routes and then proceeded to design ships (see SHIPBUILDING) which would meet the requirements of the routes. To prevent the transfer of 20-year old ships that have been engaged in foreign trade into coastwise and intercoastal trade, the Commission recommended to Congress, and Congress adopted in 1939, the "turn in and build" provision of the Merchant Marine Act. This provision allows the Commission to acquire any obsolete vessel in exchange for an allowance of credit upon a new vessel to be operated under U.S. ownership and registry, thus giving ship owners an excellent opportunity to replace old tonnage. Only vessels older than 17 years, owned by citizens of the United States for at least three years are eligible for the "turn in and build" provision.

Due to emergencies arising from the war in Europe, the Commission announced on Sept. 20, 1939, that personnel on vessels which it owns and operates through managing agents in the North Atlantic trades will receive an emergency increase of 25 per cent in their base pay. An allowance of \$150 is provided for each man to cover possible loss of clothing and personal effects arising out of emergencies due to the war. In the event of internment of its seagoing personnel, base pay plus the additional 25 per cent emergency compensation shall continue for the period of internment.

Among the activities of the Commission is the operating of a Marine Service, which includes training stations at St. Petersburg, Fla., Government Island in San Francisco Bay, Hoffman Island in New York Harbor, and Fort Trumbull, New London, Conn., besides two schoolships. The training program laid out contemplates training 3000 unlicensed seamen and 500 officers a year.

Maritime Labor Board. This Board was established by the Merchant Marine Act of 1936 as amended, as an independent agency in the executive branch of the Government, and is composed of three members, appointed by the President, by and with the advice and consent of the Senate. It is the duty of the Board upon request of either the duly selected representatives of a maritime employer or employers, or of their employees who are parties to the making of a labor agreement, to encourage and assist in the making of such agreement, or, upon the request of both parties at interest, to assist in the interpretation of the provisions of an agreement already in existence.

During 1939 members of the Board held meetings at New York, San Francisco, and other ports, with such labor and employer organizations as the National Maritime Union, American Merchant Marine Institute, and others, to study both sides of the labor situation. On or before Mar. 1, 1940, the Board will submit to the President and to Congress a comprehensive plan for the establishment of a permanent Federal policy for the amicable adjustment of all disputes between maritime employers and employees and for the stabilization of maritime labor relations. Furthermore the Board will seek to secure through its mediatory efforts agreement between employers and employees upon the plan it is required to submit.

See COAST GUARD; DISASTERS; NAVAL PROGRESS; NEUTRALITY; SHIPBUILDING.

CHAS. H. HUGHES.

SHOE INDUSTRY. Shoes are a measure of standards of living, because they are universally worn and, through machine manufacture, similar in types the world over. In the United States 3-26 hours of work will buy an average work shoe, in Germany it takes 8:09 hours of work, in Great Britain 9:03 hours equals one pair of shoes. In Sweden 9:29 hours, in Belgium 10:49 hours work, in France 12:34 hours, and in Italy 24:22 hours of work must be done to obtain a pair of shoes. By this shoe-wage stick the rest of the world pays more—measurable in terms of normal times. The last four months of the year, however, were influenced by war economics indicating in Europe a trend upward in use of more shoes—for war and civilian use—costing more work-hours of pay.

United States shoe production for 1939 will reach a new record of 419 million pairs, or 3.15 pairs per capita. This is 4 million pairs over the previous peak of 415 million pairs in 1936 and 58 million pairs over 1929. Part of this ten-year increase can be attributed to a population growth of 10 million people, but by far the increased consumption of shoes is due to lower prices and the greatly increased purchase of shoes for style and special uses. But while the United States purchase of shoes has increased by 58 million pairs, the public has paid about 300 million dollars less, or approximately one billion one hundred million dollars for shoes in 1939. The purchase of shoes for style and special uses is increasing, such as the growing purchase of shoes for wear with different costumes, for beach wear, for leisure, health, and year-round sports. Work shoes for specialized uses increased in 1939 with more types and materials introduced into shoe making to satisfy complex uses. There was an increase in the production of army shoes all over the world (in the United States only for domestic use as no European contracts were placed in 1939). In-

creased production of army footwear in Europe curtailed regular shoe manufacture to the necessities of the people. Shoe imports into England and the European countries has ceased by regulation. Importation of shoes to the United States has sharply decreased. World production of shoes and rubber footwear is as follows: (estimated) Europe, 510,000,000 pairs; North America, 490,000,000 pairs; South America, 55,000,000 pairs; Asia and Oceania, 70,000,000 pairs; Africa, 25,000,000 pairs.

There is a freedom of prices of leather and shoes on the world markets, a common level of price, with little subsidy or control anywhere—but war may alter the situation. Markets previously dependent on the United States, England, and Germany for machine made shoes, are changing to self-contained shoe producers. The growth of nationalism has been accompanied by restriction of imports and encouragement of home sources of supply.

The figures which have been released by Director William L. Austin, Bureau of the Census, Department of Commerce, Washington, D. C., report a record shoe production of boots, shoes, and slippers, other than rubber, for 1939 of 419,088,225 pairs. This is an increase of approximately 28 million pairs over the 1938 production of 390,746,226 pairs, and an increase of 4 million pairs over the previous record of 415,227,000 pairs in 1936. The production for the twelve months of 1939 is broken down by classes as follows:

| | |
|---|-------------|
| High and low cut boots and shoes (leather), total | 352,783,249 |
| Men's. | |
| Dress | 76,265,380 |
| Work | 27,290,617 |
| Youths' and boys' | 17,030,300 |
| Women's | 164,920,276 |
| Misses' and children's | 43,689,904 |
| Infant's | 23,586,772 |
| Athletic* | 3,784,154 |
| Part-leather and part-fabric | 7,114,781 |
| All-fabric (satin, canvas, etc.)* | 4,975,707 |
| Slippers and moccasins for house wear, total | 44,754,410 |
| All-leather | 13,280,217 |
| Part-leather, felt, etc. | 31,474,193 |
| All other footwear ^b | 5,675,924 |

* Excludes footwear with fabric uppers and rubber soles.

^b Includes barefoot sandals, beach sandals, theatrical footwear, and other footwear not distributed as to kind.

This production of 419 million pairs is divided among 877 factories distributed by States as follows:

| State | Factories represented December 1939 | Production 1939 |
|---------------|-------------------------------------|-----------------|
| Illinois | 57 | 31,342,216 |
| Maine | 49 | 28,115,296 |
| Massachusetts | 229 | 80,124,164 |
| Missouri | 59 | 48,496,404 |
| New Hampshire | 62 | 37,843,933 |
| New York | 146 | 71,767,159 |
| Ohio | 28 | 16,763,882 |
| Pennsylvania | 79 | 32,275,599 |
| Wisconsin | 50 | 16,665,244 |
| Other States | 118 | 55,694,328 |
| United States | 877 | 419,088,225 |

JOHN F. W. ANDERSON.

SIAM. See THAILAND.

SIBERIA. The general name of the Asiatic part of the U.S.S.R., extending east from the Ural Mountains to the Pacific and north from Manchoukuo, Mongolia, and the Kazakh S.S.R. to the Arctic. Siberia is divided into administrative units of the Russian Soviet Federated Social-

ist Republic (q.v.). Estimated total area, 4,994,819 square miles; estimated population (1931), 21,500,800. See also UNION OF SOVIET SOCIALIST REPUBLICS.

SIERRA LEONE, sî-ě-r'ə lě-ō-ně. A British colony and protectorate in West Africa. Total area, 27,925 square miles, of which the parts administered as colony (Sierra Leone peninsula, the Tasso, Banana, and York islands, and the town of Bonthe on Sherbro island) equaled 256 square miles. Total population (1931 census), 1,768,480 of whom 96,422 were in the colony. Freetown, the capital (63,758 inhabitants in 1937), has the finest natural harbor in West Africa and is a second-class Imperial fueling station.

Production and Trade. The chief products are kola nuts, palm kernels, ginger, rice, ground-nuts, piassava, cassava, hides, diamonds, gold, iron ore, platinum, and chromite. Mineral production (1938) included iron ore, 861,955 tons; diamonds, 689,622 carats; gold, 32,980 oz. troy; chromite, 1300 tons; platinum, 180 oz. troy. Deposits of ilmenite exist but they are not worked. In 1938 (including bullion and specie), imports were valued at £1,500,342; exports (including re-exports of £44,734) totaled £2,388,929 of which diamonds accounted for £858,055, iron ore £646,421, palm kernels £457,031, gold £207,940, and ginger £60,680. Cotton piece goods, coal, tobacco, wearing apparel, and foodstuffs were the main imports.

Communications. In 1938, there were 923 miles of roads, 311 miles of open line (2 ft. 6 in. gauge) railway which carried 663,168 passengers and 67,998 tons of freight, a motor-bus service which carried 303,832 passengers, 790 miles of telegraph line, and 850 miles of telephone line. There is a radio-broadcast service owned and operated by the government. Shipping aggregating 2,712,979 tons entered the ports during 1938. A weekly air service in both directions between Freetown and Bathurst (Gambia), which links with the Empire air service, has been in operation since 1938.

Government. For the calendar year 1938, revenue totaled £886,149; expenditure, £910,077. The public debt on Dec. 31, 1938, totaled £1,288,259 against which the sinking funds amounted to £128,678. The colony and protectorate are administered by a governor who is assisted by an executive council of 5 members. There is a legislative council of 23 members (the governor as president, 11 official members, 7 nominated unofficial members of whom 3 must be paramount chiefs of the protectorate, and 3 elected members). The legislative council has the power to legislate for both the colony and the protectorate. Governor and Commander-in-Chief, Sir D. J. Jardine (appointed May 21, 1937).

SILK. See TEXTILES.

SILVER. Political incidents marked the economic course of silver in 1939 as in previous years. Controversy flared up in the United States Congress early in the year with the introduction of bills by advocates and opponents of the Government's silver-buying program. The question finally came to a head about mid-year with the approaching expiration (June 30) of the President's monetary powers and Exchange Stabilization Fund, which included the authority to purchase domestic silver at decreed prices. On June 26 amendments were voted in the Senate that limited the President's monetary powers, in-

creased the Treasury's purchase price for domestic silver, and prohibited the further purchase of foreign silver. The House disagreed, and the resulting conference failed to adjust differences until July 5. The result was an extension of the life of the Stabilization Fund and the President's monetary powers through June 30, 1941. The provisions of the Silver Purchase Act were left intact; but most important, the purchase of newly mined domestic silver after June 30, 1939, and its price, were made a statutory matter, not subject to Presidential decree. The price was then set at 71.11¢ per oz. For the first half of 1939 the price was 64.64¢ by Presidential proclamation.

The New York official quotation was 42.75¢ per oz. from January to May, inclusive, after which it declined irregularly, and closed the year at 34.75¢.

World silver production in 1939 and 1938, by countries, as estimated by Handy and Harman in their annual review, is shown in the accompanying Table I.

TABLE I—WORLD SILVER PRODUCTION
[In millions of fine ounces]

| Country | 1938 | 1939 |
|-------------------------------|-------|-------|
| United States | 58.8 | 57.0 |
| Mexico | 84.0 | 81.0 |
| Canada | 23.8 | 24.7 |
| South America | 32.4 | 34.7 |
| All other countries | 67.0 | 68.6 |
| Total Production | 266.0 | 266.0 |

World silver consumption is estimated by the same authority at 441,300,000 oz. in 1939, compared with 510,300,000 oz. in 1938. U. S. Government acquisitions in 1939 were 60,600,000 oz. from domestic production and 280,800,000 oz. from open market purchases, a total of 341,400,000 oz. This is substantially lower than in 1938, when total acquisitions were 417,000,000 oz. The reduction occurred mainly in open market purchases. Treasury silver holdings on Dec. 31, 1939 were estimated at 2,930,000,000 oz. including coin in circulation. Nevertheless, on account of new acquisitions of gold during the year, the ratio of silver to gold in the nation's monetary reserves was considerably lower than that 25-75 per cent authorized under the Silver Purchase Act. Since the ratio was established in 1934 the Treasury has been more than one billion oz. short each year of maintaining one-fourth of the value of its monetary reserves in silver. In fact the goal set by the Act is 291,000,000 oz. further away than when the legislation was passed in June, 1934.

Industrial demand for silver in the United States, Canada, England, and Germany in 1939 increased to 65,000,000 oz. as compared with 53,800,000 oz. in 1938. In the United States and Canada the increase was 25 per cent, from 27,500,000 oz. to 34,000,000 oz. Percentage increases in the most important classifications were approximately: sterling silverware, 20 per cent; silver plated ware, 30 per cent; motion pictures, 10 per cent. The trend was in marked contrast to that of 1938, when decreases were shown. Research by the American Silver Producers Association into new industrial uses for silver continued in 1939. Promising outlets were: Coatings, electrical contacts, fungicides, and alloys. Consumption of silver in the purely industrial field showed a marked increase.

Preliminary estimates by the Bureau of Mines of mine production of silver in the United States indicate 65,011,770 fine oz. valued at \$44,129,201, an increase of 3 per cent in quantity and 9 per cent in value over 1938. The increase is attributed to larger output of copper, zinc-lead, and lead ores of which silver is a by-product. Idaho, largest silver producing State since 1933, contributed 26 per cent of total domestic output. The United States production and value, by States and Territories, are recorded in Table II.

TABLE II—UNITED STATES PRODUCTION

| State or Territory | Ounces | Value* |
|---------------------------------|------------|--------------|
| Alaska | 209,300 | \$142,070 |
| Arizona | 7,975,540 | 5,413,700 |
| California | 2,612,000 | 1,772,994 |
| Colorado | 8,393,642 | 5,697,502 |
| Georgia | 78 | 53 |
| Idaho | 17,199,600 | 11,674,880 |
| Illinois | 480 | 326 |
| Maryland | 3 | 2 |
| Michigan | 93,200 | 63,263 |
| Missouri | 213,397 | 144,851 |
| Montana | 8,898,450 | 6,040,160 |
| Nevada | 4,066,000 | 2,759,951 |
| New Mexico | 1,423,480 | 966,241 |
| New York | 37,165 | 25,227 |
| North Carolina | 3,650 | 2,478 |
| Oregon | 101,000 | 68,558 |
| Pennsylvania | 12,926 | 8,774 |
| South Carolina | 5,640 | 3,828 |
| South Dakota | 168,600 | 114,444 |
| Tennessee | 32,200 | 21,857 |
| Texas | 1,349,709 | 916,166 |
| Utah | 10,574,987 | 7,178,173 |
| Virginia | 1,780 | 1,208 |
| Washington | 442,200 | 300,160 |
| Wyoming | 75 | 51 |
| Philippine Islands ^b | 1,196,664 | 812,281 |
| Puerto Rico | 4 | 3 |
| Total 1939 | 65,011,770 | \$44,129,201 |
| Total 1938 | 61,560,737 | 39,796,840 |

* Silver valued at \$0.678 in 1939.

H. C. PARMELEE.

SIMMONS COLLEGE. A nonsectarian college for women in Boston, Mass., founded in 1899. The enrollment on Nov. 1, 1939, was 1498. The summer-school enrollment in the School of Nursing in 1939 was 191. The faculty numbered 162. The productive funds of the institution amounted to \$3,630,612, and the income for the year was \$598,121 (exclusive of gifts). There were 86,269 volumes in the libraries. The College received a gift of \$25,000 for the Endowment Fund of the School of Social Work. A new residence hall was ready for occupancy in September. President, Bancroft Beatley, Ed.D., Litt.D.

SINGAPORE. See STRAITS SETTLEMENTS; GREAT BRITAIN under *History*.

SLOVAKIA. See CZECHO-SLOVAKIA, GERMANY, and POLAND under *History*.

SMITH COLLEGE. A nonsectarian college for women in Northampton, Mass., founded in 1871. The enrollment for the autumn of 1939 was 2092, while that for the summer was 261. There were 251 faculty members. The productive funds amounted to \$6,669,848, and the income from such funds was \$226,834. The volumes in the library numbered 266,964. Acting President, Elizabeth Cutter Morrow, B.L., L.H.D., LL.D.

SMITHSONIAN INSTITUTION. An organization founded in 1846 according to the terms of the will of James Smithson of England, who in 1826 bequeathed his property to the United States of America "to found in Washington, under the name of the Smithsonian Institution, an

establishment for the increase and diffusion of knowledge among men." The purposes of the Institution are carried out by scientific research, exploration, and publication. It also administers the following bureaus which are supported by Congressional appropriations: The United States National Museum, National Collection of Fine Arts, Bureau of American Ethnology, International Exchange Service, National Zoological Park, and Astrophysical Observatory. It also administers the Freer Gallery of Art and the Division of Radiation and Organisms. The new National Gallery of Art was established as a bureau of the Institution but is administered by the Board of Trustees of the Gallery. See ART MUSEUMS.

The expendable income of the Institution for 1939, consisting of income from investments, income from miscellaneous sources, and gifts for special objects (excluding income from the Freer endowment) was approximately \$200,000. Its endowment funds (exclusive of the Freer endowment) totaled \$2,022,567. The Institution and the government bureaus under its direction published 99 volumes and pamphlets, of which 162,030 copies were distributed to libraries, educational institutions, and individuals. The secretary is Charles G. Abbot, D.Sc.; the assistant secretary, Alexander Wetmore, Ph.D.

SMUGGLING. See CUSTOMS, BUREAU OF; NARCOTICS CONTROL.

SOBISMINOL. See MEDICINE AND SURGERY.

SOCIAL INSURANCE. See FEDERAL CROP INSURANCE CORPORATION; FEDERAL DEPOSIT INSURANCE CORPORATION; OLD-AGE PENSIONS; RELIEF; SOCIAL SECURITY BOARD.

SOCIALISM. Any description of Socialism as it is in 1939 inevitably suggests a comparison with its position 25 years ago, when the first World War began.

Then Socialism was on the aggressive. In every nation it was challenging the profit system in the name of production for use, and the established institutions of nationalism in the name of internationalism. "Workers of the World, Unite!" was more than a pious—and empty—slogan to millions of men.

Even after Aug. 1, 1914, when Socialism had proved itself unready to avert or stop the war, it remained a force to be reckoned with by all the belligerents. With foreboding or with hope, men expected it to play a great role in making the peace which would end war and introduce a new social order.

By 1936 Socialism which had previously been wiped out in Italy was disastrously defeated in Germany where its enemy, fascism—which however called itself National Socialism—was steadily growing in power; but it had established itself as the major political force in the Scandinavian countries, it had made a revolution in backward Spain, and it had seen its leaders hold office as Prime Ministers in Great Britain and later in France.

But by 1939 although the breakdown of the capitalist nationalist order was tragically evident, Socialism was almost everywhere on the defensive. In Spain, fascism by aid of foreign arms had wiped out with impartial brutality all forms of Socialism. In Great Britain and France, Socialist Parties were still the principal opposition to the governments in office, but they felt obliged to give those governments and the new war they were fighting at least as uncritical support as in 1914 to

1918. The entire attention of the Scandinavian Parties was devoted to the perilous task of preserving national neutrality, and escaping the menace of attack from without. The end of the year saw Stalin's outrageous attack on Finland, in which country the Finnish Socialists gave full support to a national government. In Sweden, also, the government was reorganized so as to make it more nearly a national government than a Socialist-agrarian coalition.

In Russia, Stalin boasted that he had established Socialism, but state capitalism would be a more accurate description of the economics of a dictatorship which in its foreign and domestic policy was becoming less and less distinguishable from fascist totalitarianism.

In 1914 "the final conflict" to the average Socialist lay between private capitalism and a collectivism which he had too easily assumed would be Socialist; that is, administered by the workers of the world for their own well being. In 25 years the world had advanced by giant, though unequal, strides toward collectivism, but not a collectivism which meant plenty, peace, and freedom for the workers. State after state had adopted Socialist "immediate demands" only to make its essential imperialism or totalitarianism more palatable to the workers. The "final conflict" to the thoughtful Socialists turned less on the issue: economic individualism—which is dying—against collectivism, but on the kind and degree of collectivism, and the possibility of democratic control. Totalitarianism had become the great enemy, and the renewal of war threatened to bring automatically the triumph of totalitarianism even in the countries which professed to be fighting to preserve "democracy"—along with their own national interests.

At the beginning of the First World War, there was but one international organization with which avowed Socialist parties were connected—the Second, or Labor and Socialist International. This was the successor of the First International of which Karl Marx was the principal founder. It died in the storms of the Franco-Prussian war.

The Second International, to which the American Socialist Party belongs, was formed in 1889 after the death of Marx. It still lives, and is the Socialist International in contrast to the Third or Communist International formed by Lenin in 1919, with which all the orthodox Communist Parties are connected.

The followers of Lenin's greatest lieutenant, Trotsky, have a shadowy Fourth International of no great numerical strength, and there are a few Socialist Parties or more accurately, Socialist groups, connected with no International.

The Third, or Communist International, was from the beginning dominated by the Russian Party, and the various change in Communist line or policy were dictated by Russian interests and Russian understanding of those interests. The discipline of the Third International, which is to say of Stalin, over the constituent parties is absolute and rigid. Witness their acceptance of the change in line involved in the Stalin-Hitler pact, about which none of them was consulted.

The Second (or Socialist) International has no corresponding discipline of any sort. It is scarcely more than a loose association of parties with avowed Socialist ends. It maintains headquarters at Brussels, Belgium. It is a glorified debating society which since 1933 has not even provided an International Congress as a forum for a gen-

eral debate. It has, however, a representative executive committee.

Within that committee, and to some extent within the constituent parties of the Second International, the spring and summer of 1939 saw the beginning of a sharp discussion. The Austrian Socialists in exile wanted a more unified and aggressive Socialist program for Europe. The Secretary of the International, Dr. Friedrich Adler, felt a similar necessity for effective action. To bring matters to a head, he offered and pressed his resignation.

The Second International is dominated by the British Labor Party, the French Socialist Party, and the Labor and Socialist Parties of the Scandinavian countries, Belgium, and Holland. All these parties were used to political responsibility in their own nation and the leaders of several of them held, or had held, high political offices in their respective countries. In general, therefore, these parties felt, first, that the voting strength of the parties in exile should be reduced in International Congresses; and, second, that nothing whatever should be done to strengthen international control or even moral influence, over the Socialist and Labor Parties in various nations. The British and the Dutch were particularly emphatic on this point.

Before these issues had come to a head, and before final action could be taken on Dr. Adler's resignation, or a successor chosen, war broke out. The year closed without decisive action by the Executive Committee, and with Dr. Adler temporarily continuing as secretary.

The Second International is unanimous in its bitter opposition to the totalitarian state and to the Hitler-Stalin pact. Its parties in Europe can scarcely be said to have an independent Socialist position on the war of great significance. In general, they rationalize as best they can in the light of their Socialist hopes, the national policies of their countries. Thus, the British Labor Party supports the war, but is critical of Chamberlain and the Conservative Government. It refused overtures for any cabinet positions in a national government. The French Socialist Party supports the war, but is sharply critical of its old ally of united front days, Premier Daladier, and voted against government by decree.

On Nov. 1, 1939 appeared the Platform of the Workers' International Front Against War. It denounced the war as imperialist, sought a revolutionary seizure of power by the workers, and the construction of a Socialist United States of Europe. Small parties or groups, perhaps the most important of which is the Independent Labor Party of Great Britain, from seven countries, plus certain groups in exile, form this Workers' International Front Against War.

The American Socialist Party, free from the immediate pressures of the European scene, has maintained a consistent anti-war position. It holds that any peace dictated by victors will necessarily encourage new totalitarian states. It argues that American participation in the war would cost us our own democracy with no corresponding benefit to Europe. The United States out of war can do far more for democracy and for war's victims than in war. It believes in encouraging the maximum possible co-operation of the United States for world peace, and the maximum possible isolation from war. It is sure that "Roosevelt's war would not cure what Wilson's did so much to cause."

Under the New Deal, the Socialist Party, never numerically large, lost in numbers and influence. Former supporters of the Party felt that the New Deal had taken over successfully many of the immediate demands of Socialism, and that it must be supported against reaction. The Communist Party, beginning in 1935, sharply reversed its attitude of extreme opposition to President Roosevelt in favor of a united front. On this new line the Party increased substantially in numbers and more rapidly in influence. In 1938 in New York State it showed greater voting strength in New York than the Socialist. As part of an international united front against fascism, American Communists, sharply in contrast to American Socialists, were supporters of collective security even if necessary to the point of war.

This situation was dramatically changed after the Stalin-Hitler pact. By the end of 1939 Communists were denouncing imperialist war and insisting to Europe that "the Yanks are not coming." But this outward resemblance of the Communist and Socialist positions on war was based on such different reasons, and Socialist condemnation of totalitarianism whether fascist or communist was so great, that the gulf between Communists and Socialists in America deepened. In the country at large, the Stalin-Hitler pact and, most of all, Stalin's invasion of Finland, greatly reduced Communist influence, and in less degree, Communist membership. The same events appeared to be giving to the Socialist Party new strength and influence. See COMMUNISM.

In Socialist ranks at the beginning of 1939, general negotiations were under way to heal a split which had occurred in 1936, at which time certain Right Wing Socialists had formed what was called the Social Democratic Federation, a movement of no great strength or influence save in a very few centers. These negotiations came to a halt with the advent of war because the Social Democratic Federation in New York City took a virtual pro war position. However, the Social Democratic Federation in Reading, Penn., where the movement was strong and the city administration was Socialist, achieved unity with the Socialist Party. The reunited movement lost the municipal election by a very close vote.

NORMAN THOMAS.

SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR. An international association, of which the American Association for Labor Legislation is the American section, created in 1925 by amalgamating three former allied organizations, the International Association for Labor Legislation, the International Social Insurance Committee, and the International Association on Unemployment. See LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.

SOCIAL SECURITY BOARD (SSB). The Social Security Board has administrative responsibility for three Nation-wide programs, designed to bring greater security to the American people. These are old-age and survivors insurance, employment security, and public assistance, as established under the Social Security Act. The first two of these are insurance systems designed to protect wage earners against future want; the third provides immediate cash aid on the basis of need for three groups who are unable to support

themselves—the aged, the blind, and dependent children.

During 1939 two developments of major importance took place: Congress amended the original Social Security Act of 1935; and the President's First Reorganization Plan created the Federal Security Agency, bringing together under it the Social Security Board and five other Federal administrative organizations concerned with similar problems. The changes made in the act materially increase the protection it offers; coordination of related activities makes for an increasingly integrated and effective attack upon basic problems of insecurity.

The Federal system now provides monthly old-age insurance benefits for retired workers after age 65, their wives when they reach 65, and any dependent unmarried children under 18. Monthly benefits are also provided for survivors of insured wage earners who die, for dependent children under 18, for widows if they have such children in their care or when they reach 65, or if there is no widow or child, for dependent parents at age 65. These monthly benefits became payable on Jan. 1, 1940.

The 1939 amendments also increased protection for workers already 65 or nearing that age by providing that employment after age 65 could be counted toward benefits, beginning Jan. 1, 1939. Many older workers, who could not have received monthly benefits under the original plan, will thus be enabled to qualify.

Benefits are financed by taxes on employees and their employers. These taxes go into an Old-Age and Survivors Insurance Trust Fund in the United States Treasury, from which all benefits are paid. Under the 1939 amendments, the tax rate, which began at 1 per cent each for employees and employers in 1937, when the system first went into operation, has been "frozen" at that level until 1943. Thereafter, it increases by $\frac{1}{2}$ per cent every three years until, in 1949, it reaches a maximum of 3 per cent each. This tax applies only to the first \$3000 a year in wages paid to an employee.

By the end of 1939, social security accounts had been set up for nearly 48 million persons. In these individual accounts, maintained by the Social Security Board, each worker's wages in jobs covered by old-age and survivors insurance are recorded. At the close of the year the Board had more than 400 field offices throughout the country; these offices serve workers and their employers in all matters relating to the insurance system.

The employment security program, a joint Federal-State undertaking, provides a twofold service—job insurance and job placement—to protect workers against want during periods of unemployment. One of the important changes brought about by the President's Reorganization Plan was the unification of Federal employment service and unemployment compensation activities. The United States Employment Service and the Board's Bureau of Unemployment Compensation were thus brought together to form a new Bureau of Employment Security under the Board. The program also operates as a unified service in the States. Each State has its own unemployment insurance law under which jobless workers receive weekly out-of-work benefits, and its own employment service which registers the unemployed and helps them find new jobs.

States with laws approved by the Social Security Board receive Federal grants for adminis-

trative expenses of their employment security programs. Employers in such States may credit their contributions to the State unemployment fund against a Federal payroll tax of 3 per cent, levied on employers of eight or more persons in all but a few specifically excluded industries. Up to 90 per cent of this Federal tax may be offset by contributions to the State fund.

Every State, Alaska, Hawaii, and the District of Columbia, is receiving employment security grants from the Federal Government. Nearly 28 million workers throughout the Nation are insured under State unemployment compensation laws. During 1939, weekly benefits totaling nearly \$450,000,000 were paid out to unemployed workers by the various States.

The public assistance program for aid to the needy aged, the needy blind, and dependent children, is also built upon Federal-State co-operation. The Federal Government shares the cost of State payments to needy individuals made under public assistance plans approved by the Social Security Board. By the end of 1939 every State and Territory was participating in the old-age assistance program; 42 jurisdictions had approved plans for aid to the blind, and a like number for aid to dependent children. Under these plans, some 2,600,000 needy men, women, and children were receiving monthly cash payments.

The act, as amended, provides that the Federal Government shall match State payments dollar for dollar up to a combined total per month of \$40 a person for the aged and the blind, and \$18 for the first dependent child and \$12 for every other dependent child in the same home. Grants to States for public assistance, for the period February, 1936, when Federal funds first became available, through Dec. 31, 1939, totaled \$755,348,000. Of this amount \$646,428,000 was for old-age assistance; \$18,926,000 for aid to the blind; and \$89,994,000 for aid to dependent children.

See OLD-AGE PENSIONS; RELIEF; TAXATION.
ARTHUR J. ALTMAYER.

SOCIAL WORK, NATIONAL CONFERENCE OF. The Preamble to the Constitution states: "The National Conference of Social Work exists to facilitate discussion, to increase the efficiency of agencies and institutions devoted to this cause, and to disseminate information. It does not formulate platforms."

This is achieved mainly through the holding of an annual meeting, the attendance at which includes trained and untrained social workers, and lay people interested in social work. During the ten day period of the Conference about 300 meetings are scheduled by the Conference and its Associate and Special Groups, which are national agencies in specialized fields of social work.

The Conference serves as a center for the exchange of information about State Conferences of Social Work. An occasional bulletin is published regarding State Conferences of Social Work and two or more meetings in different sections of the country for state conference secretaries are sponsored by the Conference. The Conference is the representative of the International Conference of Social Work in the United States.

It publishes a *Proceedings* which includes the best papers given at the annual meeting. The *Proceedings* are sent to members who pay a \$5.00 or more membership fee. It also publishes a quarterly bulletin which is sent to all members.

The Conference is financed entirely by a mem-

bership of about 6000. The budget of the Conference is about \$46,000.

The officers in 1939 were: Grace L. Coyle, Cleveland, Ohio, President; Arlien Johnson, Los Angeles, Calif., 1st Vice President; Sidney Hollander, Baltimore, Md., 2nd Vice President; Mrs. DeForest Van Slyck, New York City, 3rd Vice President; Arch Mandel, New York City, Treasurer. The General Secretary of the Conference is Howard R. Knight, Columbus, Ohio. The permanent office is at 82 N. High Street, Columbus, Ohio.

SOCIAL WORKERS, THE AMERICAN ASSOCIATION OF. An organization formed in 1921 as a result of the growing recognition among the staff members of social agencies, under both public and private auspices, that social work was a specialized service and required, in consequence, specialized education and preparation.

The Association has about 11,500 members in all parts of the United States. It has 84 local or state-wide chapters. It has a National Board consisting of 21 members, which is in general charge, and a national staff is employed by that Board. A Delegate Conference, representative of the membership groups, meets as a general policy-forming body for the Association.

The Association publishes a monthly membership bulletin, *The Compass*, which may be obtained by non-members for \$1.00 a year. The revenues of the Association are almost entirely secured from membership dues, which amount to approximately \$89,000 annually, of which about \$24,000 is paid to the several chapters.

The principal officers of the national organization are: Harry Greenstein, President; Frederick I. Daniels, Treasurer; Mrs. Savilla M. Simons, Secretary; Walter West, Executive Secretary. See RELIEF.

SOCIETY ISLANDS. See OCEANIA, FRENCH ESTABLISHMENTS IN.

SOCOTRA. See ARABIA under *Aden Protectorate*.

SOILS. In recent study of soils, particular emphasis has been placed on soil surveying and mapping, erosion, conservation, and land use. See BOTANY; FERTILIZERS.

Surveying and Mapping. Surveying, mapping, and determining the crop-producing value of soils continued with unabated vigor during 1939. An outstanding development in this regard has been the perfecting and extension of aerial surveying of soil and preparing maps, especially for use of the Conservation Service, which show on a relatively large scale and at low cost buildings, fields, and physical features of farm land.

The long-established soil survey of the U.S. Department of Agriculture was continued as in previous years. Approximately 17,454 square miles of land in the United States and its dependencies was mapped by this survey during the year. The total area, 1,010,793 square miles, now covered by the detailed survey is more than one-half of the arable land of the country, furnishing a comprehensive handbook of scientific and practical information regarding the soils.

The coffee soils of Hawaii, the rubber soils of Malaya, and the prairie soils of Manitoba were subjects of special study during the year. The Malayan soils were studied and classified from the standpoint of the effect of temperature, rainfall, and humus residues, representing a somewhat neglected field of investigation with reference to tropical soils.

Erosion and Conservation. Thoroughly aroused by the alarming extent to which the soil, which is the basic resource of the country, has been and still is being dissipated, determined and far-reaching efforts are being made to curb such loss and restore the fertility of the depleted soil. It is estimated that in 300 years of American agriculture soil erosion and soil depletion have destroyed 50,000,000 acres of crop lands and dangerously injured another 50,000,000 acres, whereas in 4000 years of European agriculture the general level of soil fertility has not only been largely maintained but often increased by soil conservation methods and judicious use of manures and fertilizers.

Many and varied means are used successfully to combat soil erosion in this country, such as dams, terraces, contour furrows, strip cropping, and other now well-known methods. Recently special emphasis has been placed on the beneficial effect of incorporating organic matter in the soil and spreading of crop residues on the surface of the soil. Rational use of fertilizers is also being more generally recognized as an effective means of restoration.

A machine which builds terraces on sloping pasture lands to retard run-off of rainwater and thus prevent formation of gulleys and loss of top soil is now available for use.

An efficient method of measuring rainfall at short intervals recently devised by the Virginia Agricultural Experiment Station promises to be of great value in soil erosion studies.

A representative of the Soil Conservation Service of the Department of Agriculture has recently been engaged in a study of the history and results of soil erosion in the ancient Roman provinces of North Africa to determine if possible the part soil destruction played in the crumbling of this once great empire 6000 years ago.

Land Tenure and Use. The nature of land tenure and use has been an important factor in rural well-being in all ages and countries and has determined in large measure the trend of historic, economic, and human events. Such studies are assuming a commanding position in research relating to land use and conservation in the United States under the National Industrial Recovery Act of 1933 and the Emergency Relief Act of 1935. During the past five years, more than 9,000,000 acres of land primarily unsuited for cultivation have been bought at a total cost of about \$46,000,000, and developed largely by Federal Emergency Relief Administration and Works Progress Administration funds. The government has thus made new areas available for conservation programmes. Approximately two-thirds of the land is being held by the Federal Government and put to uses for which it is naturally best adapted. Some 956,000 acres have been added to national forests, while other areas, used chiefly for grazing, are managed by the Soil Conservation Service. Emergency funds for the purchase of this submarginal land closed on June 30, 1939, but development is being continued under the Bankhead-Jones Farm Tenant Act of 1937. New Federal purchases will be made in selected areas where the retirement of submarginal land from cultivation will aid in improving agricultural conditions and reducing the costs of local government.

Drainage. The urge to reclaim swamp lands, so strong some years ago, has recently abated to a considerable extent in favor of reserving many

such lands for wildlife refuges, recreation areas, and similar purposes.

Minor Soil Constituents. Minor or unusual constituents of soils continued to receive attention. Harmful deficiency or excess of such elements in soils appears to be widespread.

Iodine has been shown to be a necessary element for normal plant growth and health, especially for lettuce, spinach, beans, and beets, and there appears to be widespread deficiency of it in soils. Similar deficiencies and needs have also been shown for boron. Incidentally, small applications of boron have been shown to be an effective means of correcting overliming.

Selenophile Plants. A study of selenophile plants has proved to be an effective means of locating seleniferous soils, which are widespread in some of the Western States, in numerous geological formations from late Paleozoic to Quaternary.

Methods of Testing Soils. Further study of rapid chemical soil tests have indicated that such tests may not be universally applicable and may give misleading results in inexperienced hands. Further tests under a variety of conditions are therefore in progress. A wind tunnel method of classifying soil and sand particles which is said to be superior to the common sieve method has recently been proposed by the California Institute of Technology and the Soil Conservation Service of the Department of Agriculture. The method gives accurate data at low cost.

Decided advance in the use of micro-organisms in determining soil fertility deficiencies was reported during the year. Automatic records of electrical resistance of blocks of gypsum buried in the soil has recently been proposed by the Michigan Experiment Station as a means of continuous determination of soil moisture. Such records will be particularly useful in soil investigations. The wilting point of plants has been shown to be substantially constant for a given soil and plant and thus furnishes a reliable index of the water requirements of soil, as a guide in the application of irrigation water. Methods of determining the so-called wilting coefficient have been highly perfected in recent years.

Excessive Cultivation of Soils. Believing that in practice there is much unnecessary costly cultivation of the soil, a British investigator has made an exhaustive study of the subject and finds that cultivation required varies widely with type of soil and of climate and that by giving due regard to these as well as the kind of crop to be grown, much unnecessary tillage may be eliminated.

Soil Fumigants. Soil fumigants have been used with some success in destroying disease-producing organisms, insects, and weeds in soils. Use of chloropicrin has recently been proposed for this purpose. This substance is applied in holes in the soil which are afterwards sealed with soil or water. It is applied at an average rate of 5 cubic centimeters per cubic foot or 7½ pounds per thousand feet of bench space in the greenhouse.

Hydroponics. Interest in hydroponics or so-called soilless agriculture, that is growing plants in solutions, sand and such media rather than natural soil, remains unabated, particularly on the part of amateurs and commercial horticulturists, and the literature of the subject has increased rapidly. Much progress has been made in perfecting the technique of the process. Its practical

commercial value has, however, not yet been fully determined.

Saline Irrigation Waters. A regional laboratory for the study of saline irrigation waters and their effects on soils and crops was established during the year at Riverside, Calif., by the U.S. Department of Agriculture co-operating with 12 Western States and Hawaii.

See TENNESSEE VALLEY AUTHORITY.

BIBLIOGRAPHY.—Some noteworthy publications on soils appeared during the year, including among others the following books: *Behold Our Land*, by Russell Lord (Boston, Mass.); *Vanishing Lands, A World Survey of Soil Erosion*, by G. V. Jacks and R. O. Whyte (New York, N. Y.), which treats the subject not only from the agronomic standpoint but also with reference to the economic, political, and social consequences of soil erosion; *Study of the Soil in the Field*, by G. R. Clark (London); *Plant Chemiculture*, by C. D. Dawson and M. V. Dorn (Los Angeles, Calif.); *Chemical Gardening for the Amateur*, by C. H. Conners and V. A. Teijens (New York, N. Y.); *Micropedology*, by W. L. Kubiena (Ames, Iowa); *The Principles of Soil Science*, by A. A. J. de Sigmond (London); *The Plough-Up Policy and Ley Farming*, by R. G. Stapledon (London); and *Soil Conservation*, by H. H. Bennett (New York, N. Y.).

Other publications of timely interest include *Selected Annotated Bibliography on Sedimentation as Related to Soil Conservation and Flood Control*, compiled by C. B. Brown and E. F. Barnes, and *Soil Conservation and Related Subjects: A List of Publications and Conservation Charts*, both issued in mimeographed form by Soil Conservation Service, U.S. Department of Agriculture; *Prevention and Control of Gullies*, by H. G. Jepson, U. S. D. A. Farmers' Bulletin 1813; and *Putting Soil Science to Work*, by E. Truog, Journal of the American Society of Agronomy, December, 1938, p. 973.

WALTER H. BEAL.

SOLOMON ISLANDS. An archipelago in the Pacific, east of New Guinea. See NEW GUINEA, TERRITORY OF; SOLOMON ISLANDS, BRITISH.

SOLOMON ISLANDS, BRITISH. A British protectorate in the South Pacific, comprising the islands of Guadalcanal, Malaita, Ysabel, San Cristoval, New Georgia, Choiseul, Shortland, Vella Lavella, Kulambangra, Santa Cruz, Vanikoro, Rennell, and numerous smaller islands (including the Lord Howe atoll). Total land area, 11,000 square miles; population (1931 census), 94,066 including 478 Europeans. Capital, Tulagi.

Copra, trocas shell, timber, ivory nuts, green snail shell, and bêche-de-mer were the main products. In 1938, imports were valued at £232,891; exports, £292,411; revenue totaled £82,809; expenditure, £69,002. Administration is under a resident commissioner (subject to the authority and control of the high commissioner for the Western Pacific who resides at Suva, Fiji), assisted by a nominated advisory council. Resident Commissioner, W. S. Marchant (appointed Mar. 8, 1939).

History. On Apr. 30, 1939, an earthquake followed by a tidal wave caused considerable damage on the islands of Guadalcanal, Russell, and Ysabel. A number of buildings were wrecked and 12 persons were known to have been drowned.

SOMALILAND (sô-mă'lê-lând), BRITISH. A British protectorate along the Gulf of Aden in Africa. Area, 68,000 square miles; population (1938 estimate), 350,000, including 2700 non-natives. Chief towns: Berbera (capital), 30,000 (cold season) and 15,000 (hot season) inhabitants; Hargeisa, 20,000 to 15,000; Burao, 10,000; Zeilah (Zeila), 5000; Erigavo; Borama.

Production and Trade. Agricultural crops included sorghum, maize, barley, and wheat. Livestock raising is the main occupation of the people. The protectorate had (1936 estimate): 2,500,000

sheep, 2,000,000 goats, 1,500,000 camels, 30,000 cattle, 2000 donkeys, and 1000 horses. In 1938 imports were £728,050; exports, £207,548. Rice, dates, sugar, and textiles were the main imports. The chief exports were hides and skins, gum and resins, ghec, and livestock. During 1937 shipping entered and cleared totaled 110,233 and 109,843 tons, respectively.

Government. For 1938 revenue totaled £236,074; expenditure, £227,340. The protectorate is administered by a governor (with headquarters at Sheikh) who is represented by a district officer in each of the five administrative districts (Berbera, Burao, Erigavo, Hargeisa, and Zeilah). Governor and Commander-in-Chief, Vincent G. Glenday (appointed, 1939).

SOMALILAND, FRENCH. A French colony in East Africa. Area, about 8492 square miles; population (1938 estimate), 50,000 including about 1200 Europeans. Djibouti (capital) had 14,870 inhabitants in 1936. The coast fisheries, salt mines, and inland trade are the main sources of livelihood. Cotton goods, cattle, sugar, and coal are the principal imports. Salt (85,000 metric tons, 1937), coffee, hides and skins, and animal wax are the chief exports. In 1938 imports were valued at 147,700,000 francs; exports, 85,300,000 francs (franc averaged \$0.0288 in 1938). A railway connects Djibouti with Addis Ababa, capital of Italian East Africa (q.v.). Part of the shares of the French-owned railway company were transferred to the Italian Government in 1935. On July 1, 1939, passenger and freight rates were drastically reduced and at the request of the Italian Government the railway was equipped to transport 1000 tons daily in each direction instead of the previous 250 tons. See FRANCE and ITALY under *History*.

Public revenue in 1938 was estimated at 47,148,400 francs; ordinary expenditure, 24,248,400 francs; extraordinary expenditure, 22,900,000 francs. A governor, assisted by an administrative council, administers the colony. Governor, M. Annet (appointed December, 1935).

SOMALILAND, ITALIAN. See ITALIAN EAST AFRICA.

SOUTH AFRICA, UNION OF. A self-governing dominion of the British Commonwealth of Nations. Capital, Pretoria; seat of the legislature, Capetown.

Area and Population. The area by provinces and the mean population by provinces and racial composition as officially estimated for June 30, 1939, are shown in the accompanying table.

SOUTH AFRICA: AREA AND POPULATION
[Estimated, June 30, 1939]

| Province | Area, sq. miles | Europeans | Bantus | Asiatics & mixed |
|-------------------------|-----------------|-----------|-----------|------------------|
| Cape of Good Hope.. | 277,169* | 818,700 | 2,130,400 | 734,900 |
| Natal | 35,284 | 199,200 | 1,640,800 | 212,200 |
| Transvaal | 110,450 | 897,600 | 2,645,400 | 81,200 |
| Orange Free State . . . | 49,647 | 201,000 | 580,900 | 17,700 |
| Total | 472,550 | 2,166,500 | 6,997,500 | 1,046,000 |

* Including Walvis Bay (430 sq. miles)

The census population of May 5, 1936, totaled 9,589,898 (European, 2,003,857; non-European, 7,586,041), as compared with a total estimated population of 10,160,000 (European, 2,116,500; non-European, 8,043,500) on June 30, 1939. European births registered in 1938 numbered 52,264 (25.11 per 1000); deaths, 19,521 (9.38 per 1000).

During 1938 101,276 Europeans arrived in South Africa, including 7435 intending permanent residence, and 92,190 departed. Populations of the chief cities, including suburbs, at the 1936 census were, with the number of Europeans in parentheses: Johannesburg, 519,384 (257,671); Capetown, 344,233 (173,412); Durban, 259,606 (95,033); Pretoria, 128,621 (76,935); Port Elizabeth, 109,841 (53,461); Germiston, 79,440 (32,564); East London, 60,563 (31,311); Bloemfontein, 64,233 (30,291). The same census showed that the home language of 1,120,770 persons (55.93 per cent of the European population) was Afrikaans, 783,071 (39.08 per cent) English, 50,411 (2.52 per cent) English and Afrikaans, 17,810 German, and 17,684 Yiddish.

National Defense. By the Defense Act of 1922 citizens of European descent between the ages of 17 and 60 are liable to war service, and those between 17 and 25 are liable to peace-time training, spread over a period of four years. The Permanent Force in 1938 consisted of 234 officers and 4499 of other ranks, including the air force of 119 officers and 1514 men. A total of 944 officers and 13,687 of other ranks were called for peace-time training in the year 1938-39. Members of defense rifle associations numbered 113,590 on Mar. 31, 1938.

Education and Religion. In 1937 there were 4471 state and state-aided schools for Europeans with 381,550 pupils, and 4850 schools for non-Europeans with 546,225 pupils. Total normal state expenditures on these schools for the year was £9,354,422 (South African). There are four universities at Capetown, Stellenbosch, Witwatersrand, and Pretoria; the latter has five branches. In 1937 the average number of university students was 8707 and the state expenditure £364,871. At the 1926 census the percentage distribution of European church adherents was: Dutch churches, 49.61; Anglicans, 18.57; Methodists, 6.28; Hebrews, 4.28; Roman Catholics, 4.25.

Production. Agriculture, stock-raising, mining, and manufacturing are the chief occupations. Livestock on Aug. 31, 1938, included 11,371,733 cattle, 32,795,580 woolled sheep, 6,205,901 non-wooled sheep, 631,596 Angora, and 5,493,596 other goats. Wool production in the year ended Aug. 31, 1938, was 207,904,000 lb.; mohair, 3,234,000 lb.; creamery butter, 30,024,000 lb.; factory cheese, 12,184,000 lb. Estimated production of the chief crops was (in metric tons): Wheat, 465,200 in 1938-39; barley, 25,200 in 1937-38; rye, 18,400 in 1937-38; oats, 84,800 in 1937-38; corn, 2,575,900 in 1938-39; potatoes, 200,300 in 1937-38; cane sugar, 472,600 in 1938-39; tobacco, 10,800 in 1937-38. The Union normally exports 5,000,000 cases of citrus fruit. Wine production (1937-38) was 1,411,000 hectoliters (one hectoliter equals 26.42 U.S. gal.).

The quantity and value of the chief minerals produced in 1938 was: Gold, 12,161,392 fine oz. (£61,658,311); coal, 17,536,230 tons (£4,729,423); diamonds, 1,238,608 metric carats (£3,496,243); lime and limestone, 2,157,573 tons (£802,663); manganese ore, 422,757 tons (£560,602); copper, 14,683 tons (£464,466); asbestos, 22,282 tons (£424,078); chrome ore, 128,899 tons (£239,888); platinum, 38,862 oz. (£223,776). The total value of 1937 mineral production was £94,291,502 (£88,516,790 in 1936). In 1936-37 there were 9987 manufacturing establishments, with 140,203 European and 192,565 other employees; salaries and wages paid totaled £41,531,000 and the total value of output

was £175,765,000 of which £85,931,000 was added in process of manufacture.

Foreign Trade. General imports in the calendar year 1938 totaled 95,886,917 South African pounds (£103,383,626 in 1937); general exports, £103,899,105 (£125,415,610). Minerals accounted for 75.17 per cent of the value of all 1938 exports; agricultural and pastoral products, 18.82 per cent. The value of gold bullion exported in 1938 was £68,710,157, of which £20,714,902 was earmarked. Of the 1938 imports, £41,458,938 came from the United Kingdom, £9,662,555 from other parts of the British Commonwealth, and £44,737,233 from other countries. Of the exports £84,199,855 went to the United Kingdom, £6,283,639 to other parts of the British Commonwealth, and £13,609,235 to other countries. Total imports in 1939 were £91,046,115; exports (excluding gold shipments), £33,751,456.

Finance. The budget for the year ended Mar. 31, 1939, closed with a surplus of £1,879,254. Revenues totaled £44,087,244 and expenditures £42,207,990, as compared with £43,730,000 and £39,536,092, respectively, in 1937-38. Budget estimates for 1939-40 placed revenues at £44,442,014 and expenditures at £44,110,000. The gross public debt on Mar. 31, 1939, was £278,876,359 (internal, £177,753,151; external, £101,123,208), against £262,617,905 on Mar. 31, 1938. The average exchange rate of the South African pound was \$4.8962 in 1937, \$4.8416 in 1938, \$4.4017 in 1939.

Transportation. Railway mileage in the Union and in South-West Africa on Mar. 31, 1938, totaled 13,620 (government, 13,213; private, 407). For the year ended Mar. 31, 1939, the Minister of Railways and Harbors estimated revenues at £38,240,437 and expenditures at £39,889,025. The highway mileage in 1939 was 88,949. A six-year program calling for the construction of 5400 miles of national roads at a cost of some £20,000,000 was started in 1936. Up to Dec. 31, 1938, 1227 miles of these highways were constructed. The sum of £4,500,000 was appropriated for continuation of this program during 1939-40. The South African cities are linked with Egypt, Europe, and London by Imperial Airways. The South African Airways, operating six services, carried 34,162 passengers and 3,005,639 lb. of freight and mails in 1938. During 1938 6182 vessels of 24,869,085 net registered tons entered at Union harbors.

Government. Executive power is exercised by the Governor-General, appointed by the King on recommendation of the South African Government, and by the Executive Council (cabinet), which is responsible to Parliament. Parliament consists of a Senate of 44 members (8 appointed by the Governor-General and 36 elected) and a House of Assembly of 153 members, elected by white male and female suffrage for five years unless sooner dissolved. Governor-General in 1939, Sir Patrick Duncan (assumed office March, 1937). Prime Minister and Minister of External Affairs at the beginning of 1939, Gen. J. B. M. Hertzog, heading a United South African National party cabinet with former Premier Jan Christiaan Smuts as Deputy Prime Minister and Minister of Justice. For changes in 1939, see *History*.

HISTORY

Colonial Issues. During the first half of 1939 evidence of German designs upon South-West Africa and effective Nazi propaganda and penetration in the Union of South Africa itself appeared to have united the Afrikaner and British

elements within the Union Government in support of Britain's "stop-Hitler" policies. In April the government adopted forceful measures to check German military and propagandist activities in South-West Africa aiming at the return of that mandated territory to the Reich (see *SOUTH-WEST AFRICA* under *History* for details).

Shortly afterwards Defense Minister Oswald Pirow made a six weeks' trip to London, Berlin, Rome, Brussels, The Hague, and Lisbon in unsuccessful search of an agreement whereby Belgian and Portuguese territories in West Africa would be transferred to Germany in return for Hitler's renunciation of his claim to South-West Africa and Tanganyika. Upon his return to South Africa late in June Pirow declared the transfer of South-West Africa and Tanganyika to Germany to be "quite impossible," but urged that fair compensation for these territories be arranged by negotiation. In mid-August President Carmona of Portugal, after inspecting the defenses of Mozambique, paid a state visit to Pretoria and Capetown. He apparently reached some arrangement with the Hertzog Government for mutual military collaboration in defense of their common interests in Africa (see *PORTUGAL* under *History*).

Hertzog's Resignation. Despite these evidences of an identity of South Africa's interests with those of Britain and her allies, Britain's declaration of war upon Germany on September 3 produced a wide split in the Hertzog Cabinet. On September 5 Prime Minister Hertzog carried the issue to the House of Assembly by introducing a resolution for a modified form of neutrality. He urged that the Union's relations with all European belligerents continue unchanged but that existing contractual relations between the Union, Great Britain, and the other British Dominions, including the agreement for British use of the Simonstown naval base, be observed. His policy was supported by the opposition Nationalist leader, Dr. D. F. Malan, who had stated a few days before that the Nationalists had good reason to believe that if South Africa remained neutral it would be given South-West Africa in a peaceful manner.

General Smuts vigorously opposed the resolution, declaring that South-West Africa would be taken by Germany at the bayonet's point if Britain was defeated. His amendment to the Prime Minister's resolution, calling for co-operation with the British Empire without conscription or sending troops overseas, was approved by the House of Assembly, 80 to 67. Prime Minister Hertzog then requested the Governor-General to dissolve Parliament and call a general election. When the Governor-General refused, the Prime Minister resigned, along with other Cabinet Ministers supporting his policy—Oswald Pirow, Gen. J. C. Kemp (Lands), N. C. Havenga (Finance), and Senator A. P. J. Fourie (Railways and Harbors).

Smuts Forms Government. At the Governor-General's request, General Smuts then formed a new ministry, including Col. C. F. Stallard, leader of the pro-British Dominion party, Walter Madeley, leader of the Labor party, and six holdovers from the Hertzog Cabinet. The new Cabinet lineup, announced September 7, was: Prime Minister, Defense and External Affairs, General Smuts; Native Affairs, Col. Denys Reitz; Agriculture and Forestry, Col. W. R. Collins; Finance and Education, J. H. Hofmeyr; Interior and Public Health, H. G. Lawrence; Railways and Harbors, F. C. Sturrock; Posts, Telegraphs, and Public Works, C. F. Clarkson; Labor, W. B. Madeley;

Lands, Senator A. M. Conroy; Justice, Dr. Colin Steyn; Mines, Col. C. F. Stallard; Minister without Portfolio, Major P. V. G. van der Byl. This National Government held 85 seats in the House of Assembly (General Smuts, 69; Dominion party, 9; Labor, 4; native representatives, 3) against 39 held by Hertzog supporters and 29 by the Malanites.

The National Government's war policy was upheld early in November by the Central Head Committee of the United South African National party, 28 to 18; in several by-elections; and in the Senatorial elections of November 17. In the new Senate the Smuts Government held 28 seats against 10 for the Hertzog group and 6 for the Malanites. These developments led General Hertzog and his supporters to withdraw from the United South African National party and to join forces with the extreme Nationalists under Dr. Malan. A related development was the secession of the Mine Workers' Union from the Trades and Labor Council on November 22—one of several steps made to establish an independent Afrikaans-speaking labor movement. But events of the year tended to consolidate the majority support enjoyed by the government.

War Contribution. After declaring war on Germany on September 6, the Smuts Government issued a series of emergency decrees under which the Union was governed through the remainder of the year. Energetic steps were taken to crush an extensive sabotage and propaganda ring organized by the German Minister and other Nazi agents in South Africa and South-West Africa. Economic and financial aid was extended to Britain. The South African gold production was an important bulwark of British war finance. An aerial patrol of coastal waters was established to aid the British navy in tracking down German sea raiders. The government discouraged the enlistment of its citizens for overseas service, but promised to defend any British territories in Africa that appealed for help in the war. This assured Kenya and Tanganyika of aid in the event of an Italian attack delivered from Ethiopia. Colonel Reitz was sent to London in November to confer with British and other Dominion representatives on methods of closer co-operation.

The British Government late in October agreed to buy the great bulk of the Union's surplus agricultural commodities, including the entire surplus of corn and dairy products. On December 8 Britain undertook to purchase most of the wool clip at a favorable price. There was also a strong British demand for South African minerals and other raw materials. The government mobilized the country's resources to aid Britain's prosecution of the war through a Director General of War Supplies, assisted by a group of experts. There were various private contributions to the Empire's cause. In September the Johannesburg City Council sponsored a campaign for £1,000,000 to acquire local surpluses of butter, eggs, sugar and other foodstuffs for free distribution to Britain and France. In October a £250,000 fund was raised with government approval to combat German propaganda in South Africa.

Defense Measures. The Smuts Government also took energetic measures to strengthen the Union's defenses and to deal with possible domestic disturbances. The Union Defense Force was reorganized. All members were required to take the oath of allegiance to the Crown. A number of high military and police officers were re-

called from retirement. The Civil Guard was reformed to relieve soldiers and police from routine duties. A new Highland regiment and a South African Irish Brigade were created and a local Seaward Defense Corps organized. Members of the famous Boer commandos to the number of 118,000 were sworn in for home defense service. In the first month of war, 70,000 citizens signed the voluntary national register, and more than 20,000 enlisted for women's auxiliary services. There was rapid progress in training air pilots and technicians. The government's plan called for creation of a mobile striking force of 50,000, an auxiliary corps of 35,000 to 45,000 riflemen and scouts, and squadrons of bombing and fighter planes.

Economic Decrees. The government also took steps to protect the economic system from dislocations due to the war. Control of all transactions in gold and foreign exchange was decreed September 9 and sale of all gold and foreign currency to the Treasury was required within 30 days. A price control scheme was placed in effect with regard to essential commodities. On September 14 decrees were issued prohibiting hoarding and profiteering under heavy penalties. It was announced that the government would keep the South African pound linked to sterling and buy all domestically produced gold at a price not exceeding 150 shillings per ounce.

See CANADA and GREAT BRITAIN under *History*; CHEMISTRY, INDUSTRIAL; MILITARY PROGRESS.

SOUTH AMERICA. A continent comprising 10 republics (Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Venezuela) and three colonies (British Guiana, French Guiana, and Surinam). Total area, about 45,645,300 square miles; population, 91,300,000 (Dec. 31, 1938 estimate). See EXPLORATION; PAN AMERICANISM; PAN AMERICAN UNION; and separate articles on each country and colony.

SOUTH AUSTRALIA. An Australian State. Area, 380,070 square miles; population, exclusive of full-blood aboriginals, 595,376 (Mar. 31, 1939, estimate), compared with 580,949 (1933 census). During 1938 there were 9410 births (15.88 per 1000); 5539 deaths (9.35 per 1000); 5489 marriages (9.26 per 1000). The principal cities are Adelaide (capital), with 321,410 inhabitants, including suburbs, on Dec. 31, 1938; Port Pirie, 11,677 (1933); Mount Gambier, 5542 (1933). In 1937 the 1090 State schools had 86,807 pupils; the 193 private schools, 17,381; there is a State university at Adelaide.

Production. Wheat (31,737,411 bu. in 1938-39 season), barley, oats, hay, grapes, wine, and dried fruit are the main agricultural products. Live-stock (June 1, 1939): 318,897 cattle; 195,834 horses; 71,292 swine; 9,936,586 sheep. The principal dairy products for 1937-38 were butter, 22,428,298 lb.; cheese, 15,516,879 lb.; bacon and ham, 6,196,378 lb. Wool (greasy) produced during 1939 totaled 97,000,000 lb.

The estimated value of mineral production for 1938 was £A2,932,473. In 1937-38, from the 1980 factories, with 44,084 employees, the net value of production was £A13,820,155 (Australian £ averaged \$3.9394 for 1937 and \$3.8955 for 1938).

Government. For the year ended June 30, 1939, revenue totaled £A12,298,000; expenditure, £A12,700,000; public debt, £A108,887,000. Executive power is vested in a governor, assisted by an executive council of responsible ministers. Legis-

lative power is vested in a parliament consisting of a legislative council of 20 members (10 re-elected every 3 years) and a house of assembly elected for 3 years. The house of assembly (election of Mar. 19, 1938) comprises the following parties: Liberals, 15; Labor, 9; Independent Labor, 2; Independents, 13. Governor, Sir Malcolm Barclay-Harvey (assumed office July, 1939); Premier, Thomas Playford. See AUSTRALIA.

SOUTH CAROLINA. Area and Population. Area, 30,989 square miles; included (1930) water, 494 square miles. Population: Apr. 1, 1930 (census), 1,738,765; July 1, 1937 (Federal estimate), 1,875,000; 1920 (census), 1,683,724. Charleston had (1930) 62,265 inhabitants; Columbia, the capital, 51,581.

Agriculture. South Carolina harvested, in 1939, 5,086,000 acres of principal crops; of this total, about three-fifths was in corn and in cotton. Cotton, on 1,218,000 acres, gave 870,000 bales (estimated farm value, \$40,455,000); corn, on 1,754,000 acres, 25,433,000 bu. (\$16,786,000); tobacco, on 140,000 acres, 130,200,000 lb. (\$19,009,000); tame hay, 655,000 acres, 541,000 tons (\$7,520,000); oats, 490,000 acres, 11,515,000 bu. (\$4,376,000); sweet potatoes, 67,000 acres, 6,834,000 bu. (\$4,442,000); potatoes, 28,000 acres, 3,108,000 bu. (\$2,362,000); wheat, 210,000 acres, 2,415,000 bu. (\$2,077,000).

Manufacturing. The U.S. Census of Manufactures reported, in 1939, the totals covering 1937 for South Carolina, as follows (figures for 1935 in parenthesis): Active manufacturing establishments, 1193 (1121); wage-earners there employed, 129,748 (108,558); wages paid, \$91,791,692 (\$65,946,031); factories' output, \$409,911,517 (\$297,156,408); part of this value contributed by processes of manufacture, \$175,478,152 (\$112,538,207). The weaving, dyeing, and finishing of cotton fabrics contributed the chief part of 1937's output of manufactures. Cotton goods were woven to the total of \$216,800,565; in this work 74,693 wage-earners received \$55,056,405. Related to this weaving, but done in separate establishments and separately listed in the total output of manufactures, was a production of cotton yarn and thread totaling \$19,744,146. The output of dyers and finishers of fabrics of cotton attained \$24,418,067. Woven goods were made of rayon also; their total value for 1937 was \$25,125,646. The production of hosiery (materials not specified) amounted to \$1,685,030.

Outside of textiles, the manufacture of lumber and timber products amounted to \$17,066,532; the output of planing mills, to \$3,402,641 additional; and establishments treating cottonseed produced \$11,106,050 in oil, cake, and meal.

Greenville, the chief manufacturing city, produced \$22,649,659 in manufactured goods, while Greenville County's much greater total was \$64,508,794.

Education. For the academic year 1938-39 the number of South Carolina's inhabitants of school age (from 6 years to 20, inclusive) was stated as 677,587. Of the 487,610 reported enrollments in the public schools for that year, those of pupils in the elementary studies comprised 200,166 whites and 205,698 Negroes; in high schools, 66,716 whites and 15,030 Negroes. The year's expenditures for public-school education totaled, for whites, \$15,952,094; for Negroes, \$2,502,437. The teaching force, 9577 whites and 5506 Negroes, averaged respectively, in pay for the year, \$975 and \$383.

Legislation. The regular annual session of the Legislative Assembly dealt with a State budget providing about \$10,267,000 for the State's expenses of the forthcoming year and with a supplementary appropriation of some \$700,000 applying to a deficiency in the means to cover the expenses for the remainder of the current fiscal year. A constitutional amendment for abolishing the three-mill Statewide tax on property, levied for the support of schools, was passed by both houses.

Maybank, the incoming Governor, who considered himself specially pledged to give the State a satisfactory enforcement of law and order, sought from the session a measure creating a State police. Foiled by an adverse vote of the lower legislative house, he declared himself left without adequate means of making his promise good. Among legislative investigations conducted, one dealt with the State's finances; another, with the abnormally numerous pardons and paroles issued in the last part of the official term of Governor Johnston.

Political and Other Events. Burnet Rhett Maybank was inaugurated Governor on January 17. South Carolina's statute limiting the hours of employment to 12 a day and to 56 a week in factories and mercantile houses was declared unconstitutional by the State Supreme Court; the Court's opinion found the statute at fault in failing to restrict the limitation to those workers generally recognized as subject to such regulation and in failing to establish any basis of health-protection for the limit to working hours.

South Carolina made noteworthy improvement in economic prosperity during 1939; the volume of retail sales in the State, a measure of individuals' purchasing power, rose, for September, to 14.4 per cent above that for September, 1938. The rate of this excess was the highest shown for September in any State except Florida. The monthly rate of payments for all kinds of public assistance rendered in the State was \$3,181,000 in June; of this total, the wages paid under Federal programs of work contributed about \$2,850,000, or nine-tenths; general poor-relief during June cost the State and its subdivisions only \$28,000. People receiving old-age assistance in June numbered 24,985; those on the payroll of the WPA, 38,771.

Officers. South Carolina's chief officers, serving in 1939, were: Governor, Burnet R. Maybank (Dem.); Lieutenant-Governor, J. E. Harley; Secretary of State, W. P. Blackwell; Treasurer, E. P. Miller; Attorney-General, John M. Daniel; Comptroller, A. J. Beattie; Superintendent of Education, James H. Hope.

SOUTH CAROLINA, UNIVERSITY OF. A nonsectarian, coeducational, State institution of higher education in Columbia, chartered in 1801. Enrollment for the autumn session of 1939 totaled 1944; in the summer session, 699. The faculty numbered 106. The State appropriation amounted to \$299,525 from July 1, 1939, to July 1, 1940. The library contained 135,000 volumes. A new woman's dormitory and a new men's dormitory, constructed at a cost of \$300,000 each, were opened. President, J. Rion McKissick, A.M., LL.D.

SOUTH DAKOTA. Area and Population. Area, 77,615 square miles; included (1930) water, 747 square miles. Population: Apr. 1, 1930 (census), 692,849; July 1, 1937 (Federal estimate), 692,000; 1920 (census), 636,547. Sioux Falls

(1930) had 33,362 inhabitants; Pierre, the capital, 3659.

Agriculture. South Dakota's farmers harvested, in 1939, 12,478,000 acres of the principal crops; this total was about 6 per cent below the average for the decade 1928-37. Corn, on 2,677,000 acres, made 46,848,000 bu. (estimated value on the farm, \$25,298,000); wheat, on 2,245,000 acres, 19,424,000 bu. (\$13,208,000); barley, 1,449,000 acres, 24,633,000 bu. (\$8,622,000); oats, 1,627,000 acres, 43,929,000 bu. (\$10,982,000); tame hay, 775,000 acres, 719,000 tons (\$3,379,000); rye, 528,000 acres, 4,752,000 bu. (\$1,568,000); potatoes, 30,000 acres, 2,400,000 bu. (\$1,320,000).

Manufacturing. The U.S. Census of Manufactures published in 1939 a report on South Dakota showing the following totals for the manufacturing activity of 1937 (totals for 1935 are subjoined in parenthesis): Active manufacturing establishments numbered 434 (403), employed 4970 wage-earners (4400), paid them \$5,484,671 (\$4,397,847), and produced in goods \$67,276,395 (\$56,025,617), to which their processes of manufacture contributed \$14,379,587 (\$11,303,684).

Manufacture, for the most part, consisted of the relatively simple preparation of goods from the farm; hence the value added by manufacture was less, in proportion to the value of the whole output, than where the prevailing type of industry called for fabrication on an elaborate scale. Meat-packing, the chief industry, employed, in 1937, 1802 wage-earners, paid them \$2,282,011, attained \$39,025,348 in output, and to this sum contributed \$4,306,057 by manufacture; it accounted for three-fifths of all manufactured output, less than one-third of all value added by manufacture, and over two-fifths of all manufacturing wages. Butter-making establishments' production amounted to \$11,197,503, which included \$1,454,665 added by manufacture; packers and dressers of poultry produced \$1,662,824, to which total their own processes contributed \$258,804. Among the few lines of more intensive manufacture, the production of newspapers and periodicals held first place; products totaled \$2,390,923, of which \$1,852,033 was added by manufacture. Bakeries produced \$4,042,637.

Mineral Production. South Dakota's great gold-mining industry made a new increase in its yearly production, which rose to about 608,000 ounces for 1939, from 594,847 (1938), or by value to \$21,280,000, from \$20,819,645. The Homestake Mine produced about nine-tenths of the gold mined in 1938 and no change in this predominance was reported for 1939. Gold, in its turn accounted for nearly six-sevenths of all the State's yearly production of minerals (\$23,472,873 for 1937). The Homestake Mine was sinking a shaft to the 5000-foot level in 1939.

Education. South Dakota's inhabitants of school age were stated for the academic year 1938-39 as 138,518 aged from 6 years to 17 and 50,306 from 17 to 21. The year's enrollments of pupils in all public schools numbered 139,013; this comprised 101,050 in elementary study and 37,963 in high schools. Other enrollment included 6955 elementary pupils and 1335 in high schools, altogether 8290, in the parochial schools. The year's expenditures for public-school education totaled \$12,163,599, capital outlay included. The 8107 teachers in public schools received, for the year, pay averaging \$663.60 in elementary positions and \$1097.42 in high schools.

Legislation. The regular biennial legislative

session, meeting in January, restored punishment by death for those convicted of murder, this penalty having been abolished in 1915. A tax was imposed on goods bought outside the State and brought in for use; the purpose of the new tax was to discourage purchasers from going over the State's border and escaping the South Dakota sales tax.

Political and Other Events. Gov. Harlan J. Bushfield, who took office in January, renewed the effort to bring the State safely out of the financial uncertainties in which its system of State grants of credit to rural borrowers had put it some two decades before. Bushfield, as chairman of the Rural-Credit Board discussed the subject with that body, and in August an arrangement was announced, by which a leading firm of bankers was to act as the State's agent to effect the refunding, at the holders' will, of the greater part of the State's debt incurred for the rural credits that it had granted. This debt then stood at \$36,-869,000, of which about \$10,000,000 would mature in the next two years; the Bushfield administration's plan was to lengthen the period for total repayment to 20 years and to spread repayment out evenly so far as possible, by substituting serial bonds to mature yearly from 1950 to 1959, inclusive. An initial offering, by bankers, of \$2,-200,000 was ready at the end of 1939.

Officers. South Dakota's chief officers, serving in 1939, were: Governor, Harlan J. Bushfield (Rep.); Lieutenant-Governor, Donald C. McMurchie; Secretary of State, Olive A. Ringsrud; Treasurer, W. G. Douglas; Auditor, W. W. Warner; Attorney-General, Leo A. Tenney; Superintendent of Public Instruction, J. F. Hines.

SOUTH DAKOTA, UNIVERSITY OF. A State institution of higher education at Vermilion, founded in 1882. The enrollment for the autumn term of 1939 was 1032 and for the summer session 407. The faculty and staff numbered 100. The operating income for the year 1938-39 was \$360,245. There were 102,000 volumes in the library, and an addition to it was under construction. President, I. D. Weeks, LL.D.

SOUTH DAKOTA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A State college of agriculture and mechanic arts at Brookings, founded in 1881. The enrollment for the autumn of 1939 was 1299 collegiate students, 176 vocational school of agriculture students, and 60 students in the two-year vocational course in aviation mechanics. The 1939 summer school had an attendance of 183. On the teaching staff were the equivalent of 105 full-time teachers and officers of general administration in the collegiate departments and 10 in the secondary vocational courses. The income for 1937-38 was \$552,021. The library contained approximately 64,602 volumes (June 30, 1939), 22,500 pamphlets, and 523 periodical subscriptions. Three new buildings were under construction during 1939. President, Charles W. Pugsley, D.Agr.

SOUTHERN CALIFORNIA, UNIVERSITY OF. An institution of higher education for men and women in Los Angeles, Calif., founded in 1879. The enrollment for 1938-39, including summer session and extension classes, was 16,924. In the autumn of 1939 there were 636 members on the faculty. The endowment was \$1,600,000; the income from tuition and fees, \$1,996,390; and other income, \$176,203. The library contained 256,222 volumes. Three new buildings, College of Engineering, College of Architecture and Gallery

of Fine Arts, and Hancock Foundation Building for Biological Research, were added during the year. President, Rufus B. von Klein Smid, Sc.D.

SOUTHERN RHODESIA. See RHODESIA, SOUTHERN.

SOUTH GEORGIA; SOUTH ORKNEYS. See FALKLAND ISLANDS.

SOUTH MANCHURIA RAILWAY CO. See MANCHOUKUO under *Communications*.

SOUTH OSSETIAN AUTONOMOUS REGION. See GEORGIAN SOVIET SOCIALIST REPUBLIC.

SOUTH-WEST AFRICA. A territory administered as a part of the Union of South Africa (q.v.) under a mandate approved by the League of Nations. Total area, 317,725 square miles; population (1938 estimate), 365,000. The census of 1936 showed (exclusive of Walvis Bay) 357,-787, including 261,724 natives and 30,677 Europeans (of whom 9632 were German-speaking and of these 6244 were British or South African subjects). Chief towns: Windhoek, the capital, 10,651 inhabitants in 1936; Luderitz, 2560; Keetmanshoop, 2716; Swakopmund, 1976; Walvis Bay. In 1937 there were 10,640 pupils enrolled in the 169 primary and secondary schools.

Production and Trade. Agriculture is not carried on in a large way because of the low rainfall. Livestock in the territory (1938): 908,-071 cattle; 28,164 horses; included 9690 pigs; 3,074,257 sheep, and 1,420,322 goats. Mining is an important industry. Output of diamonds and gold (1938): 154,856 carats and 1959 standard oz., respectively. Other mineral production (1937) in metric tons: Iron ore, 7000; copper ore, 11,800; lead ore, 10,300; tin, 200; tungsten ore, 24; vanadium, 585. Karakul skins exported (1938) aggregated 1,250,000 pelts. General imports, 1938 (in old U.S. gold dollars) totaled \$5,900,000; exports, \$9,100,000.

Communications. In 1937 there were 1891 miles of railways and 902 miles of motor services. During 1937, 252 vessels entered the ports and 80,947 tons of cargo were landed and 59,270 tons were shipped. The public roads extended more than 20,000 miles.

Government. For the year ended Mar. 31, 1939, public revenue totaled £685,700; expenditure, £702,083. Revenue for 1939-40 is estimated at £660,000; expenditure at £721,382. South-West Africa is regarded as part of the Union of South Africa for the purposes of customs and excise levies and a sum approximating the duties paid on goods in the territory is allotted to the administrative cost of South-West Africa. The mandate is vested in an administrator appointed by the Union of South Africa government who is assisted by an executive committee of 5 members, an advisory council of 8 members, and a legislative assembly of 12 elected members and 6 appointed members, the latter nominated by the administrator and approved by the governor-general. Administrator, Dr. D. G. Conradie (re-appointed, Apr. 1, 1938).

History. Following reports of German-inspired plans for a revolt in South-West Africa, police reinforcements were drafted from the Union of South Africa and the South-West African and Union police forces were merged in 1939. Co-incidentally, Great Britain began installation of 9.2-inch guns overlooking Walvis Bay which, though geographically situated in South-West Africa, is politically a part of Cape Province and could therefore be fortified without violating the

terms of the mandate. Repressive measures against Nazi agitation were taken by police after the outbreak of the war in Europe and up to the close of the year no serious troubles had occurred. Early in 1939 the Deutsche Bund at a conference at Windhoek endorsed Germany's colonial claims and demanded a special mandate citizenship by which Germans could participate in elections and still profess allegiance to their fatherland.

Administration of the eastern portion of the Caprivi Finger—a narrow stretch of South-West Africa between Bechuanaland and Northern Rhodesia and Angola—was taken over by the Union of South Africa in 1939 with the announcement that because of the geographical position of the strip it was considered expedient that the Minister of Native Affairs should administer it.

SOVIET CENTRAL ASIA. A region in central Asia embracing Tajik S.S.R., Turkmenistan S.S.R., Uzbek S.S.R., and Kirghiz S.S.R. See UNION OF SOVIET SOCIALIST REPUBLICS as well as the several constituent republics under separate headings.

SOVIET UNION. See UNION OF SOVIET SOCIALIST REPUBLICS.

SOYBEANS. Production of soybeans for beans in the United States in 1939 was estimated at 87,409,000 bu., 39 per cent above the 62,729,000 bu. of 1938, and compared with the 1928-37 average of 21,833,000 bu. New high records were established in 1939 for total acreage with 10,006,000 acres and acreage harvested for beans 4,226,000 acres, versus 8,196,000 and 3,105,000 acres, respectively in 1938. Average acre yields were 20.7 bu. in 1939 and 20.2 bu. in 1938. Soybean production has been increasing rapidly for some years and the beans are being used largely in crushing, partially in substitution for cottonseed. States leading in yields of soybeans for beans were Illinois 45,423,000 bu., Indiana 13,962,000, Iowa 10,227,000, Ohio 9,681,000, and North Carolina 2,012,000 bu. The season average price per bushel received by farmers was 77.2¢ in 1939 and the value of production was estimated at \$67,488,000 versus 67.6¢ and \$42,389,000 in 1938. Soybean hay production rose to 6,263,000 tons from 4,423,000 acres in 1939 from 5,335,000 tons from 3,788,000 acres in 1938. The area of soybeans grazed or plowed under in 1939 totaled 1,357,000 acres. See MANCHOUKUO under *Production*.

HENRY M. STEECE.

SPAIN. A state of southwestern Europe. Capital, Madrid.

Area and Population. Area, 196,607 square miles, including the Balearic and Canary Islands (q.v.). Estimated population (May, 1939), 25,365,000. Populations of the chief towns (1934) were: Barcelona, 1,148,129; Madrid, 1,048,072; Valencia, 352,802; Seville, 238,727; Málaga, 203,844; Saragossa, 189,062; Bilbao, 175,898.

Colonial Empire. The Spanish colonial empire consists of Spanish Morocco (see MOROCCO) and Spanish West Africa (q.v.), with a total area of about 133,500 square miles and population estimated at 895,000.

Education and Religion. The 1930 census showed 45 per cent of the adult population unable to read or write. The Roman Catholic Church, to which the great majority of Spaniards adhere, was re-established as the official religion throughout Spain at the end of the civil war in 1939 (see *History*).

Production. Agriculture, mining, manufacturing, and fishing are the main occupations. The principal products were (in metric tons): Wheat, 3,306,500 (1936); barley, 1,709,600 (1936); rye, 458,600 (1936); oats, 552,600 (1936); corn, 735,500 (1935); rough rice, 292,000 (1935-36); potatoes, 5,064,000 (1935); beet sugar, 135,000 (1938-39); wine, 1,446,000 hectoliters of 26.42 U.S. gal. (1937); wool and mohair, 27,200 (1937); rayon, 500 (1938); iron ore, 1,180,000 (1938); pig iron and ferro-alloys, 450,000 (1938); steel ingots and castings, 470,000 (1938); copper (smelter), 12,000 (1938); lead (smelter), 30,000 (1938); zinc (smelter), 7700 (1938); quicksilver, 1450 (1936-37); silver, 45 (1935); pyrites, 2,300,000 (1937). Cotton textiles, paper, glass, and numerous other manufactures were produced previous to the civil war.

Foreign Trade. Merchandise imports in 1937 totaled 344,259,000 gold pesetas (505,703,000 in 1936); exports, 192,745,000 (453,803,000). Foodstuffs and manufactured goods were the chief imports and foodstuffs the main exports. Trade in 1939 was conducted largely on a barter basis (see *History*). See IMPORTS AND EXPORTS.

Finance. Budget estimates for 1936 were: Revenue, 4,421,000,000 pesetas; expenditure, 4,569,000,000. The finances were rendered chaotic by the civil war (1936-39). The gold reserve (2,225,000,000 pesetas on Dec. 31, 1935) was largely dissipated. The internal debt (19,012,300,000 pesetas on Jan. 1, 1937) was increased by issues of paper currency in large but undisclosed amounts. During the war the Franco Government contracted heavy obligations in Italy and Germany. A Madrid dispatch of Sept. 14, 1939, placed the total debt recognized by the Franco Government at \$2,500,000,000. The average exchange value of the peseta was \$0.0560 in 1938, \$0.0999 in 1939.

Communications. Spain in 1939 had about 10,340 miles of railway line, about 70,760 miles of roads, and air lines connecting the chief Spanish and European cities. Reconstruction of the railways and highways damaged in the civil war was begun (see *History*). The net tonnage of overseas shipping entering the ports in 1935 was 32,106,000.

Government. For the republican Constitution of Dec. 9, 1931, and subsequent constitutional developments, see 1938 YEAR BOOK, p. 687. At the beginning of 1939 the Loyalist and Nationalist (Insurgent) territories were administered by two rival governments at Barcelona and Burgos, respectively. For developments in 1939, see *History*.

HISTORY

End of Civil War. Gen. Francisco Franco's great offensive against the Loyalist provisional capital at Barcelona, which got well under way in the last week of 1938 (see 1938 YEAR BOOK, p. 688), proved a death blow to the Republican cause. Barcelona was captured on January 26. With its fall and the crushing of the Loyalist armies in Catalonia, the position of the Loyalists in Madrid, Valencia and the surrounding territory became hopeless. After putting down a Communist revolt, the Loyalist command in Madrid surrendered the city on March 28 and by the end of April all organized resistance to the Franco regime collapsed. After 32 months of sanguinary conflict that had wrought untold damage to the Spanish people, the civil war was over.

Campaign in Catalonia. Franco's drive into

Catalonia was launched along a 125-mile front beginning some distance from the Andorra frontier and running southward just east of Tremp and then along the lower Segre and Ebro rivers to the vicinity of Mora de Ebro. It was carried out with some 300,000 veteran troops. General Franco was opposed by about 400,000 Loyalists, but used his overwhelming superiority in airplanes, heavy artillery and tanks to overcome the enemy's numerical superiority. Advancing from Balaguer, Lerida, and Mora de Ebro, the Insurgent columns rapidly broke through the Loyalist defense works and forced a rapid retreat that soon became a rout. While Franco's bombers blasted away at Barcelona, and other communication centers in the rear of the Loyalist armies, Insurgent propaganda contributed to the demoralization of troops and civilians within the Loyalist lines. In repeated radio appeals and pamphlets scattered from airplanes, Franco guaranteed the lives of "all troops who surrendered in good faith" and promised food to the half-starved populace.

To escape being cut off by the rapid Insurgent advance, Loyalist troops hurriedly evacuated Tarragona on January 15. Harassed from the air and hotly pursued by Moorish and Navarrese veterans, the Loyalists were driven from Barcelona with only a show of resistance on January 26. There Franco was greeted with the acclaim of thousands of Insurgent sympathizers. While a thorough "purge" of all Loyalists remaining in Barcelona was being carried out, Insurgent troops drove the demoralized Loyalist army from the rest of Catalanian territory. Thousands of republican soldiers surrendered or were captured, while the rest joined a horde of civilian refugees in precipitate flight across the Pyrenees.

By February 10 the Insurgents had occupied all of Catalonia, and 250,000 Loyalist soldiers and refugees had crossed the border into France. There remained under Loyalist control only 54,500 square miles of territory in east central Spain, extending inland from the Valencia-Almeria sector of the Mediterranean coast to Madrid and the vicinity of Toledo and Granada. Minorca, Loyalist stronghold in the Balearic Islands, surrendered to the Insurgents on February 15.

Loyalist Dissensions. On the eve of the fall of Barcelona, the Loyalist Government withdrew hastily to Figueras in the extreme northeastern tip of Catalonia. Convinced that all was lost, President Manuel Azafia and some members of the Negrin Cabinet favored peace negotiations with Franco. But Premier Negrin declared the war must be prosecuted to the bitter end, and in this he was supported by a majority of the 62 members of the Cortes (out of 473 elected in 1936) who met in the cellars of Figueras Castle on February 2. Shortly afterward all members of the Negrin Cabinet and most members of the Cortes joined the exodus to France to escape capture. Among them went President Azafia, who resigned as head of the Republic on February 28.

From France Premier Negrin and his cabinet returned by airplane to Madrid. There Negrin proclaimed that his government would continue the struggle unless Franco agreed to hold a plebiscite to determine the future government of Spain, grant clemency to all Loyalist supporters, and pledge himself to end German and Italian intervention. Insisting on unconditional surrender, Franco prepared to continue the war by organ-

izing offensives against Madrid and Valencia. At the same time he launched a drive in the Cordoba sector that made rapid progress.

This situation led to a split between the military leaders at Madrid and Premier Negrin. Gen. José Miaja, the veteran commander of all Loyalist forces in the Madrid-Valencia sector, favored making peace on the best terms possible. He had about 600,000 troops at his disposal. But their armaments were markedly inferior to the Insurgents. Reserves of munitions were low. Demoralization from hunger and war weariness was spreading from the civilian population to the troops. Moreover the inability of Miaja's forces to wage offensive warfare had been demonstrated during January, when a drive toward the Cordoba-Badajoz railway northwest of Cordoba had stalled after the occupation of 100 square miles of territory without forcing Franco to withdraw troops from the vital Catalanian front.

The Madrid Revolt. Early in March Premier Negrin issued a decree ousting General Miaja. This was countered on March 5 by an anti-Negrin coup carried out by Gen. Segismundo Casado and a group of other Loyalist military leaders, who established a National Defense Council headed by General Miaja and sought to arrest Negrin and his cabinet supporters. Negrin and his associates escaped by airplane to France. But the Communists and other elements in the Loyalist forces determined to carry on the war were not so easily disposed of. Beginning March 6 a series of uprisings against the National Defense Council kept Madrid in armed turmoil for a week. A bitter civil war within a civil war was fought and won by Miaja and his supporters while the Insurgents rested on their arms awaiting the outcome. It was estimated that this fratricidal struggle cost 9000 casualties. About 12,000 alleged Communists were arrested by Miaja's troops.

Loyalist Fleet Interned. The strife between the Communists and the National Defense Council had repercussions throughout Loyalist territory. There were less violent clashes in Valencia and other cities. The anti-Negrin coup in Madrid was followed almost immediately by a mutiny among some sailors of the Loyalist fleet at Cartagena. When the mutineers seized the Cartagena radio station and demanded surrender of the fleet to Franco, the rest of the officers and sailors decided the conflict was over. Eleven naval vessels with a personnel of some 3000 men sailed from Cartagena to the French naval base at Bizerta in Tunisia and accepted internment by the French authorities. Franco then tightened his blockade of the Loyalist coast, ordering the sinking of all ships regardless of nationality that entered the three-mile limit. All hope of relieving the near-famine in Loyalist Spain by food imports was ended.

Madrid Capitulates. Having established its authority throughout Loyalist territory, the Madrid National Defense Council in the middle of March opened peace negotiations with Franco. The latter reiterated his demand for unconditional surrender, and after two weeks of fruitless discussion the Loyalists were forced to accept his terms. In Madrid the last food caches had been opened. Dogs, cats, and rats were being eaten. Conditions in Valencia and other Loyalist cities, all of them overcrowded with refugees from Insurgent territories, were equally bad. Insurgent troops were advancing from the south, west, and

north, and meeting little resistance. Franco sympathizers in Madrid and the other Loyalist cities were preparing to join in the overthrow of Loyalist authority. On March 28 Madrid capitulated, after having withstood 29 months of siege, and within 24 hours the 10 other provincial capitals remaining in Loyalist hands surrendered. General Míaja and scores of other Loyalist military and civil leaders were evacuated by British warships or escaped by air to French North Africa. Only Col. Segismundo Casado, the Madrid defense commander, and Julian Besteiro, the Minister of Interior, remained in Madrid to make the republican regime's formal capitulation to General Franco.

Loyalist Refugees. The collapse of the republic was followed by the dispersion of Loyalist refugees to all corners of the world. The end of the civil war found some 400,000 refugees in France, with 300,000 of these housed in concentration camps near the Spanish frontier. There were thousands of others in French North Africa, England, and other neutral countries. During the remainder of 1939, part of these refugees returned to Spain under guarantees extended by the Franco Government. But many more, facing certain death or long imprisonment if they returned home, preferred to start life anew wherever they could sustain life and liberty. Nearly 50,000 were reported to have settled in Mexico (q.v.) and smaller contingents went to the other Latin American countries and the United States. Others enlisted in the French military forces or accepted work offered by the French Government on roads and other construction projects in the French West African colonies.

The "Government in Exile." A number of leading members of the Loyalist Government gathered in Paris, where a "government in exile" was set up. Friction developed between Premier Negrin and a faction led by Indalecio Prieto, former Socialist Premier, over the disposition of some \$47,000,000 in gold and other government property that had been sent to Mexico City to avert its seizure by the Franco regime. Negrin and his supporters urged that this fund be preserved for counter-revolutionary activities against the Franco Government. The Prieto faction favored using it to finance the settlement of Spanish refugees in new homes. It also accused Negrin and his Foreign Minister, Alvarez del Vayo, of "playing the Communists' game" and of diverting government funds exclusively to Communists and their sympathizers among the Loyalist refugees. In a secret meeting of a committee of the Cortes on July 27, Premier Negrin was ousted as head of the "government in exile" and a permanent subcommittee of Prieto supporters was named to take over his powers.

Franco's Dictatorship. This dissension in Loyalist ranks was duplicated within the Franco Government on an increasing scale once the civil conflict had ended. There had been growing friction among the groups supporting the Nationalist cause in preceding years (see 1937 YEAR BOOK, p. 693; 1938 YEAR BOOK, p. 689).

The Fascist-Monarchist struggle to determine the character of the new Spanish state repeatedly flared out in dangerous hostility after the conclusion of the civil war. That armed hostilities did not ensue was attributed by some observers to Franco's policy of cautious compromise coupled with the progressive concentration of all powers in his own hands. Hugh Gibson, former

U.S. Ambassador to Belgium, after an exhaustive tour of Spain, stated in a London broadcast on Sept. 11, 1939, that Franco "now has more power than was ever exercised by any Spanish ruler, even by Charles V and Philip II."

Governmental Trends. The final form of the new Spain had not been determined by the end of the year, but various actions and decrees of the Franco Government had given it a decidedly Fascist complexion. On April 23 the government restored to Alphonso XIII and all his relatives to the fourth degree the private properties that they owned previous to the establishment of the republic in 1931. Franco significantly chose the title *Caudillo* (chief), analogous to *Fuehrer* and *Duce*, as the official designation for supreme head of the state.

At the first postwar meeting of the Grand Council of the government party in Burgos on June 5, the draft of a law giving Spain a "National Syndicalist basis" was adopted. It called for the creation and control of labor syndicates (workers' and employers' unions) in all branches of industry and commerce; it outlawed strikes and placed industry, commerce, and labor under direct government supervision. In the middle of July all meetings except church services and processions were forbidden without prior consent of Minister of Interior Serrano Suñer. These and other measures led the Monarchists to fear that Franco contemplated the immediate establishment of a Fascist government with Serrano Suñer as Premier and himself as chief of state.

During July and August opposition to such a course rapidly crystallized. Late in July Franco deposed several outstanding Monarchists for openly criticizing his course, including Gen. Queipo de Llano, military governor of Seville, and Gen. Juan Yagüe, commander of the Moroccan army corps. Generals Miguel Aranda, José Solchaga, and José Moscardo were other outstanding leaders of the anti-Fascist forces. Their strength was such as to defer any plans Franco might have formulated for the appointment of Serrano Suñer as Premier.

Reorganization of Government. On August 4 Franco published a decree perpetuating and enlarging his powers as commander-in-chief of the armed forces, leader of the government party (*Falange Española Tradicionalista*) and supreme head of the government. Declaring that he was "responsible only to God and to history," he assumed power to issue decrees and laws without consulting his Ministers. The army was incorporated in the government party, which already included all other pro-Franco political groups. Powers of the National Council of the government party were enlarged. Its members, 50 to 75 in number and representing the various Nationalist political interests, were empowered to determine the structure of both the government party and state, control syndical organizations and foreign affairs, and act upon other matters submitted to them by the *Caudillo*. As President of the National Council, Franco was also to name the Secretary-General, a permanent official with wide powers and *ex officio* a Cabinet officer.

A Political Junta was established as the permanent governing body of the government party. Composed of delegates to the National Council, it was second in importance to that body. Another decree of August 10 established a Council of National Defense headed by Franco and including

the Ministers in charge of the Army, Navy, and Air portfolios. On the same day Franco reconstructed his government on the basis of the foregoing decrees. He assumed the Premiership himself and named Serrano Suñer as president of the government party's Political Junta and Minister of Government, a post controlling public order, interior affairs, sanitation and health. Gen. Augustín Muñoz Grande replaced Fernández Cuesta as Secretary-General of the government party. Other members of the new Cabinet included: Foreign Affairs, Col. Juan Beigbeder y Atienza; Public Works, Antonio Peña; Army, Gen. José Varela; Navy, Vice Adm. Salvador Moreno; Air, Gen. Juan Yague; Justice, Esteban Bilbao Eguia; Finance, José Larraz Lopez; Industry and Commerce, Luis de Alarcon; Agriculture, Joaquin Benjumea Burin; Education, José Ibañez Martín.

The significance of this reorganization was variously interpreted as a Fascist victory, a Monarchist triumph and the establishment by General Franco of a nice balance between the Fascist extremists and the conservative generals. At any rate friction within government circles was less in evidence during the remainder of the year. On September 12 the new Constitution of the government party was published. It empowered Franco secretly to select his successor. The name of the successor was to be proclaimed after the *Caudillo's* death by the Political Junta of the party. The constitution also provided for the establishment of an advisory council of 90 members, including 9 Cabinet officers and 11 generals, to study and make recommendations concerning reconstruction problems and the fundamental laws. On October 16 the seat of government was transferred from the wartime capital, Burgos, to Madrid.

Later in the year the Fascists extended their propaganda activities in an effort to strengthen their position as against opposition elements. A feature of this campaign was the exhumation at Alicante on November 19 of the body of José Antonio Primo de Rivera, son of Spain's former dictator and founder of the Fascist (Falangist or Phalangist) movement, who was executed by the Loyalists during the civil war. His coffin was carried by relays of Fascist youths from Alicante to the famous Escorial Monastery near Madrid for final interment. The funeral procession took 10 days to cover the 284-mile journey (see accompanying illustration).

Demobilization. After a series of victory parades in Madrid and other leading cities, in which German and Italian troops participated, Franco in the middle of April commenced demobilization of his army of about 1,000,000 men. By the middle of the summer about 650,000 men had returned to civil life and 350,000, comprising the permanent army, remained under arms. The new standing army was twice the size of that under the republic and was even more top-heavy with officers. It included eight army corps of three divisions each. Four divisions (one Moorish) were quartered in Spanish Morocco, two in the Balearics, two in the Canary Islands, and one in Spanish West Africa. The main garrison points selected in Spain proper were Barcelona, Madrid, Seville, Cadiz, Cartagena and Ferrol. In each of these cities a military governor with the rank of general was appointed by the army Chief of Staff.

Liquidation of Opposition. In the months following the collapse of Loyalist resistance, the

Franco regime carried out a systematic purge of all elements that were either actively hostile or passively indifferent to the Franco cause during and before the civil war. The Law of Political Responsibilities issued Feb. 13, 1939, set up a national tribunal and regional courts to try not only persons charged with common law crimes but also those accused of "putting obstacles in the path of the providential and inevitable triumph of the National movement." According to the decree, members of 25 organizations and political groups, including the freemasons, and practically all those who actively or passively sympathized with the Loyalist cause were punishable by exile, loss of civil rights, imprisonment, or confiscation of property. More severe penalties, including death, were imposed on Loyalists found guilty of participating in or abetting executions and murders of Insurgents and their sympathizers, attacks upon priests and nuns, etc.

Anti-Franco Outbreaks. Despite these measures, opposition to the Franco regime continued to show itself from time to time. In June and July severe disturbances occurred in Asturias. Thousands of former Loyalist militiamen, who turned outlaws after the war ended, pillaged the countryside near Oviedo and repulsed a Civil Guard detachment sent to end their activities. A campaign by regular troops was required to drive them out. But when the troops departed, the outlaws resumed their activities.

Church Influence Restored. The government also sought to weaken republican and anti-Franco sentiments among former Loyalists by large-scale propaganda and by restoring the influence of the Church. All civil marriages contracted in Loyalist territory during the civil war were annulled pending validation by a religious ceremony. However the government's intention to control the Church was indicated by a decree of July 23 forbidding all religious gatherings and processions that were not specifically authorized by the civil governors of the provinces.

On November 15 the government resumed payments of 62,000,000 pesetas (\$6,200,000) annually to the clergy, as provided for in the 1851 concordat. Having recognized the financial provisions of the concordat, General Franco invoked other provisions giving the Spanish Crown the right to appoint and control the Spanish bishops. He demanded removal of Francisco Cardinal Vidal y Barraquer, Archbishop of Tarragona, and several other bishops considered hostile to the Franco regime. The Vatican, however, opposed Franco's demands. It held that the 1851 concordat was no longer in force and insisted on the negotiation of a new accord. This dispute was still unsettled at the year end.

Meanwhile the autonomy exercised by Catalonia and the Basque Provinces under the Republic was ended. Basques and Catalonians were forbidden to speak their regional languages.

The Nationalist measures were not exclusively repressive. Efforts were made to win support among the masses by minimum wage laws, public health services, more adequate unemployment relief, and various other social reforms. Yet the benefits derived from these measures were offset in large part by the rapid rise in prices, the severe shortage of food and other necessities, and the sharp increases in taxation that took place during the year.

Economic Reconstruction. The devastation wrought during the civil war was so great that

Franco's Minister of Public Works, Alfonso Peña, estimated in July that the task of reconstruction would take 12 years. On April 1, before a complete survey of the reconstruction problem had been made, Joaquín Benjuméa, director of Franco's Bureau of Devastated Regions, placed the cost of repairing war damages at 10,000,000,000 pesetas. Subsequent reports indicated that this sum was far too low.

To make matters worse, there was a great shortage of most of the raw materials and manufactured articles needed for reconstruction. The factories and foundries that remained intact were disorganized, and there was a grave lack of skilled workmen. Nor were funds or credits available for purchasing needed raw materials and manufactures abroad. Lacking foreign exchange, Spain sought to revive her foreign trade and obtain materials for reconstruction by limiting imports from any one country to the value of Spanish exports to that country.

Previous to the outbreak of the European war on September 1, Spain carried on a substantial barter trade with Germany. All available supplies of iron ore, pyrites, copper, mercury, hides and skins, olives, olive oil, and cork were shipped to the Reich in exchange for machinery, automobiles, electrical equipment, and a wide range of other manufactures. But with the establishment of the Anglo-French blockade of Germany, this trade was largely destroyed. Some increase in the small barter trade with Italy followed, but the Spanish Government was forced to slacken the pace of reconstruction while seeking to find new foreign markets and credits.

The chaotic state of Franco's finances, combined with the large foreign commercial debts outstanding since before the civil war, handicapped the Franco Government in obtaining foreign credits and loans on acceptable terms. The currency situation was improved by the return of \$39,730,000 in gold stored in French banks by the Loyalist Government and ordered delivered to the Franco regime by a Paris court on July 26. In August cotton obtained on credit in the United States permitted the reopening of the Catalan textile mills. On September 14 the Bank of Spain announced that it would resume interest payments on the national debt. Twelve outstanding bond issues bearing interest at 4½ to 6 per cent were converted into one 4-per-cent issue on October 9.

Labor Policies. For the rough work of reconstruction not dependent upon foreign equipment and supplies, there was plenty of labor available. A large proportion of the 650,000 Loyalist war prisoners were held in concentration camps and engaged under a system of forced labor on reconstruction projects.

Along with a decree rationing food throughout Spain, the government on May 16 made labor on reconstruction projects obligatory for all men between 18 and 50. A decree of July 30 required all men of these ages to work 15 days each year for the state without pay, or to pay an equivalent sum to the national treasury. By other decrees the government had previously established the 8-hour day and a minimum daily wage of about 88 cents. These safeguards did not apply to the labor of war prisoners.

Financing Methods. Funds for reconstruction purposes were obtained from the expropriated properties and fines levied upon Loyalists and others under the Law of Political Responsi-

bilities, individual contributions, Treasury advances, and bonds issued by the Institute of Credit against first mortgages and loans. All supplies of silver and copper were nationalized, a profit was taken by the government on all foreign exchange transactions, trade was controlled and the economic activities of the nation were brought increasingly under government supervision and guidance with the aim of creating new capital for the use of the state by taxing the labor and income of all classes.

Foreign Relations. Once the fall of Barcelona had insured General Franco subsequent victory in the civil war, the rivalries of the European powers in Spain were intensified. Germany and Italy strove to bind Franco firmly to the Rome-Berlin axis, while France and Britain worked to win the Insurgent Government over to a policy of neutrality in the greater European conflict then looming on the diplomatic horizon.

Seeking an early end to the civil war and restoration of the *status quo* in the western Mediterranean, Britain and France renewed their efforts to negotiate peace between the contending Spanish factions. They also pressed the Franco Government to hasten the withdrawal of Italian and German armed forces from Spain. On February 2 France sent Senator Léon Bérard on a mission to Burgos and on February 25 he signed with Count Francisco Gómez Jordana, Franco's Foreign Minister, a pact providing the basis for French recognition of the Franco Government and restoration of normal French-Spanish relations. He obtained assurances of Spain's neutrality, the early withdrawal of Italian and German troops, restoration of French-Spanish commercial relations, and that there would be no wholesale reprisals against the Loyalists repatriated from France. In return France agreed to turn over to the Franco Government gold and art treasures sent by the Loyalist Government to the Bank of France for safekeeping along with the ships, trucks, arms, and other properties taken into French ports and border cities by Loyalist refugees.

Meanwhile the British Government had served as intermediary in negotiating the surrender of the Loyalist garrison at Minorca in the Balearics, receiving in return a promise that no Italian armed forces would be permitted on this strategically placed island. In reply to intimations that Italy would not withdraw its forces from Spain until Mussolini's claims on France had been satisfied, the French Foreign Minister declared on February 7 that France would not permit "any foreign state to menace the integrity of Spain and thus the security of France." In this stand France received a pledge of armed support from Britain. On February 27 Britain gave *de jure* recognition to the Franco regime and France did likewise the following day. Both governments acted upon written assurances that foreign troops would be withdrawn from Spain as soon as the civil war ended.

Friction with Britain and France. No sooner had recognition been extended than Franco's foreign policy took a turn hostile to France and Britain. His order to sink at sight all neutral ships attempting to run the Insurgent blockade brought a sharp warning from the British Government. On March 27 the Franco Government signed the anti-Comintern pact, thus tying itself more closely to Italy, Germany and Japan. The participation of Italian and German troops in

the Franco victory parades, visits of Spanish generals and political leaders to Germany and Italy, the open agitation of the Spanish Fascists for a military alliance with the anti-Comintern powers, and the action of the Franco press in demanding Gibraltar from Britain, Morocco from France, and Tangier all indicated the possibility that Spain would join Germany, Italy, and possibly Japan in an attack upon Britain and France.

After the civil war ended, the Spanish side of the frontier opposite Hendaye, France, was hastily fortified. There were heavy Spanish troop concentrations within striking distance of France and Gibraltar. A powerful German naval squadron visited Spanish waters. France and Britain took extensive military and naval precautions to meet a sudden attack upon Gibraltar, Tangier or southern France. But with the withdrawal of Italian and German troops from Spain during June, July, and August, and the successful opposition of leading Spanish generals and others to a military alliance with the Rome-Berlin Axis, relations with Britain and France showed a marked improvement. During the summer the last provisions of the Bérard-Jordana pact were carried into effect by France. After the outbreak of the European conflict on September 1 Franco declared Spain's strict neutrality.

Germany and Spain. The Germans appeared to be playing a much more decisive role in shaping Spanish foreign and domestic policies during the first eight months of 1939 than the Italians.

To emphasize its claims upon Spain with respect to military as well as economic collaboration, the Nazi Government seized the opportunity presented by the return of German troops from Spain late in May to set forth in detail its secret contribution to Franco's victory over the Loyalists. Some 17,000 returning troops of the Condor Legion were acknowledged as part of the Reich's regular fighting forces. In a speech at the victory parade of the Condor Legion in Berlin on June 6 Chancellor Hitler declared that he had responded to Franco's appeal for help in July, 1936. (The civil war began July 17, 1936.) However the Spanish generals who accompanied the Condor Legion to Germany were among those who later joined most vigorously in opposing a military and economic alliance with Italy and Germany.

The Russo-German rapprochement beginning with the non-aggression pact of August 24 nullified much of the prestige and friendship that the Reich had won by military aid to Nationalist Spain during the civil war.

Relations with Italy. The Italian press was careful to point out once the Spanish civil war was over that Italy made a much greater material contribution to Franco's triumph than Germany.

Unofficial Rome estimates placed the value of the airplanes, arms, munitions, and supplies sent Franco by Mussolini during the war at 10,000,000,000 lire. Count Galeazzo Ciano, Italian Foreign Minister, in an article appearing in the Milan magazine *Gerarchia* on May 30, placed total Italian casualties in Spain at 3327 dead and 11,227 wounded. About 10,000 Italian troops had been returned to Italy in October, 1938 (see 1938 YEAR BOOK, p. 689). The remainder were returned in batches after the close of the civil war. About 20,000 reached Naples on June 6, 1939, and at least four additional but smaller contingents arrived in Italy during the balance of June and July.

In June, while Serrano Suñer, various leading

Spanish generals, and four battalions of Spanish troops were in Rome to express appreciation of Mussolini's aid, official Italian publications made known for the first time the full extent of Il Duce's contribution. *Forse Armate*, the Army and Navy journal, on June 8 asserted that 149 vessels of the Italian navy performed 870 war missions during the Spanish conflict. These included aiding the repulse of the Loyalist expedition against Majorca in the Balearics in August, 1936; transporting 100,000 troops to Spain from mid-December, 1936, to mid-April, 1937, together with 4370 trucks, 750 cannon, and 40,000 tons of other material; delivering supplies for the subsequent maintenance and reinforcement of this initial force; prosecuting submarine warfare against Loyalist warships and Loyalist and neutral merchant vessels trading with Loyalist ports; aiding Franco's blockade in other ways; bombarding Loyalist coastal fortifications and ports, etc.

Official figures issued at Rome on June 10 showed that the Italian Air Force sent 6011 men, with an unspecified number of planes, to Spain. According to the report, these men made 5318 bombing raids, during which 130,000 tons of explosives were dropped, and 224 ships damaged or sunk. It was claimed that the Italians shot down 903 enemy planes while losing only 86 planes, 175 dead and 192 wounded. When the Italian forces returned home, they left their artillery, planes, tanks, trucks, and other heavy war equipment behind in Spain.

The Rome Government sought payment for the arms and equipment supplied to Franco in the form of Spanish iron ore, mercury and other raw materials needed by the Italian munitions industry. Some such payments were forthcoming, but the German barter system diverted the bulk of Spanish raw materials to the Reich.

For other foreign relations, see CHILE, COLOMBIA, CUBA, FRANCE, GERMANY, GREAT BRITAIN, ITALY, MEXICO, PORTUGAL under *History*; FASCISM; MILITARY PROGRESS; NAVAL PROGRESS.

SPANISH-AMERICAN LITERATURES. The following presentation of the year's literary activities must not be taken as exhaustive, nor must the omission of any country be held as evidence that it was non-productive in 1939.

The following works are of general interest: F. B. Luquiens, *Spanish-American Literature in the Yale University Library* (very important); R. L. Grismer, *Indice de Doce Mil Autores Hispanoamericanos* (very useful); Arturo Torres-Rioseco, *La Novela en la América Hispana* (only the first part of his projected work) and *Antología de la literatura hispanoamericana* (excellent anthology, with careful studies of movements and genres, and a glossary of Americanisms).

Argentina. Of the materials that have come to hand, the heaviest contributions are in the field of erudition, with verse occupying second place.

Prizes. National Prizes for Literature for this year were awarded as follows: first, (20,000 pesos) to Juan Pablo Echagüe, for his *Por donde corre el Zonda*; second, (12,000 pesos) to Eduardo Mallea, for his two works, *La ciudad junto al río inmóvil* and *Historia de una pasión argentina*; and third, (8000 pesos) to Norah Lange, for her *Cuadernos de infancia*.—The Dirección Municipal de Cultura of Rosario set up a literary contest for 1938, the prizes being 3000 pesos each for the best works in prose and in verse respectively. The decision of the judges appeared in 1939 as follows: to Miguel Angel Correa (better known by

his pseudonym of Mateo Booz), for his *Alelukas del brigadier* (a splendid evocation, of the culminating moments of the life of the Santa Fe leader, Estanislao López); and to Hernán Gómez, for his *Sonata del amor filial* (a superb poem, in 40 sonnets).—*Premios Municipales de Literatura de Buenos Aires* for 1938. For verse: Juan Oscar Ponferrada, for *Flor Mitológica*; Margarita Abella Caprile, for *Cincuenta Poesías*; and Javier Villafañe for *Coplas, poemas y canciones*; and for prose: Luis Emilio Soto, for *Crítica y Estimación*; Bruno Jacoveilla for *Confortantes y prodigiosas historias del poeta Jerónimo Esteban Malanik*; and Armando Cascella, for *Cuadrilla volante*.

Fiction. J. Martínez Jerez, *Domingo de bodas* (excellent prose tales); C. A. Leumann, *Los gauchos a pie, Novela*; Manuel Gálvez, *Hombres en Soledad* (very powerful novel, analyzing a new kind of *weltschmerz*); Mateo Booz, *La mariposa quemada, Novela* (thoughtful study of dangers to provincials who move to the national capital), and *La ciudad cambió la voz* (meant to picture the growth of Rosario).

Versé. Emilio González Chaves, *Palabras sin Edad, Poesías*; Antonio de la Torre, *La tierra encendida* (redolent of the soil); Juan Ramón Rodríguez Morel, "*Nemesio*," *Poema gaucho* (fine work continuing the tradition of the personality of Martín Fierro); Vicente Barbieri, *Fábula del corazón* (exquisite verse, meant for the élite); Ernesto Marrone, *Diez caminos al horizonte* (with this book of verse the critics consider that the author has found, and is master of, his world).

Erudition. Antonio Aita, *Comentarios* (keen studies concerning certain important writers); Celso Tindaro (pseudonym of Pedro B. Franco), *Ideario de Juan B. Justo* (the motivating ideas of the founder of the University of La Plata); José Gabriel, *El nadador y el agua*; Ricardo Lavene, *Historia de la Nación Argentina* (splendid, substantial work, published by the National Academy of History); Rafael Alberto Arrieta, *Florencia Balcarce* (critical edition, with masterly biographical study of the author, on the centenary of Balcarce's death); Carlos Roberts, *Las invasiones inglesas del Río de la Plata* (detailed and documented history); Manuel García Morente, *Leciones Preliminares de Filosofía*; Raúl Larra, *Payró: El Hombre y la Obra* (very well documented work); Arturo Capdevila, *Córdoba del Recuerdo* (new edition of a work that originally won a National Prize in Literature); Emilio Bercher, *Diálogo de las sombras, y otras páginas* (a vindication of one of Argentina's greatest writers); Julio Aramburu, *Historia Argentina* (civil history with a broad spirit of American solidarity); Eduardo González Lanuza, *Ni siquiera el diluvio*; Segundo L. Moreno, *La Argentina, futura gran potencia mundial*; Ricardo Rojas, *Retablo Español* (masterly study of Spain in its intimate aspects, social, spiritual, historic, permanent, and passing—the author's impressions were received during his visit in 1908, and they have been maturing in his sub-conscious mind and heart for 30 years).

Drama. The outstanding dramatic event of the year was the performance in the Teatro Nacional de Comedia of the verse tragedy in four acts, *Ollantay*, by Ricardo Rojas. The action takes place in Cuzco and other places in the Empire of the Sun during the reign of the Inca Túpac-Yupanqui. With this play there was presented

for the first time on the stage an evocation of America before the discovery.

Academia Argentina de Letras. On June 22, the Academy held the solemn public reception of Roberto F. Giusti, Director of *Nosotros*. He had been elected in 1936, but, because he was to occupy the chair which bears the name of the poet Juan Cruz Varela (the centenary of whose death was celebrated this year) he wished his entrance discourse to deal with the author's literary and personal figure, as well as with the sentiments of the literary generation to which he belonged: *Juan Cruz Varela y la generación poética de la Revolución*. Giusti was received by the academicians Arturo Marasso, the author of *Rubén Darío, y su creación poética*.

Necrology. Juan Bautista Terán, Argentine juriconsult and man of letters, was born in San Miguel de Tucumán, Dec. 27, 1880. In 1902, he received the degree of Doctor of Laws and Social Sciences from the University of Buenos Aires. That same year he became professor of the Castilian Language and philosophy in the Colegio Nacional of his native city, passing later to the University, whose rector he became in 1914. He served for a while as Deputy in the Legislature. In early youth he became one of Argentina's most notable juriconsults, and was named Doctor honoris causa by the Universities of Lima, Santiago de Chile, Chuquisaca, and La Plata. He founded the *Revista de Letras y Ciencias*, collaborated on many others, published a number of works on history and law, among which notably, *La Universidad y la vida, La salud de la América Española*, and *El nacimiento de la América Española*. He died late in 1938, too late for our account of 1938.

Chile. This year the only Chilean literary works that have reached us are in the field of erudition.

Erudition. Since our announcement last year of the appearance of vol. viii of the *Obras Completas de Benjamín Vicuña Mackenna*, three other volumes have appeared: ix—*El Ostracismo de las Carreras*; x and xi—*Historia de Santiago*, vols. i and ii.—Domingo Amunátegui Solar, *Pipiolos y Pelucones* (incidents and personages in the War of Independence); Amanda Labarca H., *Historia de la Enseñanza en Chile* (second volume of her trilogy on education, a fine bit of scholarly work); José González Carballo, *Vida, obra, y muerte de Federico García Lorca* (1938) (splendid presentation and interpretation of García Lorca as man and poet); José M. McBride, *Chile: su tierra y su gente, Versión castellana de Guillermo Labarca H.* (Spanish version, published by the University of Chile, of an American work originally published by the American Geographical Society); Víctor Domingo Silva, *La Pampa trágica* (important collection of 26 stories and one play, with an important prologue); *Obras escogidas de Rubén Darío publicadas en Chile, Tomo I: Abrojos, Canto épico, Rimas, Azul* . . . (edición crítica y notas de Julio Saavedra Molina y Erwin K. Mapes), (homage of the University of Chile on the 50th anniversary of the publication of *Azul*: 1888–1938).

Necrology. Antonio Bórquez Solar died in July, 1938, but the news reached us too late for last year's account. Born in Ancud (capital of the Chiloé Archipelago) in 1873, this pedagogue, poet, statesman, and man-of-letters, was graduated with the degree of Bachelor in the Faculty of Philosophy and the Humanities in 1890, and obtained a chair in the University of Chile in 1892,

after being graduated as professor. In 1886 his first literary efforts appeared in *La Juventud*. In 1899 he published a noteworthy *Memoria* concerning pedagogy in the first congress of this nature held in Santiago. He was editor of the dailies *La Lei*, *La Tarde*, and *El Ferrocarril*. He held the chair of Spanish Philology in the National School Barros Arana. He became known as Chile's greatest poet, after the death of Pedro A. González. Among his best works are: *Campo lírico* (collection of poems); *El Dolor del Quijote* and *El alma de una raza* (very highly praised); *La floresta de los leones* (his second book of verse, also highly praised). Other works are *La epopeya de Chile*, and *La Quintrala*, which obtained the first prize in the dramatic competition organized by the celebrated company, Guerrero-Mendoza.

Colombia. Once again the majority of the literary material that has reached us from Colombia belongs in the field of erudition.

Verse. *Luz que flota en el olvido* (*Poema colombiano en 120 sonetos originales de varios autores*), (selections, arrangement, and illustrations by Carlos García Prada); Carlos Belén Groot, *Almas y Cosas de mi Ciudad, 1538-1938, IV centenario de la fundación* (contains 129 sonnets to important persons and incidents—nicely illustrated); *Prosistas y Poetas Bogotanos* (published in 2 vols. by the Ministerio de Educación Nacional).

Erudition. *Bogotá 1538-1938* (published by the Sociedad de Mejoras y Ornato de Bogotá); Eduardo Santos and Agustín Nieto Caballero, *Discursos* (the President of the Republic and the Rector of the University of Bogotá respectively give a brief history of the University in the formal opening of the academic year); José Manuel Marroquín, *Discursos Académicos y otros escritos sobre filología y corrección del lenguaje*; Luis López de Mesa, *Disertación sociológica* (very important); Antonio García, *Cinco Grandes Poetas Colombianos* (Valencia, Maya, Barba Jacob, León de Greiff, Pardo); Rufino José Cuervo, *Escritos Literarios* (posthumous publication which forms a companion piece to his *Disquisiciones filológicas*—both works assembled and edited by Nicolás Bayona Posada); P. Félix Restrepo, *El alma de las palabras: diseño de semántica general* (second edition of a work first published in 1917 and long out of print, but which is one of the soundest treatments, in small space, of the fascinating study of semantics), and *Corporativismo*.

Costa Rica. Alejandro Alvarado Quiros published *La Democracia*, a lecture and some keen, well-documented articles on the general subject of democracy.

Cuba. The following materials have come to hand, chiefly of erudition.

Erudition. José María Chacón y Calvo (litterateur, scholar, and diplomat), *Sánchez Albornoz, Medievalista y hombre actual*; and *Criticismo y Libertad, Evocación de José Francisco Heredia, Regente de Caracas*, as also *Estudios Heredianos* (careful, well-written study); Pastor del Río, *La Misión del hombre americano* (stirring call to co-operation in a real, spiritual Panamericanism); Ciro Espinosa, *La tragedia del Guajiro* (profound study of the Cuban peasant problem); Rafael Esténger, *Los amores de cubanos famosos* (brief, living portraits of 13 outstanding Cubans of the XIX century); Raúl Roa, *Vocación, palabra, y ejemplo de José Gaos* (fine presentation of the author and his works); Herminio Portell Vilá,

Historia de Cuba en sus relaciones con los Estados Unidos y España—Tomo II—(1853-1878) (the author was for several years in Cuba a Guggenheim Fellow and has produced a fine work).

Verse. Isa Caraballo, *Vendimia de huracanes* (very well received by the critics); and Antonio Iraizoz, *Lecturas Cubanas*, 2d ed. (beautiful and useful).

Academia Nacional de Artes y Letras. Although still somewhat in arrears, the Academy continues to publish its *Anales*. Vols. xviii and xix have recently arrived, bringing us up to June, 1937. Some of the titles, taken at random, will show the variety of interests concerned: Notes concerning Cuban Music; Art and Musical Art in Mexico; The Literary Theatre in North America.—Eduardo Sánchez de Fuentes reported to the Academy his attendance at the International Congress of Music, in New York, and entitled it *Intercambio Musical*.—José Antonio Ramos, member-elect, took his seat, reading as his entrance discourse *La voz nueva de América*.

Dominican Republic. The Dominican historian and diplomat, Max Henríquez Ureña, *La Independencia Efímera* (the incident here treated is the brief Dominican Independence of 1821); and *El Continente de la Esperanza—La Solidaridad Americana y La Conferencia de Lima*.

Verse. Emilio A. Morel, *Armas Dominicanas* (poem which four years ago won the first prize in a literary competition); Francisco R. Mejía, *Idilios y Paisajes*.

Erudition. Abigail Mejía, *Ideario feminista* (notes and thoughts on the feminist movement in the Dominican Republic); Horacio Pérez Licairac, *Trazos en la arena*, and *La Isla de la Leyenda*; Pedro René Contin Aybar, *Federico García Lorca, Poeta Popular* (excellent); Frai Cipriano de Utrera, *Centenario de José María Heredia—Homenaje de la República Dominicana* (excellent, well-documented study, clearing up many obscure points in Heredia's life); E. Rodríguez Demorizi, *El Cantor de Niágara en Santo Domingo* (fine study of his residence in the Dominican Republic).

The *Academia Dominicana de la Historia* continued its careful studies into Dominican History, and its nonagenarian Director, Federico Henríquez Carvajal, published Bani: *Parcela Histórica de su Vida en la Villa y en el Valle* (delightful book of reminiscences).

Guatemala. Rafael Arévalo Martínez, *Viaje a Ipanda*, gives us a gracefully written defense of democracies against totalitarian states and a kind of continuation of his recent *El mundo de los maharachas* (with a fantastic plot like some of Poe's tales).

Honduras. Néstor Bermúdez published *Escritores de Honduras* (a fine book calling attention to outstanding literary personages, with a prologue by Santiago Argüello).

Mexico. We have received only works of erudition.

Erudition. J. Lloyd Read, *The Mexican Historical Novel, 1826-1910* (although lacking an index, it is a useful contribution, attractively written); Gregorio López y Fuentes, *Huasteca* (the author treats the oil problem, the most serious aspect of which is moral, not financial); Artemio de Valle-Arizpe (author of many works concerning vice-regal Mexico) recently published two important new volumes: *Cuentos de México Antiguo*, and *Historia de la Ciudad de México según los relatos de sus cronistas* (a fine anthology);

Vicente T. Mendoza (well-known Mexican folklorist), *El Romance Español y el Corrido Mexicano* (a sound study of both the similarities and differences of these two popular expressions, in both words and music, with diagrams and musical illustrations); Carlos Rincón Gallardo (the scholarly Marqués de Guadalupe), *El Charro Mexicano* (an authoritative treatise of every phase of the manly and traditional Mexican sport known as the "charrería," with full information on Mexican customs, costumes, and equestrianism); Manuel Toussaint (an authority on Colonial art and history), *Paseos Coloniales* (interesting articles on Mexican Colonial Architecture, accompanied by historical data, and illustrated with many photographs); Justino Fernández (author of *El Arte Moderno en México*), *Tomás de Suria y su Viaje con Malaspina, 1791* (account of Malaspina's voyage to discover Aníán, which was supposed to exist at the northern part of America—illustrated with drawings, etchings, a map, and reproductions of priceless paintings from the collection of the Marqués de San Francisco).

Necrology. Federico Gamboa, Mexican novelist, critic, dramatist, and diplomat, born in Mexico in 1864, died in Mexico, Aug. 15, 1939. Already in 1890 he was first Secretary of Legation in Argentina and in Brazil, Chargé d'Affaires in Argentina in 1892, ad interim Chief of Division in the Ministry of Foreign Affairs in 1896, First Secretary of Embassy at Washington, Envoy Extraordinary and Minister Plenipotentiary to Central America, ad interim Under-Secretary and later Secretary of Foreign Affairs (1908-09), Deputy, Delegate of the Mexican Government to the Conference on International Maritime Law held in Brussels, 1909, Ambassador to Spain and later Extraordinary Ambassador (1911) to return the visit General Polavieja made to the Embassy on the centenary of Mexico's independence. At the time of his death he was the dean of Mexican men-of-letters; Director of the Academia Mejicana Correspondiente de la Española, Professor of Literature at the National University of Mexico. Among his works the most important are *La última campaña*, drama (1894); *Del natural* (sketches, which have run through several editions); *Apariencias* (1892); *Impresiones y recuerdos* (1894); *Suprema ley* (1895); *Metamorfosis* (1899); *Santa* (1900) and *La Llega* (both of which went on the silver screen); *Reconquista* (1904); and *Mi Diario*.

Nicaragua. Sofonías Salvatierra's *Contribución a la historia de Centro-América* (2 vols., 1092 pages), (collection of documented monographs, materials dug from the best archives in America, and from the Archivo General de Indias in Sevilla).—Pedro Joaquín Chamorro, at the request of the Academia Nicaragüense de la Lengua, wrote *Jerónimo Pérez, Biografía* (important treatise concerning an outstanding character of Nicaragua during the period between 1828 and 1856).

Panamá. Ernesto J. Castillero wrote *Panamá, breve historia de la República*.—Octavio Méndez Pereira (director of the Panamanian Academy of History) published a very important book, *Antología del Canal, 1914-1939*.

Perú. Luis Alberto Sánchez wrote *La Literatura del Perú*, one of the series of works on *Literaturas Americanas*.—Manuel González Prada died in 1918. His son, Alfonso, has published posthumously four volumes of prose and four of verse, greater in quantity and at times better in

quality than all that had appeared before his death.

Puerto Rico. Pedro Juan Labarthe, author of an admirable book in English: *The Son of Two Nations*, now presents two small dramas: *Los Eternos Tres en Uno* (drama en un acto y tres escenas, para ser representado ante gente sublime), a beautiful study of real life and dreams; and *Los Nietos antillanos*.—Mauricio Magdalena, *Hostos y Albizu Campos* (a timely tribute to Hostos).

Necrology. Puerto Rico suffered a bitter loss to her entire cultural life through the death, on Oct. 23, 1939, of Antonio S. Pedreira. Born in San Juan, P. R., June 13, 1899; graduate of the normal school, 1920; A.B., University of Puerto Rico, 1923; A.M., Columbia University, 1926; Doctor en Filosofía y Letras, Universidad Central, Madrid, 1932, he was professor of Spanish Language and Literature in the University of Puerto Rico, 1921-39; professor at Columbia University and at the Brooklyn Institute of Arts and Sciences, 1926-27; Director of the Department of Hispanic Studies, University of Puerto Rico, 1927-39; President of the Centro de Investigaciones Sociales, 1930-31; co-editor and founder of the review *Índice*; honorary member of the Instituto de Investigaciones Lingüísticas de México; corresponding member of the Sociedad de Altos Estudios de la Argentina, and of the Ateneo Dominicano; and active member of the Ateneo Puertorriqueño.—Among his principal works are: *Aristas: Ensayos* (1930); *Hostos, Ciudadano de América* (1932); *Bibliografía Puertorriqueña (1493-1930)* (1932); *Insularismo, Ensayos de Interpretación Puertorriqueña* (1934); *La Actualidad del Jibaro* (1935); *El Año Terrible del 87* (1937); *Un Hombre del Pueblo*, José Celso Barbosa (1937).

Uruguay. Verse and erudition are offered by Uruguay.

Verse. Ernesto Pinto's new book, *Revelación de la imagen*, raised quite a storm among the critics, but there seems to be general agreement as to the poetic quality thereof: "Ernesto Pinto makes visible therein a pure state of emotion."—Edgar Ubaldó Genta, *La Epopeya de América* (old Inca, Araucanian, Kechua, and other legends); Gastón Figueira, *Geografía poética de América, Tomo V., Alba en la playa de los mil cocoteros* (poetic description of scenery—Bahía and Pernambuco).

Erudition. Romualdo Brughetti, *18 poetas del Uruguay* (short sketches, followed by selections); Alberto Zum Felde, *La Literatura del Uruguay* (very helpful; one of the series *Literaturas Americanas*); Carlos Vaz Ferreira, *Fermentario* (volume of fine thought-provoking essays).—The publication of the *Obras Completas* of that grand old man, Juan Zorrilla de San Martín, has reached vol. 16.

Necrology. Luis Melián Lafinur, the last survivor of the great generation that influenced so profoundly the civic affairs and the culture of the Río de la Plata, died early in 1939 at the age of 89. Immediately after being admitted to the bar of Montevideo and Buenos Aires, he began teaching Civil Law at the University of Montevideo and soon became a member of the advisory council. The intellectual élite of that epoch had taken refuge in the Ateneo del Uruguay, of which Melián Lafinur was president. He was profoundly versed in English and Latin. He was elected Deputy and made a great reputation as an orator. Al-

though not popular with the successive governments, his learning, his prestige, and his superior aptitudes were such that the government had to use him. Thus, with others, he represented his country at the third Pan-American Conference held in Rio de Janeiro in 1906. Immediately thereafter he was appointed Minister Plenipotentiary in the United States, Mexico, and Cuba. Upon his return home he was elected deputy for a third time and served brilliantly, although nearly blind. Aside from *Las Mujeres de Shakespeare*, his principal publications were two historical works: *Los Treinte y Tres* and *Juan Carlos Gómez*; and two volumes of verse: *Ecos del Pasado* and *Los Grandes y los Pequeños*; and his last work, *Buenos Aires*.

Venezuela. Materials from Venezuela have been chiefly fiction and erudition.

Erudition. José Antonio Calcaño, *Contribución al estudio de la música en Venezuela*; Víctor José Cedillo, *Juan Vicente González*; Enrique Bernardo Núñez, *Una ojeada al mapa de Venezuela*; Pedro Sotillo, *Andanza*; Manuel Segundo Sánchez, *La Prensa Periódica de la Revolución Emancipadora* (documented study of the newspapers of the revolutionary period; 1810-21).

Drama. Julián Padrón, *Parásitas negras* (*Saínete en 3 actos y en 7 cuadros*).

Fiction. Pablo Domínguez, *Ponzoñas* (*Cuentos*); Walter Dupouy, *Tomasote*; José Fabbiani Ruiz, *Agua Salada* (*Cuentos*).

Necrology. Caracciolo Parra León died at the age of 37. Doctor of Political Sciences (1924), Doctor of Ecclesiastical Sciences (1926), Vice-Rector of the Universidad Central de Venezuela (1928-33), Director of the National Library (1936), Professor of the General Principles of Law, of Spanish Law, and of Public Ecclesiastical Law in the School of Political Science of the Central University from 1929 until his death. He was Director of the Office of Inter-American Relations in the Ministry of Foreign Affairs (1936-38), Delegate to the VIII International Pan-American Conference at Lima; Knight of the "Orden Piana," and Gran Premio Hispanoamericano de la Raza, 1932. Among other works these are outstanding: *La Instrucción en Caracas 1567-1725*; *Filosofía Universitaria Venezolana 1788-1821*; *Analectas de Historia Patria*.

JOHN D. FITZ-GERALD.

SPANISH GUINEA. See SPANISH WEST AFRICA.

SPANISH LITERATURE. The aftermath of the war seems to have prevented any considerable amount of literary activity. Nevertheless, there have been some creditable literary performances on both sides of the Civil War, over and above the works of propaganda. The following works which are of interest in the Hispanic field may be mentioned:

War. J. García Mercadal, *Aire, Tierra, y Mar* (*Los más gloriosos episodios de la gesta española*). *Primer Año Triunfal* (a frankly pro-Franco account of the first year of the Spanish Civil War—Premio Nacional de Literatura); Angel Lázaro, *La Verdad del Pueblo Español* (speeches and essays upon persons and things in Spain before and during the recent war—published in Puerto Rico); Concha Espina, *Esclavitud y libertad, diario de una prisionera* (day by day account of her living in territory dominated by the Loyalists until the Nationalists finally conquered—pro-Franco); Karl Marx and Frederick

Engels, *Revolution in Spain* (despite its tendentiousness, the work is welcome as a collection of historical documents); Luis Quintanilla, *All the Brave*, Preface by Ernest Hemingway, Text by Elliot Paul and Jay Allen (a terrific indictment of war in general and fascism in particular, with paintings by a great artist, who is also a great soldier); Robert Brasillach and Maurice Bardèche, *Histoire de la Guerre d'Espagne* (despite its appearance so soon after the war, it presents the war very comprehensively as a whole); Arthur F. Loveday, *World War in Spain*.

Verse. *Poems of Federico García Lorca* (with English translations by Stephan Spender and J. L. Gili—selection and introduction by R. M. Nadal: a friend of the poet), (fine selection; translations not always accurate; valuable contribution); Rosalía de Castro, *Beside the River Sar* (Selected Poems from *En las orillas del Sar*), translated from the Castilian, with annotations and a preface, by S. Griswold Morley.

Erudition. Ramón Menéndez Pidal, *La España del Cid* (new single volume edition, reproducing the original text in its entirety, with some corrections but omitting the voluminous appendix with documentary notes); Francisco Rodríguez Marín, *En un lugar de la Mancha . . .* (*Divagaciones de un ochentón evacuado de Madrid durante la guerra*); and *La Gatomaquia, poema jocoserio de Lope de Vega Carpio* (*Primera edición anotada en España*), (was prepared for the tercentenary of the death of the poet, but could not be published until now); Karl Vossler, *Einführung in die Spanische Dichtung des Goldenen Zeitalters* (author's translation of his own lectures given at Santander in 1933 and published in 1934 as *Introducción a la literatura española del siglo de oro*); Narciso Alonso Cortés, *El Pronombre "se" y la voz pasiva castellana* (a valuable treatise), and *Manual de composición literaria* (a serious work on rhetoric); Julio Berzunza, *Alexander the Great and the Alexander Romances from the Collection of Julio Berzunza* (very valuable contribution to our knowledge of "Alexandriana"); Juan Suñé Benages and Juan Suñé Fonbuena [Father and Son], *A Critical Bibliography of Editions of the "Don Quixote" printed between 1605 and 1917*, continued to 1937 and now edited by J. D. M. Ford and C. T. Keller (lists editions and translations in 42 languages and totals thus far 1369 items); E. Allison Peers, *Spain, the Church, and the Orders* (a careful study); Victor Pradera, *The New State* (posthumous translation by Bernard Malley), (may have considerable influence on Spanish politics of tomorrow); Alice H. Bushee, *Three Centuries of Tirso de Molina* (a very valuable contribution); Julio Jiménez Rueda, *Juan Ruiz de Alarcón y su tiempo* (well documented, devoted to the personality of the author, is indispensable); Lope de Vega, *Del monte sale (quien el monte quemó)*, (Palaeographic edition with study and notes by Emilio Le Fort Peña); *La Estrella de Sevilla*, Notes and Vocabulary by Frank Otis Reed and Esther M. Dixon, introduction by John M. Hill (a very fine edition which has only just appeared several years after the death of Dr. Reed); Baltasar Gracián, *El Criticón* (vol. ii, which completes the excellent critical and annotated edition of M. Romera-Navarro); Gilberte Guillaume-Reicher, *Théophile Gautier et l'Espagne* (very careful and sympathetic study, following Gautier's own footsteps); Manuel García Morente (Dean of the Faculty of Philosophy and Letters of the Central University of Mad-

rid), *Lecciones preliminares de filosofía Argentina* (prepared, while the author, in exile, was serving as Dean of the University of Tucumán, for his Argentine students of philosophy—a simplification, with history and criticism—is reported already to have been officially adopted by Peruvian and Chilean Universities); Guillén de Castro, *Las Mocedades del Cid* (edition by G. W. Umphrey); Ruth Matilda Anderson, *Pontevedra y La Coruña* (careful study, illustrated with 682 photographs); Florence Lewis May, *Hispanic Lace and Lace-Making* (with 432 illustrations) [these last two books mentioned were published by the Hispanic Society of America]; the great surgeon and pathologist, Gregorio Marañón, even in exile, has given us another of his psychological biographies of great men of the past: *Tiberio Historia de un resentimiento*.

Spanish Academy. Eduardo Marquina, the poet, dramatist, and actor, was admitted in a session held in San Sebastián Aug. 4, 1939.

Necrology. Antonio Machado Ruiz, Spanish poet, dramatist, and scholar, was born in Seville, July 26, 1875, studied under Giner de los Rios in the Institución libre de Enseñanza, was Vice-Consul of Guatemala in Paris in 1900, taught French in the Institute of Soria, 1907, and (after being government fellow to study philology in Paris in 1910) in the Institute of Baeza, going thence in 1919 to the chair of literature in Segovia. He was a Doctor of Philosophy and Letters, Member of the Spanish Royal Academy of the Language, Member of the Hispanic Society of America, Correspondiente of the Real Academia Sevillana de Buenas Letras, and possessed the Palmes Académiques of France. He collaborated often with his brother Manuel. Between them they were an influence for the best lyric tradition of Modern Spain. Antonio died in the French Pyrenees, Feb. 22, 1939.

JOHN D. FITZ-GERALD.

SPANISH WEST AFRICA. The two Spanish colonies in western Africa: (1) Spanish Guinea (comprises Rio Muni, 9470 sq. mi., 89,130 inhabitants, on the Gulf of Guinea and surrounded by French Equatorial Africa; the island of Fernando Po, 795 sq. mi., 2987 inhabitants, and the adjacent Corisco islands, 14 sq. mi., 2987 inhabitants). Total area, 10,279 square miles; population, 112,990. Capital, Santa Isabel. Cacao, sugar, and coffee are the chief products. (2) Western Sahara (includes Rio de Oro with Adrar, 109,200 sq. mi., 12,000 inhabitants, adjoining the southern border of French Morocco; the nearby enclave of Ifni, 965 sq. mi., 20,000 inhabitants). Total area, 110,165 square miles; population, 32,000. Capital, Villa Cisneros (Rio de Oro). Fishing is the main occupation of the people.

SPINGARN, J(OEL) E(LIAS). An American author and publicist, died in New York, July 26, 1939, where he was born, May 17, 1875. He was educated at Columbia University (A.B., 1895; Ph.D., 1899) and at Harvard University (1895-96). After getting his doctorate degree he joined the faculty of Columbia University, becoming professor of comparative literature in 1909. He was the founder of the *Journal of Comparative Literature* and was its managing editor from 1902 until 1914. In 1911 his connection with the University was severed in an academic dispute.

He published the *Amenia* (N. Y.) *Times* from 1911 to 1926, and in 1919 aided in the founding of the publishing firm of Harcourt, Brace & Co.,

serving as literary adviser until 1932. An advocate of full rights for the Negro, Mr. Spingarn became associated with the National Association for the Advancement of Colored People in 1913, and in the following year established the Spingarn Medal awarded annually "to the man or woman of African descent and American citizenship who has made the highest achievement during the preceding year in any honorable field." After 1930 he was president of the Association.

A follower of Theodore Roosevelt, he was an unsuccessful Republican candidate for Congress in 1908, and in 1912 and in 1916 was a delegate to the Progressive National Convention in Chicago. He founded a movement for rural co-operative recreation in 1910. Among his many interests was gardening, and he was particularly interested in the growing of clematis, of which he had the largest collection in the world. In 1937 he published *Henry Winthrop Sargent and the Early History of Landscape Gardening and Ornamental Horticulture in Dutchess County, N. Y.*, and received the Jackson Dawson Memorial Medal of the Massachusetts Horticultural Society. He contributed to Taylor's *Garden Dictionary* and Markham's *Clematis*.

Besides contributing to the *Dictionary of American Biography* and the *Cambridge History of English Literature*, he wrote *A History of Literary Criticism in the Renaissance* (1899), which was translated into Italian in 1905; *The New Criticism* (1911), *The New Hesperides and Other Poems* (1911); *Creative Criticism* (1917); *Poems* (1924); *Poetry and Religion* (1924), and *Creative Criticism and Other Essays* (1931). Also, he edited *Critical Essays of the Seventeenth Century* (3 vol., 1908-09); *Temple's Essays* (1909); *Goethe's Literary Essays* (1921), *Criticism in America* (1924), and *European Library* (25 vol., 1920-25).

SPITSBERGEN. See SVALBARD.

SPORTS. The close of the sports season of 1939, one quarter-century removed from the outbreak of the World War in 1914, left the world of athletics facing an almost exactly similar position to that which obtained 25 years earlier. World-known athletes entered the armed services of one country and another. Warfare called for men of the very types furnishing participants in many sports. The planning of sporting events ran into the uncertainties and disruptions natural to a time of conflict.

Yet 1939 was a year of great achievement, a year of near-perfection in championship form. The United States retained its international prestige in a competitive schedule that we were able to see through to the end. In almost all the fields of sport, our athletes proved their supremacy.

Archery. The 1939 Archery Championship was retained by Pat Chambers of Portland, Ore., when he made an all-time record with a score of 134-826 in the Single York Round at the tournament of the National Archery Association held in St. Paul, Minn. Chambers also won the Double York Round, score 272-1581; Single American Round, 90-700; Double American Round, 180-1398. A new champion, however, succeeded to the women's title, displacing Miss Jean Tenny who was runner-up. The 1939 title holder is Mrs. Blevia Carter of Seattle, Wash., who scored 72-466 in the Single National Round; 143-919 in the Double National Round; 72-538 in the Single Columbia Round, and 144-1066 in the Double Columbia Round.

Curtis L. Hill, Dayton, O., won the Men's Regu-

lar Style Flight Shoot championship, 517 yds. 1 ft. The Men's Free Style Flight Shoot title was won by Bruce Robertson, Milwaukee, Wisc., 536 yds. 2 ft. 8 in. The women's championships in these two events were won by Mrs. Millie Hill, Dayton, O., 374 yds. 2 ft. 5 in., and Glendolene Vinyard, Canby, Ore., 455 yds. 8 in., respectively, both women creating all-time records in these events, as did Curtis L. Hill in the Men's Regular Style F. S. event. Mrs. Beatrice Hodgson, San Pedro, Cal., created an all-time record in the Single Columbia Round, with her score of 72-552.

The annual international tournament, held at the Canadian National Exhibition in Toronto in August, was marked by the unprecedented feat of Mrs. Olive Besco-Layer of Clarendon Hills, Ill., in winning the women's senior title for the sixth successive year, the first archer, man or woman, to hold an international title over that period. Jules Schweitzer of Lakewood, Ohio, won the men's crown and Robert Goldich of Newtonville, Mass., successfully defended the boys' junior championship. The only Canadian to figure in the four major events was Miss Doreen Roberst of Toronto, who captured the girl's junior title.

Automobile Racing. Just what speed a man-driven machine on four wheels may ultimately attain seems impossible to conjecture. When Capt. George E. T. Eyston in 1938, within 24 hours after having his own record smashed by his compatriot, John R. Cobb, London fur dealer, drove his famous *Thunderbolt* for an all-time record of 357.5 m.p.h., that seemed to be the utmost limit. Last year, however, the doughty trader in pelts returned to the scene of his previous year's defeat, the Bonneville Salt Flats of Utah, and in a series of assaults against time emerged with all the unlimited and Class "A" International records tucked safely under his belt. Cobb traveled the mile on the famous straightaway track at the speed of 368.9 m.p.h. on August 23. Three days later in his same *Railton Red Lion*, he broke the 5 and 10 mile records at the rate of 302.2 m.p.h. and 270.4 m.p.h., respectively. Incidentally he was clocked for kilometer marks in each test, doing 1 k. in 369.7 m.p.h.; 5 k. in 326.7 m.p.h., and 10 k. at the rate of 283.0 m.p.h. Over the same flats in July and August, Ab Jenkins in his *Mormon-Meteor III* roared to two more world endurance-run records, which about gives him a perfect score on all distances from 100 to 1000 miles. On July 26, he traveled 500 miles in 2:55:07.12 or, 171.31 m.p.h. On August 11, Jenkins sped 1000 miles to an endurance record of 170.77 m.p.h., going the entire distance in 5:51:21.01. The Annual Memorial Day 500-mile auto classic at Indianapolis saw Wilbur Shaw repeat his '37 victory in a *Boyle Special*, completing the distance in 4:20:47.39 equalling 115.035 m.p.h., before over 145,000 spectators. Shaw bettered his previous time but failed to lower the record for this event made by Floyd Roberts when he won it in 1938 with an average speed of 117.200 m.p.h. The 1939 race was marred by the fatal accident which ended the career of Floyd Roberts when he collided with Bob Swanson as he entered the 266th mile in the first fatality on the track since 1935. Roberts had planned to retire after this event.

Badminton. The National Amateur championships held—for the first time—in New York in 1939, demonstrated that badminton is one of the most popular of winter games. Competitors assembled for the event last March 23-25, representing the East, Middle West, and Far West to the

number of nearly 200. Nor did its popularity rest solely with the participants, for the number and enthusiasm of the spectators surpassed anything in previous attendances. Champions of two years' standing, ever since the National event was inaugurated in 1937, were dethroned in both the men's and women's singles. Walter Kramer of Detroit, defending champion, yielded his crown in the men's final singles to 18-year old David Freeman, Pomona College freshman from Pasadena, Cal., in straight sets, 15-9. Miss Mary Whittemore, slender and left handed, who hails from Boston, Mass., met Miss Helen Gibson of Westport, Conn., in the women's final after the latter had eliminated Mrs. Del Barkhuff, Seattle's reigning champion since 1937, in the semi-finals 4-11, 11-6, 12-10. Miss Whittemore defeated Miss Gibson 11-1, 2-11, 11-4. H. Law and R. Yeager of Seattle successfully defended their men's doubles title; Mrs. Barkhuff and Miss Zoe Smith of Seattle regained their women's doubles crown lost last year, and Miss Smith and Yeager are the new mixed doubles titleists. Paul Vansco, New York, won the Eastern championship, with Miss Whittemore victor in the women's event, while the Metropolitan crowns went to Clinton Stephens and Miss Mary Hagan respectively, both of New York. The Eastern Intercollegiate championship enjoyed a successful inception in 1939 and was won by Albert M. Frost, Columbia senior, who defeated Francis B. Hamlin, Jr., of Yale in the final. To complete a flourishing year, a youthful American professional, Bill Markham of New York, defeated Jack Purcell, veteran star of the badminton realm, native of Toronto, Canada.

Baseball. It was fitting that the grand climax of the baseball season of 1939 should ring down the curtain upon the celebration of the 100th Anniversary of America's National game with a team record unparalleled in the annals of baseball history. And the well-deserved honor for that feat goes to the New York Yankees. Their playing throughout the entire season, up to and through the World Series, demonstrated the most perfectly co-ordinated team work and machine-like precision. It was an exhibition of achievement reaching its highest plane throughout a 100 years of progressive development. They won their fourth successive American League pennant with a margin of 17½ games, and repeated against the Cincinnati Reds the straight game victory they won in 1938 against the Chicago Cubs when the two teams met in the 1939 World Series. The scores for the series were as follows: First game, played in New York Oct. 4, 1939, attendance 58,841, Yankees 2: Reds 1. Second game, New York, October 5, attendance 59,791, Yankees 4: Reds, 0. Third game, Cincinnati, October 7, attendance 32,723, Yankees, 7: Reds 3. Fourth game, Cincinnati, October 8, attendance 32,794, Yankees 7, Reds 4. On their quest for the pennant, the Yankees were never in grave danger. Only once, with an already overwhelming lead, in mid-season they let down and lost five straight games to the Boston Red Sox, reducing their lead to 5½ games. From then on, they dominated the American League without a challenge.

In the National League it was a different story. With the collapse of the Cubs, Giants, and Pirates it looked as if the Cincinnati Reds would duplicate the Yankees' steam-roller progress. But September brought a dangerous challenge from the Cardinals, and it was not until the close of the final four-game series with the Cards that the coveted pennant came into the possession of the Reds for the

first time in 20 years and the second in the history of the World Series.

A total of seven home runs were scored in the World Series, all by the Yankees, Charlie Keller, freshman marvel, accounting for 3 (2 in the third game); Dickey 2, and Dahlgren and Di Maggio 1 each. The total attendance for the four days was 183,849; total receipts, \$745,329, and the amount received by the players was, Yankees \$5541 each, Reds \$4193 each. Capt. Bill McKechnie, the Reds' steersman, performed a miracle during his two years' handling of the team. When he took command, starting the 1938 season in last place, he had maneuvered them into the first division at its close. The close of his second season found them pennant winners. He had, however, won pennants with the Pirates in 1925 and Cardinals in 1928.

The seventh annual All-Star game between the American and National Leagues took place on July 11, 1939 in New York and was won by the American League 3-1, with six Yankee players on the team. This was their fifth victory in the entire series.

Joe Di Maggio of the Yankees won the American League batting honors with a percentage of .381 and was also voted the most valuable player. Jimmy Foxx of Boston was homerun king with a total of 35. In the National League, Bucky Walters, Cincinnati Reds, was accorded the honors as the most valuable player and was also credited with the most effective pitching record, based on his average of 2.29 earned runs per nine inning-game, with the New York Giant's veteran, Carl Hubbel, runner-up and Walter's team-mate, Paul Derringer, in third place. Johnny Mize, St. Louis Cardinals, carried off the National batting honors with a percentage of .349. Mize also won the homerun crown with a total of 28. Bob Grove, Boston, was adjudged the best pitcher in the American League, although Marius Russo and Steve Subdra were first in earned runs and won-and-lost percentages respectively.

The season was saddened by the forced retirement of Lou Gehrig, from the effects of a form of paralysis. Gehrig had achieved the remarkable record of playing 2130 consecutive games. He was retired on his own request and, on July 4, was paid a notable tribute in the Yankee Stadium by his team-mates and by Mayor La Guardia who extolled his record in the presence of 61,808 fans. The game also lost two towering figures in the passing on of Col. Jacob Ruppert (q.v.) owner of the Yankees, and Louis Comiskey, owner of the Chicago White Sox (see NECROLOGY).

The Little World Series title went to Louisville; in the American Association to Kansas City; in the International League to Jersey City, in which series the Governor's Cup was awarded to Rochester as play-off winner; in the Pacific Coast League to Seattle; in the Dixie Series to Fort Worth; in the Southern Association to Chattanooga; in the Texas League to Houston; in the Eastern League to Scranton. Harvard and Cornell were tied for the Eastern Intercollegiate League title, and Iowa captured the Western Conference crown.

During the 1939 season night baseball gained in popularity, spreading to the American League, and was supported in the National League. See ELECTRICAL ILLUMINATION.

Basketball. The 1938-39 Intercollegiate basketball season definitely proved its claim to popular appeal with record attendance figures reported from every section of the country. Competition was

not only keener than in previous years but showed marked improvement in technique, with the result that only two of last year's conference champions were able to retain their crowns. Extension of intersectional competition and an increase in the adoption of the double header method of meeting the constantly increasing spectator interest, the holding of the first National Collegiate A. A. championship, and the extraordinary record of the Long Island University five in winning the second Metropolitan Basketball Writers' Association National Invitation Tournament, were the outstanding features of the season.

The L. I. U. team, having survived a pre-season tour of seven games without a defeat, followed through with a stiff 21-game intercollegiate schedule, still unbeaten. The Loyola quintette of Chicago, also unbeaten, were selected with the L. I. U., to participate in the Metropolitan National event. Meeting in the final, L. I. U. defeated Loyola 44-32, thus winning the title as the outstanding team of the season in one of the most brilliantly spectacular series in the history of the game, drawing a total of over 50,000 spectators to Madison Square Garden.

The National Collegiate Association, after holding country-wide eliminations, held its first National Championship with Oregon, winner of the Pacific Coast Conference, meeting Ohio State, holding the Big Ten laurels. Oregon took the crown with a score of 46-33, their title, however, being subordinated to that of Long Island University.

The two quintettes that successfully defended titles won last year were Dartmouth, who defeated Harvard for the Eastern Intercollegiate League crown, and Rhode Island, winner of the New England Conference championship, with Connecticut a close runner-up.

The other Conference champions were: Ohio State which won in a flaming race with Indiana for first place in the Western Conference; Alabama which took the Southeastern Conference title with a five-game margin over Georgia; Wake Forest, winner of the Southern Conference crown with a seven-game margin over Washington and Lee which tied with Maryland for second place; Texas, winner by a one-game margin over Arkansas in the Southwest Conference; Missouri and Oklahoma tied for honors in the Missouri Valley Conference (Big Six), and Drake and Oklahoma did the same in the other Missouri Valley Conference. After Carnegie Tech and Georgetown tied for first place in the seven-year-old Eastern Conference, that body was dissolved. Colorado University won the title in the Rocky Mountain (Big Seven) Conference. Oregon won the Northern Division of the Pacific Coast Conference, and California took the Southern Division lead, but in the Divisional Play-off, Oregon defeated California 54-49 and 53-47. New Mexico State was the winner of the Border Conference, and in the Southern and Southeastern Conference tournaments Clemson and Kentucky were the respective winners.

The only claimant for national high scoring honors was Chet Jaworski of Rhode Island with 477 points, quite a drop from the all-time record of 1550 points made by Louisetti of Stanford last year. This fact may be significant of the higher plane of the past season's technique when coupled with the facts that with only two exceptions, championship crowns changed heads throughout the entire country, and Temple, the all-powerful quintette of 1938, could do no better than finish the season in the Eastern League in fifth place. At-

tendance rose to new high records throughout all the circuits. The series of 14 double headers at Madison Square drew a total attendance of 196,595. The total for 12 double headers in Convention Hall, Philadelphia, was 63,000, and in the mid-West, Minnesota and Ohio State drew a record gate of 15,700 in Minneapolis.

Billiards. In a decidedly "off-year" the only tournament of National scope held in 1939 was won by Joe Chamaco of Mexico City in the three-cushion billiard championship held under the auspices of the National Billiard Association; it lasted over four months, on a round-robin basis, held in eight cities. Chamaco, who represented New York, won fifty-five out of seventy-two games with a percentage of .762, Jay Bozeman of Chicago, pressing him closely with .667, was runner-up. Allan Hall, also of Chicago, was third with .583. The rest of the players included John Layton, Frank Scoville, Tiff Denton, Charles McCourt, Clarence Jackson, Otto Reiselt, and Art Thurnblad. With no tournaments in the other branches of the game, the present title holders are, Welker Cochran 18.2 balkline champion; Willie Hoppe, the 18.1 and 71.2 king, and Jake Schaefer, the 28.2 ruler, who retain their crowns.

No tournaments were held in the pocket billiard realm; hence, Jimmy Caras of Wilmington, Delaware, held his possession of the title. The same condition obtains in the amateur division.

Bobsledding. Named No. 1 pilot for the American Olympic Team, Robert Linney, of Lyon Mountain, N. Y., was the outstanding bobsled driver in 1939. With his mates, William J. Stacawitch, Arthur Keysor, and Angus W. Clair, he won first place in the Olympic Tryouts and then captured the North American Four-man Championship at Lake Placid, driving an all-metal sled, the *Iron Clipper*, designed and built by himself. Aubrey "Bucky" Wells of Keene Valley A. C., N. H., outstanding pilot of 1938, retained the National A.A.U. four-man championship with his team-mates, Warren Martin, Hubert Nye, and John Otis. Both the North American and National A.A.U. two-man titles were successfully defended by that famous Keene Valley pair, Ivan Brown and A. M. Washbond who won the 1936 two-man Olympic title. The Governor Lehman, Leithgow Osborne, and Samuel H. Packer four-man trophies were won by Francis Tyler's team representing the Sno Birds of Lake Placid. The International four-man championship was won by Switzerland, at Cortina d'Ampezzo, Italy, in January, 1939, with Great Britain second, Germany third and fourth, and the United States fifth.

Bowling. From March 9 to May 5, over 23,000 bowlers competed for a share of the \$184,849 total prize money during the 39th American Bowling Congress held in Cleveland, the second longest and one of the largest tournaments in the history of the A.B.C. A former baseball player, Joe Wilman, of Chicago, annexed premier honors when he won the all-event title with a total score of 2028 and cashed in with the highest money-score, his winnings approximating \$600. James Danek of Forest Park, Ill., won the singles crown with a score of 730, while the doubles diadem went to Murray Fowler and Phil Icuss of Steubenville, O., their combined score being 1405. The victorious five-man team comprized Fred Breckle, Charles Kotarski, Louis Burr, Leonard Dettloff, and John Crimmins, representing the Fife Electric Company, with a total of 3151; Solvay (N. Y.) Bank team second, with 3075, and Elizabeth (N. J.) Elks

third with 3066. William McGeorge of Kent, Ohio, rolled the only perfect game of 300 throughout the entire tournament. The 1940 A.B.C. will be held in Detroit.

The intercollegiate title was won by a Syracuse University team comprising Barney Evans and Bill Hofner, of Rochester, who set a world's doubles mark of 1517 in November. Another outstanding achievement was that of Albert Brandt, of Lockport, N. Y., who created another world's record when he bowled a total of 886 for three games.

The Women's 22nd International Bowling Congress was held in Oklahoma City, and, as in the men's event, the honors went to the mid-west. Miss Ruth Troy of Dayton, Ohio, won the women's all-around title with a total of 1724. Miss Helen Hergstler of Detroit took the singles crown with a score of 626, and Miss Connie Powers and Miss Bobby Reus of Grand Rapids, Mich., scored 1130 to capture the doubles title. The team winner was the Kornitz Pure Oil quintette which accounted for 2618 pins to annex the championship. Syracuse, New York, was selected by the ladies for their 1940 W.I.B.C.

Boxing. If the past season is a criterion, the "million-dollar-gate" has taken an indefinite vacation as far as the prize ring is concerned. In four defenses of the heavy-weight title during 1939, the total gate receipts fell under the seven figure mark. The present champion, however, deserves particular credit for his willingness to defend the title won in his fourth fight in June, 1937. He defended it in the following August, in three bouts in 1938, and four times in the past season, and, in both his 1938 and 1939 campaigns, he won all by the K.O. route.

In January, Louis met John Henry Lewis who had abandoned his light-heavyweight title to crash the heavyweight sanctum. Louis disposed of him in 2:29 of the first round. Three months later, he served Jack Roper with the same dose, but in nine seconds less time in a one round contest. In June, Louis came nearer to losing his crown than at any time since his first bout with Max Schmeling. It was only the absolute ignorance of any semblance of science or ring generalship on the part of his opponent that saved the champion from a knockout. This was his meeting with "Two-Ton" Tony Galento, who he "bombed" into helplessness in 2:29 of the fourth round. The ponderous Italian bar-keep, who knows nothing of fear and less of the art of boxing, by introducing a peculiar "stance" which permitted him to lift a punch from the floor up, had Louis staggering with the fury of his blows in the first round and spilled the champion to the canvas with a left hook to the jaw in the third session. Unable to follow up his advantage in either case, and unable to defend himself when Louis, who was clearly puzzled by the style of attack, found an opening, Galento, bruised and bleeding, his senses numbed by the Bomber's merciless hammering, proved to be little else than a punching bag from then on to the finale.

In September Louis entered the ring in Detroit, for his final championship bout of the year with Bob Pastor as his opponent whom he succeeded in knocking out in 38 seconds of the 11th round—the longest bout in his career in which he won by this route. Once before he won by a K.O. in the 10th round, in 1935 against Hans Birkie.

Next to Joe Louis, the name of Billy Conn of Pittsburgh stands out pre-eminently among the season's stars. Defeating Apostoli the second time,

Conn won the light heavyweight title from Melio Bettina of Beacon, N. Y., in a fifteen round decision at Madison Square in July. Bettina came by the title in defeating Tiger Jack Fox in an elimination final in February, 1939. The new light heavyweight champion is, at present, the most promising candidate for heavyweight possibilities.

Armstrong lost much of the glamor attached to his 1938 performances when he dropped the lightweight crown through questionable tactics in his bout with Lou Ambers, who was awarded the title—a decision, however, which brought much criticism—but he successfully defended his welterweight crown in eleven title bouts. The middleweight crown is shared by two heads, Al Hostak reigning with the recognition of the N.B.A. on his four round knockout of Solly Krieger, while Ceferino Garcia disputes his right to the title upon his own recognition by California and New York through his sensational knockout of Fred Apostoli. Joey Archibald retained his featherweight championship by defeating Leo Rodak and Henry Jeffra, and Sixto Escobar successfully defended his bantamweight title against Kayo Morgan in April, but subsequently relinquished the crown. This leaves the bantamweight title in dispute between Georgie Pace, Cleveland, recognized by the N.B.A., and Lou Salica, New York, recognized by the New York Boxing Writers' Association. In the flyweight class Little Dado, Philippine Islands, has the recognition of the N.B.A. and the N.Y.B.W.A. In neither of the latter classes does the New York State Boxing Commission recognize any champion.

In the amateur class the National A.A.U. champions are as follows: 112-lb. Class, Jose Mercado, Honolulu; 118-lb. Class, Willima Speary, Philadelphia; 126-lb. Class, William Eddy, Flint, Mich.; 135-lb. Class, George Toy, Cleveland; 147-lb. Class, Cozy Etorace, Rome, N. Y.; 160-lb. Class, Ezzard Charles, Cincinnati; 175-lb. Class, James Reeves, Cleveland; Heavyweight, Tony Novak, Chicago. The National Collegiate A. A. Champions include: 120-lb. Class, Sewele Whitney, Loyola; 127-lb. Class, Ted Kara, Idaho; 135-lb. Class, Gene Rankin, Wisconsin; 145-lb. Class, Omar Crocker, Wisconsin; 155-lb. Class, Woodrow Swancutt, Wisconsin; 165-lb. Class, Frederick Stant, Catholic U.; 175-lb. Class, Truman Togerson, Wisconsin; Heavyweight, Rene Trochesset, Louisiana State. In the Eastern Intercollegiate Championships, Army won team honors and won the 120, 145, and 155-lb. events; Syracuse took the 165 and 175-lb. titles; Cornell won the 127-lb. and heavyweight crowns, and Penn State scored in the 135-lb. Class.

Checkers. Two National organizations controlling the checker players of the country focused the attention of devotees of the game upon Flint, Michigan, where the annual meeting of the old American Checker Association was held, and Tacoma, Wash., which was the scene of the National Checker League's gathering. Running true to expectations, Asa Long of Toledo, who has claims to the World Championship, won the A.C.A. tournament at Flint. In Tacoma, Willie Ryan of New York won the title of the N.C.L.

Chess. World interest in chess centered upon the achievements of Sako Flohr, Czechoslovakian wizard, who, early in the season, definitely re-established his premier position.

In three European contests, Flohr demonstrated his superiority, his first triumph occurring in the great tournament which started in Leningrad and ended in Moscow. Lohr won first prize with the

score of 12-5, just $1\frac{1}{2}$ points ahead of the United States champion, Samuel Reshevsky, runner-up. Again at Margate, England, Flohr was in excellent form when he scored $6\frac{1}{2}$ -2 $\frac{1}{2}$ as runner-up to Paul Keres, Estonia, who captured first prize. Flohr shared second and third prize with Jose R. Capablanca of Cuba.

The advent of war in Europe changed the scene of action for the International Chess Federation to Buenos Aires. Due to its contention that \$1500 offered for expenses was insufficient, the United States team, hitherto invincible, failed to attend the meeting in defense of the Hamilton-Russell trophy which, as a result, was won by the German team, attending for the first time, and whose total score was 36-20. In a close finish, Poland was second with $35\frac{1}{2}$ -20 $\frac{1}{2}$; Estonia $33\frac{1}{2}$ -22 $\frac{1}{2}$; Sweden 33-23; Argentina $32\frac{1}{2}$ -23 $\frac{1}{2}$; Moravia-Bohemia 32-24; Latvia $31\frac{1}{2}$ -24 $\frac{1}{2}$, and Holland $30\frac{1}{2}$ -25 $\frac{1}{2}$. Palestine, France, Cuba, Lithuania, Chile, Brazil, and Denmark completed the competitors, finishing in that order. Eleven countries, eliminated after the preliminary round, participated in a consolation tournament for the President of Argentina Cup, Iceland and Canada tying for first place with 28 points each. Iceland, however, having a victory of $2\frac{1}{2}$ -1 $\frac{1}{2}$ over Canada, was declared the winner.

In the women's tournament of the International event, Mrs. Vera Menchik Stevenson, London, retained her world's championship which she has held ever since the inception of this event, scoring 18 out of 19 points, Sonja Graf of England being runner-up with 16 points.

Jose Capablanca scored the highest percentage. Playing for Cuba without losing a game he made 77.04 per cent of all those playing at the first board for their respective nations. Representing France, Dr. Alexander Alekhine scored 75 per cent.

The most important event in American chess activities was the final amalgamation of the National Chess Federation, U.S.A., and the American Chess Federation into one National unit, the United States of America Chess Federation, George Sturgis, President, with headquarters in Boston, and Ernest Olfe, Secretary, in Milwaukee. Under these new auspices, the annual championship tournament, held in New York, was won by Reuben Fine, New York, with Samuel Reshevsky, the official champion of the United States, runner-up, with scores of $10\frac{1}{2}$ - $\frac{1}{2}$ and 10-1 respectively. The Women's championship ended in a triple tie between Mrs. Mary Bain, Astoria; Mrs. N. M. Karff, Boston, and Dr. Helen Weisenstein, New York.

The Intercollegiate Chess championship was won by City College ('Varsity) $16\frac{1}{2}$ -3 $\frac{1}{2}$. Walter P. Stockman, Harvard '40, won the individual Intercollegiate title after a tie with Stephen P. Diliberto, Princeton '42. Harvard won the H.Y.P.D. College Chess League championship, with Yale second, Princeton third, and Dartmouth, fourth.

Contract Bridge. Two outstanding events occurred during 1939 which created all time records so far established in contract-bridge championship play. At Pittsburgh, in December, Mrs. Ralph C. Young, Charles H. Goren, John R. Crawford, and Charles J. Solomon won the National team-of-four championships for the third consecutive time, having captured the title in 1938 and 1937, the first time any team of four has achieved this feat. Mrs. Ralph C. Young won more National championships than any other player, man or woman, during 1939.

The Masters Individual was won by M. D.

Maier, with Alvin Landy, second, and Myron Fuchs, third. In the Summer Nationals, the Masters Pairs was won by Harry Fishbein and Robert Appleyard; Masters Teams by Oswald Jacoby, T. A. Lightner, M. D. Maier, Howard Schenken, and Robert McPherran; Mixed Teams by Florence Stratford, Alvin Landy, Mrs. Valerie Klein, and Robert Chatkin; Amateur Teams by Mrs. Fred Horn, Mrs. Gussie Pianco, Mrs. Mabel Ervin, Mrs. Valerie Klein; Men's Pairs by Oswald Jacoby, John R. Crawford; Women's Pairs by Mrs. A. M. Soble, Mrs. R. C. Young; President's Pairs by Mr. and Mrs. Herbert D. Lent.

In the Eastern Championships, Fred D. Kaplan and Harold Ziman were victors in the Open Pairs; Charles Lochridge, Travers LeGros, S. G. Churchill, John Rau, and Sam Fry, Jr., won the Open Teams; Mrs. M. D. Rothschild and Mrs. Robert Fuller won the Women's Pairs; Mr. and Mrs. James H. Lemon and Dr. and Mrs. L. W. Lord won the Mixed Doubles, and the Non-Masters Pairs title went to Ralph Hirshberg and Charles H. Sanders.

Court Games. Court Tennis. Ogden Phipps of New York came back to end the brief reign of James H. Van Alen, Newport, in the realm of court tennis with a crushing defeat for the 1939 title. Unable to compete in 1938 through an injury, the veteran champion won his fifth claim to the crown when, in the finals of the annual tournament held at Boston in March, he overwhelmed Van Alen with his terrific "railroad" service and powerful stroking in sequence sets, 6-2, 6-2, 6-2. Upon his return to championship competition earlier in the year, Phipps vanquished Van Alen in the final of the famous Tuxedo Gold Racquet tournament. Paired with William Rand, Phipps also won the National doubles title. Pierre Etchebaster retained his World's and National Professional championship crown without the necessity of defending it.

Racquets. Qualifying to challenge for the World's championship in 1940, Robert Grant III of New York won his third amateur title in racquets, retained his Tuxedo Gold Racquet Title and the Canadian crown and, with Clarence Pell, Jr., also of New York, successfully defended the American and Canadian doubles championships. Grant swept through the amateur ranks without the loss of a single game, defeating J. R. Leonard in the final. As a climax to his 1939 achievements he entered the National open event, wresting the title from Norbert Setzler in a crushing final that netted the professional of the Racquet and Tennis Club only three points in the final game, the score being 11-15, 15-12, 15-7, 15-5, 15-3. Setzler had previously defeated Kenneth Chantler of Montreal. Grant's latest campaign established him on a par with the late Jay Gould as the greatest master of the game in present competition.

Squash Racquets. Germain Glidden's retirement, undefeated, from his 3-year reign in the realm of squash racquets found Donald Strachan of Philadelphia regaining the title he won in 1935. Strachan's return was accomplished by his defeat of the ambidextrous Stanley Galowin, New York, when they met in the final of the 1939 National championships in Chicago in February. Galowin, who had won the New York State title, was no match for the Philadelphian who won in three straight games. Hunter H. Lott and William S. Slack of Philadelphia, retained their National doubles crown, defeating Galowin and Fred Alexander of New York in the final.

Princeton won the Intercollegiate title when Stanley Person defeated Kim Canavarrro of Harvard.

Miss Anne Page, Philadelphia, won the women's title for the third time, having held it in 1936 and 1937. She defeated her fellow townswoman, Miss Elizabeth Pearson. The women's team, however, failed in London in competition with the British women's team in the Wolfe-Noel Cup Series. The British team won 5-0.

Squash Tennis. In the 1939 squash tennis competition, Harry Francis Wolf added to his unparalleled record by retaining the National title for the tenth successive year without losing a match. Prior to his advent, the title had never been held longer than four years. Wolf also led the New York A. C. team to victory in the Class A inter-club matches which they had won in 1937. The Clyde Martin memorial and Princeton invitation tournaments also succumbed to his prowess. Walter Hoag of the Yale Club won the metropolitan veteran's crown, and Bob Reeve of Bay-side annexed both the National Class B and Class C championships.

Cricket. Cricket honors in the United States went to Philadelphia when the Philadelphia Electric Cricket Team, defeating Union County, won the United States Cricket Association cup. But the Quaker City team, which won the Metropolitan District championship in 1938, went down to third place in this year's competition. In a visit to Rochester and Canada, they won seven with two matches drawn in a series of nine. The Metropolitan District Championship was regained by Brooklyn after completing a schedule of fourteen championship matches in which they won 9, lost 1, and had 4 drawn. In a tour of Montreal and Ottawa, they played five matches, won 2, lost 2, and had one drawn.

In England, the County Championship was won by Yorkshire, and Oxford won the annual match with Cambridge. In three test games played by England against the West Indies England won 1 and the remaining 2 were drawn. In a test game in South Africa, England scored 648 runs for 5 wickets, a record score in a fourth inning. After their English series, the West Indian Team visited Canada, playing one match in Montreal, which they won. The Bermuda Overseas (colored) team in a visit to New York, played a series of eight games, winning 3, losing 1 and had 4 drawn.

J. B. Hobbs created a record by scoring 197 centuries in first-class cricket. With the addition of 43 scored in minor games, his total was augmented to 240.

Cross-Country Running. The National A. A. U. harrier championship, run on November 19, 1939 over the Branch Brook Park course, Newark, N. J., was won for the sixth consecutive time by the veteran Don Lash who thus broke the record established by Willie Ritola who had held the title for five consecutive years. Lash, without preparation, not having participated in any events since June, clipped 11 seconds from his own record, covering the 10,000 meters (6¼ miles) in 32:26. Millrose A. C., New York, retained the team championship, barely nosing out the New York A. C. by two points.

The National Collegiate A.A. championship, a new addition to the cross-country schedule, was won by Walter Mehl, University of Wisconsin, who annexed both the National and Central titles at East Lansing, Mich., when he negotiated the four-mile course in 20:30.9. Mehl also won the

Western Conference title a week previously at Chicago, November 20.

A New York U. sophomore, Leslie MacMitchell, captured the Intercollegiate A.A.A.A. championship on November 21, over the Van Cortland Park course, covering the five miles in 26:28.6. Manhattan College won the team championship.

Frank ("Pat") Dengis retained the National A.A.U. Marathon title at Yonkers, New York, running the 26 miles 385 yards in 2:33:45.2, a record for that course. Dengis also won the Lawrence Marathon at Salisbury Beach, Md., in 2:32:54.1 and the Laurel event at Baltimore, Md., in 2:44:30.6. The Boston Marathon, over the same distance, was won by Ellison Brown in 2:28:51.8, lowering the course record by 2:9.8 and the Olympic record by 27.4.

Curling. The Gordon International Medal, regained by the United States in 1938, was successfully defended by our curlers at Utica, scene of the international competition, when they defeated the Canadians 238-164. Accustomed to heavier stones and slower ice, the invaders were able to win only three matches, one ending in a tie. The No. 1 rink, playing for the Country Club of Brookline, took the high scoring honors for the United States.

The Schenectady Curling Club won the Gordon Grand National Medal, defeating the defenders from Utica 13-12 in the final. The Patterson Medal was captured by the Saranac Lake Curling Club for the seventh time, and the Stockton Cup went to a Utica rink captained by A. Gleason.

Cycling. Due to the European war, bicycle racing was confined chiefly to the United States and enjoyed country-wide popularity. Only two World titles were competed for and both went to the Netherlands. These were the amateur and professional sprint championships, in which Jan Derkens displaced his fellow Hollander, Jan van der Vivver for the amateur crown, and Arie Van Vliet retained his professional laurels by default. Riding in the final heat against Josef Scherens, six-time title-holder from whom he won the championship in 1938, the pair collided and Scherens was so badly injured that he was unable to continue. Howard Rupprecht of Maplewood, N. J., won the National amateur sprint title; Robert Stauffacher of San Francisco captured the National A.A.U. senior crown, and Eddie Carafagnini annexed the National Cycling Association senior title. Tino Riboli won the National professional motor-paced event.

The six-day schedule was seriously curtailed. Kilian and Vopel, great German pair had won the Milwaukee and San Francisco events, and Kilian with Bobby Thomas won the Chicago and Buffalo grinds before their call to the colors compelled them to sail for home. Other foreign stars also had been called home, with the result that the big event in December at Madison Square Garden in December was reduced to five days. It was won by Moretti and Yates with 2089 miles and 1058 points to their credit. The six-day event last May at the Gardens was won by W. and D. Peden who rode 2388.9 miles and totaled 1498 points.

Dogs. The realm of dogdom was again dominated by an imported entry when the decision of the judges at the Westminster Indoor Bench Show at Madison Square, awarded highest honors to Mrs. M. Hartley Dodge's Doberman pinscher, Champion Ferry von Raufhelsen of Giralda, as the best dog in the show. Westminster was

Ferry's first show and, instead of retiring him, as was the custom in former years, McClure Halley campaigned him against the best in the entire country. In thirteen finals, he won first honors in twelve. With this record, Ferry is easily the outstanding dog of the year. No runner-up was named, but the highly prized award for the best American-bred dog of the show went to Herman Mellenthin's cocker spaniel, Champion My Own Brucie, winner of the Morris and Essex Outdoor Bench show. Mrs. William DuPont's beagle, Champion Meadowlark Draftsman, took the \$200 prize for the most credits won. The best brace in the show were the litter brother and sister, white standard poodles, Champions Blakeen Jung Frau and Champions Blakeen Eiger, owned by Blakeen Kennels and shown by Mrs. Sherman R. Hoyt. The team prize went to the Sealyham terriers, Belle Dorothy, Champion Croglin Christina, Champion Nutfield Snowfall, and Champion Brash Best Man of Croglin, owned by the Croglin Kennels.

In the field trial class, first honors in the spaniel division were won by James Simpson, Jr.'s. F. T. champion Solo Event, and in the retriever division by Paul Blakewell III's Golden retriever, F. T. champion Rip. L. M. Bobbitt's English setter, Sports Peerless Pride, won the bird dogs' award of the National Championships at Grand Junction, Tenn.

Fencing. Fencing laurels during 1939 remained in the East, with Navy predominating in the Intercollegiates by winning five of the seven events. For the first time, the championships of the Amateur Fencers League of America was held on the Pacific Coast, in San Francisco. The long rivalry for sabre honors between Dr. John R. Huffman of the New York A. C., who, in 1938, won the individual championship for the fifth time, and Norman C. Armitage of the Fencers Club, saw the tables turned in San Francisco when Armitage wrested the crown from his adversary 5-4. Huffman also suffered the loss of his three-weapon title to Jose R. de Capriles of the Salle Santelli. An exceptionally close contest for the foils crown ended with a surprise when young Norman Lewis, of the Salle Santelli, former New York University star, came through the three-way tie to victory. Another upset was the unexpected feat of Loyal Tingley of the University of Chicago who fought his way through the field of experienced national and international veterans to become the second undergraduate to win a National title, taking first honors with the épée. Norman C. Armitage added the outdoor sabre crown to his laurels, and Tracey Jaeckel won the outdoor épée event, which had to be conducted indoors on account of inclement weather.

Salle Santelli won the National Foils team title and also the three-weapon team crown. The sabre team title was retained by the New York A. C., and the épée team laurels were captured by the Fencers Club. The three National Junior titles went to Ralph Marson, New York A. C., foils; Alfred Skrobisch, Fencers Club, épée, and Anthony Hyde, Philadelphia Sword Club, sabre.

The National Women's individual title was retained by Miss Helene Meyer of Oakland, Calif., while the team honors went to the Salle d'Armes Vince. Miss Helena Mrockowska of Hofstra College won the Women's Intercollegiate individual title, and Hofstra College won the team championship. The National Women's Junior laurels went to Miss Mildred Stewart, Salle Santelli.

The Intercollegiate results were as follows: Individual: foil, Vincent De Poix, Navy; épée, Salvatore Manzo, Army; sabre, Abraham Campo, Navy. Teams: foil, Navy; épée, retained by Navy; sabre, Columbia; three-weapon team, Navy. The preponderance of Navy supremacy was unprecedented in the 46 years of the Intercollegiate competition.

Football. College football showed no decrease in its popular appeal; in fact, attendance as a whole throughout the country showed an increase and records in the South were repeatedly broken. On the other hand, the professional game proved the fastest growing sport on the calendar, the National Football League games drawing a total of 1,312,611 fans. This would indicate that the two games, vastly different in intimate interest, are unlikely to interfere with each others' popularity. The close of the 1939 college football season found five teams of outstanding merit, each unbeaten, Texas A. and M., Tennessee, Cornell, Southern California, and Tulane.

Texas A. and M. was supreme in the Southwestern Conference; Cornell was recognized as retaining unofficial championship of teams in the East; Southern California again annexed the Pacific Coast laurels; Tennessee and Tulane shared the Southeastern with Georgia Tech., (Tennessee retaining its title). The remaining title holders were Ohio State in the Big Ten, Missouri in the Big Six, Duke retained its title in sharing the Southern Conference leadership with Clemson, while Colorado University led the Big Seven.

Cornell, after its best season since 1923, refused all offers for a post-season game. The teams scheduled to meet in the New Year's Day "Bowl" contests were: Rose Bowl, Tennessee and Southern California; Sugar Bowl, Texas A. and M., and Tulane; Orange Bowl, Missouri and Georgia Tech.; Cotton Bowl, Clemson and Boston College.

It is generally agreed that Nile Kinnick, brilliant Iowa back, was the year's greatest player, and that the coach of the year was Dr. Eddie Anderson serving his first year at Iowa City. Two other first year coaches, Buff Donelli of Duquesne and Frank Leahy of Boston College, deserve special mention. A surprise of the year was the dropping of intercollegiate football by the University of Chicago, formerly a power in the Big Ten, whose 1939 team was defeated in all but two of the eight games on its schedule.

Southern California and U.C.L.A. played to the year's largest gallery in Los Angeles, 103,000, and the Army-Navy game, which was won by the midshipmen 10-0, under the most inclement weather conditions, drew a gate totaling 102,000 enthusiasts at the Philadelphia Municipal Stadium. The post-season games played on New Year's Day 1939 resulted as follows: Rose Bowl (Pasadena, Calif.): Southern California 7, Duke 3, attendance, 91,000; Sugar Bowl (New Orleans, La.): Texas Christian 15, Carnegie Tech. 7, attendance 50,000; Orange Bowl (Miami, Fla.): Tennessee 17, Oklahoma 0, attendance, 32,191; Sun Bowl (El Paso, Tex.): Utah 26, New Mexico 0, attendance 13,500; Cotton Bowl (Dallas, Tex.): St. Mary's 20, Texas Tech. 13, attendance 40,000.

In the professional ranks, the New York Giants won first place in the Eastern Division of the National League, losing only one game out of ten played. The Green Bay Packers led the Western Division with 8 games won and 2 lost. The play-off between the Giants and the Packers was held

in Milwaukee, the Green Bay eleven exhibiting a perfection of gridiron skill that swamped the New York gridders with a 27-0 rout, the worst defeat in the annals of the play-offs. Don Hutson was Green Bay's star performer, setting three league records for pass-catching during the season, two of which were life-time marks for number of aeriels received and yardage gained on forwards. As a decoy he was equally effective. A total of 13 individual records were made and 14 team marks blasted, a sweep of statistics unprecedented. Davey O'Brien of Texas Christian, playing for the Philadelphia Eagles, and Parker Hall of Mississippi, playing for Cleveland, both freshmen in the professional ranks, proved heavy contributors in outstanding achievements, their forward passing virtually sweeping the records clean. Bill Osmanski of Holy Cross was the leading ground-gainer in the league, playing for the Chicago Bears. All-time record attendance occurred in five cities, Detroit leading with 48,492, Washington 36,183, Brooklyn 34,032, Philadelphia 33,258, Cleveland 30,691, while in New York the total attendance for six home games reached 232,440, the Giant-Redskin fracas drawing 62,543 with the Polo Grounds sold out four days prior to the game. The financial returns exceeded any previous season and all the clubs made money.

In the American League, the race for supremacy in the Southern Division was a thriller, New-ark's Bears and the Wilmington Clippers closing the season in a tie that necessitated a play-off which ended in a Bear victory. Paterson's Panthers won the Northern Division championship. In this play-off for the Association title and the Leonard Grant Memorial trophy, the Bears were again successful.

Golf. From an international standpoint, golf had an off-year during 1939. The abandonment of the Ryder Cup match due to the war, and the lack of Walker or Curtis Cup matches in the season of 1939, left but little incentive for a United States invasion of Europe. In the home and Canadian major tournaments it was decidedly an off-year for champions, not a single one of whom retained his or her title. The United States National Open championship, played over the links of the Philadelphia Country Club, in which 27-year old Byron Nelson, Reading, Pa., professional and former Texan, finally won in a three-way play-off, was the outstanding event of the year. After Sam Snead of White Sulphur Springs, W. Va., and Marvin Ward, promising amateur from Spokane, Wash., blew up in the final round and ended fifth and fourth respectively, Nelson, Denny Shute, and Craig Wood tied with a 284. The first play-off found Nelson and Wood still tied, Shute being eliminated. In the final the next day Wood, needing only two to get down from off the green, took three, chipped eight feet past the hole and left himself a good ten inches short on the next, while Nelson dropped a ten-foot putt for his 4. Ward's flubbing cost him the opportunity to tie Bobby Jones' 1930 double win, for, later in the season, he defeated Ray Billows 7 and 5 on the North Shore course at Chicago, to win the final in the National amateur tourney.

The Professional title was won by Henry Picard, Hershey, Pa., in his first major victory. He defeated Nelson, newly crowned Open champion, one up, over the links of the Pomonoc Club. Picard also won the Metropolitan Open. Andy Szwedko, brawny Pittsburgh steel worker, annexed the U.S. Public Links crown, while Los

Angeles retained the team title. Nelson can justly claim to be the outstanding professional player of the year since, in addition to his three-way triumph in the National Open, he moved on to the Western Open and lifted the crown that had rested on Guldahl's brow for the last three years in succession.

With Miss Patty Berg unable to defend her title, due to an operation, the choice of favorites to win the Women's National amateur championship lay between Miss Pam Barton, British champion, and Mrs. Estelle Lawson Page of Chapel Hill, N. C., 1937 titlist and runner-up to Miss Berg in 1938. Both suffered upsets, however, and a 20-year old Texas lass, Miss Jameson, who won the Southern crown when she was 15 years old, came through to victory by beating a sister star from the South, Miss Dorothy Kirby of Atlanta, 3 and 2, over a wet and soggy Wee Burn course. Playing her first National championship test, 18-year old Betty Hicks of Oakland, Calif., reached the semi-finals, and in the qualifying round, Miss Beatrice Barrett established a championship record of 74.

The British championships were scheduled early enough not to be affected by the war, but not early enough to entirely escape the threat of American victory. In the British Open, Johnny Bulla of Chicago, with a score of 292, lost by just two strokes when a member of the 1935 British Ryder Cup Team, Dick Burton, turned in the winning score of 290. With Richard A. Chapman of Greenwich, Conn. (who won the French amateur title), and W. H. Holt of Syracuse, reaching to quarter and semi-finals respectively, the British Amateur crown found a Scotsman, Alexander Kyle, and a Welshman, Andrew Duncan, vying for its possession. The Scotsman won 2 and 1. Miss Pam Barton of England won the British Women's championship, repeating her 1936 victory.

The Canadian Amateur honors were garnered by Ken Black of Vancouver, B. C., while Harold McSpaden, Winchester, Mass., brought the Canadian Open title over the border, with Ralph Guldahl, runner-up, five strokes behind. The Duke of Devonshire Trophy was won by the United States.

The National Intercollegiate Championship was won by Vincent D'Antoni of Tulane University, and the team title went to Leland Stanford University. The Western Intercollegiate Conference crown was won by Chase Fennon, Northwestern U., and the team championship went to the same university. Princeton led the Southern Division of the Eastern Intercollegiate League in a play-off match, and the Northern Division went to Dartmouth in a double play-off finish with Yale, runner-up, as a result of a play-off match.

Ralph Guldahl, with a record breaking 279, won the Masters tournament. The U.S. Senior title was won by C. H. Jennings of Roaring Gap, N. C., and the North American Senior by William A. Ryan of Detroit. Mrs. E. L. Howe, Merion C. C., won the Women's National Senior, and Mrs. Harry McNaughton won the Metropolitan Women's championships. The Griscom Cup went to New York. Frank Strafacci, Lido C. C., retained his Metropolitan Amateur laurels, and Gene Sarazen captured the Metropolitan Professional.

Gymnastics. In the National A.A.U. Gymnastic Championships held at Annapolis, Md., the All-round title was won by George Wheeler, 24-

year old Washington, Pa., teacher for the third successive year. Wheeler was first in calisthenics, long horse, side horse, and parallel bars. He lost his title in the horizontal bars to Chester Phillips of Philadelphia, however, himself taking third place. The other individual winners included Joe Goldenberg, Normal College, Indianapolis, flying rings; E. A. Hennig, Cleveland, Indian clubs; Joe Gialombardo, University of Illinois, tumbling; Stanley Ellison, Navy, rope climb, in which he established a world record by negotiating the 25-foot distance in five seconds. The team title was retained by the Swiss Turnverein of Hudson County.

Miss Margaret Weissmann, New York, retained the all-round lead in the Women's National event held in Pittsburgh, while the individual titlists were Andrea J. Barbustiak, Pittsburgh, calisthenics, side horse and flying rings; Helen Schifano, Newark, N. J., parallel bars; Vera Tipawitz, Philadelphia, tumbling.

The University of Illinois won the National Collegiate A.A. tournament, defeating Army whose cadets had won the all-round and individual titles in the Eastern Intercollegiate championships.

Handball. There was little change in the National handball competition in 1939. Joe Platak of Chicago won the senior four-wall singles title for the fifth successive year, repeating his 1938 victory—less easily, however—over Jack Clements of San Francisco. The New York A. C. doubles pair, Ed. Linz and Frank Coyle, retained their title, also winning the New York State crown. In the National Singles, one-wall event, Harry Michitsch, Trinity Club, defeated the 1938 title-holder Joe Garber, who holds the Metropolitan one-wall title. Harry Goldstein and George Baskin, Trinity Club, also Metropolitan doubles titlists, retained their National one-wall doubles championship.

Hockey. The Stanley Cup, emblematic of World supremacy in ice hockey, was won by the Boston Bruins when they defeated the Toronto Maple Leafs in April, 4-1. Finishing their regular schedule in the National Hockey League race in first place, with the New York Rangers trailing in second, the Boston skaters' ultimate victory came as an anti-climax to the series of seven matches in their post-season play-off, in which the Rangers thrilled with a come-back which almost changed the outcome. Unsuccessful in their scheduled matches with the Bruins, the New York team was brushed aside in whirlwind fashion in the first three matches of the play-off, two of them in overtime play, but, to the consternation of the Bostonians, the Rangers came back to win the next three. The seventh and deciding session was played in Boston Garden amid tense excitement, also going into overtime play before the Bruins were able to score the final goal with a 3-2 victory. The 1938-39 season operated with only seven teams in the loop, only one of which was eliminated from participation in the play-offs, the Chicago Black Hawks who had won the Stanley Cup the preceding year. The point standing of the teams at the close of the season was: Boston Bruins 76, New York Rangers 58, Toronto Maple Leafs 47, New York Americans 44, Detroit 42, and Les Canadiens 39. Mel Hill of the Bruins scored all the deciding goals in the overtime matches in the play-off series.

A team of Canadian skaters, the Trail (B.C.) Smoke Eaters, finished first in a tournament held in Basle, Switzerland, and won the World amateur championship. The United States was second.

The Allan Cup, symbolic of the Canadian amateur title, was won by the Port Arthur Bear Cats. The National A.A.U. was captured by the Cleveland American Legion; International-American League, by Cleveland Barons; Eastern League, by New York Rovers; American Association, St. Louis Flyers; International Intercollegiate League, McGill University, and the Quadrangular League by Dartmouth.

Field Hockey. The war was responsible for the first interruption of the triennial series of women's international field hockey tournaments since the International Federation of Women's Field Hockey Associations was instituted a decade ago. October found London out of the running as a receptive hockey host. In the United States, the Middle Atlantic Sectional Association, comprising Philadelphia and District, made its debut in the National tournament and made a clean-up by winning all its matches, and gained seven of the eleven positions on the 1939 All-America first team. Three of the other four went to northeast players. The entire team named by the United States selection committee in order from left wing to goalkeeper were: the Misses Winifred Wolff (M.A.), Barbara Strohar (M.A.), Betty Shellenberger (M.A.), Lucy Jane Hedburg (M.W.), Marjorie Harrowell (N.E.), Barbara Streibigh (M.A.), Betty Taussig (M.A.), Louise Orr (M.A.), Christine Hamilton (M.A.), Frances Pierce (N.E.), and Helen Park (N.E.). Miss Anne Parry of Glenside, Pa., internationalist who played on the team visiting Australia two years ago, was unable to play due to an ankle injury.

Lacrosse. Maryland came to the fore in intercollegiate Lacrosse competition, dethroning Navy from its 1938 championship in probably the hardest fought battle in a decade, 5-3. Starting the season with an 11-1 victory over Mount Washington, club champion, the Terrapins defeated every college opponent with a wide margin, until the Navy match. This struggle took so much out of the victors that they suffered their first and only defeat from twice-beaten Johns Hopkins, 6-3. Navy was also beaten only once, but as that was at the hands of Maryland, the Middies had to take second place.

Mount Washington won their club championship by nosing out the Baltimore Athletic Club.

Motorboating. With a total of fifty-six new American records established in twenty-seven speed-boat classes, premier World honors again went to the one-time world's fastest auto-speedster, Sir Malcolm Campbell, who smashed his own mark set up in 1938. Six years before, Gar Wood had astounded the motor boating world with his mark of 124.68 m.p.h. Five years elapsed before this mark was erased by Sir Malcolm's 1937 feat in increasing the speed to 125.79 m.p.h. The next year he raised it to 129.50 on Lake Maggiore, Italy, and later to 130.94 on Lake Hallwil in Switzerland. In 1939, on Lake Coniston, England, with his *Bluebird II*, engined with a 7-year-old Rolls-Royce motor, he raised the mark to the incredible speed of 141.74 m.p.h., August 19th.

In the absence of foreign competition, the Gold Cup returned to its native shores, Count Rossi being unable to defend his title won in 1938. In winning the trophy in the Detroit Regatta on September 4, 1939, Zalmon G. Simmons of Greenwich, Conn., drove his *My Sin* to a straight heat victory over *Miss Canada* and *Notre Dame*, establishing a new average speed record of 66.420 m.p.h. for the

90 miles. The President's Cup, also held by Rossi, took its maiden trip to Canada, when Harold Wilson of Ingersoll, Ont., in his father's *Miss Canada III*, defeated Mendelson's *Notre Dame*, setting a new total race record for the three 15-mile heats of 63.644 m.p.h. Simmon's *My Sin*, injured by driftwood, was unable to finish in this event.

Clinton R. Ferguson of Waban, Mass., young Hobart freshman, proved to be the outstanding amateur of the season. In July he created the unprecedented outboard record in driving a dead heat in a 5-mile Class C race with Gar Wood, Jr., in the record time of 53.925 m.p.h.; at Fort Worth, Texas, in September, he won the Class A and F National Amateur championships, and in November set a new American record for 1-litre outboards at 78.44 m.p.h. With these achievements, Ferguson had the additional glory of displacing the veteran professional, Freddy Jacoby of North Bergen, N. J., as the highest point scorer in the sport, accumulating 22,078 points, with Jacoby runner-up with a total of 18,371. George Schrafft outclassed all the other 225 cubic-inch drivers, winning the National championship for the John Charles Thomas Trophy and the American Power Boat Trophies at Washington with his *Chrissie III*. His nearest rival was Jack Cooper of Kansas City, 63 year old grandfather, whose *Tops III* set a new mile record for the Class of 87.485 m.p.h. at Picton, Ont., a competition record of 66.629 m.p.h. at Detroit, and won the International races for the class at Detroit capturing the Edenburn Memorial and Green-Duff trophies.

Gar Wood, Jr., Algonac, Mich., won the National C-Class Outboard championship for amateurs and was also National intercollegiate high scorer, representing Tulsa University. The National Sweepstakes went to Anthony Pezillo, Miami, with *Emancipator VIII*. The American Speedboat championship was won by John Bramble, Baltimore, with *Pep IV*. The National 135 Class was won by Edison Hedges, Atlantic City, N. J., with *Eagle*, and the 91 Class crown was captured by Arno Apel, Ventnor, N. J., with *Aguila*. Tulsa University won the National Intercollegiate team title. The Class B amateur outboard went to Jack Henckels, Fort Worth, and the Midget Class (open) to Alfred Anderson, Branford, Conn. In the National Professional Outboards, Class A and B were won by Paul Wearly, Muncie, Ind.; Class C by Claude Smith, Atlanta, and Class F by Robert Guttman, Manitowoc, Wis. Clayton Bishop, Onset, Mass., recaptured the Albany to New York motorboat marathon race, the only competitor to win it twice, having scored last in 1936.

Polo. Interest in Polo centered upon the triennial match between Great Britain and the United States for the International Polo Challenge Cup, played at Westbury, L. I., in June. The British team had been in preparation for the event for almost a year, arriving in California in mid-Winter for training before coming East. In their opening match, in California, they met with a severe loss in the fatal injury of the veteran Capt. C. T. I. Roark. In the line-up at Westbury the United States team was composed of Michael G. Phipps No. 1, Thomas Hichcock, Jr. No. 2, Stewart B. Iglehart No. 3, and Winston F. C. Guest, back. The British team included Robert Skene No. 1, Aldan Roark No. 2, Gerald Balding No. 3, and Eric Tyrrell-Martin, back. Despite their careful preparation the British were unable to match the

opposition in either play or ponies. The United States won in 2 straight games, scoring 11 goals to 7 in the first and 9 to 4 in the second. Since the series was decided in two games, the third was in the nature of an exhibition match, the British donating special trophies and the game played on handicap, establishing a precedent. In the six matches played since the World War, starting in 1921, one being omitted in 1933, the British teams have failed to win a single game, the United States having won by the same score, 2-0 throughout.

The National Open Championship was won by the Bostwick Field Team, G. H. Bostwick No. 1, Robert L. Gerry, Jr. No. 2, Elbridge Gerry No. 3 and Tyrrell-Martin, back, who defeated the Greentree team 8-7 in an exciting final. The latter team was composed of Peter Grace, Robert Skene, Hitchcock, and J. H. Whitney. Greentree came back to win the Monty Waterbury Memorial, however, most important of the handicap events, defeating the Texas Rangers with C. B. Wrightsman, Cecil Smith, Eric Pedley, and Guest, in the final 10-8.

The National 20-goal championship, formerly the National Junior, drew nine teams into competition at Bostwick Field. The final was won by the League of Nations team made up of Jay Secor, Ohio, Robert Skene, Australia, George Oliver, Texas, and Robert Loewenstein, Belgium, who defeated the Hurricanes 15-9. Terrence Preece No. 3 on the Hurricanes was injured in the opening period, which handicapped his team.

The Hulsaches of Texas won the National Intercircuit; Pegasus Club of New Jersey captured the National 12-goal title; Yale defeated Harvard in the final to win the Gerry Cup in the Intercollegiate championship, and the Blue Hills Farm team won the Sherman Memorial Trophy.

The National Indoor crown was won by the 124th Field Artillery Team of Chicago; West Point captured the Intercollegiate Indoor title, and Lawrenceville School was the victor in the Interscholastics.

Rowing. The outstanding features of the 1939 rowing season centered upon the achievements of Harvard at home and abroad and the retention of the Diamond Sculls by Joe Burke, with their indication of the supremacy of the United States in International competition, and the return of the West to dominate the Poughkeepsie classic.

Winning the Adams, Compton, and Rowe Cups early in the season, Harvard's great crew climaxed its domestic season with a clean sweep over Yale at New London on June 23, having met with only one defeat, by Cornell, in a bad storm at Ithaca. With little time to adjust a 4-mile crew to the Henley distance of a mile and five-sixteenths, they entered the Henley regatta, celebrating its 100th anniversary on July 6, winning three races to capture the famous Grand Challenge Cup, for the second time in history—a Harvard Junior Varsity lifted the historic trophy in 1914. The 1939 crew defeated the London Rowing Club on the first day; Jesus College of Cambridge on the second, and the Argonaut Rowing Club of Toronto in the final, with something to spare. A precedent was established when Tabor Academy, Marion, Mass., in an all-American final, defeated Kent School to win the Thames Challenge Cup, and Joseph Burke of the Penn A. C., Philadelphia, repeated his performance of 1938 in winning the Diamond Sculls, a triple triumph against scullers from all countries. Burke defeated R. Verrey of Poland in

the final on the Thames by one-and-a-quarter lengths.

At Poughkeepsie a powerful California Varsity eight swept to victory over the 4-mile course in the record breaking time of 18:12½, with Washington second, also under the old record in 18:14. Navy, dislodged from its year's reign as Intercollegiate champion, was third and was followed in order by Cornell, Syracuse, Wisconsin, and Columbia. The East took solace in the victory of Syracuse over Washington in the Junior Varsity event. The Freshman event over two miles was won by Washington with Columbia in second place.

The Oxford-Cambridge Boat Race was won by Cambridge on April 1, the light blue negotiating the 4¼ mile course in 19:03, just one minute slower than her own record of 18:03 made on March 17, 1934.

A marked growth of interest and activity in rowing was an encouraging feature of the past season, and despite the doubt pervading the Olympic Games, the coaches are preparing to go through with the tryouts to be held at Princeton, pointing to establishing a national champion.

Shooting. Rifle. The 1939 National Rifle and Pistol Matches, held under the auspices of the National Rifle Association at Camp Perry, Ohio, was the scene of the largest attendance of expert shots in its history. Records were shot to pieces, and the Marines did most of the damage. The "Leathernecks" were responsible for capturing the President's Match, the Wimbledon Cup, the DuPont Trophy, and the Herrick Trophy. Sergeant Thomas J. Jones, U.S.M.C., in winning the President's Match (10 shots at 200, 600, and 1000 yards) tied the record for this event with 147 x 150. Alfred L. Wolters, Pfc. U.S.M.C., shooting against 1937 competitors, 20 shots at 1000 yds., won the Wimbledon Cup match with a perfect score of 100 (27 V's). First Lieut. Walter R. Walsh, U.S.M.C.R., was high man to win the DuPont Trophy in the All-around match with a total score of 1058 x 1150. The Herrick Team Trophy, open to teams of eight shooters, was won by the U.S.M.C. team with a perfect score of 800 and a total of 123 V's. The course was 20 shots per man at 1000 yds., so that each of the eight men comprising the team shot a perfect score, establishing a World record in team shooting.

The National Individual Match, Daniel Boone Trophy, was won by Sgt. Coats Brown, 22nd, Infantry, score 288 x 300; High Civilian, Arthur B. Jones, N. Y. Civ. Tm., score 285 x 300. The National Team Match, shot over the same course, was won by the U.S. Infantry Team, score 2757; high National Guard Team, winner of the Hilton Trophy, National Guard of Ohio, score 2712, and the Pennsylvania Civilian Team, ranking team of its class, winner of the Soldier of Marathon Trophy, score 2667.

In the small bore division, William B. Woodring, Illinois, 1938 Champion, and Vere Hamer, Minnesota, again competed for first place in the Critchfield Trophy National Championship. The positions were reversed however, Hamer capturing first place with 3192 x 3200 and Woodring, runner-up with 3190.

Pistol. The National Individual Pistol championship was won by P. M. Chapman, U.S. Treasury Team, with a score of 280 and the National Pistol Team Match (.45 Cal.) was captured by the U.S. Marine Corps Team with a total score of 1315. The Los Angeles Police Team again won the

N.R.A. Revolver Team Trophy, and Emmet E. Jones, member of the team, won the N.R.A. Grand Aggregate with a score of 1736; the .22 Cal. Slow Fire, Revolver or Automatic Match, score 191; the Clarke Memorial Trophy, score 291; the .45 Cal. Slow Fire, score 184, and the N.R.A. All-Around Pistol Match with a total of 588. The International Pistol team match was won by the U.S. Team, total score, 1820; Canada, 1738, Great Britain, 1721, Cuba, 1581.

Trapshooting. The 34th Annual Amateur Trapshooting championship, held at Travers Island resulted in the veteran nimrod, Steve Crothers of Conshohocken, Pa., winning the title after a four-way shoot-off, having broken 197 x 200 in the regular shoot at 16 yds., Class AA Singles. H. T. Bullock, Vineland, N. J. won the Class A Singles, 16 yds., 197-200, and J. J. Vaugonsic, also of Vineland, won the Class B Singles, 194 x 200. J. Heistand, Hillsboro, O., won the doubles event 97 x 100. In the Distance shoot, J. D. Riggs, Conshohocken, Pa., scored to win 97 x 100 at 24 yds. Later, Riggs established a new State record in the State of New Jersey Championship shoot with a score of 300 straight targets at 25 yards. Mrs. Blondie Wolfe, N. Bergen, N. J., won the Women's event with 97 x 100.

In the Grand American Handicap, held at Vandalia, O., in August, the championship was won by Dwight L. Ritchie, Goshen, O., in a shoot-off, after breaking 99 x 100, at the 22 yd. line and tying G. A. Wagner of Dayton. The North American Handicap women's championship was won by Mrs. William Gilbert of Madison, Wis., a virtual tyro at the traps, who borrowed a gun from a friend and broke 98 x 100 to take the title. Fred Tomlin, professional from Glassboro, N. J., who won the Professional title event with 199 x 200 was the outstanding target breaker of the year making an all-time record for total targets broken, 2433 x 2450, giving him the unprecedented percentage of .993 and obliterating his previous world's record of .9922 made in 1938.

Skeet. As in the case of the trapshooting competition, shoot-offs for the championship titles prevailed in the Skeet contests, at the fifth annual National Meet at San Francisco in August. Dick Shaughnessy, 17-year old contestant who won the men's National all-gauge title when he was only 14, continued his sensational performance despite the fact that he lost his 20-gauge crown to Don Sperry of Flint, Mich., who won the title with 99 x 100. Shaughnessy however, captured the sub-small gauge championship with 94 x 100, and gave Sperry a close run for both the 20-gauge and the Men's small gauge. The High-Over-All title went to Robert Parker, Tulsa, Okla., 534 x 550, who, with his father, G. C. Parker, Sr., won the Father and Son title with a score of 484 x 500 and the Family 20-gauge with 189 x 200 and, with Walter Dinger, two-man team title 494 x 500. Dinger who hails from Tulsa, Okla., won the all-gauge crown after a shoot-off, five tying for first place with 247 x 250. Miss Pat Laursen, Akron, O., was the only woman to retain her title and she had to engage in a shoot-off to win at 236 x 250; Mrs. Hochwalt, Edmonds, Washington, won the 20-gauge women's with 84 x 100; Mrs. Smythe, Aurora, O., won the women's small-gauge, 87 x 100 and also the sub-small-gauge, 82 x 100. Robert Parker won the Junior title 100 x 100.

Skating. Figure skating in 1939 enjoyed a marked increase both in its activity and popularity, particularly as a feature of entertain-

ment. In the competitive field, it was one of the few sports in which several of the champions retained their titles. Robin Lee, who has since turned professional, retained his National title as men's champion for the fifth consecutive year, at the tests held in St. Paul, Minn. Miss Joan Tozzer of Boston held the women's National crown which she won last year and also, with Bernard Fox, retained the National Pair title. The Junior Singles titles were won respectively by 13-year old Gretchen Merrill of Boston and 14-year old Arthur Vaughn of Philadelphia, both 1938 novice champions. Miss Sandy MacDonald and Harold Hartshorne of New York, won the National Dance Competition.

The Biennial North American Championships held in Toronto were again dominated by Canadians. Montgomery (Bud) Wilson of Toronto, who has held the title since 1929, won the Men's North American Singles championship. Miss Mary Rose Thacker won the Women's Singles. Miss Tozzer and Bernard Fox, however, won the North American pairs crown. The North American Fours title was captured by the Misses Dorothy and Hazel Caley, Montgomery S. Wilson, and Ralph McCreath of Toronto.

The men's Singles Championship of the World, was won at Budapest by Graham Sharp, of England, Felix Kaspar, defending titleist not competing. Miss Megan Taylor of England, retained her World Women's Singles Title at Prague but was defeated for the European championship by her compatriot, Miss Cecilia Colledge. The World's Pair championship was retained by Fraulein Maxi Herber and Ernst Baier, Germany.

H. CHARLES RAWLINS.

Swimming. Old records were shattered at random in the world of water sports and sweeping successes were established by American swimmers at home and abroad. Other outstanding features of the year were the conspicuous role played by young girls in title competitions for women and the first victory ever scored by an Hawaiian team in the national A.A.U.

In the field of breast strokes, Richard H. Hough of Princeton University, cut the world's records down to 1:00.6 for 100 yards; 1:07.3 for 100 meters; and 2:22 for 200 yards. Ralph Flanagan, of Austin, Tex., lowered the previous record for 500 meters free style to 5:56.5; Adolf Kiefer, of Chicago, that for 100 yards back stroke to 0:58.8; and the New York A. C. team of Thomas McDermott, James Reilly, Peter Flick and Walter Spence set a new 400-yard relay record at 3:31.3. An American short course mark of 2:51.9 for the 300-yard medley relay was achieved by the Princeton trio of Albert Vande Weghe, Hough and Hendrick Van Oss.

The men's national outdoor championships were won by a group of Hawaiians representing Alexander House Community of Maui, Hawaii. The islanders defeated the Detroit A. C., next in line at the competition, by a score of 32 to 29.

Miss Nancy Merki, of Portland, Ore., thirteen, a former victim of infantile paralysis, cut the American long course free style records for 200 meters from 2:34 to 2:30.8; 400 meters from 5:28.5 to 5:22.2 and 800 meters from 11:32.2 to 11:19.9. Miss Jane Dillard, of Austin, Tex., at the breast stroke, established a world's record of 1:16.6 for 100 yards (a mark subsequently beaten in Europe). Miss Fujimo Katsutani, of Hawaii, fifteen year old, set a national breast stroke record of

3:13 for 200 yards, short course; Miss Helene Rains, of New York, fourteen, achieved a similar feat when she traveled 200 yards in 2:49 on a 20-yard course.

The Misses Edith Motridge, Esther Williams and Virginia Hopkins of the Los Angeles A. C. cut down the time for the 200-meter medley from 4:01.6 to 3:52.8; while the last two, with Miss Marion Hopkins and Miss E. Chamberlin, reduced the time for the 400-meter free style test from 4:54.8 to 4:46.

Michigan captured the National Collegiate A. A. championship, defeating Ohio State, runner-up, by 65 to 58. Yale grabbed the Eastern premiership.

Noteworthy among new varsity marks in swimming, were 2:19.8 for 200 yards breast stroke, 20-yard course, by Richard H. Hough, and 3:38.7 for the 400-yard relay, long course, by a Michigan four.

Tennis. The projection of Donald Budge into the professional ranks and the loss of the Davis cup to Australia were two inter-related highlights in the 1939 world of net and racket. Lifting the trophy for the first time since 1919, and under circumstances reminiscent of 1914, the Australian team of Adrian Quist, John Bromwich, Capt. Harry Hopman and Jack Crawford, took it with them to the Antipodes, where it was reportedly interned for the duration of the war.

Robert Riggs and Frank Parker represented the United States in the singles and Joe Hunt and 18-year-old Jack Kramer constituted the doubles team. On the first day, Riggs overcame Bromwich with an exhilarant tactical display and Parker followed by the vanquishing the veteran Adrian Quist. The doubles, as anticipated, were carried off by Quist and Bromwich. Quist narrowly edged out Riggs in five sets on the final day and Bromwich overpowered Parker in the deciding match. After dropping the first two sets to Quist, Riggs gained power and precision and appeared to be on the road to victory as his opponent drooped; but by an effort born of sheer determination, the Australian drove ahead in the last few minutes to a squarely earned triumph. The matches were held on the turf of the Germantown Cricket Club the first week in September.

Robert Riggs succeeded Budge as national champion and also as champion of Great Britain, defeating 19-year-old Welby Van Horn of California in the final at Forest Hills and Elwood Cooke in the final at Wimbledon. In the national championships, Bromwich, who had been generally expected to establish himself as the new world's amateur champion, was beaten by Van Horn. Quist was eliminated by Wayne Sabin of Portland, Ore., who was himself erased by Van Horn.

The United States retained the Wightman Cup from England for the ninth successive year. Donald McNeill of Oklahoma City won the championship of France. Americans made a clean sweep of the singles, doubles, and mixed doubles at Wimbledon.

Miss Alice Marble was the undisputed ruler of women's tennis. Once again she defended her British crown with success, and won the American championship for the third time, thus retiring the trophy, after being seriously challenged by Miss Helen Jacobs; with Mrs. Sarah Palfrey Fabyan, she won the women's doubles in both championships; and also her doubles with Mrs. Fabyan in the Wightman Cup matches.

Quist and Bromwich carried off the men's doubles championship, defeating Crawford and Hop-

man in the first all-foreign final in the history of the tournament.

Making his debut as a professional, Budge overcame Vines at Madison Square Garden, returning there later in the year to conquer Fred Perry. The national professional championship was won by Vines.

Turf. The chief headline horses of 1939 were *Challedon*, *Johnstown*, *Eight Thirty*, *Bimelech*, the undefeated two-year-old champion, and *Kayak II*. *Challedon*, carrying the silks of W. L. Brann, was the greatest money-maker, winning nine races for the fame of it and \$184,535 for the pocketbook. He was the acknowledged three-year-old king after he won the Arlington Classic, although an ailment kept *Johnstown* from challenging him in this classic. In March, *Kayak II*, owned by Charles S. Howard, and Warren Wright's *Bull Lea* won the winter handicaps at Santa Anita and Miami respectively. William Woodward's *Johnstown*, capturing the public imagination with his speed and élan, raced to victory in the Wood Memorial and Kentucky Derby and defeated *Challedon* for the Dwyer Stakes at Aqueduct. *Challedon* had previously won the Belmont Stakes for which *Johnstown* was ineligible. Frank Keogh, a patrol judge, said after the Dwyer that when *Johnstown* passed his station he was making a peculiar noise, as though gasping for breath. By the time the Arlington Classic came to pass, *Johnstown* was whistling while he worked, but in spite of his condition, was pronounced a favorite. He led for a mile, then fell back and was decisively beaten by *Challedon*. It was *Johnstown's* last race. Thereafter tracks seemed much roomier to *Challedon*. He outclassed *Kayak II* like nobody's concern in the Narragansett Special, set a new record at Kenneland, and defeated *Kayak* again in the Pimlico Special at weight for age.

Bimelech, owned by E. R. Bradley, commanded the field among two-year-olds, starting six times, winning six times and making off with \$135,090. He won the Special and Hopeful at Saratoga, the Futurity at Belmont Park and the Pimlico Futurity.

War Plumage, owned by James Cox Brady, was the champion three-year-old filly. *Now What*, from the Vanderbilt stable, was acknowledged the fastest two-year-old of her sex.

Two important events of the year were the public approval of the pari-mutuel amendment in New York State and the accession of Alfred Gwynne Vanderbilt to the presidency of Belmont Park.

Track and Field. Human running records were freely broken during 1939 and distinction in this respect attached particularly to the name of Taisto Maki, a native of Finland, who annihilated five world's records as follows. He raced two miles in 8 minutes, 53.2 seconds; three miles in 13:32.4; 5000 meters in 14:08.8; six miles in 28:55.6 and 10,000 meters in 29:52.2. Rudolf Harbig, German track star, covered 400 meters in 46 flat and 800 meters in 1:46.6, new marks for those respective distances.

At Princeton in June, in a one-mile race, Sydney Wooderson, bespectacled London bank clerk, of whom much was expected, ran last in a field of five, and claimed that he was fouled. Chuck Fenske, who won the race, subsequently was beaten for the National A.A.U. 1500-meter championship by Blaine Rideout.

In indoor racing, Glenn Cunningham was unbeatable at the mile, but was outrun twice at 1000 yards by John Borican, a Negro; and on the sec-

and occasion Borican set an indoor record of 2:08.8 as Cunningham, finishing on his heels, also broke the record. Cunningham finished first in a two-mile indoor competition, preceding Don Lash, Greg Rice, and Tommy Deckard at the finish line.

Borican set outdoor records of 1:49.2 and 1:49.8 for 800 meters and 800 yards on the Dartmouth track, but could not win an outdoor race. Clyde Jeffery of Stanford gained a disputed decision in the national 100 meters over Herbert Thompson and lost his only furlong race of the year to Norwood Ewell, Penn State freshman, in the nationals.

Charley Beetham won the national 600-meter indoor title and the national outdoor 800 meters. Erwin Miller, of U.S.C., lost only one race, to Woodruff, in the I.C. 4-A.

Joe Batiste, a Negro schoolboy from Tucson, won the national high hurdles title, beating Fred Wolcott of Rice. After breaking a dozen meet records and the American record in the shotput, Elmer Hackney of Kansas State lost the national title to Lilburn Williams. Boyd Brown became the champion among javelin throwers, although many observers considered Bob Peoples of U.S.C. the country's best. For the team title, the New York A. C. was dethroned by the Olympic Club.

Southern California won the varsity team competition, garnering both the I.C. 4-A (with a record point score) and the N.C.A.A. championships.

Don Lash finished first for the sixth consecutive time in the National A.A.U. cross-country championship over Newark's 10,000-meter (6¼ miles) Branch Brook course. Gregory Rice was second. Lou Gregory won the National A.A.U. 10,000-meter race at Lincoln, Neb. Frank (Pat) Dengis took the laurels at the Yonkers marathon. (Dengis was killed in an airplane crash in December.)

HAROLD J. COOPER.

SPRATLY ISLANDS. See JAPAN under History.

SQUALUS DISASTER. On May 23, 1939, during a training trip off Portsmouth, N. H., the newly built submarine, the U.S.S. *Squalus*, made a quick dive and sank in 240 ft. of water with a loss of 26 lives. Subsequent investigation developed that through faulty operating gear the engine air induction valve was open, thus permitting large quantities of water to enter the hull. When radio communication with the submarine failed, a sister ship in the vicinity, the U.S.S. *Sculpin*, commenced a search and soon found a marker buoy released from the sunken craft and established telephone communication. In the heavy swell, the light cable of the marker buoy soon carried away. Meantime, however, divers and salvage gear were being rushed to the scene by ship and plane.

The submarine rescue vessel, *Falcon*, on arrival, secured herself in position over the sunken craft and sent down divers to attach a diving bell, specially designed for submarine rescue work, over a hatch. Through this bell the surviving 33 members of the crew were rescued. Four trips of the bell were required, on the last of which the down-haul cable became jammed and delayed surfacing for several hours. The expeditious and efficient manner in which the operations were carried resulted in saving all those not drowned in the initial rush of water. Such an accomplishment from a depth of 240 ft. was remarkable and without precedent. The success of the operation was attributable not only to the skill and fortitude of those conducting the rescue, and to the efficient

design of the gear used, but was also due to the thorough manner in which the Navy had for years drilled the submarine personnel against such a contingency as actually occurred.

Salvage operations were begun immediately and prosecuted diligently day and night until the *Squalus* was placed in dry dock on September 15. On the first lift when the ship finally broke away from the mud her positive buoyancy, obtained by forcing air into the hull, sent her to the surface with a rush. But before openings could be sealed she sank again. By use of pontoons and lifts by stages she was finally brought into shallow water and 115 days after originally sinking she entered dry dock. Over 600 dives were made in the rescue and salvage work, half of them at depths over 200 ft. The damage the *Squalus* sustained was not great and naval authorities expected that within a few months she would be ready to join the fleet.

STAMP COLLECTING. The close of the year 1939 saw stamp collecting on the last step to celebrating 100 years of active service. It was on May 6, 1840 that Sir Rowland Hill's invention made its appearance in Great Britain and since has become renowned as the "Penny Black." The international crisis and resulting war in the fall of 1939 caused the Royal Philatelic Society, London, to abandon plans for celebrating this event—the "Black's" centenary—with an international exhibition.

Out of dismembered Czecho-Slovakia came two new stamp-issuing sources, Slovakia, and Bohemia and Moravia; Poland was destroyed by the German lightning war and lost its identity, save for designations as now being parts of Germany and Russia; the Free City of Danzig was returned to the Reich and its stamps were replaced by those of Germany; Italy swept Albania off the map as an independent country, and the only remainder of Albania philatelically is that Italian stamps for that addition to Victor Emmanuel's empire are printed in Albanian. End of the revolt in Spain halted a flood of postage stamps from both sides. France surrendered Alexandretta to Turkey, and the ancient name of Hatay appeared on postage stamps.

The United States added coil varieties of set of stamps portraying its presidents; two world's fairs were marked with stamps, that at San Francisco in February, that at New York in April when first-day records were broken with the sale of 1,964,743 copies; stamps were issued for the 150th anniversary of the inauguration of George Washington as the first president; to mark the opening of the Panama Canal 25 years earlier; for baseball's 100th birthday; for printing's tercentenary in the United States; and to note the admissions of North Dakota, South Dakota, Montana, and Washington to statehood 50 years ago. See Post OFFICE DEPARTMENT.

Start of the first transatlantic air-mail service from New York to Europe by Pan-American Airways was cause for the issuance of a special 30¢ stamp. Service was over two routes: North, New York to Southampton via Moncton, N. B., Botwood, Nfld., and Foynes, Eire; South, New York to Marseilles, via Horta, Azores, and Lisbon, Portugal. War curtailed this service to the southern route, with the last stop at Lisbon. From England, Imperial Airways also started service to the United States over the northern circuit but

war forced its abandonment. Another airmail development was the use of an autogyro to speed mail from the Camden, N. J., airport to the post office at Philadelphia.

Threats of war and actual war slowed up stamp production in Europe. France, generally prolific in this field, curtailed emissions with the start of strife in the fall. Stamps from Germany, after war began, mostly related to conquest of Poland and Danzig. England continued with its George VI set. Russia, as usual, was a heavy producer. The great majority of stamps appearing from Europe were from the German protectorates, Slovakia and Bohemia and Moravia. During the year, throughout the world, more than 2000 stamps were issued, most of these being of a commemorative nature.

STANDARD OIL CO. See ARABIA and BOLIVIA under *History*.

STANFORD UNIVERSITY. A privately endowed institution of higher education, nonsectarian and coeducational, founded in Santa Clara County, Calif. (near Palo Alto) on a 9000-acre tract of land in 1885, and opened in 1891, in memory of Leland Stanford, Jr. The total enrollment in 1938-39 was 5086. The 1939 summer quarter had an enrollment of 929. In the autumn quarter of 1939 the enrollment was 4360, of which approximately 40 per cent were women, and the faculty numbered 743, including 169 teaching assistants. The endowment funds amounted to \$31,000,000, and the budget income for the year was \$3,278,200, plus gifts of \$1,051,643. Through a gift of \$97,000 from Mrs. Louis Stern, of Palo Alto, the Ruth Lucie Stern Research Laboratory was built in connection with the Stanford Medical School, in San Francisco. Outstanding among the gifts for research was a grant of \$200,000 from the Rockefeller Foundation for research in Chemo-Physical Biology, beginning 1939-40. The University Libraries contained 740,000 volumes and 4000 periodicals. President, Ray Lyman Wilbur, M.D., LL.D., Sc.D.

STARS. See ASTRONOMY.

STATE, U.S. DEPARTMENT OF. Cordell Hull of Tennessee was Secretary of State during 1939 and Sumner Welles of Maryland was Under Secretary. Following the administrative reorganization of July 1 (see under UNITED STATES), the Department took over the foreign commerce division from the Department of Commerce, the foreign agricultural service from the Department of Agriculture, and the Foreign Service Buildings Commission, formerly an independent agency. Expenditures are given in the table under PUBLIC FINANCE. See the section on *Foreign Affairs* in the article on the UNITED STATES.

STATE TAXATION. See TAXATION.

STATISTICAL ASSOCIATION, AMERICAN. A scientific organization founded in Boston in 1839 to foster an interest in statistics and to promote scientific methods of collecting and interpreting statistical data. The official publications are the *Journal of the American Statistical Association* and the *American Statistical Association Bulletin*. The Association has 17 chapters in important American cities. It has a number of committees in various statistical fields, some of which conduct special conferences at various times during the year.

The Association's 101st annual meeting was held in Philadelphia, Pa., Dec. 27 to 30, 1939.

Several joint meetings were held with the American Economic Association, the American Sociological Society, the American Marketing Association, the American Farm Economic Association, the American Association for Labor Legislation, the Population Association of America, the Econometric Society, and the Institute of Mathematical Statistics, which were meeting in Philadelphia at the same time.

The following officers were elected for 1940: President, F. Leslie Hayford, General Motors Corporation, New York City; Vice Presidents, Howard W. Green, George W. Snedecor, Neva R. Deardorff, Alfred J. Lotka, Ralph J. Watkins, William A. Berridge, Donald S. Thompson, and Theodore N. Beckman. Secretary-Treasurer, Frederick F. Stephan, 1626 K Street, N.W., Washington, D. C.

STEVENS INSTITUTE OF TECHNOLOGY. A college of engineering at Hoboken, N. J., founded in 1870. The total enrollment for the autumn of 1939 was 909. There were 83 members of the teaching staff. There were 30,000 volumes in the library. President, Harvey Nathaniel Davis, Ph.D., Dr.Eng.

STEVENSON, J(OSEPH) ROSS. An American theologian, died in New York, Aug. 13, 1939. Born in Ligonier, Pa., Mar. 1, 1866, he was educated at Washington and Jefferson College (A.B., 1886; D.D., 1897) and the McCormick Theological Seminary in Chicago (1889). After study at the University of Berlin (1889-90), he was ordained in the Presbyterian ministry and assigned to Sedalia, Mo. In 1894 he joined the faculty of McCormick Theological Seminary, retiring as full professor in 1902. Called to the Fifth Avenue Church, New York in 1902, he remained there until 1909 when he went to Brown Memorial Church, Baltimore.

In 1914, Dr. Stevenson was elected president of Princeton Theological Seminary, serving until 1936 when he was retired as president emeritus. His presidency was marked by the conflict between fundamentalists and conservative modernists during 1925-29, which led to the establishment of Westminster Seminary in 1929 by the fundamentalists. The year after his election to the presidency he received the highest honor the Church could give—Moderator of the General Assembly.

Dr. Stevenson served on many Church committees, including the Presbyterian General Assembly's Department of Church Co-operation and Union, and he was one of the leaders of his denomination in the proposed concordat with the Protestant Episcopal Church. During the World War he served overseas with the Young Men's Christian Association and the Army Education Commission.

STILBESTROL. See MEDICINE AND SURGERY.

STOCKARD, CHARLES RUPERT. An American biologist, died in New York, April 7, 1939. He was born in Washington County, Miss., Feb. 27, 1879, and was educated at the Mississippi Agricultural and Mechanical College (B.Sc., 1899), Columbia University (Ph.D., 1906), and the University of Wurzburg (M.D., 1922), and also studied at the Carnegie Institute Laboratory for Tropical Biology in Florida (1907-09), and

at the Naples Zoological Station (1910). Upon graduation from college, he joined the faculty at Mississippi as commandant and acting professor of military science and tactics, and in 1900 he held the same positions at Jefferson Military College.

In 1903 he went to Columbia University to study and two years later became an assistant in the zoological department. He joined the staff of Cornell Medical College in 1906 as assistant in embryology and histology, and was successively instructor of comparative morphology (1908-09), assistant professor of embryology and experimental morphology (1909-11), and thereafter professor of anatomy. Dr. Stockard's reputation as a scientist was won in the field of morphology and particularly for his discoveries of the physical and psychological implications of the activity of the glands and genes. His work was recognized by invitations to deliver the DeLamar lecture at Johns Hopkins (1925), the Harrington lecture at the University of Buffalo (1926), the Beaumont Foundation lecture at Detroit (1927), the Lane lecture at Stanford (1930), the Potter Memorial lecture at Jefferson Medical College (1934), and the Joseph Collins research lecture at the N. Y. Academy of Medicine (1937). From 1908 he was an investigator for the Huntington Fund for Cancer Research and was also president of the board of the Rockefeller Institute for Medical Research.

A leader in his profession, Dr. Stockard was a fellow of the American Association for the Advancement of Science, president of the Association of American Anatomists (1928-30) and of the American Society of Zoologists (1925) and edited the *American Journal of Anatomy*, the *Journal of Experimental Zoology*, and the *American Anatomical Memoirs*. He wrote *Origin of Blood* (1915), *Hormones and Structural Development* (1927), and *The Physical Basis of Personality* (1931).

STOCK EXCHANGE. See FINANCIAL REVIEW.

STRACHEY, JOHN. See IMMIGRATION AND EMIGRATION.

STRAITS SETTLEMENTS. A British crown colony comprising the four settlements of Singapore (with Christmas and Cocos-Keeling islands), Penang (with Province Wellesley), Malacca, and Labuan. Total area, 1356 square miles; population (1939 estimate), 1,357,854, compared with 1,114,015 (1931 census). During 1938 there were registered 56,735 births, the rate (per 1000) being 42.2; the death rate (per 1000) was 21.3. Chief towns: Singapore, the capital, 520,164 inhabitants (1937); George Town (Penang), 149,408 (1936); Malacca, 43,258 (1937); and Victoria, 2022. In 1937 the 759 schools for primary and secondary education had 137,392 students enrolled. In addition there are various vocational and industrial schools, a college of medicine, and a college of arts and science.

Production and Trade. Rubber (503,127 tons, 1937); rice; coconuts; pineapples; coffee; fish; tin (100 metric tons, 1937); phosphate of lime (162,000 metric tons exported from Christmas Island during 1938); and tobacco, were the chief products. The trade of Singapore and Penang consists mainly of the collection and distribution of commodities for the whole of Malaysia, especially the Netherlands Indies. Singapore is a natural distribution point for oil and shipments are made to Australia and Africa. In

the direct foreign trade of the Straits Settlements for 1938 imports totaled £65,264,000; exports, £67,848,000.

Communications. Merchant shipping that entered and cleared the ports during 1938 aggregated 45,145,274 tons. There were 1165 miles of roads. Railways are owned by the government of the Federated Malay States. In 1939 air services linked Singapore with Penang, London, Amsterdam, Australia, and Hong Kong.

Government. For the year 1939 revenue was \$540,227,000; expenditure, \$545,368,000. The budget for 1940 anticipated receipts of \$538,204,000 and expenditures of \$545,261,000. (Straits dollar averaged \$0.5692 in 1938 and \$0.5797 in 1937). The government is under a governor who is aided by an executive council of 11 members (8 ex officio and 3 unofficial) and a legislative council of 26 members (13 ex officio and official, 11 nominated unofficial, and 2 unofficial members elected by the Singapore and Penang Chambers of Commerce). Governor and Commander-in-Chief, Sir Shenton Thomas.

History. The approach of hostilities in Europe caused repercussions in Singapore and the Straits Settlements throughout 1939. High-ranking members of the British and French naval, military, and air forces—some 60 officers in number—held an important conference in Singapore in June concerning the joint defense of Franco-British possessions in that part of the world. The following month detachments of British troops were being moved from India to the garrison in Singapore. Work on the Singapore naval base reached feverish proportions with the outbreak of the war and by December it was said to be capable of maintaining and repairing a full-sized battle fleet and of withstanding a siege of indefinite duration. The Straits Settlements Legislative Council (April 24) presented the British government with a gift of £1,000,000 for imperial defense. The donation supplemented £1,167,000 given in 1938 and was additional to a regular annual defense contribution of £467,000.

SUEZ CANAL. A waterway connecting the Mediterranean with the Gulf of Suez and the Red Sea. Traffic in 1938 totaled 6171 vessels of 34,418,000 net tons, as compared with 6635 vessels of 36,491,000 net tons in 1937. The decrease was attributed largely to the normalization of conditions in Italian East Africa. Passengers in 1938 numbered 479,802 (697,800 in 1937). Great Britain accounted for 50.4 per cent of the 1938 tonnage; Italy was

second with 13.4 per cent, followed by Germany, the Netherlands, France, and Norway.

The total weight of goods transported through the canal in 1938 was 28,779,000 tons, a decrease of 12.2 per cent from 1937. The number of south-bound vessels was 3003 (16,655,881 net tons); north-bound, 3168 (17,762,306 net tons). Beginning Dec. 15, 1938, dues were 5s. 9d. sterling per ton for vessels with cargo and 2s. 10½d. per ton for vessels in ballast; passengers were charged 5s. 9d. sterling. In accordance with a convention signed on Oct. 29, 1888, the Suez Canal is exempted from blockade and vessels of all nations, whether armed or not, have been allowed to pass through it in peace or war. See FRANCE and ITALY under *History*.

SUGAR. The sugar-beet crop in the United States in 1939 was estimated at 10,691,000 tons of beets from 921,000 acres, expected to produce about 1,607,000 tons (equal to 1,719,000 raw ton basis) of sugar, compared with the 11,615,000 tons of beets, 930,000 acres, and 1,685,000 tons of sugar in 1938, and the 1928-37 average of 8,486,000 tons of beets from 763,000 acres and 1,238,000 tons of sugar. The acre yield was 11.6 tons as compared with 11.1 tons, the 10 year average. Average acre yields in many major beet states were below the record yield in 1938, yet in 1939 sugar content averaged 15.03 per cent as against 14.51 in 1938. Beet-sugar production in leading states was estimated for California 436,000 short tons; Colorado 262,000; Michigan 160,000; Montana 138,000; Idaho 129,000, and Nebraska 102,000 tons.

The 1939 sugar-cane crop of Louisiana and Florida, including cane for seed was grown on 256,000 and 21,600 acres respectively and was estimated as 5,447,000 and 758,000 tons and equivalent to 433,000 and 78,000 tons of sugar. Molasses as a sugar-cane by-product totaled 38,675,000 gallons. Sugar-cane sirup produced in eight southern states totaled 23,159,000 gallons and the sorgo sirup made in 16 states amounted to 10,230,000 gallons.

Maple products reported by 10 states included 2,515,000 gallons of sirup and 760,000 pounds of maple sugar. Destruction of trees in the New England States by the hurricane of September, 1938, accounted for much of the decline from 1938.

The production of raw beet-sugar for the season of 1939-40, as reported by 25 countries to the International Institute of Agriculture, approximated 12,543,000 short tons. Other leading producing countries included Germany 2,900,000 tons; U.S.S.R. 2,600,000; France 1,138,000; United Kingdom 605,000; the area formerly Czecho-Slovakia 599,380, and Italy 515,000 tons.

The world's cane-sugar production for the 1938-39 season, according to estimates of Willett and Gray issued Jan. 18, 1940, amounted to 18,436,515 short tons. Production in leading countries was for British India, gur (low grade) 2,888,708 tons, and white sugar 813,200 tons; Cuba 2,758,552; Japan and Formosa 1,663,750; Java 1,543,430; Brazil 1,080,031; Philippine Islands 876,934; Hawaii 855,000; Australia 822,744; Puerto Rico 760,678; Natal 466,723; and Argentina 465,630 tons. The world beet-sugar production was estimated to total 10,215,665 tons, including Germany 2,145,141 tons; U.S.S.R. (Russia and Ukraine) 2,300,000; France 858,892; Poland 540,378; and Czecho-Slovakia 530,474 tons. The grand world-total for beet- and cane-sugar in 1938-39 amounted to 28,652,180 tons. Preliminary

world total estimates of 30,409,000 tons for 1939-40 included cane sugar 19,018,000 tons and beet sugar 11,391,000 tons.

SUICIDES. See VITAL STATISTICS.

SULFANILAMIDE; SULFAPYRIDINE. See BIOLOGICAL CHEMISTRY; MEDICINE AND SURGERY; VETERINARY MEDICINE.

SULPHUR. The United States is the dominant country in world elemental sulphur production, accounting for nearly 90 per cent of the total. Texas produces approximately 85 per cent of the domestic output, and together with Louisiana accounts for about 99 per cent of United States production. Utah and California contribute minor tonnages to the total. Some elemental sulphur is recovered as a by-product of smelting sulphide ores, but the great bulk of the production is from deposits of native sulphur. Italy and Japan hold second and third rank, respectively, in world sulphur production.

Shipments of crude sulphur by United States producers for domestic consumption and export in 1939 were approximately one-third larger than in 1938. In the latter year shipments for domestic consumption amounted to 1,052,890 long tons, and for export, 575,957 long tons, or a total of 1,628,847 long tons. An increase of one-third in 1939 would show total shipments of approximately 2,170,000 long tons. Of this quantity shipments for domestic consumption are estimated at 1,546,000 tons, and exports at 624,000 tons. Although the industry experienced an improvement in 1939 compared with 1938, it did not equal the record year of 1937 when shipments aggregated 2,466,512 long tons, according to *Minerals Yearbook* of the Bureau of Mines.

SUMATRA. See NETHERLANDS INDIES.

SUNDAY-SCHOOL UNION, AMERICAN. A nonsectarian society, organized in Philadelphia in 1817 to establish and maintain Sunday schools in the rural and mountain sections of the United States and to publish and circulate Christian literature. Its board of managers and missionary force are composed of men representing many of the Protestant denominations. For the year ending Feb. 28, 1939, the society maintained 3444 Union Sunday schools, with 143,447 teachers and scholars, and conducted 1054 daily vacation Bible schools, with 27,137 in attendance. During the same period it established 192 young people's societies, conducted 47 young people's Bible Conferences, opened 80 preaching stations, organized 19 churches which were turned over to the various denominations chosen by their constituencies, and erected 9 church buildings. The officers were: President, E. Clarence Miller, LL.D.; vice-presidents, Robert L. Latimer and James F. Shrader; national secretary of missions, Elliott D. Parkhill, D.D.; editor of publications, Arthur M. Baker, Ph.D.; and treasurer, John H. Talley. The national office is at 1816 Chestnut Street, Philadelphia, Pa.

SUPREME COURT, (U.S.). The vacancy in the membership of the Supreme Court left by the death of Justice Cardozo in 1938, was filled by the appointment, January 5, of Felix Frankfurter, a professor of law at Harvard University. The Senate confirmed his nomination with little delay. A new vacancy occurred soon after, through the retirement of Justice Louis D. Brandeis, 82-

year-old liberal, who had served for 22 years. The President nominated in his place, March 20, William Orville Douglas, then Chairman of the Securities and Exchange Commission, a tested servant of the Administration, born 40 years before in Minnesota and grown to manhood in the State of Washington. His appointment confirmed by the Senate, April 4, Douglas took office April 17, the youngest man, so it was said, to join the Supreme Court in a century or more. Douglas, like Frankfurter, was a liberal replacing another liberal without definitely altering the balance of the Court's mind. But on November 16 came yet another vacancy, through the death of Justice Pierce Butler (q.v.), 73 years old, who had held steadily to the conservative legal doctrine. His place was not filled in 1939.

Decisions of the Court. Decisions as to the extent of Federal authority and the validity of its steps were mainly favorable, though not invariably. With regard to control over the relations of employer and employee, proceedings of the NLRB were found faulty in three important decisions rendered February 27: one denied the right of the Board to require the Fansteel Metallurgical Corporation to re-employ a group of strikers who had seized the premises of the Corporation in North Chicago; another rejected the Board's ruling against the Columbian Enameling and Stamping Co., of Terre Haute, that the company had not bargained collectively with striking employees and must on account of this failure reinstate them; the third found invalid the Board's order against the Sands Manufacturing Co., of Cleveland, and found faulty the Board's evidence that the company had discriminated against members of a union and refused to deal with them. Among decisions in favor of regulation of labor, two were delivered December 4: the course of the NLRB was upheld in its requirement that an independent union of employees of the Newport News Shipbuilding and Dry Dock Co., judged to have been operated as a company union before but not after the establishment of the Labor Act, should be disestablished; and with regard to an appeal of the Chicago Rock Island and Pacific Railroad, the Interstate Commerce Commission was held to have the authority to make its approval of a consolidation conditional on the company's agreeing to protect 69 employees affected thereby.

Dealing with the control of agriculture, decisions of the Court held: that distributors and handlers of milk in the Chicago area could be prosecuted under anti-monopoly laws, other existing acts not giving dealers in agricultural commodities immunity thereto (December 4); that the second Agricultural Adjustment Act (that of Feb. 16, 1938), impugned by certain growers of flue-cured tobacco, effected a proper exercise of the constitutional power to regulate interstate commerce, as to its compulsory restriction of growers' sales, and was therefore valid in such restriction—Chief Justice Hughes, who had concurred in the decision overthrowing the first Agricultural Adjustment Act, concurring likewise in the new decision (April 17); that Secretary of Agriculture Wallace, having started new proceedings, in place of those condemned by the Court in 1938, to commission agents in the Kansas City Stockyards, might go on with these proceedings before disposing of the \$586,000 claimed by the agents (May 15).

A decision rendered March 27 discarded the

doctrine, previously followed for generations, that neither the United States nor a State might tax the salaries of the other's employees. Rendered in the case of an attorney for the Home Owners' Loan Corporation, James B. O'Keefe, who sought the return of a payment of income tax made to the State of New York, the decision favored the contention of the Federal Government, which intervened to support the right of a State to tax a Federal salary; the order of the lower court, the New York Court of Appeals, that O'Keefe's payment must be returned, was reversed; the opinion, by Stone, supported by five other Justices, and opposed by only McReynolds and Butler, found faulty the hitherto guiding decision of the Supreme Court, made 68 years before in the case of *Collector vs. Day*. Another decision as to taxation (November 6) denied the right of a firm, the Glenn L. Martin Co., performing a contract for the Government, to include in costs allowed in its contract its payments of taxes for Social-Security purposes. But Maryland, in another decision (November 6 also), was not allowed to collect a tax for recording mortgages of the Home Owners' Loan Corporation.

Among important decisions affecting the rights of persons were: that on the reorganization of the Los Angeles Lumber Products Co., Ltd., denying to so-called equity-holders, such as stockholders, a right to an equity in a corporation reorganizing under Section 77b of the Federal Bankruptcy Act of 1934, except in case that assets should more than suffice to satisfy fully the claims of creditors and holders of prior securities (November 6); that invalidating municipal ordinances of Los Angeles, Milwaukee, Worcester, Mass., and Irvington, N. J., to prohibit or control the distribution of handbills, on such grounds as the prevention of litter in the streets or of canvassing (November 22); and that nullifying an order of the Secretary of Labor, for the deportation of an alleged Communist, Joseph G. Strecker of Hot Springs, Ark., in accordance with a statute of 1918 for deporting aliens belonging to bodies advocating the forcible overthrow of the Government, the Court holding by 6 to 2 that the act applied only to one still a member of such an organization (April 17).

In matters affecting individual States, some of the more notable decisions were that reversing a decision of the Supreme Court of Pennsylvania and affirming the application of that State's law regulating the dealers in milk to Eisenberg Farms Products, a concern maintaining that while it bought milk from farmers in Pennsylvania it resold solely outside the State (February 27); that upholding Michigan's retaliatory law to prohibit the importation of beer from Indiana, where an act of 1935 restricted dealers' bringing beer into Indiana (January 3); and that in a contest among Massachusetts, Texas, New York, and Florida, establishing Massachusetts alone as the domicile of the late Edward H. R. Green (son of Hetty Green) and thus enabling this State to levy about \$5,000,000 on his estate.

In the litigation of the "fourteen utility companies" to have the Tennessee Valley Authority Act declared unconstitutional, the Court (January 30) avoided pronouncing on constitutionality but dismissed the action (January 30) on the ground that the companies lacked the right to bring the matter before it, denying them the right of immunity to competition from any quarter; the ruling had the effect of removing the legal op-

position of the most-affected private interests to the prosecution of the further Federal plans for developing waterworks for the generation of electricity. In the Government's prosecution of the American Medical Association as a monopoly in restraint of trade, the Court dismissed (October 23) a motion of the Government to bring appeal directly to the Supreme Court, from the District of Columbia's District Court, which had found the Association not a monopoly, for the reason that the medical profession was not engaged in trade; the disposal simply changed the procedure to the extent of rerouting the appeal from the decision in first instance into the normal course, a proceeding in the Circuit Court.

For decisions in other courts, see COURTS, FEDERAL; also, DAIRYING; LAW; NATIONAL LABOR RELATIONS BOARD.

SURETY BONDING. See INSURANCE.

SURGEONS, AMERICAN COLLEGE OF. A college or guild (not a teaching institution) organized in 1913 by some 500 surgeons of North America to elevate the standard of surgery. Fellowships in the organization are granted on the basis of merit only, with reference to professional ability and moral and ethical fitness. In 1939 these numbered approximately 12,800.

The college's twenty-ninth annual congress was held in Philadelphia, Pa., Oct. 16-20, 1939, with an attendance of 3000 surgeons. The organization's official journal is *Surgery, Gynecology, and Obstetrics*.

The officers for 1939-40 were: President, George P. Muller, Philadelphia; first vice-president, Henry W. Cave, New York; second vice-president, D. Edwin Robertson, Toronto; treasurer, Dallas B. Phemister, Chicago; secretary, Frederic A. Besley, Waukegan, Ill. Officers-elect: President, Evarts A. Graham, St. Louis; first vice president, Oliver S. Waugh, Winnipeg; second vice president, Albert O. Singleton, Galveston. The Board of Regents consisted of Irvin Abell, Louisville, chairman; Arthur W. Allen, Boston, vice-chairman; Frederick A. Coller, Ann Arbor; George Crile, Cleveland; William Darrach, New York; John R. Fraser, Montreal; W. Edward Gallie, Toronto; Harry S. Gradle, Chicago; John E. Jennings, Brooklyn; James Monroe Mason, Birmingham; George P. Muller, Philadelphia; Alexander R. Munroe, Edmonton; Howard C. Naffziger, San Francisco; Alton Ochsner, New Orleans; Arthur M. Shipley, Baltimore, and Gilbert J. Thomas, Minneapolis.

Since the death of Dr. Franklin H. Martin, the directorship is invested in an Executive Committee, consisting of Dr. Irvin Abell, chairman, and Drs. Arthur W. Allen, John R. Fraser, Harry S. Gradle, George Crile, George P. Muller (ex officio), Howard C. Naffziger, Dr. Malcolm T. MacEachern and Dr. Bowman C. Crowell are associate directors and Dr. Harold Earnheart, and Dr. E. W. Williamson are assistant directors. Headquarters are at 40 East Erie St., Chicago, Ill.

SURGERY. See MEDICINE AND SURGERY.

SURINAM, sōō'ri-nām' (NETHERLANDS GUIANA). A colony of the Netherlands, in northern South America. Area, 54,291 square miles; population (1938 estimate), 171,000. During 1937 there were 4524 births and 1854 deaths. The 122 public and private schools had a total of 21,851 pupils. Paramaribo, the capital, had 52,368 inhabitants in 1938.

Production and Trade. Besides sugar (20,160 short tons, 1939), the chief products in metric

tons are: Coffee (4000 in 1939); rice (35,400 in 1938); maize (2000 in 1937); bauxite (392,300 in 1937). Bananas, cacao, rum, molasses, gold (14,154 fine oz., 1938), and salt are other products. Livestock in the colony (1937) included 21,209 cattle, 2912 goats, 7109 pigs. In 1938 (in old U.S. gold \$) imports were valued at \$1,800,000; exports, \$1,900,000. During 1937, 409 vessels aggregating 489,218 register tons cleared the ports.

Government. For 1939 local revenue was estimated at 4,035,000 florins, the State subvention was 2,780,000 florins; expenditure, 6,815,000 florins. (Florin averaged \$0.5334 in 1939). A governor heads the colony and he is aided by an advisory council of five members (the governor as president, a vice-president, and three others) all nominated by the Queen of the Netherlands. The representative body of the colony is the Colonial States, which is made up of 13 members elected for six years. Governor, Prof. Dr. J. C. Kielstra (appointed Aug. 13, 1933).

SUSPENSION BRIDGES. See BRIDGES.

SVALBARD, sväl'bär. An archipelago owned by Norway, comprising West Spitsbergen, North East Land, Prince Charles Foreland, Edge Island, Bear Island, and adjacent islands. Total area, 24,294 square miles; population (wintering force in 1938-39), 2316. Capital, Longyearbyen. Coal (626,516 tons, 1938) is the chief product. The budget for the fiscal year 1940 was balanced at 254,050 kroner (kroner averaged \$0.2457 in 1938).

SWANSON, CLAUDE AUGUSTUS. An American cabinet officer, died in Rapidan, Va., July 7, 1939. He was born in Swansenville, Va., Mar. 31, 1862, and educated at Randolph Macon College (A.B., 1885) and the University of Virginia (LL.B., 1886). He engaged in the practice of law in Chattanooga, and in 1893 was elected to the House of Representatives, where he served as a member of the Ways and Means Committee. In 1905 he was elected Governor of Virginia, serving until 1910 when he resigned to accept appointment as a U.S. Senator from Virginia to fill the unexpired term of John W. Daniel. On Mar. 4, 1911, he was reappointed, and at the meeting of the General Assembly of the State he was elected for the term ending in 1917. Mr. Swanson was re-elected to serve in that body until 1937.

His career in the Senate was marked by his chairmanship of the Senate Committee on Naval Affairs (1918-33) and by the fact that he was ranking Democrat on the Senate Committee on Foreign Relations. He was a leader in the movement to build up the Navy to a strength equal to any other power, and during the Wilson Administration he was instrumental in putting through Congress the President's big naval program. He advocated American adherence to the League of Nations and membership in the World Court and was one of Wilson's strongest supporters in these causes. His ranking membership in the Foreign Relations Committee led to his appointment as an American delegate to the Disarmament Conference at Geneva in 1932.

On Mar. 4, 1933, Swanson resigned from the Senate to accept the appointment of Secretary of the Navy in the cabinet of President Roosevelt. A "strong navy" man, he entered upon his duties when American naval construction was at its lowest ebb, but during his regime an armada costing more than \$1,500,000,000 was put under construction—an unparalleled peacetime expansion of the American navy. He was an advocate of a

planned program of expansion in opposition to the usual sporadic building, claiming the latter to be costly and inefficient.

SWARTHMORE COLLEGE. A nonsectarian coeducational institution for higher education in Swarthmore, Pa., founded in 1864 by the Society of Friends. The 1939-40 enrollment was 739. The teaching staff numbered 106. The total endowment was \$7,800,000, and the income for the year was \$934,800. The library contained 115,000 volumes. President, Frank Aydelotte, LL.D.

SWAZILAND, swā'zē-lānd. A British protectorate in South Africa. Area, 6704 square miles; population (1936 census), 156,715, including 153,270 Bantu (natives), 2740 Europeans, and 705 colored (other than Bantu). Capital, Mbabane.

Production. The chief agricultural crops are maize, tobacco, groundnuts, cotton, and millet. In 1938 there were 403,000 cattle, 136,000 sheep and goats, and 1700 horses. Large numbers of sheep are brought from the Transvaal each year for winter grazing. In 1938, 1246 fine ounces of gold and 174 long tons of tin were produced. Swaziland is considered a part of the Union of South Africa for customs purposes. It received £20,508 as its share of customs revenue for the year ending Mar. 31, 1938. No statistics for imports and exports are kept.

Government. For the year ended Mar. 31, 1938, ordinary revenue totaled £119,288; expenditure, £151,320. The government is administered by a resident commissioner under the British High Commissioner for South Africa. Resident Commissioner, Charles L. Bruton (appointed Nov. 2, 1937). See SOUTH AFRICA, UNION OF, under *History*.

SWEDEN. A constitutional monarchy of Scandinavia. Capital, Stockholm. Sovereign in 1939, Gustav V, who succeeded to the throne on Dec. 8, 1907.

Area and Population. Sweden has an area of 173,341 square miles (land area, 158,394) and a population estimated at 6,310,214 on Jan. 1, 1939 (6,142,191 at the 1930 census). The urban population in 1938 was 2,278,413. Live births in 1938 numbered 93,499 (14.9 per 1000); deaths, 72,577 (11.5 per 1000); marriages, 56,725 (9.0 per 1000). Estimated populations of the chief cities on Jan. 1, 1939, were: Stockholm, 570,771; Göteborg, 275,763; Malmö, 151,247; Norrköping, 69,434; Helsingborg, 61,365.

National Defense. Military service is compulsory. On Nov. 1, 1939, the army consisted of 100,000 active soldiers and 525,000 trained reserves, according to the Adjutant General's Office, Washington, D. C. The air force comprised 1000 men and 260 aircraft. The country maintained 8 coast defense ships, 2 cruisers, 14 destroyers, 31 torpedo boats, 6 mine-sweepers, 14 submarines, 1 minelayer, besides depot ships, training ships, and small craft. See *History* below.

Education and Religion. Schooling is compulsory and there is practically no illiteracy. Of 761,287 children of school age (7 to 14 years) in 1936, 666,060 were attending elementary schools. In 1938-39 there were 36,560 students in government high schools and 12,855 in universities. The Lutheran Protestant Church, to which 6,124,490 persons adhered in 1930, is recognized as the state church. There were also 6653 Jews, 4763 Roman Catholics, 3981 Methodists, 805 Baptists, and 1499 others.

Production. About one-half of the working population is engaged in agriculture and the remain-

der chiefly in fishing, lumbering, manufacturing, and commerce. In 1937 there were 9,284,000 acres of arable land; 2,696,000 acres of meadows and pastures; 54,962,000 acres of woods and forests. The value of field crops in 1938 was 1,140,427,000 crowns (kronor), compared with 1,183,206,000 in 1937. Yields of the chief cereals in 1939 (in metric tons) were: Wheat, 855,700; barley, 234,400; rye, 387,700; oats, 1,279,100. The harvest of other crops in 1938 was: Mixed grain, 664,000 metric tons; potatoes, 68,803,000 bu.; sugar beets, 1,833,000 metric tons; beet sugar (1938-39), 292,000 metric tons; sown hay, 5,339,000 metric tons; forage roots, 2,568,000 metric tons. Wood pulp (chemical) production in 1938 was 2,390,000 metric tons. In July, 1938, there were 3,036,000 cattle; 1,371,000 swine; 617,000 horses; 406,000 sheep.

The major industrial products in 1938 (in metric tons unless other wise specified) were: Iron ore, 8,500,000; pig iron, 714,000; steel (ingots and castings), 972,000; coal, 431,000; copper ore, 9300; zinc, 34,600; lead, 8600; aluminum, 1900; manganese, 2100; pyrites, 186,000; tungsten, 110; margarine, 59,000; wool and mohair, 600; rayon, 7961; silver, 1,040,000 fine oz.; gold, 197,984 fine oz.; beer, 41,950,000 gal.; alcohol, 11,914,000 gal.; electricity, 8,150,000,000 kilowatt-hours; paper, 979,000 metric tons in 1937.

Foreign Trade. Merchandise imports in 1939 were valued at 2,489,000,000 crowns (2,081,700,000 in 1938) and exports at 1,879,000,000 (1,843,300,000 in 1938). Principal exports were iron and steel, machinery, paper, wood, and cork. In 1938 the exports were distributed chiefly as follows (in crowns): Great Britain and Ireland, 446,915,000; Germany, 328,779,000; United States, 165,785,000; Norway, 124,927,000; Denmark, 87,883,000; Finland, 86,437,000. Of the imports (valued in crowns), Germany supplied 480,940,000; Great Britain and Ireland, 376,319,000; United States, 336,749,000; Denmark, 118,070,000; the Netherlands, 114,794,000. See *IMPORTS AND EXPORTS*.

Finance. Budget estimates for the fiscal year ended June 30, 1940, placed total revenues at 1,283,314,000 crowns (1,153,438,000 in 1939) and expenditures at 1,340,468,000 crowns (1,191,966,000 in 1939). A supplementary budget of 553,000,000 crowns, to cover expenditures necessitated by the European war, was introduced in the legislature in September, 1939. The public debt on Aug. 31, 1939, was 2,701,375,701 crowns. After having been linked to the pound sterling since 1933, the Swedish crown was cut loose on Aug. 28, 1939. The average exchange value of the Swedish crown (krona) was \$0.2520 in 1938 and \$0.2399 in 1939.

Transportation. With 10,381 miles of line, the state and private railways in 1937 carried 79,993,000 passengers and 46,067,000 metric tons of freight, gross receipts totaling 373,534,000 crowns. Motor highways extended 53,285 miles in 1939 (see *ROADS AND STREETS*). Civil aviation statistics for 1938 were: Miles flown, 1,686,724; passengers carried, 60,046; mail, 1,577,297 lb.; baggage and freight, 2,234,402 lb. The merchant marine on Jan. 1, 1939, comprised 2275 ships of 1,600,000 gross tons. During 1938, 18,600,000 net registered tons of shipping entered Swedish ports in the international trade. Gross earnings of the Swedish merchant marine were estimated at 357,500,000 crowns in 1938.

Government. The limited monarchy rests on the Constitution of 1809, since modified, fixing the authority of the hereditary King and of the elected Diet, or Riksdag. The King's supreme executive

and judicial authority is exercised through a council of ministers, who depend on the support of the Riksdag. The Riksdag is bicameral. Its First Chamber in 1939 had 150 members; about one-eighth are elected each year, for terms of eight years, according to districts, by vote of municipal and provincial councils. The Second Chamber had 230 members, elected quadrennially from 28 constituencies by the male and female subjects not under 23 years of age. The more powerful Second Chamber was controlled, after the election of 1936, by a Social-Democratic majority. Premier, Per Albin Hansson (Social Democrat).

History. Sweden prospered in the early months and summer of 1939. Iron ore, pig iron, and steel were exported to meet a high demand elsewhere in Europe. The market for timber and products of wood recovered much of the ground lost in 1938. Private building was active, work created by the government was more than normally abundant, and banks were well supplied with liquid capital. The fiscal year ending with June 30, 1939, left the government with an unexpended surplus of 46,160,000 crowns after ordinary current expenditure. A project taken up early in the year provided a highway 72 feet wide to connect the cities of Stockholm and Gothenburg. Legislation was passed to transfer to the government, in the course of five years, all railroads that remained in private possession. The union holding about four-fifths of the wage-earners signed with an association of about 4500 employers an agreement on procedure in their future disputes, designed to reduce the hardship that such disputes might cause to the rest of the people. Thus in many ways Sweden had reason to feel better off than the greater part of Europe.

The beginning of the war between Germany and the Franco-British alliance brought Sweden most of the risks and difficulties that it caused to Europe's other minor maritime neutrals. These fell on Sweden, in most cases, with less severity than on the others. The hostilities at sea inflicted a fairly severe loss on Swedish merchant shipping, 19 vessels, aggregating 34,629 gross tons, having been destroyed, according to *Lloyd's List* of Dec. 28, 1939; but Swedish yards had launched 166,600 tons of ships in 1938. The trouble attending the movement of goods by sea caused the government to create, early in September, a shipping board and, by this agency, to limit ships' voyages by a system of permits. It became necessary by November to limit numerous exports by license. The most evident shortage in domestic supplies, that of fuel for automobiles, necessitated decrees shutting down the internal services by airplane and forbidding private use of automobiles except by special permission.

The government's relations with the belligerents had the benefit of two circumstances: Sweden was not the immediate neighbor of a belligerent in the war against Germany; and Germany and Great Britain competed as buyers of Swedish ore and ferrous products. Sweden proclaimed neutrality on September 1. It limited the use of its ports by belligerent warships (essentially German), in a decree of September 8. Later a special session of the Riksdag appropriated about 500,000,000 crowns for expenditure on national defense and other needs brought by the war. Toward repaying this sum it voted, December 20, a special "defense tax," at the rate of 50 per cent of the taxes on income and on property levied for 1939.

Sweden's situation of relative security was trans-

formed suddenly, before the end of the year, into one of perplexity, of conflicting motives and of peril. Russia began on November 30 its independent attack on Finland (q.v.), a country that formerly had long formed part of Sweden, that bordered it, and whose people were in close cultural contact with the Swedes. While this attack still threatened, the kings of Sweden, Denmark, and Norway and President Kallio of Finland met at Stockholm, October 18-19, and decided that the three monarchies would make diplomatic representations to Russia on Finland's behalf. No agreement among the four was said to have been reached as to any joint military effort to defend Finland. Later, as the Russian invasion developed, Sweden permitted shipments of supplies to Finland, allowed subscriptions of money to aid the distressed in that country, and offered no barrier to the passage of Swedes and others to Finland to volunteer for service in its army. Sums collected on behalf of the Finns attained about 6,000,000 crowns by December 28.

Foreign Minister Rickard J. Sandler, without proposing military support for Finland, urged in November that Sweden use its forces to defend the Åland Islands. These islands, extending partly across the outlet of the Gulf of Bothnia, were under Finland's government, but many of their inhabitants were Swedish in language and origin. Sandler's proposal rested on the view that Russia, if it gained these islands, would dominate a great part of the Swedish coast. Sandler's proposal met with severe criticism in the German press, an indication that the German authorities sought to discourage a policy likely to bring Sweden into war with Russia. There followed the acceptance of Sandler's resignation from the cabinet, December 11. Hansson, continuing as Premier, chose Christian E. Guenther as Foreign Minister and made other changes. The policy of non-interference in Finland now became firmly fixed. Strong and widespread feelings of sympathy for the Finns and the dread of a Russian advance made this policy far from universally acceptable and tended to develop organized popular agitation for giving Finland military support; but relations with Germany promptly improved, and the conclusion of negotiations for a new German trade agreement was reported in the closing days of the year.

SWITZERLAND. A federated republic of central Europe. Capital, Bern (Berne).

Area and Population. Switzerland has an area of 15,944 square miles and a population estimated at 4,210,000 on Jan. 1, 1939 (4,066,400 at the 1930 census). The urban population in 1937 was estimated at 1,760,000. Living births in 1938 numbered 63,790 (15.2 per 1000); deaths, 48,576 (11.6 per 1000); marriages, 31,031 (7.4 per 1000). Estimated populations of the chief cities on Jan. 1, 1939, were: Zurich, 329,780; Basel, 162,559; Geneva, 123,286; Bern, 121,976; Lausanne, 89,632; St. Gallen, 63,491; Winterthur, 58,410; Lucerne, 54,123. The 1930 census showed 2,924,313 German-speaking Swiss; 831,097 French-speaking; 242,034 Italian-speaking; and 44,158 Romansch-speaking.

National Defense. Military service is compulsory. On Nov. 1, 1939, the army consisted of 480,000 active soldiers and 100,000 trained reserves, according to the Adjutant General's Office, Wash-

ington, D. C. The air force comprised 5000 men and 400 aircraft.

Education and Religion. There is no illiteracy among persons over ten years of age. Enrollment in the schools in 1936-37 was: Primary, 471,430; secondary and preparatory, 89,235; manual arts instruction, 29,053; university (1937-38), 10,981. About 57 per cent of the Swiss people are Protestants, 41 per cent Roman Catholics, and 0.4 per cent Jews.

Production. Approximately 45 per cent of the working population is engaged in industry, 21 per cent in agriculture, and 15 per cent in commerce. About 12 per cent of the total area is arable and there are some 4,161,000 acres of meadow and 2,372,000 acres of forests. The value of agricultural production in 1937 was 1,247,000,000 Swiss francs, derived as follows (in million francs): Cereal grains, 75.7; potatoes, 33.4; vineyards, 44.4; fruit culture, 82.6; vegetable culture, 66.0; cattle for slaughter, 207.2; horses, 19.5; hogs, 162.0; poultry, 59.2; milk and milk products, 457.9; other agricultural products, 39.2. Livestock statistics for 1938 showed 1,701,000 cattle; 923,000 swine; 140,000 horses (1936); 176,000 sheep (1936); 220,000 goats (1936); 5,594,000 poultry (1936).

The output of hydro-electric energy in year ending Sept. 30, 1938, was 7,400,000,000 kilowatt-hours. Other industrial production (during the 1938 calendar year) was: Beer, 56,600,000 gal.; watchcases, 584,000; silk (conditioned), 802,000 lb.; manufactured gas, 261,000,000 cu. meters; salt, 81,100 metric tons. There were in 1938 about 19,875 textile looms and 1,249,000 cotton spindles. The hotel industry in 1938 had 3,485,000 patrons (3,578,000 in 1937).

Foreign Trade. Total imports in 1938 were valued at 1,606,902,000 Swiss francs and exports at 1,316,572,000. In 1939 imports of merchandise were 1,888,800,000 francs; exports of Swiss products, 1,297,200,000 francs. Manufactures accounted for 87.6 per cent of all 1938 exports. Exports (valued in francs) were chiefly consigned to the following countries: Germany, 206,143,000; United Kingdom, 148,083,000; France, 121,406,000; Italy, 91,199,000; United States, 90,738,000. Of the imports (valued in francs), Germany supplied 373,083,000; France, 229,182,000; United States, 125,257,000; Italy, 116,669,000; United Kingdom, 95,021,000. See IMPORTS AND EXPORTS.

Finance. Government revenue for 1939 was estimated at 524,800,000 francs; expenditure at 580,800,000 francs. Actual receipts in 1938 totaled 539,005,000 francs (522,068,000 in 1937); expenditures, 578,011,000 (537,009,000 in 1937). The public debt on Jan. 1, 1939, was 2,753,300,000 francs, of which 1,950,100,000 was funded and 803,200,000 was floating. The average exchange value of the Swiss franc was \$0.2287 in 1938 and \$0.2253 in 1939.

Transportation. There were in 1937 about 3660 miles of railway (2800 miles electrified) and (in 1939) 10,448 miles of highways (see ROADS AND STREETS). Civil aviation statistics for 1938 were: Miles flown, 3,354,530; mail carried, 1,386,489 lb.; freight and baggage, 1,338,201 lb.

Government. The Constitution of 1874, the basis of the government, provides a republican confederation of 22 cantons or states. The Federal Assembly consists of two chambers; one, the Council of States, is composed of 44 members—two from each canton; the other chamber, the National Council, has 187 members, all elected quadrennially by the obligatory vote of males and females

who have attained 20 years of age. The Federal Council consists of seven members, all elected quadrennially by vote of the united chambers of the Federal Assembly; by similar vote, but annually, are chosen, from among the seven, a President of the Confederation and a Vice-President of the Federal Council. Each of the Federal Council's seven members is assigned to the direction of one of the seven Federal administrative departments. Philippe Etter was President in 1939; Dr. Marcel Pilet-Golaz was elected in 1939, to be President in 1940.

History. The violent disturbance among the greater powers of Europe in 1939 imperiled the bases of Switzerland existence—threatened the integrity of her soil, the concord of her people, the ingress for her food, and the outgo of her products. The peril at hand dictated the course of public policy to such a degree that most other considerations dropped out of the immediate reckoning.

The risk of military invasion had led the Swiss to take unusual military precautions prior to 1939 (see YEAR BOOK, 1938, p. 715). These were steadily augmented in 1939. In January the Federal Assembly passed a law to lengthen the term of obligatory military service. In April 20,000,000 francs were voted to build a long-needed road to connect central Switzerland with Graubünden (Grisons); dispute over the question whether to follow the best military or best commercial route had delayed the decision on this road for years, but now the military route, that through Kisten Pass, was adopted.

On August 28 the government ordered the mobilization of about 100,000 men to cover the threatened frontiers; on the 30th the Assembly voted plenary powers to the Federal Council, elected Col. Henri Guisan to the rank of general (the fourth to hold this exceptional rank in the Swiss army since 1848), and made him commander in chief. On September 1 the general mobilization of the army, involving about 500,000 men in all, was ordered. By the time that war between neighboring Germany and France was declared, Swiss mobilization was well under way. Starting with October, the release of a considerable part of the mobilized force was effected in the autumn. In December a plan was adopted for organizing a fourth corps in the Swiss army, with a view to improve its ability to act on a great scale. The way was laid in April for the slower process of increasing the nation's defensive works and material; the Federal Council approved the expenditure of 190,000,000 francs for aircraft, anti-aircraft defenses, forts, cannon, and related material.

Swiss authorities declared, June 8, that they had discovered evidence of a separatist movement in the mainly Italian-speaking Canton of Ticino and had seized 10,000 proclamations calling on the population to secede and unite with Italy. Soon afterward the Italian Government, in pursuing its plan of purging Bolzano in the South Tirol of non-Italian elements, sought in July the removal of the 200 or more Swiss in the area; some of these were hotel-keepers, and the requirement that they leave without taking out any considerable sum in money left them without much hope of material compensation for loss incurred; the matter was a subject of diplomatic action on the part of Switzerland. When the war broke out six weeks later a part of the Swiss army just mobilized was sent to protect the Italian frontier, and it was kept there until the approach of winter

made trouble in that quarter unlikely. A small number of persons alleged to have acted as Italian spies were arrested in October. The pro-German Swiss Nazis, who had been active in 1938, abandoned overt operations as the war developed; they abstained from the October elections to the National Council.

The neighboring war made a battle-front of the Rhine along the whole eastern edge of Alsace. It thus interrupted in September the transportation of heavy goods from the seaboard to Switzerland by water. Great quantities of wheat, fodder, and other merchandise on the way were stalled at seaboard and along the river. Fortunately the efforts of the Swiss Government to accumulate food had been progressing for a year. It was announced that more than a year's supply of breadstuffs lay in storage within the country. Partly to help renew the supply before it should run out and partly to help the exportation of Swiss products, the government chartered a fleet of ten ships (expectedly 15 by the end of 1939) from a Greek firm, to carry Swiss commerce, connecting via either Atlantic or Mediterranean ports. The government warned the population in April to gather stores of a list of the common readily preserved table supplies, such as sugar and rice. In September it was consequently able to check disturbance in the market for such goods, and restrictions on the sale of foodstuffs went into effect without serious difficulty. Imports and exports, likewise were put under strict regulation. The national hoard of gold, was reported as early as March to have been mainly removed to London and New York and—as for the required 40 per cent to be kept on hand as currency-coverage—put in hiding.

Elections. The members of the National Council, for the next four years, were elected by the popular vote, October 28-29. The voters gave a heavy majority for the conservative candidates. On June 4 in a popular referendum the voters adopted, by a majority of more than 2 to 1, a constitutional amendment, previously voted by the Federal Assembly, allowing a tax on retail sales, at rates mainly from 2 to 4 per cent, toward producing 330,000,000 francs to meet expenses due to the cost of measures of national defense.

SYRACUSE UNIVERSITY. A nonsectarian institution of higher learning for men and women in Syracuse, N. Y., founded in 1870. The 1939 autumn enrollment was 6641. The summer session had an attendance of 2368. The faculty numbered 673. The productive funds amounted to \$4,706,432, while the income for the year was \$4,003,528. The library contained 260,801 volumes. Chancellor, William Pratt Graham, Ph.D.

SYRIA AND LEBANON. A mandated territory of France on the east coast of the Mediterranean between Turkey and Palestine. Beyrouth (Beirut) is the administrative center of the French High Commissioner, Gabriel Puaux, who assumed office Jan. 7, 1939.

Area and Population. The area and population of the Syrian Republic, its sub-divisions, and the Republic of Lebanon, are shown in the accompanying table. It excludes the Sanjak of Alexandretta (Hatay Republic), with an area of 1930 square miles (pop. about 228,000) ceded to Turkey by France June 23, 1939.

The people are mainly Arabs and Arabic is

the chief language, but there are considerable numbers of Turks, Kurds, Turkomans, Circassians, Armenians, Iranians, and Jews as well as about 28,000 Europeans. The chief cities, with 1935 populations, are: Damascus, 193,912; Aleppo, 177,313; Beyrouth, 134,655; Homs, 52,792.

SYRIA AND LEBANON: AREA AND POPULATION¹

| Political Unit (Capital) | Area, sq. mi. * | Popula- tion ^b |
|-------------------------------------|--------------------|------------------------------|
| Republic of Syria (Damascus)..... | 72,560 | 2,487,000 |
| Syria Proper (Damascus)..... | 67,550 | 2,044,000 |
| Latakia (Latakia)..... | 2,310 | 372,000 |
| Djebel Druze (El Suweideh)..... | 2,700 | 71,000* |
| Republic of Lebanon (Beyrouth)..... | 3,470 | 862,600 |
| Total..... | 76,030 | 3,349,600 |

* Approximate. ^b Estimates of December, 1938, for the Republic of Syria and its subdivisions; census of 1935 for Republic of Lebanon. * Excluding about 15,000 nomads who spend part of their time in Djebel Druze.

Education and Religion. Statistics on education (1937): Primary, 2611 schools (253,763 pupils); technical, 146 (15,916); secondary, 31 (1485); universities, 3 (1316). Religions: Moslems, 1,514,755; Christians, 505,419; Alawites, 27,930; Druses, 86,125; Jews, 16,526; Ismailians, 14,882.

Defense. The French-controlled army of occupation on Jan. 1, 1938, comprised 10,476 officers and men, of whom only 303 were Frenchmen.

Production. Agriculture and livestock raising are the principal occupations. Production in 1938 (metric tons): Wheat, 659,400; barley, 385,200; oats, 10,000; corn, 27,500; rice, 3000; potatoes, 41,600; tobacco, 3400; cotton-seed, 17,600; sesame, 5300; olive oil, 15,300; cotton, 8400; wool and mohair, 9900; raw silk, 140. Wine production (1938-39) was 43,000 hectoliters (hectoliter equals 26.42 U.S. gal.). Figs, apricots and citrus fruits are widely grown. Livestock (Jan. 1, 1938): 2,273,520 sheep, 89,900 camels, 345,228 oxen, 152,221 asses, 1,659,514 goats. Some flour, soap, olive oil and silk thread are manufactured.

Foreign Trade. Merchandise imports in 1938 were valued at 70,812,000 Syrian pounds (53,604,000 in 1937); exports, 29,280,000 (25,716,000). Textiles and animal and vegetable products are the chief articles of trade. Commerce is mainly with France, Britain, United States and neighboring countries. During 1938 2,082,122 metric tons of oil was piped through Syria to the port of Tripoli from Iraq.

Finance. Budget results for both the Syrian and Lebanese Governments (1938) were: Receipts, 17,232,042 Syrian pounds; expenditures, 16,497,303. The so-called "Common Interests" budget returns were: Receipts, 12,237,189 Syrian pounds; expenditures, 9,085,282. The Syrian pound (equal to 20 French francs) exchanged at \$0.576 in 1938 and \$0.81 in 1937.

Communications. The mandated territory had 890 miles of railway in 1938, 7072 miles of roads, air connections with France and Palestine, and bus connections between Beyrouth and Baghdad, Iraq. Beyrouth is the chief port. Shipping entered at all ports in 1937 totaled 1757 vessels of 4,074,000 tons. See ROADS AND STREETS.

Government. By the Constitution of May 14, 1930, the Syrian Republic achieved a virtually independent status, except that control of defense, foreign relations, and certain other functions was retained by France as the mandatory power. The Constitution provided for a legislature of 69 members elected for four years and a president

elected by the legislature for five years. President in 1939, Hashem Beg el Attassy, elected Dec. 21, 1936. The Constitution of the Lebanese Republic, dated 1926, was similar to that of the Syrian Republic. President, Emile Eddé, elected Jan. 20, 1936. Latakia and Djebel Druse, which are semi-autonomous districts of the Syrian Republic, were administered by French governors, assisted by partly nominated and partly elected councils. See *History*.

History. Relations between France and the Syrian Nationalists, politically the strongest group in the Syrian Republic, became exceedingly strained in 1939 as a result of two major developments. One was the refusal of the French Government to put into effect the Franco-Syrian treaty of 1936 (see 1936 YEAR BOOK) unless the pact was amended so as to continue French control of the army and police. The other was the cession of the Sanjak of Alexandretta (Hatay Republic) by France to Turkey under the Franco-Turkish mutual assistance pact signed June 23, 1939 (see FRANCE and TURKEY under *History*).

The treaties signed Sept. 9 and Nov. 13, 1936, by France with the Syrian and Lebanese Republics, respectively, provided for their establishment as independent republics, allied to France, at the end of a three-year transition period. Late in 1938 the French Parliament refused to ratify the treaties on the ground that the disturbed European situation made it inopportune for France to relinquish effective control of the mandate. When the French Government early in 1939 opened negotiations for amendment of the treaty, it met angry opposition from the Syrian Government and the Nationalist movement. Severe anti-French rioting in Damascus, Homs and other centres in March was repressed by troops, which on orders from Paris assumed all police powers. On March 14 the Nationalist leader Jamil Mardam Bey resigned as Premier of the Syrian Republic and his party refused further co-operation with the French regime. This resulted in a series of short-lived cabinets, each of which proved unable to act along lines satisfactory to both the French High Commissioner and the Nationalists.

The cession of the Sanjak of Alexandretta served further to enrage and alienate the Syrian Arabs. Turks comprised only about 40 per cent of the population of the sanjak, and the Arabs feared that Turkey would next move to seize additional parts of Syria. Moreover, as mandatory power the French had promised to see to it "that no part of the territory of Syria and Lebanon is ceded or leased or in any way placed under the control of a foreign power." This pledge was openly violated. On July 8 President Hashem Beg el Attassy and the cabinet resigned in protest. On the following day the French High Commissioner suspended the Constitution of the Syrian Republic and appointed a council to rule under his direction. Later the Lebanese Constitution was suspended. There was some Arab support for a reported French plan to establish a kingdom with the Emir Abdullah of Trans-Jordan on the throne. But this was opposed both by the Syrian Nationalists and by King Abdul Aziz ibn Saud of Saudi Arabia.

Before Turkey took full possession of Alexandretta late in July, thousands of Armenians and other minority groups in the Sanjak fled to Lebanon and Syria. Meanwhile the establishment of direct French rule ended the clashes that occurred in 1938 and early 1939 between the Syrian

government and certain Christian and Alawite minority groups opposed to Arab Moslem rule. With the outbreak of the European War in September, the anti-French agitation seemed to wane. Arab leaders announced their support of France and Britain and thousands of Arabs enlisted in the rapidly growing armed force that the French concentrated in Syria and Lebanon under Gen. Maxime Weygand during the remainder of the year.

TAHITI. See OCEANIA, FRENCH ESTABLISHMENTS IN.

TAIWAN. See FORMOSA.

TAJIK SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., north of Afghanistan. It includes the Gorno-Badakhshan Autonomous Region (25,800 sq. mi.; capital, Khorog). Total area, 55,545 square miles; population (Jan. 17, 1939), 1,485,091. Chief towns (with 1936 populations): Stalinabad, the capital, 49,600; Leninabad, 67,700. In 1937 the 3853 primary and secondary schools had a total of 203,209 students. The main occupations of the people are farming, horticulture, and livestock raising. Cotton, rice, and vegetables are the chief crops. Deposits of petroleum, coal, lead, zinc, silver, and arsenic are being worked.

TANGANYIKA (tǎn'gǎn-yē'ka) **TERRITORY.** The former German East African area now administered by Great Britain under a mandate approved by the League of Nations. Area, 363,600 square miles; population (1938 estimate), 5,182,000 of whom 9165 were Europeans, as compared with (1931 census) 5,063,544 including 8217 Europeans. Chief seaports: Dar-es-Salaam, the capital (33,147 inhabitants), Tanga, Lindi, Mikindani and Kilwa. Mwanza and Bukoba are ports on Lake Victoria and Ujiji and Kigoma are ports on Lake Tanganyika.

Production and Trade. In 1939 the principal crops (with output in metric tons) were coffee (15,000), cotton (8600), groundnuts (5200), sesame (5300), cotton seed (27,300 in 1938), copra (5300 in 1938), and sisal (101,400 short tons exported in 1938). Other products are hides and skins, simsim, ghee, diamonds (3576 carats, 1938), gold (86,162 fine oz., 1938), and timber (pencil cedar, yellow wood, mvule, ebony). Livestock in the territory (1938): 5,052,207 cattle; 1,648,384 sheep; 2,827,766 goats. In 1938 imports totaled £3,448,575; exports, £4,050,734. Chief imports were machinery, cotton piece goods, foodstuffs, and motor vehicles. During 1938, 540 ships of 2,605,998 tons cleared the ports.

Government. For 1938 revenue totaled £2,113,294; expenditure, £2,223,896. In the budget for 1939, revenue was estimated at £2,161,000 and expenditure at £2,275,000. Tanganyika is administered by a governor who is aided by an executive council of 6 nominated members and a legislative council of 23 members (13 official and 10 non-official). Governor and Commander-in-Chief, Sir Mark Young (appointed Mar. 2, 1938).

History. Labor riots in the lighterage, railway, and public works services at the port of Tanga in August, 1939, resulted in the death of one striker and the wounding of another when police fired on a mob of several hundred persons. In June the government shipped foodstuffs to the Mbulu district of Tanganyika to combat famine conditions resulting from a two-year drought.

See SOUTH AFRICA under *History*.

TANGIER. An internationally administered seaport and surrounding territory in northwestern Africa adjoining Spanish Morocco near the Strait

of Gibraltar. Area, about 225 square miles; estimated population on Jan. 1, 1938, 80,000, mostly native Moslems but including some 17,000 Europeans and 7000 Jews. The city of Tangier proper has about 45,000 inhabitants. Commerce, agriculture, fishing, and the manufacture of cigarettes are the principal occupations. Wheat, barley, and chickpeas are leading crops. Imports in 1937 were 80,084,240 French francs; exports, 8,247,103 francs. A railway connects Tangier (city) with the French Moroccan railroad network. Modern harbor works are under construction at Tangier. Air lines connect Tangier with Toulouse, France, and with various North African cities.

Tangier was permanently neutralized and demilitarized by the Convention of Dec. 18, 1923, as modified by the protocol of July 25, 1928. For local government there is an international assembly of 27 members, whose acts are subject to the veto of a Committee of Control composed of the French, British, Spanish, and Italian consuls in the city. The assembly delegates administrative responsibility to an administrator, with three assistants in charge of finances, health, justice, etc. Government revenues for 1937 were estimated at 19,927,500 francs (excluding subsidies); expenditures, 25,082,822 francs. Native affairs are in the hands of a Mendoub, representing the Sultan of Morocco. Administrator in 1939, M. Le Fur; Mendoub, Si Mehemmed Et-Tazi. French, Spanish and Arabic are the official languages.

History. The port of Tangier resumed its pre-World War status as a center of international tension following the termination of the Spanish civil war (see SPAIN under *History*). In April the concentration of thousands of war-hardened troops in Spanish Morocco along the Tangier border and the visit of the German fleet to the port aroused Anglo-French fears that the Spanish dictator was contemplating seizing the port with German and Italian aid. To guard against this possibility a large French fleet was concentrated at nearby Gibraltar while the British Mediterranean fleet took up stations in the Eastern Mediterranean. The tension was dissipated when the German fleet returned to its home ports and General Franco assured Britain and France that he had no intention of disturbing the status quo in Tangier.

TANNU TUVA, tǎn'nōō tōō-vā'. An independent republic, organized under Russian auspices and enjoying the protection of the Soviet Union. Situated in Central Asia, it lies between Siberia and Outer Mongolia (of which it formerly was the northwestern corner). Area, about 64,000 square miles; population, estimated at 65,000 (50,000 Tuvinsians, 12,000 Russians, 3000 Chinese and Mongols). Capital, Kizilkhoto (Krasny in Russian), with about 10,000 inhabitants. The natives are mainly pastoral. Animal products, gold, and asbestos are the chief exports.

TARIFFS. See CUSTOMS, BUREAU OF; TRADE AGREEMENTS.

TASMANIA. An island State of Australia. Area, 26,215 square miles; population, exclusive of full-blood aboriginals, 238,061 (Mar. 31, 1939, estimate), compared with 227,599 (1933 census). During 1938 there were 4907 births (20.82 per 1000); 2288 deaths (9.71 per 1000); and 2082 marriages (8.83 per 1000). The principal cities are Hobart (capital) with 63,150 inhabitants, including suburbs (Dec. 31, 1938); Launceston and suburbs, 32,820 (1937); Devonport, 5151 (1933).

Production. The chief agricultural products

are wheat (195,500 bu. in 1938-39 season), oats, peas, fruits, potatoes, hops, and hay. There were 2,500,000 sheep in 1939. Other livestock (1937): 254,812 cattle, 31,578 horses, 43,067 swine. The principal dairy products (1938) were butter, 11,997,323 lb.; cheese, 3,770,189 lb.; bacon and ham, 2,454,528 lb. Wool (greasy) produced during 1938-39 totaled 15,000,000 lb.

The estimated value of mineral production for 1938 was £A1,889,795, of which copper accounted for £A580,238; silver and lead, £A267,773; tin, £A244,037; gold, £A195,079; coal, £A61,991. In 1937-38, from 948 factories, with 13,170 employees (including working proprietors), the net value of production was £A5,445,094. (Australian £ averaged \$3.9394 for 1937 and \$3.8955 for 1938).

Government. For the year ended June 30, 1939, revenue totaled £A3,615,000; expenditure, £A3,641,000; public debt, £A26,367,000. The executive authority is vested in a governor, assisted by an executive council of responsible ministers who are also members of parliament. Parliament consists of a legislative council of 18 members elected for 6 years, and a house of assembly of 30 members elected by proportional representation for 3 years. Governor, Sir Ernest Clark (term expires Aug. 5, 1940); Premier, E. Dwyer-Gray (interim Premier after the death of A. G. Ogilvie, June 10, 1939, until Jan. 1, 1940; R. Cosgrove was elected in June, 1939, to become Premier on Jan. 1, 1940). See AUSTRALIA.

TATAR AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

TAXATION. The changes in the Federal tax laws effected during 1939 were generally favorable to taxpayers. While Congress was seeking to reduce Federal expenditures, it also endeavored to make taxation less burdensome without materially curtailing the yield to the Treasury. For the most part, these changes were effected, in the face of at least mild opposition from the Administration, on the initiative of the legislators themselves.

Federal Taxation. The Revenue Act of 1939, approved June 29, effected a number of changes in the statute that were favorable to corporate taxpayers. This tax law extended to corporations some of the concessions as regards imposts on capital gains that were granted individuals in the Revenue Act of 1938. The most important changes were the following:

1. The normal tax on corporate income exceeding \$25,000 was changed from a sliding scale of 16½ to 19 per cent to a flat 18 per cent, for years beginning Jan. 1, 1940, thus eliminating the last vestige of the undistributed profits tax principle.

2. Corporations having net operating losses in 1939 and thereafter could deduct them from profits earned in the two subsequent years.

3. Corporations were accorded the privilege of deducting losses on capital assets held over eighteen months from other income, instead of being limited to \$2,000 of net capital losses as previously. In this way, the capital gain and loss provisions of the Revenue Act were made similar for corporations and individuals.

4. Corporations showing gains from the retirement of debt at a discount prior to 1943 need not include them in taxable income.

5. All taxpayers who desire to use it were granted the authority to use the "last in, first out" method of inventory valuation.

The Treasury Department sought to offset the action of Congress in eliminating surtaxes on un-

distributed profits by tightening the administration of Section 102 of the Revenue Act, imposing punitive taxes upon the unreasonable retention of earnings by a corporation. New regulations issued in August made the failure to pay out 70 per cent of earnings as dividends *prima facie* evidence of unreasonable retention, unless other circumstances were held to justify such action. A number of corporations liberalized their dividend policies, especially where the cash position was strong, to avoid the threat of the imposition of the surtax under Section 102.

Several revisions were effected in the Social Security Act of interest to taxpayers. The tax on payrolls for unemployment insurance was frozen at 1 per cent, payable by employers and employes, for three additional years ending 1942. Beginning with 1943, the tax is to be 2 per cent. This is expected to save taxpayers \$275,000,000 yearly for the three years 1940-42, when the rate was to have been 1½ per cent under the original Social Security Act provisions. Payroll taxes for unemployment insurance are to be limited to the first \$3000 of compensation paid an employe beginning with 1940, which is expected to save employers some \$65,000,000 yearly. At the same time, the Social Security Act was amended to authorize reductions in unemployment insurance taxes under approved merit rating plans which are adopted by the individual States. The old-age pension scheme was broadened to include bank employes, seamen, and employed persons over 65 for the first time, which was expected to provide pensions for approximately 1,300,000 additional employes. Employers of such persons thus became subject to payroll taxes.

The yields from Federal income taxes for the fiscal years ended June 30, 1938, and 1939, compared as follows:

INCOME TAXES IN FISCAL YEARS 1938 AND 1939

[In millions of dollars]

| | 1938 | 1939 | Change |
|------------------------|---------|---------|--------|
| Current corporation... | 1,145.6 | 963.3 | -182.3 |
| Current individual... | 1,189.0 | 937.4 | -251.6 |
| Back taxes | 251.6 | 250.6 | - 1.0 |
| Excess-profits tax | 36.6 | 27.1 | - 9.5 |
| Total income taxes | 2,622.8 | 2,178.4 | -444.4 |

State Taxation. Few major changes were made in state taxation during 1939, apart from increases in liquor imposts. The total yield of all State taxes for the year was \$3,836,000,000, which compared with \$3,894,000,000 in the preceding year. In addition, state liquor stores earned net profits for the year of \$60,497,000, which compared with \$58,639,000 in the preceding year.

New York State increased its liquor tax from \$1 to \$1.25 a gallon, in the face of widespread opposition from the industry, which argued that bootlegging was stimulated as a result. Eleven other States took similar action.

The imposition of discriminatory taxation upon chain stores was not extended during the year, and met checks in the courts. By the end of the year, 19 States had such taxes, bills to pass additional levies of this kind being defeated in a number of States. In Kentucky, the Court of Appeals again held the chain store tax unconstitutional on November 24. However, another bill to impose a graduated tax on chain enterprises that would meet the objections of the Kentucky Court of Appeals was introduced and passed shortly after the turn of the year. The Pennsylvania discriminatory chain store tax also was held invalid by the State

Supreme Court, and the Wisconsin chain store levy expired.

The imposition of taxation by States on commodities crossing State lines presented a major issue in State taxation. The decision of the U.S. Supreme Court holding invalid Florida's inspection tax of 15 per cent on cement imported from abroad was hailed as a victory by opponents of interstate trade barriers. The courts refused to intervene as regards discriminatory taxation on alcoholic beverages imported into a State, however, holding that the twenty-first amendment to the Constitution gives the States a free hand in taxing such products.

TELEGRAPHY. Technical obstacles that previously prevented good picture transmission over ocean cables were announced as largely overcome by a new system that was placed in service Apr. 24, 1939, between London and New York over the cables of the Western Union Telegraph Company. Pictures up to 6 × 7 inches are sent and received through the medium of common cylinder machines, but special electrical networks selectively compensate for the peculiarities of the cable that cause distortion. The result is a picture of realistic density and excellent detail. Western Union also introduced, in February, the first commercially available automatic telegraph machine for the transmission of facsimile messages; in August introduced a new system of dial-operated direct circuits connecting important branch offices. The Italian government was reported late in the year to have appropriated the equivalent of about \$2,780,000 for new telephone-telegraph submarine and land cables and associated open-wire lines between Italy and the principal Albanian cities. See FEDERAL COMMUNICATIONS COMMISSION.

G. ROSS HENNINGER.

TELEPATHY. See PARAPSYCHOLOGY.

TELEPHONY. Telephone instruments in service as of Jan. 1, 1939, were reported as totaling more than 39 million, of which approximately 51 per cent were the dial (automatic) type. The dial instruments were reported to be in service as follows: United States 8,500,000, Germany 3,174,000, Great Britain and Northern Ireland 1,670,000, France 745,543, Canada 613,027, remainder of the world 3,310,448.

According to Department of Commerce figures, published in *Foreign Communication News*, Dec. 22, 1939, the telephone development of certain foreign countries, as of the beginning of 1939, was as shown in the table on the next page.

Among developments of significance in wire communication were three reported before the A.I.E.E. early in 1939: (1) a submarine cable-plow, (2) a remote-control toll-board, and (3) a "crossbar" switching system for dial telephones. By means of an ingenious equipment drawn along the ocean bottom by the cable ship on the surface, submarine cables are being plowed into trenches in the ocean bottom in the commercial fishing areas to protect the cables from damage by fishing gear dragged along the bottom by steam trawlers. A related device measures and sends recording and indicating signals to the

surface revealing the depth in inches to which the cable actually has been buried. To meet the public demand for ever more expeditious handling of certain classes of toll service, the new remote-control toll board simplifies the operating set-up in an exchange by providing for local-to-toll, toll-to-local, and toll-to-toll connections through the medium of electromechanical selector switches under the control of the toll operator, instead of hand-operated cord-and-jack connections. The crossbar telephone switching equipment is essentially an assembly of simple relays and relay-like structures which performs all switching operations, similar to, but with certain structural and operating advantages over, the panel and step-by-step switching equipments now commonly used respectively in the larger and the smaller cities. The crossbar equipment is expected to supplement the panel equipment in large cities. The first two crossbar exchanges were put into service in 1938, both in New York City.

Teletypewriters were used during Army maneuvers in northern New York for the transmission of military maps as well as for administrative and operating orders. In Cincinnati, Ohio, was made the first teletype installation for the high-speed transmission of fire alarms and their automatic and immediate translation into written form. With the completion of the 50-mile underground cable between Elmira and Binghamton, N. Y., almost three-fourths of the circuit mileage operated by the New York Telephone Company has thus been storm-proofed. Incidental to the extension of telephone cable facilities into the Northwest, the first fully commercial toll-line installation of coaxial cable is being made, and is expected to be in service within about a year. The coaxial installation will extend from Stevens Point, Wis., to Minneapolis, Minn.

Late in the year announcement was made that the American Telephone and Telegraph Company had been granted a construction permit for a new point-to-point radiotelephone station at Hialeah, Fla., to communicate with Panama City, San Jose, Managua, Tegucigalpa, La Lima, Honduras, Guatemala City, and San Salvador. International Telephone and Telegraph Corporation

announced the establishment in September of direct radiotelephone service between Belgium and Holland and South American points. Successful operation of a nine-channel ultra-short-wave radio link between Belfast and Stranraer has led to joint action by British and French authorities to establish a similar system for use across the English Channel. The system will provide 9 channels initially and 18 ultimately, will operate between 3.6 and 4.9 meters, and radio equipment will be remotely controlled from the nearest repeater stations to which the circuits will be completed via landline cables. A 56-position all-metal toll-board was placed in operation at Marseilles. In Colombo, Ceylon, key city of 300,000 inhabitants on the Europe-Orient trade route, one of the largest installations of automatic telephone equipment ever to be made in the tropics was completed in 1939. The system consists of three exchanges. Equipment is step-by-step type with rotary line switches and provides for automatic metering and through-dialing. Tropically humid climatic conditions required special insulation and completely air-conditioned exchanges. In May, RCA Communications, Inc., inaugurated a greatly improved method of transmitting radiophotos. See FEDERAL COMMUNICATIONS COMMISSION.

G. ROSS HENNINGER.

Bell System. There was an estimated increase of more than 750,000 Bell System telephones in 1939, bringing the total number to more than 16,500,000, a new high record. All told there were more than 20,500,000 telephones in the United States at the end of the year. Telephone conversations in the United States averaged almost 92,000,000 a day (estimated) and the total number of toll and Long Distance calls was approximately 990,000,000.

At the end of 1939 approximately 900,000 more telephones were dial operated than at the start of the year. An appreciable number of these were installed in small communities. About 600 small exchanges in the Bell System, ranging from less than 100 to 1000 lines, were converted to dial operation. Progress continued in the installation of crossbar dial central offices, 67,000 telephones being served by this type of equipment at the end of 1939.

Telephone instruments capable of giving improved transmission of speech have continued to be introduced in large numbers. More than half of all Bell telephones are now provided with the improved transmitter, and about 65 per cent are of the hand set type, including almost three million "combined sets" in which the bell and auxiliary apparatus are in the base of the cradle supporting the hand set.

Combined sets with built-in keys were introduced by the Bell System during the year. The keys provide such service features as pick-up of more than one line at one instrument; holding a call on one line while talking on another; intercommunication and signalling between several telephones on the premises without the aid of an operator or attendant; cutoff of extension telephones for privacy, etc. Heretofore the keys were separate units and were fastened to the user's furniture.

More than 13,000,000 visitors attended telephone exhibits at the New York World's Fair and the Golden Gate Exposition in San Francisco. Probably the most popular feature of each exhibit was the Long Distance demonstration, at

which about 150 persons a day were selected by lot to make demonstration calls as other visitors listened through special receivers.

WILLIAM P. BANNING.

TELETYPEWRITER. See TELEPHONY.

TELEVISION. Dedication of the RCA exhibit building at the New York World's Fair, Apr. 20, 1939, afforded the press its first opportunity in the United States to use television facilities in covering a news event. Ceremonies at the Fair grounds were telecast by NBC to Radio City where news men viewed them in RCA studios. Television programs for public pickup were inaugurated with the telecasting by National Broadcasting Company of features of the Fair's opening-day ceremonies April 30. Columbia Broadcasting System went on the air for tests with its New York City station on November 8, the first time two television stations have been on the air simultaneously in the same city. Interference, although feared, did not materialize. The advent of television in the New York City area is regarded by observers as being at once an unqualified technical success and a commercial disappointment, the latter in part at least because of the high cost (\$200 to \$750) of satisfactory receivers. Of an estimated 5000 television receivers manufactured, about 20 per cent had been sold by the year-end. Marking its 20th anniversary on October 17, RCA telecast a special program from its radiator atop the Empire State Building in New York City to an air transport liner flying over Baltimore and Washington more than 200 miles away. Late in the year, RCA and Farnsworth Television and Radio Corporation concluded an interchange of non-exclusive patent licenses. High-intensity water-cooled mercury-arc lamps for studio lighting have greatly reduced the radiant heat which television performers have suffered. A successful experimental use of telephone cable circuits for the short-distance transmission of television currents from portable pick-up equipment seemed to open new possibilities, which, however, are rigorously limited by technical complications. Coaxial cable still offers the only feasible means for wire-transmission of television currents, because its losses are but about a millionth part of those of an ordinary cable pair. Radio Manufacturers' Association has established a standard of 441-line screen and speed of 30 frames per second, but experimental results indicate the possibilities on the one hand of more lines for enlargement or better definition of pictures or, on the other hand, of reduced speed and consequent reduction in width of wave band required. Television screen tubes in use range from 5 to 12 inches in diameter and a new 20-inch tube has been developed using a new "phosphor" said to reduce flicker effect. Big-screen (6 x 8 ft.) television receivers have been tried in both Germany and England, but have proved costly, and results have been inferior to standard movie quality. This aspect of television is dormant in the United States at present. Outside of New York City the only regular program service offered is in Los Angeles, Calif. The FCC is pondering several license applications, and has established rules to govern telecasting stations. In the Eiffel Tower, Paris, a 25-kilowatt telecasting station is reported as having been ready for operation when the present war broke in September. There, a 12-ton 1200-ft. coaxial cable connects the station at the base of the tower with the radi-

ator at the top. The initial success of a relay station which picks up New York City television programs for re-telecasting in the vicinity of Albany may point the way toward solution of that phase of the problem which centers around the limited range of telecasting stations. Frequency modulation (see RADIO) ultimately may play a part in television development.

G. ROSS HENNINGER.

TEMPLETON, FAY. An American actress, died in San Francisco, Calif., Oct. 3, 1939. Born in Little Rock, Ark., Dec. 25, 1865, she made her first appearance as Cupid on Aug. 16, 1869 in her father's opera company, which he renamed the Fay Templeton Opera Co., in 1875. In 1885 her career began in earnest when she appeared in *Evangeline*. Married to Howell Osborn, her second husband, she went abroad and in 1886 made her debut on the London stage as Fernand in *Monte Cristo, Junior*. She did not return to New York until after her husband's death in 1895 and was seen then in *Excelsior, Jun.*

In 1900, Miss Templeton joined the Weber and Fields Company and was with them for four seasons, achieving a huge personal success as the singer of "Rosey, You are My Posey." During 1903-04 she had her own company, and on Sept. 25, 1905, opened at Columbus, Ohio, in *Forty-Five Minutes From Broadway* by George M. Cohan. This play opened in New York on Jan. 1, 1906, and in it she sang "Mary Is a Grand Old Name" and had a long and successful run. She retired from the stage in April, 1907.

In 1906 she married William Patterson (d. 1931) and lived in retirement until 1911 when she reappeared in a revival of *H.M.S. Pinafore*, playing her old role of Buttercup, which was considered one of her finest. She joined Weber and Fields on the occasion of their reunion in 1912, and in 1912 appeared in vaudeville. In 1926, 1931, and 1932 she again appeared as Buttercup. Her last part was the title-role in Jerome Kern's musical comedy, *Roberta* in 1933.

TEMPLE UNIVERSITY. A coeducational institution of higher learning in Philadelphia, Pa., founded in 1884. The 1939 autumn enrollment was 6170 in the three colleges of liberal arts, education, and commerce and 2095 in the eight professional schools of chiropody, dentistry, law, medicine, oral hygiene, pharmacy, theology, and nursing. The 1938 summer session had an attendance of 1563. There were 752 faculty members. The income for the year ending June 30, 1939, totaled \$2,169,380. The libraries of the University contained 175,000 volumes. President, Charles E. Beury, LL.D. See PHOTOGRAPHY.

TENNESSEE. Area and Population. Area, 42,022 square miles; included (1930) water, 335 square miles. Population: April 1, 1930 (census), 2,616,556; July 1, 1937 (Federal estimate), 2,893,000; 1920 (census), 2,337,885. Memphis (1930) had 253,143 inhabitants; Nashville, the capital, 153,866.

Agriculture. Tennessee harvested, in 1939, 5,902,900 acres of principal crops. Corn and hay took nearly three-fourths of this acreage. Corn, on 2,635,000 acres, gave 52,700,000 bu. (estimated farm value, \$38,998,000); tame hay, on 1,621,000 acres, 1,629,000 tons (\$14,987,000); cotton, 726,000 acres, 450,000 bales (\$19,800,000); tobacco, 117,900 acres, 102,716,000 lb. (\$12,775,000); wheat, 358,000 acres, 4,117,000 bu. (\$3,458,000); sweet potatoes, 47,000 acres, 3,713,000 bu. (\$2,-

785,000); potatoes, 41,000 acres, 2,911,000 bu. (\$2,212,000).

Manufacturing. The U.S. Census of Manufactures published in 1939 a report on Tennessee showing the following totals for 1937 (figures for 1935 are subjoined in parenthesis): Active manufacturing establishments numbered 2083 (1991), employed 135,073 wage-earners (112,434), and paid them \$109,247,514 (\$81,245,588); all factories' totals of output aggregated \$707,986,784 (\$520,968,985), to which the manufacturing processes contributed \$295,626,708 (\$218,537,160).

The making of textiles yielded nearly one-fifth of all value of manufactured products, furnished over one-fourth of all value added by manufacture, and employed one in eleven of all factories' wage-earners. The textile industry was itself diverse; it covered the spinning, weaving, knitting, dyeing, and finishing of rayon, cotton, and wool. The output of rayon and allied products amounted, for 1937, to \$59,132,550; that of cotton yarn and thread, to \$7,474,943; of woven cottons, to \$13,541,795; hosiery-knitting, to \$29,219,241; the knitting of underwear, to \$14,358,311; the weaving of woollen goods, to \$5,708,593; the dyeing and finishing of yarn, to \$2,226,948. The making of garments, exclusive of the knitted ones already mentioned, but inclusive of boots and shoes, approximated \$46,000,000 of output; of this sum, boots and shoes furnished \$20,897,976, clothing for work, for sport, and for other wear, \$24,014,045. As in other cotton-growing States, the treatment of cottonseed produced oil, cake, and meal; the output of these attained \$20,150,709. In Tennessee, moreover, a special industry produced shortenings (without lard), vegetable cooking oils, and salad oils to the value of \$36,457,022. This amount, however great in relation to the output of all manufacture, was offset, to the extent of more than nine-tenths, by the cost of materials, etc. The preparation of tobacco for smoking, chewing, and snuffing produced an output of \$14,492,782.

The manufactures of Memphis amounted to \$150,879,273 for 1937; the total for Chattanooga was \$86,948,394; for Nashville, \$83,547,312; for Knoxville, \$60,111,487.

Mineral Production. The yearly total value of the State's production of its native minerals, \$34,893,847 for 1937, came, to the extent of almost one-third, from coal; cement, stone, zinc, and clay products ranked after coal, in the order in which they are named. The yearly quantity of the mines' production of coal diminished to 4,373,000 net tons (1938), from 5,212,000 tons, in value \$10,373,000, for 1937. The makers of Portland cement, contrary to the general trend in the Union, increased their shipments to 3,390,871 barrels for 1938, from 3,013,817 for 1937; by value, to \$5,063,628, from \$4,683,717. The production of stone diminished in yearly quantity to 2,599,840 short tons (1938) from 2,720,750 tons (1937); but it increased in value to \$4,237,351 (1938) from \$3,979,159 (1937); orders for exterior marble in the construction of the National Art Gallery at Washington lifted Tennessee's production of marble for 1938 to 29,130 short tons; in value, to \$1,779,961, the highest value for marble produced by any State in that year. The output of zinc, including production from Virginia, rose to 56,766 short tons (1938) from 55,255 (1937); by value, the product totaled \$5,449,536 (1938). Clay products, valued by the U.S. Bureau of Mines

in 1939 as having attained, for 1937, \$1,873,644, did not include the value of pottery; as earlier years' estimates of clay products had included pottery, there resulted an apparent but not actual drop of about \$1,170,000. The mining of phosphate rock again increased, to a total of 899,298 long tons for 1938, from 825,099 tons for 1937; in value, to \$3,725,601, from \$3,343,108.

Legislation. Meeting in January, the regular biennial session of the Legislature continued until March 10. Its most conspicuous act was the repeal of the State's law prohibiting the sale of intoxicating liquors. The liquor measure enacted allowed the sale of liquor in the package in any county where the popular vote should so decide.

Legislators passed and Governor Cooper approved three proposals for amending the State constitution. These were to enable the State to impose an income tax, to increase the pay of each member of the Legislature to \$10 a day, from \$4, and to lengthen the term of the Governor to 4 years, from 2 years. A fourth proposed amendment, to lengthen the term of legislators to 4 years, from 2 years, was reported to have been voted by them and sent to the Governor.

Enactments of the session granted State aid to the public schools at the rate of \$10,500,000 a year and granted free textbooks to pupils in grades 1 to 3; revised the plan of interest-payment on the State's highway obligations to the counties, so as to save the State about \$300,000 a year; provided a method for the consolidation of counties, some of which (notably those partly overflowed by reservoirs of the TVA) lacked the taxable wealth easily to support a separate existence; increased the allowable loads of motor trucks to 24,000 pounds, increasing the tax on the heavier trucks; protected the State's high gasoline tax of 8 cents a gallon by forbidding vehicles to enter the State when carrying more than 18 gallons in the fuel tank; and repealed the county-unit primary act, the act to purge registration books, the ouster act to remove public officials without trial by jury, and the act creating a special State prosecuting force.

The Legislators rejected, as before, a bill to repeal the act, once the occasion of a sensational trial, forbidding the teaching of evolution; they tabled a resolution to give the State's ratification to the pending proposed Federal constitutional amendment for regulating the labor of the young; both houses received a bill to tax public utilities owned by the TVA, in compensation for the loss of revenue previously derived from the Tennessee Electric properties, which the TVA acquired.

Political and Other Events. Prentice Cooper was inaugurated as Governor on January 16. A Court composed of two Federal district Judges gave a decision, September 11, that payment of the State's poll tax was a constitutional and valid requirement for qualification to vote in National elections in the State.

The TVA, Federally owned and operated agency for the production of electric current from the water-power of the Tennessee River area, bought on April 12, in company with certain cities in Tennessee, the properties owned by the Commonwealth and Southern Corporation, through its subsidiary the Tennessee Electric Company, within the State. The transaction had been sought by the leading interests in the Corporation, as a way out of its financial destruction by Federally aided competition. The cities were to get, by the deal, ready-made systems of distribu-

tion enabling them to start business in the municipal distribution of electricity without delay. The price to be paid to the sellers was \$78,600,000; payment was delayed until the enactment by Congress, in July, of means for meeting the amount. The cost to the TVA was \$46,000,000; the rest of the cost was borne mainly by Chattanooga, Nashville, and certain other municipalities as the price of local properties that they acquired for systems of municipal distribution. Memphis joined the group of municipal partners of the TVA by agreeing in February to buy the local property of the Memphis Power and Light Company for \$17,360,000, of which the TVA was to contribute \$2,110,000 and the city itself was to raise the rest.

County Judge E. L. Eblen, of Roane County, declared before a hearing of the U.S. House of Representatives' committee on military affairs, early in December, that the loss of taxes on public utilities' properties acquired by the Federal Government would force counties to default on bonds to a total of \$14,000,000 unless the Government would consent to let itself be taxed on such properties or would make equivalent amends for the revenue that it had taken away. The estimated loss of taxes in Tennessee was \$3,000,000 a year.

Officers. Tennessee's chief officers, serving in 1939, were: Governor, Prentice Cooper (Dem.); Secretary of State, A. B. Broadbent; Treasurer, John Harton; Comptroller, Robert W. Lowe; Attorney-General, Roy H. Beeler; Commissioner of Education, B. O. Duggan.

TENNESSEE, UNIVERSITY OF. A State institution of higher education, nonsectarian, and co-educational, in Knoxville. The enrollment for 1939-40 was 4443. The total enrollment for the 1939 summer session was 2536. The endowment for the year was \$480,833, and the income amounted to \$20,720. The library contained 184,002 volumes. A new residence hall for girls was opened. President, James D. Hoskins, LL.D.

TENNESSEE VALLEY AUTHORITY (TVA). The Tennessee Valley Authority is a corporation wholly owned by the United States Government. It was established by the Tennessee Valley Authority Act of May 18, 1933, later amended in 1935 and 1939. The TVA Act stipulates among its objectives the improvement of the navigability and the provision for the flood control of the Tennessee River; provision for the agricultural and industrial development of the Tennessee Valley; provision for the national defense; and the development and distribution of incidental hydroelectric power to the public. The agency is further empowered to make such studies, demonstrations, and recommendations as will further the economic welfare of the region involved.

In carrying out its programme, the TVA is constructing in the river channels a series of high dams that will provide a navigable channel for boats of nine-foot draft from Paducah, Ky., to Knoxville, Tenn. These same high dams also provide great storage capacity for the control of destructive flood waters and at the same time create a large amount of water power. At the close of the year the Authority had completed and placed in operation four multipurpose dams—Norris, Wheeler, Pickwick Landing, and Guntersville. Two additional dams, Hiwassee and Chickamauga, were nearing completion, and work on the Kentucky and Watts Bar projects was under way.

Agreements were made during the year be-

tween private utilities of the area and the Authority and several municipalities whereby sale of the private power properties was concluded. As a result, the TVA system of dams, while operating for navigation and reduction of floods, serves a market of 325,000 customers at an annual saving to them of some \$8,000,000, and annual revenue to the Tennessee Valley Authority of \$15,000,000.

Of the 26,000,000 acres comprising the Tennessee Valley drainage area about 18,000,000 are in farms, of which one-third is in farm woodlands, pasture, and cultivated crops, respectively. Practically all of the remaining 8,000,000 acres are in forests, publicly and privately owned. Some of these forested areas are at present not fully effective for purposes of water control, and some 7,000,000 acres in the farm areas are now subject to appreciable erosion.

These losses in soil and water can be reduced by measures of control provided by improved farm and forest practices. Such practices must rest largely upon a self-sustaining basis, however, if they are to be widely and permanently adopted. In line with these principles, therefore, Congress directed the Authority to take over the war-time Wilson Dam and the nitrate plants at Muscle Shoals, maintain them for national defense, and operate them with a view to effecting the production of new and improved forms of plant food.

In practically every state it has been possible for farmers to determine for themselves the extent to which improved fertilizers will enable them to readjust their farm programmes in the interest of water control and of soil conservation. Over 27,700 farmers, whose farms represent a total of more than 4,400,000 acres, are now actively participating in this phase of the TVA programme alone. In addition, more than 105,000 tons of concentrated phosphatic fertilizer have been produced for distribution through the Agricultural Adjustment Administration in furtherance of its national programme. It is noteworthy that only since this arrangement was made with the TVA has it been possible to secure concentrated phosphates from private producers in appreciable amounts. Guidance has been given to farmers in terracing nearly a half-million acres of farm land in the Valley at their expense. Nearly 100,000,000 trees have been planted in a programme designed to overcome serious soil erosion and at the same time to provide a new source of forest income.

Under Sections 22 and 23 of the TVA Act, the Authority serves as a strong unifying agency within the region, placing its experience in the conservation and use of resources at the disposal of the public, co-operating with states, localities, and organizations in the solution of related problems and in the development of mutually consistent programmes. As authorized by law, it conducts demonstrations and experiments to pave the way for action by other governmental units. TEXAS. Area and Population. Area (1930, with later correction to include 45 square miles gained from Oklahoma in revision of boundary), 265,941 square miles; included (1930) water, 3498 square miles. Population: Apr. 1, 1930 (census), 5,824,715; July 1, 1937 (Federal estimate), 6,172,000; 1920 (census), 4,663,228. Houston had (1930) 292,352 inhabitants; Dallas, 260,475; San Antonio, 231,542; Fort Worth, 163,447; Austin, the capital, 53,120.

Agriculture. Farmers in Texas harvested, in 1939, 25,122,100 acres: this fell by one-eighth below the average harvested area for the decade 1928-37; and it exceeded, by nearly one-fourth, the area harvested in 1939 by Iowa, next in magnitude. Cotton, on 8,608,000 acres (as against 13,395,000 acres, decade's average) made 2,830,000 bales (estimated value on the farm, \$121,690,000); corn, on 4,586,000 acres, 73,376,000 bu. (\$41,091,000); grain sorghums, 3,465,000 acres, 38,115,000 bu. (\$22,488,000); wheat, 2,765,000 acres, 27,650,000 bu. (\$17,420,000); rice, 269,000 acres, 13,988,000 bu. (\$11,610,000); oats, 1,250,000 acres, 28,750,000 bu. (\$8,338,000); tame hay, 1,163,000 acres, 1,022,000 tons, (\$8,687,000); peanuts, 312,000 acres, 129,480,000 lb. (\$4,014,000); grapefruit, (indicated total) 15,200,000 boxes (\$5,928,000); sweet potatoes, 63,000 acres, 3,780,000 bu. (\$3,402,000); potatoes, 43,000 acres, 2,666,000 bu. (\$3,119,000).

Manufacturing. The U.S. Census of Manufactures published in 1939 its biennial report on Texan manufactures, covering 1937. The following were the chief totals for 1937 (accompanied by those for 1935, in parenthesis): Active manufacturing establishments numbered 4422 (4167) and employed 129,501 wage-earners (99,124), who received \$132,505,115 (\$90,202,214); all these factories' totals of output aggregated \$1,581,422,401 (\$1,059,245,252), to which the processes of manufacture contributed \$439,854,447 (\$295,127,739). The value of the output of all manufactured products of 1937 exceeded any in the five preceding biennial reports of this total, starting with 1927; the highest of these predecessors, that for 1929, was \$1,427,022,000. Though output thus exceeded the old top in dollars, the higher cost of materials, etc., used in manufacture brought 1937's total of value contributed by manufacturing processes below the corresponding figure of 1929; wage-earners, also, were somewhat fewer and total wages lower.

Five industries that each produced manufactured goods in total for 1937, above \$50,000,000 accounted among them for more than three-fifths of all the Texan factories' output. These were the refining of petroleum, which gave manufactured products of \$689,625,304; meat-packing, \$97,980,983; grain mills' flour and other products, \$62,873,757; miscellaneous machinery, \$60,736,935; and the transformation of cottonseed into oil, cake, and meal, \$52,322,363.

Cities reporting more than \$100,000,000 each in manufactured output for 1937 were thus stated: Houston, \$146,145,451; Dallas, \$140,626,858; Fort Worth, \$110,013,332.

Mineral Production. Texas produced from its soil in 1937 minerals valued at \$813,270,605; the chief item, petroleum, of which Texas was the leading producer in the Union, made up nearly three-fourths of the State's entire total for 1937; natural gas and gasoline extracted from it con-

tributed somewhat less than one-fifth; sulphur, cement, sand and gravel, clay products, and stone were also produced to substantial totals. The output of petroleum, 475,614,000 barrels, approximately, for 1938, was again by far the greatest in the Union, but it fell considerably below the 510,318,000 barrels of the State's output for 1937. By value the total for 1937 attained \$594,500,000. A lower demand and consequent lower prices reduced the output in 1938. Production of natural gas according to the Texas Railroad Commission, approximated 1100 billions of cubic feet for 1938 and outran 1937's by 11 per cent. Other figures put the production of natural gas for 1937 at 1040 billion cu. ft.; made allowance for gas used in repressuring or gone by loss and wastage; and arrived at 854,561 millions as the number of cubic feet of natural gas that was marketed in 1937; the value of this total was \$132,166,000. The production of gasoline from natural gas increased to 655,800,000 gallons (1938) from 615,281,000 gallons, in value \$24,329,000 (1937). Texas produced about six-sevenths of the Union's output of sulphur for 1938, the year's total for the State being 2,058,940 long tons, as against 2,030,315 tons, in value \$36,535,670, for 1937.

Education. For the academic year 1938-39, pupils' enrollments in the public schools of Texas numbered 1,353,555. The year's expenditure for public-school education approximated \$85,400,000. The sum included pay for 45,131 teachers, averaging \$1032. The State government aided the public schools during the year with a per-capita apportionment at the rate of \$22 and an equalization fund that paid over \$5,000,000.

Legislation. The 46th State Legislature started its regular session January 10; adjourned June 21. It failed either to adopt or to find a substitute for Governor O'Daniel's plan for heavy new taxation to cover a great increase in the State's payments to old folk; on the other hand it enacted a bill so framed as to allow such rise in rates of the State's payment of old-age pensions, and likewise to add so many to the number of qualified recipients, as to increase the yearly cost to an estimated \$50,000,000.

The State's old-age-assistance act of 1939 amended the Texan system of pensions to the elderly by qualifying for pensions persons of 65 or over who had as much as \$1000 (or for a married couple, \$1500) in personal property, a life-insurance policy for \$1000, \$360 in cash, and a homestead as defined in the State constitution—a residence, with a piece of not more than 200 acres of land; disqualification for the pension on the ground that the applicant had children with the means to support him was expressly forbidden.

The act was passed without provision for raising the money to pay the added total in pensions that its provisions might create. The sales tax was as unpopular a proposal as the higher and more numerous pensions were popular; O'Daniel had promised his supporters to raise the pensions without creating a sales tax, although no other adequate and yet unused source of money could be discerned. O'Daniel met the dilemma by bidding the Legislature to give the State a transaction tax at the rate of 1.6 per cent on "any dealing of every kind between two or more persons," charities, wages, professional fees, farmers' original sales of their farms' products, and newspapers and street-car fares excepted. He proposed that this tax be fixed on the State as a constitu-

tional amendment. The general inability to reckon what such a tax would bring in, or how it would affect economic conditions, the scanty precedent for such a tax, and the feeling that instead of avoiding the retail-sales tax the Governor simply sought to tax sales all the way down the line and most other transactions as well caused the total failure of the Governor to win effectual support for his scheme. Other ways to raise the money occupied the Legislature's attention; bills to create a retail sales tax or to increase the already high rates levied on mineral production and other special sources of wealth were repeatedly passed in one house or the other, but none reached the statute books. The close of the session thus left the State obligated by its own law to pay an unknown additional yearly amount in pensions to the elderly, yet without a cent of additional revenue created for this purpose.

The Legislature failed, like several of its predecessors to mend the condition of the State's general fund, which had been accumulating a creeping deficit for about ten years, now amounting to \$18,000,000. The session's appropriations for the next two years' departmental, judiciary, eleemosynary, and educational needs aggregated \$61,606,190, or about \$1,200,000 less than for the previous biennium; but those for the State's rural aid rose by about \$4,500,000, to \$15,504,664; and a further threatened impairment of the general fund was created by the passage of a bill remitting to the counties one half of their respective collections of the State's ad valorem tax on property for the next five years, whereby the State surrendered about \$4,000,000 a year of its usual income. Following precedent, the Legislature also granted special remission out of the same tax, to a number of individual counties represented as being in special need.

Other acts of the session abolished the office of State Tax Commissioner and assigned its duties to the Comptroller; furnished a way for organizing farmers on a local basis in accordance with the system of soil-conservation districts; declared the territory of the State to extend, at the seaboard, across the East Sabine jetties, into the Gulf of Mexico, in the shape of a gore, claimed by Louisiana and of possible importance as a source of petroleum; and created a Welfare Board, to administer the State's functions in social security through a Department of Public Welfare. A fair-trade act, to permit merchants to maintain fixed prices, despite anti-trust laws, on nationally marketed trademarked goods was vetoed. A new law on vehicles required registered certificates of title for all motor-driven cars. The law on title to school-fund lands was revised; the fee for filing on vacancies was raised to \$100, from \$1; occupants of unfilled land and adjoining owners gained preferential right to lease or buy it; a State School-Land Board was created to administer the disposal of such lands in place of the Land Commissioner, whose handling of the task (see YEAR BOOK, 1938, p. 724) had been questioned. The persons handling food and the 5000 or so establishments in which they worked were subjected to examination by the State's Department of Health. Soliciting persons for money to aid movements for higher pensions was made unlawful by an act that Attorney-General Mann declared (September 13) in an official opinion, to be unconstitutional.

Political and Other Events. W. Lee O'Daniel, political newcomer and former itiner-

ant flour-salesman, took office, January 17. In July O'Daniel made or approved reductions of \$13,104,206 among the items of seven appropriation bills.

Later in the year, as the State continued short of available cash, the situation of the recipients of old-age assistance became less satisfactory than it had been before the passage of the amplified pensions. The State borrowed \$2,230,000 from banks and used it to keep up the payments for a time; but in September the Welfare Board reduced the monthly payment to each recipient by \$6, thus dropping about 1500 persons who had been getting \$6 each or less. There remained about 120,000 on the rolls. The Federal Social Security Board notified Texas unless all recipients were re-examined in the meantime it would suspend the Federal contributions to old-age assistance in Texas after July 1, 1940. There were, at the time of this announcement, some 40,000 listed applicants for old-age pensions, claiming qualification under the terms of the new act; the State had no means to satisfy their claim.

Attorney-General Mann rendered, October 4, an opinion that the regular session's act remitting to the counties, pro rata, the State's revenue for the year, from the ad valorem tax, to a total of approximately \$25,000,000, was unconstitutional. Another of Mann's opinions, August 13, advised the Governor that, despite a number of earlier appointments to the contrary, a member of the Legislature, during the term for which he had been elected to that office, could not be appointed to a position on the State Bench.

The Railroad Commission, of which the duties included the proration of the output of petroleum, took the radical course of ordering, August 14, that all the State's petroleum wells cease production for a month. This step followed upon companies' cutting the already unsatisfactory price for petroleum by 20 cents a barrel. Oklahoma, Kansas, Arkansas, Louisiana, and New Mexico followed suit; there followed the most extensive concerted closing of wells by public authority in the mid-continental field. The production of the area fell sharply and purchasers bid the price up again in a short time. Texas, acting about the same time as the other States, allowed the wells, August 31, to reopen. Earlier in the year the Railroad Commission had ordered weekly shutdowns of the wells, both in May and in June, to total six days a month. Dealing with the railroads' charges for carrying freight in Texas, the Railroad Commission ordered in October that the charging of differential rates cease at all points on November 20. This order broke with a long past of discrimination between areas or routes in the matter of freight charges. The State's Attorney-General, at the time, intended soon to address the Interstate Commerce Commission on behalf of the abolition of differentials setting the rates for freight carried by rail in interstate commerce higher in the Southern States than in those of the central and northeastern regions. The order issued in Texas cleared the railroad traffic interior to that State of a feature that might have been represented to show Texas as doing otherwise than as Federal regulation of rates was urged to do. Shippers from the Rio Grande Valley, moreover, had been complaining, as their agricultural output grew, that the high cost of shipping kept their profits down.

Colorado River Floods. Hostility to the Lower Colorado River Authority, the State body administering the operation of the Buchanan

Dam, a Federally built structure holding water for the generation of electric current, had been roused by the damage done by the flood of July 1938. Farmers damaged by the flood blamed the management of the dam with letting water out at the time when it should have been held back. The Authority, facing prospect of the passage of an adverse bill in the Legislature, undertook to seek funds for raising the Marshall Ford Dam 75 feet higher, so that it might store more water and thus catch the downflow of floods. The regular session of Congress appropriated \$5,000,000 to this purpose, and the Federal Bureau of Reclamation, in charge of the latter dam, prepared to do the work.

New Crops and Products. The growing output of the counties near the mouth of the Rio Grande was evident in the complaint from the Rio Grande area about freight rates and in local opposition to the State's efforts to keep heavy motor-trucks, the conveyers of such products, from using and wearing down the roads. According to a published estimate, the so-called delta of the river had received about 200,000 settlers in the course of twenty years. During the area's active season it counted on shipping vegetables mainly to Kansas City and St. Louis at a rate varying from 200 carloads a week, around the end of December, to 1200 a week in the middle of April. Grapefruit trees, few over 15 years old, were reckoned to number 5,000,000; though many had yet to reach the age of bearing, the crop of the winter of 1938 provided shipments of 16,000 carloads of fresh fruit sent to distant markets. Culture was mainly on about 450,000 acres of former thicket land, cleared mainly by individual capital at a cost believed to total \$9,000,000.

With a view to the manufacture of paper the Southland Paper Mills, Inc., started the building of works at Lufkin; a carload of pine timber from East Texas was taken to Savannah, Ga., and there converted at the Herty laboratory into newsprint paper described as of satisfactory quality. The possibility of putting cheap natural gas to work on native ores of iron led a group interested in property near Longview, in East Texas, to try to form a company. Interest in new crops and lines of production was stimulated by the unsatisfactory state of the cultivators of cotton; Dean Kyle of the Texas Agricultural and Mechanical College stated that the Texans living on cotton farms numbered about 1,775,000, that these farms' income from cotton had totaled \$748,000,000 for 1923, and that the corresponding income from cotton, plus Federal subsidies, had brought them only \$153,400,000 for 1938.

Municipal and Local Events. In San Antonio a meeting of Communists was held, August 25, in a room of the Municipal Auditorium, under promise of protection from the police. A crowd of several thousand made an adverse demonstration outside, and some of its members stoned the meeting through the windows, while the police used tear gas and played fire hose on the mob. The Communists got away by exits in the rear and basement; about 15 people were hurt. The proximity of San Antonio to Mexico tended to make dwellers in the area sensitive to reports of Communist indoctrination. Mayor Maury Maverick, former U.S. Representative, was reported to have given the assurance of protection to the meeting. Maverick was indicted, October 16, on charges of paying the poll taxes of five gar-

ment workers, in violation of a State law, during the campaign preceding the last election. He denied the veracity of witnesses against him and was acquitted, December 5.

In Dallas a Federally financed plan of the city's housing authority to build dwelling-places for Negroes at a cost of \$3,000,000 was opposed by a group of Negroes owning homes in the area to be condemned; fifty-three such owners brought suit, September 7, to stop proceedings for the condemnation of their property. Near Houston, the previously completed San Jacinto Monument was formally dedicated, Apr. 21, 1939.

Officers. The chief officers of Texas, serving in 1939, were: Governor, W. Lee O'Daniel (Dem.); Lieutenant-Governor, Coke R. Stevenson; Secretary of State, Tom L. Beauchamp; Treasurer, Charley Lockhart; Comptroller, George H. Sheppard; Attorney-General, Gerald Mann; Superintendent of Public Instruction, L. A. Woods.

TEXAS, UNIVERSITY OF. A State institution of higher education for men and women, founded in Austin in 1883. For the autumn of 1939 the enrollment at the Main University totaled 10,213; that at the Medical Branch in Galveston was 549. There were 633 members on the faculty. The 1939 summer session had an attendance of 6062. The endowment resources (in part for the Agricultural and Mechanical College of Texas) amounted to more than \$41,000,000. The libraries contained 613,615 volumes. President, Homer Price Rainey, inducted Dec. 9, 1939.

TEXAS STATE COLLEGE FOR WOMEN. A college of liberal and technical arts in Denton, Texas, established in 1901 for the higher education of women by the Legislature of the State of Texas. The enrollment for the fall semester of 1939 includes 2671 students in the day session. There is no evening session. The enrollment for the summer session of 1939 was 1103. The faculty numbers 167. The library contains 68,000 volumes. Seven new buildings, erected at a cost of \$1,300,000 were completed during 1936-37. Student Chapel completed in 1939. New Education building soon to be constructed. President, Louis Herman Hubbard, Ph.D., LL.D.

TEXAS TECHNOLOGICAL COLLEGE. A State coeducational institution at Lubbock, Tex., opened in 1925. The enrollment in the fall semester of 1939-40 was 3890 (agriculture, 533; engineering, 890; home economics, 462; arts and sciences, 2005). The 1939-40 enrollment, including both fall and spring semesters, was estimated at 4200. During the summer session of 1939 there were 1932 students enrolled. The teaching staff for 1939-40 numbered 173. The State appropriation for salaries and maintenance amounted to \$555,586 plus \$40,000 for the summer school. The income from student tuition was estimated at \$240,000, including summer school. The library contained 65,032 catalogued volumes and public documents.

TEXTILES. Textile mill activity in the United States during the year 1939 was approximately 30 per cent higher than that of 1938, and exceeded even that of 1937, according to a review by *Textile World*. It was about 35 per cent above that of a so-called "normal" year (1923-25 average). Although this was partly due to the stimulus of the war in Europe in the last four months of the year, the rate during the first eight months was also well above that of the corresponding period of the preceding year. The

main effect of the war situation was to stimulate demand, boost prices, and restore a profit margin to practically all branches of the industry. Conditions in these various divisions are summarized below. See BUSINESS REVIEW; CHEMISTRY, INDUSTRIAL; ELECTRICAL INDUSTRIES.

Cotton. Consumption of cotton in the mills of the United States during 1939 totaled 7,367,131 bales, an increase of 25 per cent over the 1938 consumption of 5,901,952 bales. The 1939 total was nearly as large as that of the record year of 1937. Despite a relatively high rate of production in the first eight months of the year, prices and profit margins were unsatisfactory and inventory accumulated. The sharp demand created by the outbreak of hostilities in Europe changed the picture completely and the last four months of the year were profitable as well as busy ones. The major factor influencing the industry, other than the war situation, was the wage-hour law. The industry committee recommended a 32½¢ minimum wage for the cotton, rayon, and silk divisions. In the cotton branch, this created another North-South split on the basis of the insistence of the South that it should have a differential below the Northern wage. After heated hearings, the wage-hour administrator accepted the committee's recommendation, to take effect Oct. 24, 1939.

Wool. Production activity in woolen and worsted mills during 1939 was approximately 40 per cent above that of 1938, 15 per cent above 1937, and 5 to 10 per cent greater than in 1936, but was about 5 per cent less than in the post-war record year of 1935, according to the statistics of the National Association of Wool Manufacturers, based on the first 11 months of the year. The peak of activity for 1939—and in fact the highest level of wool textile mill activity since the first quarter of 1937—was reached in October and November. The war situation not only was an impetus to demand and consequently to mill production, but had an even more radical effect on prices of raw wool. The peak price reached in the fall was approximately 55 per cent greater than the starting price just before the war boom set in; this subsequently leveled off to a range of from 40 to 45 per cent advance from the starting point. Prices of wool goods also advanced but not to the percentage extent of the raw material rise.

Rayon. Synthetic fiber continued to make the real news in the textile industry during 1939. Domestic rayon filament yarn consumption in that year totaled 356,000,000 lb., a new all-time record high, according to the Textile Economics Bureau, Inc. That figure exceeded the 1938 consumption total by 30 per cent. Rayon staple fiber likewise showed a new consumption record in 1939 with a figure of about 100,000,000 lb., exceeding the previous high in 1938 by 88 per cent. Of even greater interest than this statistical advance was the development of entirely new synthetics. One of these, Nylon, aroused particular popular interest because of its use in full-fashioned hosiery in place of silk. Production of Nylon had just gotten started at the end of the year. Another new synthetic, Vinyon, is finding its initial outlets in industrial fabrics, thus being particularly a competitor of cotton.

Silk. Silk was the only one of the four major textile fibers which did not give a good account of itself in 1939. Consumption by United States mills was 7 per cent less than that for the previous year. The total for 1939 was 383,431 bales,

against 411,794 bales in 1938. Silk's decline in use has been due to a considerable extent to the continued encroachment of synthetic fibers. The threatened invasion of its last major stronghold, full-fashioned hosiery, by the new synthetics as noted above, is particularly serious. In addition to this factor, 1939 held another problem for silk in the form of a sharply rising price, in the face of a declining use. In December, 1939, the price reached a high that was 140 per cent above the December 1938 average.

Conclusion. Generally speaking, the textile industry entered 1940 under better circumstances than had characterized it for some years. Most divisions still had a good backlog of orders; prices included profit possibilities; and fairly well sustained demand was indicated. However the many variables in the situation make prediction difficult. The best estimate is that 1940 textile mill activity will probably not run so high as that of 1939 but should come in between the rates of 1938 and 1939. However the prospect is for a more profitable basis during the year as a whole, than during 1939 as a whole.

DOUGLAS G. WOOLF.

THAILAND, tī'länd (SIAM). An independent monarchy of southeastern Asia. Capital, Bangkok (pop. 886,150 in 1937). King, Ananda Mahidol, born Sept. 20, 1925, who ascended the throne Mar. 2, 1935. The name Thailand was officially adopted in place of "Siam," the previous designation; the change became effective June 24, 1939.

Area and Population. Area, 200,148 square miles; population, estimated at 14,976,000 in July, 1938 (14,464,489 at 1937 census). Nine-tenths of the inhabitants are of Thai (Siamese) origin. There are about 500,000 Chinese, 500,000 Indians and Malays, 60,000 Cambodians, and less than 2000 Europeans and Americans. Bangkok's population in 1937 was 886,150.

Education and Religion. Elementary education is compulsory and free, but about 35 per cent of the adult population was illiterate in 1938. Besides two universities at Bangkok, there were in 1938 10,616 schools of all kinds with 1,309,919 pupils. Buddhists in 1930 numbered 10,958,426, Mohammedans 498,311, Christians 49,462.

Defense. Two years of compulsory military service for all males between 18 and 30 was introduced in 1937. The effectives of both army and air corps total about 30,000 men. The navy of 4 coast defense vessels, 4 submarines, 18 torpedo boats, and smaller units is of modern construction. Two cruisers, two torpedo boats, and a mine-layer were being built in 1939.

Production. Agriculture directly supports over 80 per cent of the population. Mining and lumbering are the other chief industries. Rice is both the principal export and main article of diet. Production (1938) was in metric tons: Rice, 4,937,400; tobacco (1937), 8100; cotton-seed, 4900; rubber (exports), 42,000; cotton (1937), 2100; tin ore (metal content), 14,000. Teak exports in 1938 were valued at 9,161,930 bahts. Livestock (1937) included 5,618,000 bullocks, 5,533,460 buffaloes, 10,723 elephants, and 374,236 horses. Rice milling and saw milling are the chief manufacturing industries. The government, besides encouraging private industry, operates a cotton mill, paper factory, sugar mill, distillery, oil refinery, and airplane factory.

Foreign Trade. For the fiscal year ended Mar. 31, 1939, imports were valued at 129,550,000

bahts and exports at 206,280,000 bahts (111,780,823 and 180,773,109, respectively, in 1937-38). Cotton piece goods, foodstuffs, and machinery are leading imports and rice, tin ore, rubber, and teak are the chief exports. Trade is mainly with Singapore, Hong Kong, Japan, and the United Kingdom.

Finance. The following table shows the budget totals for the new fiscal year Oct. 1, 1939, to Sept. 30, 1940; the budget for the last full fiscal year on the old basis, Apr. 1, 1938 to Mar. 31, 1939; and the budget for the six-months interim period covering the change from the old to the new fiscal year (figures in thousands of bahts):

| Item | Budget Apr. 1, 1938- Mar. 31, 1939 | Interim budget Apr. 1, 1939- Sept. 30, 1939 | Budget Oct. 1, 1939- Sept. 30, 1940 |
|-------------------------------|--|---|---|
| Revenue..... | 109,426 | 57,933 | 124,061 |
| Ordinary expenditures. . . | 109,398 | 62,577 | 124,059 |
| Capital expenditures.... | 22,109 | 15,815 | 22,889 |

Capital expenditures for 1939-40, of which 13,887,364 bahts was to come from the Treasury reserve and 9,000,000 from loan proceeds, included the following principal items: Highway construction, 6,937,498 bahts; railways, 3,210,990; (other) transportation development, 3,598,200; irrigation, 2,501,553; cotton industry, 1,119,715. Budget returns have shown an excess of revenues over ordinary expenditures in every year since 1932. The accumulated treasury reserve as of Mar. 31, 1939, was about 38,000,000 bahts.

The public debt on Mar. 31, 1939, was equivalent to £7407,525 (£7,796,252 on Mar. 31, 1938), all in sterling loans. The baht (or tical) was pegged at 11 to the pound sterling in 1928; average exchange value in 1938-39, \$0.437.

Transportation. Railways under operation in 1938-39, all State owned, totaled 2058 miles; they carried 5,722,766 passengers and 452,630,248 ton-kilometers of freight. Operating revenues were equivalent to \$6,735,992; operating expenses, \$3,154,896. An agreement for immediate construction of a railway from Mongolborey to Aranya, connecting Thailand and French Indo-China for the first time, was signed by the two governments in 1939. Highways totaled 3398 miles (see **ROADS AND STREETS**). Bangkok is served by the Imperial Airways and Air France systems. A native air line connects the chief cities of northern Thailand. Improvement of the port of Bangkok at a cost of 10,000,000 bahts to permit entrance of larger vessels was under way in 1939. The shipping tonnage entered there with cargo in 1938 was 888,000; cleared, 1,176,000.

Government. The constitution of Dec. 10, 1932, changed Thailand from an absolute to a limited monarchy. There is an Assembly of 182 members, half elected and half appointed by the Crown, and a Council of State (cabinet) responsible to the Assembly. Premier and Minister of Defense, Foreign Affairs and Interior in 1939, Luang Bipul Songgram (appointed Dec. 17, 1938). The Council of Regency, serving during the King's minority, is headed by Prince Aditya Dibabha.

History. Charges that the Thai Government had closed Chinese schools, arrested many Chinese, and prohibited the remittance of funds to China by Chinese banks in Thailand were made by Chinese authorities at Chungking early in August, 1938. These charges conflicted with the report made by the Chinese Minister of Communi-

cations, Chang Chia-ngau, who visited Thailand in May, 1939. He said he found governmental policies and public sentiment at Bangkok increasingly favorable to China. Later in the year Gen. Chiang Kai-shek sent a telegram to Premier Songgram asking adequate protection for the lives and property of Chinese in Thailand. A reply from Songgram, published at Chungking on December 31, pledged adequate protection and guaranteed to Chinese the right "to engage in local pursuits throughout the kingdom."

The boy King, Ananda Mahidol, who had arrived in Bangkok Nov. 15, 1938, for a visit to his country, left for Switzerland to resume his education on Jan. 13, 1939. A crowd of 300,000 persons gave him a royal send-off. His great popularity was believed to have eliminated sentiment favorable to the establishment of a republic. It was reported from Bangkok on November 24 that a conservative insurrection against the government had been suppressed and 21 of the leaders sentenced to death. Among them were two of ex-King Prajadhipok's grandsons. A death sentence imposed upon a son of the late King Chulalongkorn, who commanded the Siamese expeditionary forces in the World War, was commuted. Twenty-two other conspirators received life sentences. See **NAVAL PROGRESS**.

THANKSGIVING DAY, DATE OF. A proclamation of President Roosevelt's, issued October 31, designated November 23 to be Thanksgiving Day. This broke with the long-fixed custom of holding Thanksgiving on the last Thursday of November. The President let it be known through the press (issues of August 16 and 31) that he would thus change the usual date, and that he intended thereby to give a week more for the retail trade in advance of Christmas. See **BUSINESS REVIEW**. The announcement was made August 30, in response to inquiry from makers of calendars and cards, that in 1940 Thanksgiving would be on November 21.

Individuals and officers of a number of States opposed the change. In 22 States the 23d was made the legal holiday or day of observance; in 23 States, the 30th (the traditional last Thursday of the month); and in three States both days were observed. From this disagreement arose some inconvenience, as in the case of railroads' holiday schedules and in that of students' return home from institutions in States that did not keep the same holiday as such students' home States.

The Associated Press thus tabulated the States according to the dates they observed:

| Nov. 23 | | | Nov. 30 | |
|------------|----------------|---------------|----------------|--|
| California | New York | Alabama | Minnesota | |
| Delaware | North Dakota | Arizona | Nebraska | |
| Georgia | Ohio | Arkansas | Nevada | |
| Illinois | Oregon | Connecticut | New Hampshire | |
| Indiana | Pennsylvania | Florida | New Mexico | |
| Louisiana | South Carolina | Idaho | North Carolina | |
| Maryland | Utah | Iowa | Oklahoma | |
| Michigan | Virginia | Kansas | Rhode Island | |
| Missouri | Washington | Kentucky | South Dakota | |
| Montana | West Virginia | Maine | Tennessee | |
| New Jersey | Wyoming | Massachusetts | Vermont | |
| | | | Wisconsin | |

Colorado, Mississippi, and Texas observed both dates.

THEATER. See **DRAMA**; **FRENCH LITERATURE**; **GERMAN LITERATURE**; **LITERATURE, ENGLISH AND AMERICAN**, ETC.

THEOSOPHICAL MOVEMENT, THE. The Theosophical Movement does not aim at increasing the number of its professed adherents; it seeks to effect a change in the mind and the heart of the race, to keep alive in man his spirit-

ual intuitions and to teach the animal-man to be a human-man, with self-conscious divinity as his goal. Its doctrines are the accumulated wisdom of the ages, the truths given out, expressly or by implication, by all the great Teachers and Prophets—truths brought together and restated by Madame H. P. Blavatsky towards the close of the last century, as part of a consistent and an all-embracing philosophy of life.

The publication during 1939, by Theosophy Company, Los Angeles and Bombay, of a full Index to Madame Blavatsky's monumental two-volume work, *The Secret Doctrine*, the most important of modern Theosophical texts, fills a long-felt want. *The Brotherhood of Religions*, by Sophia Wadia, published early in 1939 by the International Book House of Bombay, brings together a number of lectures by a well-known present-day student of genuine Theosophy. The Theosophical Society of America had 4100 members in 1939. Headquarters are in Wheaton, Ill.

THIRD INTERNATIONAL. See COMMUNISM.

"THIRTY DOLLARS EVERY THURSDAY." See OLD-AGE PENSIONS; CALIFORNIA.

THURINGIA. See GERMANY.

TIBET, tî-bê't'; tîb'ët. A territory in central Asia, nominally under Chinese suzerainty. Area, 463,200 square miles; population, estimated variously at from 700,000 to 6,000,000. Capital, Lhasa (pop., about 50,000). Lamaism, a form of Buddhism, is the accepted religion; its priests and monks are estimated to total about one-fifth of the population. Agriculture, stock-raising, and hand-craft industries, particularly wool spinning and knitting, are the principal occupations. Gold, borax, and salt are the chief minerals produced. There is a factory for army equipment, uniforms, coins, and paper money.

The Dalai Lama, whose palace (the Po-ta-la) is near Lhasa, is head of both the Lamaist religion and of the Tibetan government. Normally he shares his religious authority with the Tashi (Panchen) Lama and delegates his political authority to a prime minister and grand council. After the death of the last Dalai Lama in 1933, his powers were assumed by a regent. The Tashi Lama, expelled from Tibet by the Dalai Lama in 1924, died in exile in Western China in 1937, thus leaving Tibet without either of its spiritual leaders.

History. The five-year search for a new Dalai Lama ended in September, 1939, when a baby boy, reported to be four years and three months old, was accepted by the Regent and government of Tibet as the reincarnation and successor of the last ruler. According to Lamaist dogma, the spirit of the departed Dalai Lama is embodied in a new-born baby. After a number of infants were tested and rejected, Lamaist monks found a peasant Chinese boy in a tiny village in Kokonor who passed the necessary tests. With armed guards and a great caravan of followers, he was taken on a 1000-mile journey to Lhasa, where late in September a secret conclave accepted him as Tibet's spiritual and temporal ruler. A solemn enthronement ceremony was performed at Rigya near Lhasa early in October.

The new Dalai Lama became the focus of the struggle for predominance among Tibetan factions and between the Chinese and British (see 1938 YEAR BOOK, p. 726). Representatives of the Chungking Government went to Lhasa to witness the enthronement of the boy ruler, while the

Viceroy and Government of India sent messages wishing the new Dalai Lama long life and prosperity. The partisans of the former Dalai Lama, who was pro-British in sympathies, were believed to be in control.

TIMOR, tê-môr', PORTUGUESE. A Portuguese possession in the Malay Archipelago, comprising the eastern part of the island of Timor together with the territory of Ambeno and islands of Pulo Cambing and Pulo Jako. Total area, 7330 square miles; population (1938 estimate), 460,000. Capital, Dilli (or Dili). The chief exports are copra, coffee (1000 metric tons, 1937), sandalwood, sandal-root, and wax. There are 496 miles of roads (On Sept. 4, 1939, the Portuguese home government granted a loan of 400,000 escudos to Timor to repair roads and other State properties damaged by heavy winds and rainfalls in the preceding April and May). Public revenue and expenditure (1938) balanced at 13,410,650 escudos (Escudo averaged \$0.0443 in 1938).

TIN. World production of tin is largely determined by the International Tin Control which allots quotas to the countries signatory to the scheme of restriction. Organized ostensibly for the stabilization of production, the I.T.C. in 1939 exerted its influence also for the stabilization of prices in the London market. The signatory countries are Belgian Congo, Bolivia, French Indo-China, Malaya, Netherlands East Indies, Nigeria, and Thailand (Siam). These countries produce more than 80 per cent of the world's tin.

Under the International Tin Control scheme, standard tonnages of production are assigned by agreement to the signatory countries. Production is then controlled by setting quotas, or percentages of standard tonnages, to which the signatory countries conform. These quotas may vary widely and are usually set each quarter. Thus for 1939, the successive quarterly quotas were 45 per cent, 40 per cent, 120 per cent, and 100 per cent. Quotas of 100 per cent represent a production of 200,000 to 208,000 long tons per annum. World tin production for 1939, according to the International Tin Research & Development Council, is estimated at 183,700 tons. Apparent world consumption for 1939 is estimated at 165,700 tons. Tin stocks at the end of 1939 were 50,700 tons, or 29 per cent of current annual rate of consumption.

London prices for standard spot tin in 1939 ranged from £217 per long ton in January to £230 on December 8. With the removal of restrictions by the British Ministry of Supply, the price rose sharply on December 9 to £271, declining to £250 at the year end.

New York average monthly prices for Straits tin ranged from 46¢ per lb. in January to 64½¢ in September, and closed the year at 50¢ in December.

Inasmuch as the United States produces no tin, but is nevertheless the largest user of the metal (approximately 60,000 tons in 1939) consumers are dependent on supplies from producing countries. Tin is, therefore, regarded by the United States as a "strategic" metal for the Army and Navy, and steps were taken in 1939 to build domestic stockpiles of the metal, in accordance with the Strategic Minerals Act of 1939. Late in the year the Procurement Division of the Treasury Department announced the award of five contracts for the purchase of 6,560,000 lb. of pig tin, delivery guaranteed in six months. Allotments ranged from 200,000 lb. to 2,000,000 lb., and

prices ranged from 47.16¢ to 48.25¢ per lb. Steps were taken also to conserve tin supplies in the United States. The State Department issued regulations governing licenses for the exportation of tin-plate scrap. See METALLURGY.

TIROL. See AUSTRIA; ITALY under History.

TOBACCO. The tobacco crop of 1939, the largest ever produced in the United States, was estimated at 1,769,639,000 lb., about 29 per cent above the 1938 crop of 1,376,471,000 lb., and comparing with the 10-year (1928-37) average production of 1,360,400,000 lb. The harvested acreage, the fifth largest in history, totaled 1,942,200 acres compared with 1,600,500 in 1938, while the 1938 average acre yield was 911 lb., also a record, compared with 860 lb. in 1938. The value of the crop was estimated at \$269,966,000 for the 1939 crop versus \$269,876,000 for 1938. The price per pound received by farmers averaged 16.0¢ on November 15, and 13.8¢ on Dec. 15, 1939 versus 18.1¢ in December, 1938. Production by types was estimated for flue-cured, 1,117,594,000 lb.; fire-cured, 98,522,000; air-cured, light: Burley, 361,434,000 and Southern Maryland, 29,796,000; air-cured, dark, 36,285,000; and cigar types, 126,008,000, comprising filler, 53,013,000; binder, 61,414,000; and wrapper, 11,581,000 lb. All classes of tobacco showed increased production over 1938 with the largest increases in flue-cured, which was 42 per cent more than the 1938 crop and about 59 per cent above the 10-year average production. North Carolina again led producing States with 773,810,000 lb., and was followed by Kentucky with 320,668,000; Virginia 138,232,000; South Carolina 130,200,000; Tennessee 102,716,000; Georgia 96,620,000; Pennsylvania 36,239,000; Wisconsin 31,406,000; Maryland 29,796,000; Ohio 28,842,000; Connecticut 25,590,000, and Florida 23,410,000 lb.

The 1939 crops in other important producing countries, as estimated, were for Turkey 121,253,000 lb.; Japan 180,802,000; Greece 125,660,000; Bulgaria 77,933,000; Germany 82,500,000; Hungary 48,852,000; Cuba 44,502,000; Yugoslavia 40,786,000; Canada 108,770,000; Southern Rhodesia 23,396,000; Chosen (Korea) 68,385,000; China (flue-cured) 115,000,000; South Manchuria 41,500,000 lb.; and Sumatra 135,000 bales. In 1938-39, Mexico produced 41,723,000 lb.; Argentina 40,490,000; Nyassaland 17,929,000; Australia 3,922,000; and British India 1,124,480,000 lb. Flue-cured leaf produced in the principal foreign countries in 1938-39 was estimated at about 384,000,000 lb., 16 per cent greater than in 1937-38; and the combined production of this type in 1939 in China, Japanese Empire, India, Netherland Indies, and Siam was estimated at 280,000,000 lb., versus 220,000,000 in 1938.

Collections from internal revenue taxes on tobacco in the United States for the fiscal year 1939 amounted to \$580,159,206, an increase of \$11,977,238 or 2.1 per cent over 1938. Receipts from taxes on small cigarettes amounted to \$504,036,932, which was 86.9 per cent of the total taxes collected on tobacco, and \$10,603,973 over 1938. Taxes collected on smoking and chewing tobacco rose to \$54,757,044 in 1939 from \$53,982,098 in 1938; increased on large cigars to \$12,792,550, a gain of \$41,635; and on snuff rose to \$6,932,019, a gain of \$253,166 compared with 1938. The greater part of the total tobacco receipts were collected in North Carolina, Virginia, Kentucky,

New Jersey, Pennsylvania, California, and Ohio in the same order as in 1938. In the calendar year 1938, the Commissioner of Internal Revenue reported, 171,686,382,670 cigarettes weighing less than 3 lb. per 1000 were manufactured, compared with 169,969,319,880 in 1937. Exports of unmanufactured tobacco totaled 489,093,865 lb. worth \$155,670,580 in 1938 and 358,811,605 lb. worth \$77,414,043 in 1939. See BUSINESS REVIEW; TAXATION.

HENRY M. STEECE.

TOGO, FRENCH. The part of the former German West African protectorate mandated to France by the League of Nations. Area, 21,893 square miles; population (1938 estimate), 781,000, including some 450 Europeans. Lomé, the capital, had 14,389 inhabitants, including 283 Europeans, in 1936. Chief crops, with 1938 production figures in metric tons, are: Cacao, 2800; cotton seed, 4300; groundnuts, 7200; copra, 2600; palm oil, 500; palm kernels, 3700. In 1938 imports were valued at 73,750,000 francs; exports, 66,550,000 francs. There were (1937), 3105 miles of roads suitable for automobile transportation and 242 miles of railway line. The budget for 1939 was balanced at 58,923,000 francs.

TOGOLAND. The part of the former German protectorate of Togo, confirmed as a British mandate by the League of Nations, and attached to the British Gold Coast Colony and Northern Territories for administrative purposes. Area, 13,041 square miles; population (1938 estimate), 370,327 of whom 43 were non-Africans. Cacao (12,700 metric tons, 1938), and palm kernels are the chief products.

TOKELAU. See UNION ISLANDS.

TOLEDO, UNIVERSITY OF THE CITY OF. A municipal, coeducational institution of higher learning in Toledo, O., founded in 1872. The enrollment for the autumn of 1939 totaled 2982 of whom 2188 were day-session students and 794 evening session students. The faculty had 102 full-time and 33 part-time members. The 1939 summer session enrollment was 518. The value of grounds, buildings, and equipment was \$4,000,000 and the income for 1938-39 was \$587,159. The library contained 75,511 volumes. President, Philip Curtis Nash, Dr. Engr. LL.D.

TOLLER, töl'ër, ERNST. A German writer, committed suicide in New York, May 22, 1939. Born in Samotschin, Germany, Dec. 1, 1893, he was educated in the universities of Heidelberg, Munich, and Grenoble. During the World War he saw service in the German Army until 1917 when he was invalided home. Thereafter he was a worker in radical and pacifistic movements and was president of the Central Council of Workers and Soldiers in the soviet republic, Bavaria (1918-19). Arrested for his political activities in 1919, he was sentenced to five years in prison. While imprisoned he wrote much of his early work, including *Masses and Man* (1921), which was produced on the New York stage by the Theatre Guild in 1924. Upon his release he became active in the work of the League for Human Rights, and in 1933 upon the rise of the Nazi regime he was deprived of his citizenship and exiled. Until 1936 he lived in London, where he became a British citizen, but later he removed to New York City. During the Spanish Civil War he was active in supplying food and medicine to the Spanish children.

Mr. Toller's works included the autobiographi-

cal *I Was a German*, published in New York in 1934 under the title, *Learn from My Youth; Letters from Prison* (American edition, *Look Through the Bars*, 1937); *Moscow and Madrid*. His plays, besides *Masses and Man* were *Transformation* (1919); *The Machine Wreckers* (1921); *Hinkemann* (1922); *Draw the Fire!*; *Marv Baker Eddy*, *The Blind Goddess*; *No More Peace*; *Blind Man's Buff* (with Denis Johnston); *The Revenge of the Scorned Lover*; *The Night is Far Spent*. *Seven Plays* was published in 1936, and a volume of poetry, *The Swallow Book*, appeared in 1923.

TONGA (FRIENDLY) ISLANDS. A kingdom under British protection in the South Pacific, comprising three main groups of islands called respectively Tongatabu, Haapai, and Vavau, together with the outlying islands Niuafoou, Niuaotubutu, and Tafahi. Total area, 385 square miles; population (1938 census), 33,785 including 1295 non-Tongans. Capital, Nukualofa. Copra, bananas, citrus fruits, and native vegetables are the chief products. In 1938, imports were valued at £82,795; exports, £98,436. For the year ended June 30, 1938, revenue totaled £69,242; the expenditure for the same year amounted to £62,742. Queen, Salote Tubou (succeeded Apr. 12, 1918).

TRADE. See BUSINESS REVIEW; FEDERAL TRADE COMMISSION; IMPORTS AND EXPORTS; INTERSTATE COMMERCE COMMISSION; MARKETING; TRADE AGREEMENTS; sections on *Foreign Trade* under the various countries.

TRADE AGREEMENTS, RECIPROCAL. For reasons indicated under NEUTRALITY, the war in Europe impelled the United States to new efforts to make and in other cases to revise trade agreements with other governments in the Americas. For discussion of particular trade agreements or of negotiations toward them, see also ARGENTINA, CANADA, CUBA, GREAT BRITAIN, TURKEY, URUGUAY, and VENEZUELA under *History*.

Tariffs as affected by the various trade agreements are set forth in special reports prepared by the U.S. Trade Commission. Its pamphlet summary of the agreements is obtainable from the Superintendent of Documents, Washington, D. C. A summary of the provisions of each agreement appeared in *Commerce Reports* promptly after the signing.

The accompanying table lists all trade agreements between the United States and other governments, signed under the provisions of the Re-

ciprocal Tariff Act of 1934, up to the close of 1939.

UNITED STATES TRADE AGREEMENTS

| Country | Date signed | Date effective |
|--|----------------|----------------|
| Cuba | Aug. 24, 1934 | Sept. 3, 1934 |
| " (supplementary) | Dec. 18, 1939 | Dec. 23, 1939 |
| Belgium | Feb. 27, 1935 | May 1, 1935 |
| Haiti | Mar. 28, 1935 | June 3, 1935 |
| Sweden | May 25, 1935 | Aug. 5, 1935 |
| Brazil | Feb. 2, 1935 | Jan. 1, 1936 |
| Canada | Nov. 15, 1935 | Jan. 1, 1936 |
| " (revision) | Nov. 17, 1938 | Jan. 1, 1939 |
| " (supplementary) | Dec. 30, 1939 | Jan. 1, 1940 |
| Netherlands | Dec. 20, 1935 | Feb. 1, 1936 |
| Switzerland | Jan. 9, 1936 | Feb. 15, 1936 |
| Honduras | Dec. 18, 1935 | Mar. 2, 1936 |
| Colombia | Sept. 13, 1935 | May 20, 1936 |
| Guatemala | Apr. 24, 1936 | June 15, 1936 |
| France and dependencies except Morocco | May 6, 1936 | June 15, 1936 |
| Nicaragua | Mar. 11, 1936 | Oct. 1, 1936 |
| Finland | May 18, 1936 | Nov. 2, 1936 |
| Salvador, El | Feb. 19, 1937 | May 31, 1937 |
| Costa Rica | Nov. 28, 1936 | Aug. 2, 1937 |
| Czecho-Slovakia | Mar. 7, 1938 | Apr. 16, 1938 |
| Ecuador | Aug. 6, 1938 | Oct. 23, 1938 |
| United Kingdom, Newfoundland, and British colonies | Nov. 17, 1938 | Jan. 1, 1939 |
| Turkey | Apr. 1, 1939 | May 5, 1939 |
| Venezuela | Nov. 6, 1939 | Dec. 16, 1939 |

^a Certain provisions of agreement with Nicaragua lapsed, Mar. 10, 1938. ^b Czecho-Slovakian agreement suspended, Apr. 22, 1939.

While disturbed conditions in Europe and Asia worked against negotiating further trade agreements there in 1939, proceedings for a new agreement with Belgium, to supersede that of 1935 were started on August 16. They had not concluded at the end of the year. The suspension of the agreement with Czecho-Slovakia in April followed Germany's suppression of the political existence of that country.

In Latin-America the United States sought trade agreements, during 1939, with three governments. It began negotiations, August 23, with Argentina. On October 2 it started proceedings with Chile. The subject was opened with Uruguay on October 20. Negotiations with Argentina and with Uruguay both fell through early in 1940. Those with Chile were listed as unfinished at the end of 1939. The agreement with Venezuela, shown in the accompanying table, was the single addition to the list of agreements in Latin-America in 1939.

Effect on U.S. Commerce. Figures on the United States' imports and exports in trade, respectively with those nations that had entered into trade agreements and those that had not, were published by the Department of Commerce. These figures did not provide thoroughgoing comparisons, as to different periods of time, for the list of nations trading with the United States under agreements varied from year to year. The figures, however, showed that, for the first 11 months of 1938 and 1939, averaged, the United States exported more, by \$420,000,000, or 60.5 per cent, to the mainly growing number of nations with trade agreements than the average for the corresponding months of 1934 and 1935; and that it imported (same months of 1938 and 1939, averaged) more from these nations by only \$156,000,000, or 22.1 per cent, than for the earlier period. Dealing with the decreasing group of countries having no trade agreements, the United States exported more (11 months, 1938-39, averaged) by \$265,000,000, or 29.6 per cent than for the earlier period (11 months, 1934-35, averaged) and imported more by \$75,000,000, or 10.6 per cent. For further details, as to totals of trade with nations having trade agreements, etc., see *Commerce Reports*, Jan. 20, 1940, pp. 61-63.

The figures did not indicate that the reciprocal agreements had materially altered the ratio of imports to exports as between the two groups of nations. The failure of the agreements to accomplish a rise of the ratio of imports to exports did not gratify the school that thought it necessary for the United States to become more of an importing nation and so to give others the means to pay for U.S. exports. On the other hand, producers of some leading raw materials in the United States objected to the reciprocal agreements' allowing the United States to import more of goods produced in the United States. Definite protests were offered, purportedly on behalf of producers in the United States, to lowering barriers against imports coming from abroad to compete with goods produced within the Union. Such was the case with the proposed reduction of the tax, at four cents a lb., on foreign copper, which was thought likely to become part of the yet uncompleted agreement with Chile; likewise, the halving of the excise tax of 22 cents a barrel on imports of petroleum, allowed on petroleum from Venezuela. While a few such cases underwent discussion on a national scale, many less conspicuous reductions of tariffs, not so widely felt in any single case as to get general attention, nevertheless in the aggregate affected the set of public sentiment.

Political Phase of Trade Agreements. The system of reciprocal trade agreements had existed and grown for about five years without stirring up serious political opposition. Late in 1939 this happy immunity ended. Senators McNary, Vandenberg, Capper, and Borah on the Republican side, and the Democratic Senators Pittman, Johnson (of Colorado), Wheeler, and McCarran expressed themselves against features of the trade agreements, while in the House of Representatives the Republican leader, Martin of Massachusetts, formed a special committee, under the guidance of Treadway of Massachusetts to find out how the new reciprocity affected domestic commerce and production.

The defense of the agreements fell to the duty of Secretary of State Hull, their progenitor and natural protector. He repeatedly (e.g., November 24, December 17) drew comparisons between the results of the trade agreements and those of the "Smoot-Hawley embargo" (tariff of 1930), the achievement of a Republican Congress of which both McNary and Vandenberg, his most conspicuous opponents, were survivors. He declared before the Farm Bureau Federation, at Chicago (December 6), that the United States "must not be drawn into war"; that the only alternative to the trade agreements was a return to the "Hawley-Smoot embargo policy"; and that "grave mistakes of policy on the part of the United States" and other nations had contributed in the '20's to the general economic breakdown; and he pointed to sound international trade as needful to any hope of enduring peace. The Federation, after hearing his address approved the policy of trade agreements, yet apparently shied at possible subordination of the domestic interest to ulterior considerations of international peace and demanded that future trade agreements "give economic factors consideration equivalent to the weight accorded to the factors of diplomacy and statecraft." It urged that the reciprocal trade and tariff act be amended to require the Secretaries of Commerce and of Agriculture, as well as the Secretary of State, to approve further agreements.

While in the main discussing the general features of his policy, Hull in some instances went into the difficult question of the merits of particular balance between advantage and disadvantage in an agreement with a specified nation; thus in a letter to Governor Ratner of Kansas he maintained that Venezuela's concessions on lard, wheat flour, etc., would help that State more than the lowering of barriers against Venezuelan petroleum would hurt.

The controversy was still hot at the end of the year. Behind it rose the prospect of effort in Congress to prevent the renewal of the delegation of power to make trade agreements, a power destined otherwise to lapse in June, 1940.

TRADE UNIONS. INTERNATIONAL FEDERATION OF. See COMMUNISM.

TRAFFIC SAFETY. See AUTOMOBILES.

TRANS-JORDAN. An Arab territory in Asia Minor, under mandate to Great Britain. Area, 34,740 square miles; population, estimated at 312,000 (305,000 Arabs and 7000 Circassians and Chechens). All the inhabitants, except some 25,000 Christian Arabs, are Moslems. Chief towns: Amman (capital); Es-Salt. Education (1937-38): 172 schools and 12,934 pupils.

Production and Trade. A large part of the country consists of desert lands but in the west the land is fertile and suitable for agricultural pursuits and for livestock raising. Tobacco has been successfully grown and the output is greater than the requirements of the local factories. Phosphate deposits have been developed; potash is found in the Dead Sea. A company has been formed to exploit the oilfields already explored. **Overseas trade** (1937): Imports, £P934,211 (including specie, £P4530); exports, £P708,378 (including specie of £P182,550 and re-exports of £P14,860). There were 611 miles of roads in 1938. The Trans-Jordan section (213 miles) of the Haifa-Bagdad road was under construction during 1939. Railways (narrow gauge) extended 200 miles.

Government. Finance (1937-38): revenue, £P459,150 (including a grant from the Imperial government of £P19,000); expenditure, £P462,710. The public debt on Dec. 31, 1937, totaled £P262,028. The territory is part of the British Palestine Mandate, but certain clauses relating to the establishment of a national home for the Jews are excluded from operation within Trans-Jordan. On May 16, 1939, the British government announced the conclusion of an important agreement with the Emir of Trans-Jordan, Sir Abdullah ibn Hussein, who will in future exercise authority through a council of heads of departments responsible to himself instead of having an executive council with advisory powers. The legislative power is vested in a council of 16 members elected by universal manhood suffrage (9 Moslem Arabs, 3 Christian Arabs, 2 Circassians, 2 Bedouins) and 6 official members (the chief minister and the heads of departments). A British Resident (A. S. Kirkbride, appointed Feb. 16, 1939), represents the High Commissioner for Palestine and Trans-Jordan.

History. During May, 1939, the British government announced the conclusion of an agreement with the Emir of Trans-Jordan which provides that (in place of the executive council) a council of ministers, or cabinet, be formed with each member being responsible to the Emir; the restriction on the Emir's powers of raising and

maintaining military forces will be removed; the Emir will be allowed to appoint consular representatives in certain neighboring Arab countries. Residents of Trans-Jordan, dating from June 1, 1939, must show a passport or other valid document when entering Palestine; formerly no passports were required by residents of Trans-Jordan and Palestine wishing to visit each other. See PALESTINE under *History*.

TREASURY, U.S. DEPARTMENT OF THE. Henry Morgenthau, Jr., of New York was Secretary of the Treasury during 1939. John W. Hanes the Under Secretary was succeeded by Daniel W. Bell on Jan. 1, 1940; Preston Delano was Comptroller of the Treasury; W. A. Julian, Treasurer of the United States, and Guy T. Helvering, Commissioner of Internal Revenue. Following the administrative reorganization of July 1 (see under UNITED STATES), the Public Health Service (q.v.) was removed from the jurisdiction of the Treasury Department and transferred to the Federal Security Agency; the Bureau of the Budget was transferred to the Executive Office and the public buildings branch of the Procurement Division to the Federal Works Agency. At the same time the Treasury Department took over the Bureau of Lighthouses and consolidated it with the Coast Guard. Officials of the Treasury were charged with carrying out the provisions of the President's neutrality proclamation, following the outbreak of the European War in September. Basil Harris, who was sworn in as Commissioner of Customs and Assistant to the Secretary on September 7, became the chief neutrality enforcement officer. Herbert E. Gaston, assistant secretary, became head of a committee appointed to co-ordinate the enforcement agencies of the Treasury. Secretary Morgenthau appointed an advisory committee of three prominent financial men and three economists to advise the Treasury throughout the crisis as "dollar-a-year" men. For activities of the Department, see BANKS AND BANKING; NARCOTICS CONTROL; PUBLIC FINANCE, TAXATION, and separate articles on the following divisions: COAST GUARD, CUSTOMS, BUREAU OF, and FEDERAL ALCOHOL ADMINISTRATION.

TRENGGANU. See UNFEDERATED MALAY STATES.

TRINIDAD AND TOBAGO. A united British crown colony near Venezuela, comprising the islands of Trinidad (1862 sq. mi.) and Tobago (116 sq. mi.), and adjacent islands. Total area, 1980 square miles; total population (Jan. 1, 1939, estimate), 464,889 compared with (1931 census) 412,783. During 1937 there were 14,226 births (31.46 per 1000), 7848 deaths (17.36 per 1000), and 2608 marriages (10.38 per 1000). Chief towns: Port of Spain (Trinidad), the capital, 77,711 inhabitants; San Fernando, 15,858; Princetown, 5580; Arima, 5613; Scarborough (Tobago), 1371; Roxborough (Tobago), 1515. The 302 schools (287 primary, 6 intermediate, and 9 secondary) had a total of 77,092 pupils enrolled for the year 1937.

Production and Trade. Crude oil (17,737,201 bbl.), asphalt (127,859 tons), cacao (18,000 tons), citrus fruits, sugar (133,627 tons), coco-

nuts, coffee, timber, and bananas (80,506 bunches) were the principal products in 1938. The sugar quota for the year ending Aug. 31, 1939, was fixed at 144,700 tons (132,200 for export and 12,500 for local consumption). Minerals found in small quantities include coal, iron, graphite, gypsum, and gold. In 1938, imports were valued at \$35,497,121 (machinery, foodstuffs, metal manufactures, cocoa, and timber were the main items); exports, including re-exports, \$35,367,764 (petroleum \$23,658,166, asphalt \$1,131,078, sugar \$4,957,963, molasses \$139,441, rum and bitters \$186,529).

Communications. There were, in 1938, some 1844 miles of roads and 123 miles of railways. Air mail and passenger services are maintained by Pan American Airways with the United States, South America, and other parts of the West Indies. Three wireless stations are operated by the government. In 1937, 6649 ships with an aggregate tonnage of 4,947,352 entered and cleared the ports.

Government. For the year ended Dec. 31, 1938, revenue totaled \$13,445,235; expenditure, \$12,230,184. Public debt (on Dec. 31, 1938) amounted to \$19,730,304 against which the sinking fund for its redemption stood at \$827,573. Estimates for 1939 indicate revenue of \$12,882,274 and expenditure of \$12,492,118 (including extraordinary expenditure of \$2,383,330). The united colony is administered by a governor who is assisted by an executive council of 7 members, and a legislative council (reconstituted by Letters Patent and an Order in Council effective on Aug. 21, 1924) of 26 members including the governor as president, 12 officials, and 13 unofficial members (of the latter, 6 are nominated by the governor and 7 are elected). There are 6 electoral districts in Trinidad and 1 in Tobago. Governor, Major Sir H. W. Young (appointed February, 1938).

History. It was announced during April of 1939 that the immigration of central European refugees into Trinidad had been banned for economic reasons. On July 1, 1939, the old-age pension ordinance became effective. A review of the causes of the labor market depression in the British West Indies, together with recommendations for improving the general situation, are contained in *Labor Conditions in the West Indies*, by Major Orde Brown (Cmd. 6070; H.M. Stationery Office, London: 1939).

TRINITY COLLEGE. An institution for the higher education of men in Hartford, Conn., founded in 1823 as Washington College and changed to Trinity College in 1845. For the autumn term of 1939 the enrollment was 564. For the 1939 summer session the enrollment was 157. There were 62 members on the faculty. The endowment fund of the college was \$3,538,116 and the income totaled \$356,412. The library contained 135,000 volumes. President, Remsen B. Ogilby, Litt.D., LL.D.

TRIPOLITANIA. See LIBYA.

TRISTAN DA CUNHA, tris-tān' dā kōōn'-yā. The chief of a group of islands in the South Atlantic (37° 6' S. and 12° 2' W.), owned by Great Britain. Area, 45 square miles; population (1937), 185. On Jan. 12, 1938, the islands of Tristan da Cunha, Gough, Nightingale, and Inaccessible were made dependencies of St. Helena (q.v.). Resident Chaplain, Rev. Harold Wilde.

TUFTS COLLEGE. A nonsectarian institution for the higher education of men and women in Medford, Mass., founded in 1852. The registration for the autumn terms of 1939 was 2134. There were 420 faculty members. The productive funds of the college amounted to \$7,839,594, and the income for the year was \$1,373,057. The library contained 190,000 volumes. President, Leonard Carmichael, Ph.D., Sc.D., LL.D., Litt.D.

TULANE UNIVERSITY OF LOUISIANA. An institution of higher education in New Orleans, founded in 1834. The total enrollment for the autumn of 1939 was 4179, of whom 736 were in the H. Sophie Newcomb College for Women. There were 872 students enrolled in the 1939 summer session. The faculty numbered 500. The productive funds for the fiscal year ending Aug. 31, 1939, amounted to \$11,133,825; the income for the year was \$1,569,274. Gifts and bequests to the value of \$694,443 were received. In the libraries there were 239,049 volumes. President, Rufus Carrollton Harris, A.B., LL.B.

TUNGSTEN. The principal use of this metal is in the production of high-speed-tool steels. Other uses are in electric-light and radio-tube filaments, and in the chemical industry. It is produced chiefly in China, with the United States second in rank. Nevertheless, on account of its great industrial importance in war as well as in peace, it is listed as a "strategic" metal by the United States Army and Navy, and is one of such commodities authorized to be purchased for stockpile reserves. The only contract let in 1939 was for 425 tons of tungsten ore from China.

Tungsten ore is sold on the basis of tungstic acid, or tungsten trioxide, contained, with 60-65 per cent as the standard. Prices are quoted per unit (1 per cent) of tungsten trioxide in the ore or concentrate. Prices fluctuated in the United States in 1939, opening the year at \$19.50 per unit in Chinese ore, duty paid, and closing at \$23.50 per unit. For domestic ores and concentrates the prices rose from \$16 @ \$19 in January to \$22 @ \$24 in December.

H. C. PARMELEE.

TUNISIA. A French protectorate in North Africa. Capital, Tunis. With an area of 48,332 square miles, Tunisia had a population of 2,608,313 at the 1936 census, including 2,335,623 Arabs and Bedouins, 59,485 native Jews, 108,068 French citizens, 94,289 Italians, and 7279 Maltese. The population estimate for Jan. 1, 1938, was 2,670,000. The 1936 census populations of the chief towns were: Tunis, 219,578; Sfax, 43,333; Sousse, 28,465; Bizerte, 25,872; Kairouan, 22,991. Moslems comprise 89.5 per cent of the total population. The school attendance on Dec. 31, 1937, was 96,520.

Production. The chief occupations are agriculture, stock raising, fishing and mining. Yields of the chief crops in 1938 were (in metric tons): Wheat, 374,670; oats, 30,000; corn and sorghum, 5500; barley, 100,000; beans, 20,000; olive oil, 25,000; dates, 25,400; wine, 1,975,832 hectoliters (hectoliter equals 26.42 U.S. gal.). The 1937 live-

stock estimates were 507,302 cattle, 3,382,894 sheep, 1,672,352 goats, 144,762 camels, 109,787 horses, 156,554 asses, and 56,615 mules. Output of the chief minerals in 1938 was (in metric tons): Phosphate rock, 1,928,800; iron ore, 821,649; lead ore, 28,793; zinc ore, 1412; mercury ore, 9313; pig lead, 23,786. Wool spinning and weaving, leather working, carpet and pottery making the principal native industries.

Foreign Trade. Imports in 1938 were valued at 1,559,000,000 francs (1,324,000,000 in 1937); exports, 1,353,000,000 (1,141,000,000). The depreciation of the French franc from an average exchange value of \$0.04 in 1937 to \$0.029 in 1938 was a factor in the rise in export values. France supplied 62 per cent of the 1938 imports and took 55.9 per cent of the exports; United States, 3.6 and 5.2, respectively.

Finance, etc. Budget estimates for 1939 placed receipts at 802,631,060 francs (704,151,400 in 1938); expenditures, 802,535,003 (704,061,680). The public debt on Jan. 1, 1938, was 1,009,593,000 francs. Tunisia in 1938 had about 1293 miles of railways, 7728 miles of roads and highways, and air connections with France, Italy, Algeria, and Morocco. See ROADS AND STREETS. In 1937 7011 vessels of 4,735,325 tons entered the ports and 7005 of 4,737,446 tons cleared.

Government. Tunisia is a regency under the control of the French Foreign Office, which acts through a Resident-General who is also Minister of Foreign Affairs for Tunisia. There is a ministry of 11 departments (8 French and 3 Tunisian). The nominal ruler in 1939 was Sidi Ahmed Bey, who succeeded to the throne July 10, 1929. Eirik Labonne became French Resident-General on Oct. 22, 1938.

History. The 1939 budget provided for various increases in existing as well as new taxes, with customs and tobacco and cigarettes furnishing the major portion. Expenditures were expanded by credits for improving agriculture, by the sinking fund of a 36,000,000-franc loan negotiated in 1939, and by increases for government employee allowances.

Tunisia remained during 1939 a source of active controversy between France and Italy (qq.v.). The immediate issue in dispute was the status of some 90,000 persons of Italian birth or ancestry in the regency. The conviction in French official circles that Mussolini was determined to employ this issue as a lever for overturning French rule and himself seizing possession of the colony added to the difficulties of a friendly solution. Italian efforts to incite the native Moslems against the French authorities were nullified by Moslem indignation at Italy's racial and foreign policies. While a number of Italians in Tunisia were arrested for anti-French activities during the year, it was reported that many Italians volunteered for service in the French army when war between France and Germany broke out in September. Several anti-Fascist Italian groups adopted resolutions affirming their loyalty to France. Meanwhile French colonial and military authorities had taken extensive precautions to strengthen the Tunisian coast and frontier defenses. See ALGERIA, FRANCE and ITALY under History. Consult Vera Micheles Dean, "Italy's African Claims Against France," *Foreign Policy Reports*, June 1, 1939.

TUNNELS. The completion of the remarkable and difficult tunneling work (108 miles) of the Colorado River-Los Angeles Aqueduct (see

AQUEDUCTS) brings to a successful close one of the greatest tunneling operations ever attempted by man. The new Catskill Aqueduct (85 miles) is, of course, a tremendous tunneling operation but will apparently not involve any such difficult conditions of water inflow and loose ground as were encountered in the former work. Large quantities of water are being encountered, however, in the Hudson River crossing (600 ft. below sea level) but the rock is, in general, sound and hard.

In New York City the Queens-Midtown vehicular tunnel under the East River was holed through on November 8 and this project thus passes into its final stage. There has been much discussion of the plan, first, of building a suspension bridge to connect the southern tip of Manhattan Island with Brooklyn, and, more recently, of a vehicular tunnel. The bridge project was turned down by Government authorities on the grounds that any failure due to bombing might obstruct passage to the Brooklyn Navy Yard. The tunnel project, however, will cost about twice as much as a bridge (70 to 90 million dollars) and, while the plans have been approved by the Army Engineers, the problem of finances still remains to be solved.

The remarkable project of utilizing an abandoned railroad for a new super-highway in Pennsylvania—between Pittsburgh and Harrisburg—(see 1938 YEAR BOOK) went rapidly forward during the year. The estimated cost of this toll line has been raised to \$70,000,000 and the funds are being provided by the PWA, the RFC, and the Pennsylvania Turnpike Commission.

JAMES K. FINCH.

TURBINES. See POWER PLANTS.

TURF. See SPORTS.

TURKEY. A republic comprising parts of Asia Minor and the Balkan peninsula as well as Imbros, Tenedos, and the Rabbit Islands in the Aegean Sea. Capital, Ankara (Angora).

Area and Population. The area, excluding 452 square miles of marshes and 3256 square miles of lakes, is 294,492 square miles (13,012 in Europe and 281,480 in Asia). The population on Jan. 1, 1938, was estimated at 16,800,000 of whom 1,320,000 were in Europe. Populations of the chief cities in 1935 were: Istanbul (Constantinople), 740,805 in the municipality and 245,982 in the city proper; Izmir (Smyrna), 170,546; Ankara (Angora), 123,699; Adana, 76,306; Bursa (Brusa), 72,270; Konya, 52,486; Gazi Antep (Aintab), 50,891.

National Defense. Military service is compulsory. On Nov. 1, 1939, the army consisted of 510,000 active soldiers and 200,000 trained reserves, according to the Adjutant General's Office, Washington, D. C. The air force comprised 3500 men and 370 aircraft. At the beginning of 1939 the navy included 1 battle cruiser of 23,100 tons, 2 light cruisers, 2 gunboats, 3 minesweepers, 4 destroyers, 5 submarines, 3 motor torpedo boats, and several other craft. Naval personnel numbered 800 officers and 4000 men.

Education and Religion. Illiteracy decreased from 78 per cent in 1928 to 55 per cent in 1934. Elementary education is obligatory for children, enrollment in 1936-37 totaling 814,407. There is a university at Ankara. In 1935 there were 15,838,673 Moslems, 125,046 Orthodox Church members, 78,730 Jews, 44,526 Gregorians, 32,155 Roman Catholics, 11,229 Armenians, 8486 Protestants, and 12,967 adherents of other religions. There is no state religion.

Production. Four-fifths of the population is supported by agriculture. Yields of the chief crops in 1938 were: Wheat, 156,006,000 bu.; barley, 108,413,000 bu.; rye, 17,193,000 bu.; oats, 15,436,000 bu. (1937); corn, 23,759,000 bu.; tobacco, 121,253,000 lb.; olive oil (1938-39 season), 6,605,000 gal.; raisins, 176,368,000 lb.; figs, 83,775,000 lb.; ginned cotton (1938-39 season), 172,080,000 lb.; wool, 58,704,000 lb.; mohair, 16,530,000 lb.; opium, 553,000 lb. The 1938 livestock census showed 5,896,000 cattle; 17,752,000 sheep; 14,804,000 goats (including 3,749,000 mohair goats); 586,000 buffaloes; 95,000 camels; 1,817,000 horses, mules, and asses.

Production of the chief minerals in 1938 was (in metric tons unless otherwise indicated): Coal, 2,559,000; lignite, about 130,000; emery, 8370; chrome ore, 208,055; boracite, 5000; cement, about 480,000; mercury, 44,992 lb. Industrial plants in operation or course of construction in 1939 (under the second four-year industrialization plan begun in 1938) included textile mills, coking and steel and blast-furnace works, paper mills, attar-of-roses distillery, a glass factory and sulphur plant. Cotton goods manufacture in 1938 totaled 7900 metric tons of yarn and 10,000 metric tons of cloth. Refineries produced 42,526 metric tons of sugar. There were 65,245 industrial establishments in 1936.

Foreign Trade. Total imports in 1938 were valued at 149,836,689 Turkish pounds (114,379,026 in 1937) and exports at 144,947,000 Turkish pounds (137,983,551 in 1937). The chief exports were tobacco and other agricultural products. Germany took 42.9 per cent of Turkey's 1938 exports; the United States 12.3 per cent; Italy 10.0 per cent; followed by Russia and Great Britain in order. Germany supplied 47 per cent of the imports; Great Britain, 11.2 per cent; the United States, 10.5 per cent; with Italy and Russia trailing respectively. See IMPORTS AND EXPORTS.

Finance. Estimated budget revenues for the fiscal year ending May 31, 1940, were £T261,110,000 (£T250,040,000 in 1938-39); expenditures were £T261,064,192 (£T249,954,020 in 1938-39). A supplementary budget of £T58,917,000—almost half of it for defense measures—was also adopted for 1939-40. The public debt on May 31, 1938, was £T533,614,000 (consolidated internal, £T180,493,000; consolidated external, £T143,200,000; floating internal, £T165,660,000; floating external, £T44,261,000). The average exchange value of the Turkish £ was \$0.8013 in 1937 and \$0.8011 in 1938.

Transportation. On Jan. 1, 1939, Turkish railways extended 4444 miles, including 3903 miles of standard gauge. Highway mileage (1938) was 25,657 of which 11,213 was surfaced (see ROADS AND STREETS). In August, 1939, there were four commercial air services covering 1114 miles of routes and flying 13,368 miles per week. The Turkish merchant marine on June 1, 1939, comprised 185 vessels of 224,461 gross tons capacity.

Government. The Constitution of Jan. 20, 1921, as amended in 1924 and 1934, vests executive and legislative power in the Grand National Assembly, consisting of 424 deputies elected for four years by universal male and female suffrage. The Assembly exercises executive power through the President, elected for four years by the Assembly, and through the Council of Ministers, chosen by the President. In practise the President wields dictatorial powers. President in 1939, Gen. Ismet Inonu, who was elected to succeed President Kemal Ataturk on Nov. 11, 1938, and re-elected Apr. 3, 1939. The People's party, the only legal political organization, in December, 1938, elected President Inonu

as President General of the party for life. For other developments in 1939, see *History*.

HISTORY

Internal Affairs. Anticipating the European crisis that led to war in September, President Inonu early in 1939 took steps to consolidate Turkey's internal political situation. A new cabinet under Dr. Refik Saydam was appointed January 25 to hold the quadrennial elections for the Grand National Assembly. The voting, moved ahead to March 26, resulted in the customary return of a National Assembly composed entirely of People's party members. On April 3 the new Assembly unanimously re-elected Ismet Inonu as President for the ensuing four-year term. The following day Premier Saydam reorganized his cabinet on a more permanent basis, replacing two of his 13 associates.

The election was notable for the cautious moves toward a more democratic political system initiated by President Inonu. The voters were given a partial choice in the designation of candidates for the National Assembly. Efforts were made to enlist the co-operation of Turkish elements ignored or suppressed by Inonu's predecessor. Moreover the Fifth Grand Congress of the People's party on May 27 agreed to the experimental establishment of an "independent" group of 21 deputies to serve as benevolent critics of the government's program during debates in the Grand National Assembly.

Economically, the country suffered a setback in 1939 as compared to 1938 due to dislocations of

trade by the European crisis, particularly the loss of the important German export market during the last quarter of the year. These disturbances and increasing expenditures for defense forced a curtailment of the industrialization program. The important Karabuk iron and steel plant started operations in midsummer but completion of some of the connected factories was delayed by a shortage of materials and the departure toward the end of the year of German technicians. This adverse economic trend was offset in part by the large credits extended by Great Britain and France (see below) and by the trade agreement with the United States signed on April 1 and ratified November 20. However the great Anatolian earthquake of December 26-27 was another severe blow to the Turkish national economy. See EARTHQUAKES under *Turkey* for full details.

Foreign Policy. The year brought a historic and far-reaching change in Turkish policy. An ally of Germany during the World War, and thereafter an uncompromising neutral having extremely close relations with the Soviet Union, Turkey in 1939 threw in her lot with Britain and France and staked her future upon their victory in the European War (q.v.). The transformation from neutral to Franco-British ally was a gradual one. It started early in the year when the German annexation of Bohemia and Moravia, followed by Italian expansion into Albania, aroused Turkish fears that the Axis powers would sweep into the Balkans and endanger Turkey's security and independence. At the same time Britain and France offered the

Courtesy of New York Times

STRATEGIC POSITION OF TURKEY AND THE STRAITS

Turks substantial inducements to join their anti-Axis bloc.

New Alliances. After Britain and France on April 13 had conditionally guaranteed the independence of Greece and Rumania, Premier Saydam on May 12 obtained the Grand National Assembly's approval of an Anglo-Turkish mutual assistance agreement. The same day it was announced that Britain and Turkey had undertaken to "co-operate effectively" and lend each other aid "in the event of an act of aggression leading to war in the Mediterranean area." Turkey and France exchanged identical pledges in the agreement signed June 23 under which France ceded to Turkey the Republic of Hatay (Sanjak of Alexandretta). See FRANCE and SYRIA AND LEBANON under *History* for details.

These agreements were designed by Turkey, Britain, and France to check threatened aggression by Germany upon Rumania and by Italy upon Greece. Turkey in May received a £10,000,000 credit from Britain for the purchase of armaments and other materials in the United Kingdom. On June 2 a Turkish military mission left for London and negotiations for converting the Anglo-French-Turkish accords into a permanent alliance were carried forward. At the same time the Turkish Government used its close contacts with Moscow to facilitate progress of the Anglo-French-Soviet mutual assistance pact negotiations aimed at Germany.

Negotiations with Moscow. The Soviet-German non-aggression pact of August 24, which brought these negotiations to an unsuccessful conclusion, placed Turkey in a difficult position. Forced to choose between the Soviet Union and the Anglo-French combination, President Inonu sent Foreign Minister Sukru Saracoglu to Moscow late in September to secure a Russian agreement to maintain the status quo in the Balkans and the Black Sea. The Soviet Government not only refused to guarantee the status quo in the Balkan-Black Sea area but sought a pledge from Turkey that Anglo-French warships would not be permitted to pass through the Straits in the event war broke out in the Black Sea area. On October 17 Premier Saydam announced the failure of the Moscow negotiations and two days later Turkey concluded a formal 15-year alliance with Britain and France.

The treaty gave the Turks unconditional Anglo-French pledges of support against aggression from any quarter. In return Turkey agreed to aid the Allies if aggression by any power provoked war in the Mediterranean or if they were compelled to carry out their pledges to protect Rumania and Greece against attack. However the treaty provided that Turkey could under no circumstances be compelled to join the Allies in a war against the Soviet Union. Following conclusion of this treaty, which entered into force November 16, Britain and France extended additional credits and loans aggregating £43,500,000 to Turkey and agreed to purchase large quantities of Turkish exports—especially dried fruits, nuts, and tobacco—previously marketed in Germany.

Although Turkish-Soviet relations remained on a fairly friendly basis during the remainder of the year, the Turks suspected Stalin of planning to resume the former Czarist drive for control of the Straits. Toward the end of the year they strongly reinforced troops stationed along the northeastern and eastern frontiers. At the same time plans were worked out for Turkish military

co-operation with British, French, and other Allied forces in the Near East.

Relations with the Reich. Although avoiding participation in the European conflict during 1939, Turkey's preparations showed full expectation of future involvement. Following conclusion of the Anglo-French-Turkish pact of October 19, the German press warned that Turkey might share the fate of Poland. In November and December German-Turkish relations became more tense. A number of Germans in Turkey were arrested for espionage and propaganda activities. Others were expelled. The Turkish press warned Franz von Papen, the German Ambassador, to end his efforts to provoke a Turkish-Soviet conflict or "get out."

Balkan Policy. In an effort to block German and Soviet penetration into the Balkans, Turkey with Yugoslav co-operation and some Italian support sought to strengthen the Balkan Entente and to create a solid bloc of neutrals comprising all the Balkan and neutral Danubian states. On November 10 Turkey and Bulgaria agreed to demobilize troops concentrated along their mutual frontier, but the Balkan bloc idea was shattered by Hungary's refusal to moderate its territorial demands upon Rumania.

See BULGARIA, FRANCE, GERMANY, GREAT BRITAIN, GREECE, ITALY, RUMANIA, SYRIA AND LEBANON, UNION OF SOVIET SOCIALIST REPUBLICS, and YUGOSLAVIA under *History*; EARTHQUAKES; EDUCATION; MILITARY PROGRESS; NAVAL PROGRESS.

TURKEYS. See POULTRY.

TURKMENIAN SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., north of Iran and Afghanistan. Area, 171,250 square miles; population (Jan. 17, 1939), 1,253,985. Chief towns (with 1936 populations): Ashkhabad, the capital, 102,500; Krasnovodsk, 27,000. About 85 per cent of the country is occupied by the Kara-Kum desert and 90 per cent of the inhabitants live in the oases along the Amu-Darya river. During the last four years a number of irrigation systems have been constructed and the output of cotton has been doubled. The breeding of horses, camels, and sheep is being rapidly extended. Carpet weaving is an important industry. Mineral products consist of sulphur, sodium sulphate, ozokerite, petroleum, and salt. See UNION OF SOVIET SOCIALIST REPUBLICS.

TURKS AND CAICOS ISLANDS. See JAMAICA.

TUSKEGEE INSTITUTE. An institution for the vocational training of colored young men and women at Tuskegee Institute, Ala., founded in 1881 by Booker T. Washington. The enrollment for the term beginning September, 1939, was 1282. Summer sessions, 828. There were 178 members on the faculty. The endowment for the year ending May 31, 1939, was \$6,991,908, the income was \$442,053. The library contained 45,429 volumes. President, Fred D. Patterson.

UDMURT AUTONOMOUS SOVIET SOCIALIST REPUBLIC See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

UGANDA (ōō-gān'dā or ū-gān'dā) **PROTECTORATE.** A protectorate under British control in East Africa. Area, 93,981 square miles; population (Jan. 1, 1939, estimate), 3,745,165 (3,725,798 natives, 17,256 Asiatics, and 2111

Europeans). Vital statistics (natives, 1938): 26.70 births per 1000, and 17.50 deaths per 1000. Chief towns: Entebbe (capital), Kampala, and Jinja.

Production and Trade. The staple crop is cotton which is grown by native cultivators (54,400 met. tons of ginned cotton produced and 127,000 met. tons of cottonseed exported during 1938-39). For 1940 the cotton crop was estimated at over 325,000 tons. Other products were coffee, tin, gold, hides and skins, and salt. Livestock (1937 census): 2,609,146 cattle, 2,541,077 goats, and 1,405,549 sheep. Uganda and Kenya form a single unit for customs purposes. In 1938, imports (ex-ship Mombasa, Kenya) were valued at £2,992,974; exports (f.o.b. Mombasa), including re-exports of £188,934, totaled £8,857,900 of which cotton (lint and seed) accounted for £3,734,887, coffee £327,664, sugar £118,847, and gold £145,413. In addition to the external trade afore-mentioned there is an interchange of imported and locally produced goods among Kenya, Tanganyika, and Uganda.

Communications. In 1938 there were 2075 miles of main roads maintained by the government, and 4800 miles of roads built and maintained by native administrations. Kampala is linked with most of the chief towns by motor-omnibus service. Railway lines total 328 miles. Port Bell, Uganda, is a port of call on the England to South Africa air service. See KENYA under *Communications*.

Government. For 1938, revenue totaled £1,863,863 and expenditure £2,060,199. The government is administered by a governor who is assisted by an executive council (7 ex-officio members) and a legislative council of 10 members (6 ex-officio and 4 unofficial). Native kings and chiefs, including some with rights regulated by treaty, are encouraged in carrying out the government of their own subjects, and purely native matters are dealt with by native councils. Annual estimates are compiled for all native administrations and submitted to the governor for approval (in 1938, revenue £524,933 and expenditure £525,871). Governor and Commander-in-Chief, Sir P. E. Mitchell (appointed October, 1935).

UKRAINIAN SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., occupying the southwest part of the Soviet Union. It includes the Moldavian Autonomous Soviet Socialist Republic (3250 sq. mi.; capital, Tiraspol). Area, 171,950 square miles; population (1939 census), 30,960,221. Chief cities (1939 populations): Kiev (capital), 846,293; 663,000 in 1936; Kharkov, 833,432; Odessa, 604,223; Dnepropetrovsk, 500,662; Stalino, 462,395. Education (1937): 4,319,000 students in Ukrainian elementary schools, and 253,000 students in schools for higher education (1936-37).

Production, etc. The area under crop in 1937 was 62,022,100 acres—the chief products being wheat, barley, rye, buckwheat, hay, sugar beets, potatoes, and cotton. Ninety-six per cent of all peasant farms have been collectivized, and 90,000 tractors and 29,000 harvester combines are used. Livestock raising is an important occupation. Minerals produced include coal (67,100,000 tons during 1937), manganese, salt, iron, limestone, mercury, petroleum, and cement. Industrial output (in tons) in 1936 was pig iron 8,862,000, steel 7,995,000, rolled metal 5,843,000. Electric power (1936): 8600 million kilowatt hours. Railways, in 1936, extended 8880 miles including 125 miles

which were electrified. See POLAND under *History*; UNION OF SOVIET SOCIALIST REPUBLICS.

ULSTER. See IRELAND, NORTHERN.

UN-AMERICAN ACTIVITIES, INVESTIGATION OF. See DIES COMMITTEE.

UNEMPLOYMENT. See UNITED STATES EMPLOYMENT SERVICE; LABOR CONDITIONS; LABOR LEGISLATION; for unemployment insurance, see SOCIAL SECURITY BOARD.

UNFEDERATED MALAY STATES. The States of Johore, Kedah, Kelantan, Perlis, and Trengganu in the Malay Peninsula, under British protection and control (see below). The rulers of these five States are assisted by State councils, and by advisers appointed by the British government. The chief products are rubber, manganese, coconuts, pineapples, coffee, tapioca, areca nuts, rice, timber, tin, betel nuts, iron, and gold. The Straits dollar (S\$) averaged \$0.5692 for 1938, \$0.5174 for 1939.

Johore. Area, 7500 square miles; population (1938 estimate), 709,870 (308,240 Malays, 311,620 Chinese, 84,090 Indians, 1080 Europeans, and 4840 others). Capital, Johore Bahru (97,634 inhabitants). In 1938, imports were valued at S\$43,380,224; exports, S\$62,758,852; revenue, S\$17,922,090; expenditure, S\$18,863,093. Estimates (1939): revenue, S\$19,624,000; expenditure, S\$25,822,000. Sultan, Sir Ibrahim (acceded, 1895).

Kedah, kādā. Area, 3660 square miles; population (1937 estimate), 474,755. Capital, Alor Star (25,000 inhabitants). In 1937-38, imports were valued at S\$12,385,148; exports, S\$44,625,429; revenue, S\$7,544,682; expenditure, S\$6,625,653. Sultan, Sir Hamid Hamlin Shah (acceded, 1881).

Kelantan, kē-lān'tan. Area, 5750 square miles; population (1937 estimate), 400,378. Capital, Kota Bharu. In 1938, imports were valued at S\$7,734,361; exports, S\$7,063,345; revenue, S\$3,134,035; expenditure, S\$3,001,033; public debt, S\$5,119,069. Sultan, Sir Ismail.

Perlis. Area, 316 square miles; population (1938 estimate), 55,446. Capital, Kangar. In 1938-39, revenue totaled S\$747,756; expenditure, S\$700,190. Ruler, Tuan Syed Alwi.

Trengganu, trēng-gā'nō. Area, 5050 square miles; population (1938 estimate), 201,370. Capital, Kuala Trengganu. In 1938, imports were valued at S\$6,140,777; exports, S\$9,851,964; revenue, S\$2,427,004; expenditure, S\$2,360,447; public debt, S\$2,860,000. Sultan, Sir Suleiman Badrullalam Shah (acceded in 1920).

UNION COLLEGE. A nonsectarian college for men at Schenectady, N. Y., founded in 1795. The enrollment for the autumn of 1939 totaled 826. The faculty numbered 83. The amount of endowment for the year was \$4,425,364, and the income \$577,847. The library contained 106,515 volumes. President, Dixon Ryan Fox, Ph.D.

UNION ISLANDS (TOKELAU). The five clusters of islets (the chief being Fakaofu, Nukunono, and Atafu) in the Pacific (8° to 10° S. and 171° to 173° W.), formerly part of the British Gilbert and Ellice Islands colony but transferred to the jurisdiction of New Zealand on Feb. 11, 1926, and placed under the administrator for Western Samoa. Area, 4 square miles; population (1937), 1176.

UNION OF SOUTH AFRICA. See SOUTH AFRICA, UNION OF.

UNION OF SOVIET SOCIALIST REPUBLICS (U.S.S.R.). A state comprising the

greater part of the former Russian Empire. Capital, Moscow.

Area and Population. The area as of Aug. 31, 1939, was about 8,200,000 square miles (73 per cent in Asia and 27 per cent in Europe). The census of Jan. 17, 1939, showed a population of 170,467,186 (88,802,205 females and 81,664,981 males), compared with 147,027,915 at the 1926 census. The urban population at the 1939 census was 55,909,908; rural, 124,557,278. In addition, there was added to the U.S.S.R. through the annexation of eastern Poland in September, 1939, about 75,650 square miles of territory and some 12,800,000 inhabitants, according to Soviet estimates, divided as follows: Western Ukraine, 41,650 square miles and 8,000,000 inhabitants; Western White (Byelo) Russia, 34,000 square miles and 4,800,000 inhabitants.

At the beginning of the European War, the Soviet Union was composed of 11 Union Republics which in turn included 22 autonomous republics and 9 autonomous provinces as well as lesser subdivisions. The various autonomous units represented the principal national groups in the Union, of which there were nearly 200, inherited from the Czarist Empire. The estimated area and population of the 11 Union Republics as of Jan. 17, 1939, are shown in the accompanying table.

U.S.S.R.: AREA AND POPULATION

| | Square Kilometers | Population |
|------------------------------|----------------------|-------------|
| Russian S.F.S.R. | 16,510,500 | 109,276,614 |
| White Russian (Byelo) S.S.R. | 126,800 | 5,567,976 |
| Ukrainian S.S.R. | 445,300 | 30,960,221 |
| Uzbek S.S.R. | 378,300 | 6,282,446 |
| Azerbaijan S.S.R. | 86,000 | 3,209,727 |
| Armenian S.S.R. | 30,000 | 1,281,599 |
| Georgian S.S.R. | 69,600 | 3,542,289 |
| Turkmenian S.S.R. | 443,600 | 1,253,985 |
| Tadjik S.S.R. | 143,900 | 1,485,091 |
| Kazakh S.S.R. | 2,744,500 | 6,145,937 |
| Kirghiz S.S.R. | 196,700 | 1,459,301 |

The populations of the 29 leading cities at the 1926 and 1939 censuses, with the percentage increases for that period, were as follows:

POPULATIONS OF CITIES 1926 AND 1939

| City | Dec. 17, 1926 | Jan. 17, 1939 | 1939 in % of 1926 |
|----------------|---------------|---------------|-------------------------|
| Moscow | 2,029,425 | 4,137,018 | 203.9 |
| Leningrad | 1,690,065 | 3,191,304 | 188.8 |
| Kiev | 513,637 | 846,293 | 164.8 |
| Kharkov | 417,342 | 833,432 | 199.7 |
| Baku | 453,333 | 809,347 | 178.5 |
| Gorky | 222,356 | 644,116 | 289.7 |
| Odessa | 420,862 | 604,223 | 143.6 |
| Tashkent | 323,613 | 585,005 | 180.8 |
| Tbilisi | 294,044 | 519,175 | 176.6 |
| Rostov-on-Don | 308,103 | 510,253 | 165.6 |
| Dnepropetrovsk | 236,717 | 500,662 | 211.5 |
| Stalino | 174,230 | 462,395 | 265.4 |
| Stalingrad | 151,490 | 445,476 | 294.1 |
| Sverdlovsk | 140,300 | 425,544 | 303.3 |
| Novosibirsk | 120,128 | 405,589 | 337.6 |
| Kazan | 179,023 | 401,665 | 224.4 |
| Kuibyshev | 175,636 | 390,267 | 222.2 |
| Saratov | 219,547 | 375,860 | 171.2 |
| Voronezh | 121,612 | 326,836 | 268.7 |
| Yaroslavl | 114,277 | 298,065 | 260.8 |
| Ivanovo | 111,460 | 285,069 | 255.8 |
| Archanget | 76,774 | 281,091 | 366.1 |
| Omsk | 161,684 | 280,716 | 173.6 |
| Chelyabinsk | 59,307 | 273,127 | 460.5 |
| Tula | 155,005 | 272,403 | 175.7 |
| Minsk | 131,803 | 238,772 | 181.2 |
| Vladivostok | 107,980 | 206,432 | 191.2 |

| Kirov | 62,097 | 143,181 | 230.6 |

National Defense. See MILITARY PROGRESS; NAVAL PROGRESS.

Education. During the two decades ending in 1937, illiteracy was reported to have declined from 67.7 per cent to less than 8 per cent. At the beginning of the 1938-39 school year there were 33,965,400 pupils attending 171,579 schools. There were about 1,200,000 students in technical schools and workers' faculties; about 1,800,000 children in nurseries and kindergartens, exclusive of 5,700,000 children placed in collective farm nurseries and kindergartens during harvest season; and 550,000 students in universities and colleges. In the spring of 1938, 106,700 students were graduated from schools of higher education and 160,000 new students enrolled in universities. There were 563,000 teachers appointed to elementary and secondary school positions in the R.S.F.S.R. alone in 1938. Education is a charge against each of the 11 Union Republics and against the localities concerned. Expenditures increased from 764,700,000 rubles in 1929 to 18,774,000,000 rubles in 1938.

Production, etc. In the Soviet Union transport and communications are conducted as Federal departments. Banking is centralized in a State Bank under government control. Distribution is socialized, with retail trade in the cities conducted mainly by local administrative bodies and in the villages by consumer co-operatives. Industrial production is carried on largely by state enterprises, operating under the general direction of appropriate Commissariats (government departments). A State Planning Commission (Gosplan) plots the objectives for each year and for five-year periods. An Economic Council acts as a co-ordinative body. A commission of Soviet Control checks and supervises results.

State planning is an essential of Soviet economy. The planning system is designed to direct and co-ordinate the employment of the energies and resources of the country for orderly development. The planning system, however, goes beyond the economic field. It includes science, education, public health, and the extensive social services designed to safeguard the welfare and security of the citizenship.

Under this system the work of Gosplan has assumed a position of primary importance. Its personnel in Moscow includes a considerable number of permanent specialists re-enforced by consultants who are authorities in every field. Under the central body each Constituent Republic has its Gosplan, and there are subordinate planning boards in the various cities.

The third Five-Year Plan (see 1938 YEAR BOOK for programs of first and second Five-Year Plans) was begun Jan. 1, 1938. Schedules for the first year envisaged an increase in the industrial output of 15.5 per cent and commensurate increases in other lines.

Industry. The increase in general industrial production in 1938 was 13.5 per cent over 1937. The output of the chief industries in 1938 was: Electric power, 132,600,000,000 kw.-hr.; Coal, 132,900,000 metric tons; peat, 26,450,700 metric tons; oil, 32,230,000 metric tons; pig iron, 14,600,000 metric tons; steel, 17,700,000 metric tons; cement, 5,696,000 metric tons; trucks, 184,000 units; tractors, 32,200 units; cotton cloth, 3,491,000,000 meters; woolen goods, 114,000,000 meters; footwear, 213,000,000 pairs; sugar, 2,500,000 metric tons. Average daily carloadings were 88,000 cars. For comparative figures for 1935, 1936, and 1937, see 1938 YEAR BOOK, p. 737.

Agriculture. Since 1928 the structure of agriculture has been completely reorganized. The small,

individual peasant holdings, averaging 12 to 14 acres, have in large measure given way to large-scale collective farms in which the peasants pool their acreage. (Each collective farm family, however, has its own garden plot and domestic farm animals.) This new set-up has made possible better organized methods of production with a high degree of mechanization. The transition was effected largely during the years 1929-33. In 1929 less than 4 per cent of the peasant households were represented in the collective farms; by Jan. 1, 1938, the percentage had risen to 93.5. There were 244,000 collective farms averaging about 1200 acres in 1938. Some 800,000 peasant households still worked individual holdings. In addition, large state farms operated about 12 per cent of the sown area.

SOWN AREA AND GRAIN HARVEST

| | Area of all crops (hectares ^a) | Area of grain crops (hectares ^a) | Grain production (metric tons) |
|------------|--|--|--------------------------------------|
| 1913 | 105,000,000 | 94,400,000 | 80,100,000 |
| 1931 | 136,300,000 | 104,400,000 | 69,480,000 |
| 1936 | 133,800,000 | 102,400,000 | 82,700,000 |
| 1937 | 135,300,000 | 104,400,000 | 120,290,000 |
| 1938 | 139,900,000 | 102,400,000 | 94,900,000 |

^a Hectare equals 2.47 acres.

Grain exports, in metric tons, averaged 10,553,000 annually for the years 1909-13 and were 5,057,000 in 1931, 332,000 in 1936, 1,278,000 in 1937, and 2,080,000 in 1938.

PRINCIPAL INDUSTRIAL CROPS

| | 1936 | 1937 | 1938 |
|-----------------------|------------|------------|------------|
| Cotton.....met. tons | 2,390,000 | 2,580,000 | 2,690,000 |
| Sugar beets.....do... | 16,830,000 | 21,860,000 | 16,680,000 |
| Flax.....do... | 580,000 | 570,000 | 546,000 |

The backbone of mechanization in Soviet agriculture is furnished by the machine and tractor stations, each of which serves collective farms within its area. These stations grew from 158 in 1930 to 6350 in 1938. The number of tractors on farms increased from 66,332 in 1929 to 483,500 in 1938; the number of combines, from 45 in 1929 to 153,500 in 1938.

Transportation. Length of railway lines in 1937 was 53,700 miles, nearly 50 per cent greater than in 1913. Railway freight carried in 1938 aggregated 369,000,000,000 ton-kilometers; passengers, 1,178,000,000 persons. The length of Soviet air lines in 1937 was 79,250 miles; in that year they carried 235,000 passengers and 46,900 metric tons of mail and freight. See **ROADS AND STREETS** for highways. The length of inland waterways is about 248,000 miles, of which 65,826 miles are navigable. In 1938 they carried 66,600,000 metric tons of freight (66,900,000 in 1937).

Shipping. The Soviet merchant marine had a gross tonnage of 1,280,900 on June 30, 1938 (1,258,200 on June 30, 1937). The total freight carried (including coastwise freight) amounted to 35,500,000 metric tons in 1937. See **SHIPPING**.

Foreign Trade. Foreign commerce in the Soviet Union is a governmental monopoly exercised by the Commissariat of Foreign Trade which maintains trading agencies abroad. Imports and exports are regulated in accordance with the country's system of planned economy. Trade in recent years is shown in the accompanying table compiled from the U.S. *Foreign Commerce Yearbook 1938*.

For distribution by countries and chief items of trade in 1937, see 1938 **YEAR BOOK**, p. 739.

Finance. In a country as highly socialized as the Soviet Union the growth of the budget reflects

SOVIET FOREIGN TRADE

| Year | Imports (1,000 rubles ^a) | Exports (1,000 rubles ^a) | Imports (\$1,000 ^b) | Exports (\$1,000 ^b) |
|------------|--|--|------------------------------------|------------------------------------|
| 1935 | 1,057,200 | 1,609,300 | 209,264 | 318,534 |
| 1936 | 1,352,535 | 1,359,104 | 270,507 | 271,821 |
| 1937 | 1,341,255 | 1,728,634 | 268,251 | 345,727 |
| 1938 | 1,422,882 | 1,331,927 | 261,757 ^a | 250,751 |

^a In rubles nominally equal to 20 U.S. cents. ^b U.S. currency dollars. ^c Provisional.

to a large extent the degree of economic progress. The first "firm" budget, that of 1924-25, balanced at 32,700,000 rubles. For the calendar year 1938 budget estimates placed receipts at 127,600,000,000 rubles and expenditures at 124,000,000,000 (national economy, 51,709,000,000; defense, 23,151,000,000; social welfare, 35,316,000,000). The State Bank, only bank of issue and center of the financial system, had 16,000,000 depositors with deposits of 4,500,000,000 rubles on Dec. 1, 1937.

Government. Under the Constitution of 1936 supreme political power is vested in the Supreme Soviet of the U.S.S.R., meeting twice a year, and elected for a period of four years by universal direct suffrage and with secret ballot. The Supreme Soviet consists of two legislative chambers with equal rights. The two chambers in joint session elect a Presidium of the Supreme Soviet consisting of 37 members, i.e., president, 11 vice-presidents, 24 members, and a secretary, with wide administrative powers between sessions of the Supreme Soviet, including ratification of treaties and declaration of a state of war. The Presidium supervises the work of the Council of the People's Commissars, selected by the Supreme Soviet, which acts as the executive and administrative organ of the state.

In practise, the government and country is under the absolute control of Joseph Stalin, general secretary of the Communist party of the U.S.S.R., whose only governmental post is that of member of the Presidium of the Supreme Soviet. The Communist party is the only legal political party, and all candidates for elective office must have its approval. The Council of People's Commissars (All-Union) was composed as follows at the end of 1939: Chairman and Commissar for Foreign Affairs, Viacheslav M. Molotov; Defense, Klementi E. Voroshilov; Foreign Trade, Anastase I. Mikoyan; Railways, Lazar M. Kaganovich; Communications, Ivan T. Peresipkin; Sea Transport, Semen S. Dukelsky; River Transport, Zosim A. Shashkov; Electric Power Stations and Electric Industry, Mikhail G. Pervukhin; Ferrous Metallurgy, Fedor A. Merkulov; Non-Ferrous Metallurgy, Alexander I. Samokhvalov; Chemical Industry, Mikhail F. Denisov; Aviation, Mr. Shakhurin; Shipbuilding, Ivan T. Tevosyan; Munitions, Ivan P. Sergeyev; Armaments, Boris L. Vannikov; Heavy Machine Building, Viacheslav A. Malishev; Medium Machine Building, Ivan A. Likhachev; General Machine Building, Peter I. Parshin; Navy, Nikolai G. Kuznetsov; Procurement, Sergei E. Skrinnikov; Construction, Semen Z. Ginzburg; Oil Industry, Lazar M. Kaganovich; Coal Industry, Vasily V. Vakhurshev.

The Union-Republican People's Commissars were: Food, Vasily P. Zotov; Fish, Acting Commissar J. Bogaev; Meat and Dairy Products, Pavel V. Smirnov; Light Industry, Sergei G. Lukin; Textiles, Alexei N. Kosigin; Timber, Naum M. Antselovich; Agriculture, Ivan A. Benediktov; State Grain and Livestock Farms, Pavel P. Lovanov; Finance, Arseni G. Zverev; Trade, Alexander

B. Lubimov; Internal Affairs, Lavrenti P. Beria; Justice, Nikolai M. Richkov; Public Health, Georgi A. Miterev; Building Materials, Leonid A. Sosnin. Chairman of the Presidium of the Supreme Soviet, Mikhail Kalinin; Chairman of the State Planning Commission, Nikolai A. Voznesensky; Chairman of the State Bank Administration, Nikolai A. Bulganin; Chairman of the Commission of Soviet Control, Rosalia S. Zemlyachka; Chairman of the Supreme Court, Ivan T. Golyakov; Procuror, Mikhail I. Pankratiev.

HISTORY

Foreign Relations. The Soviet Union rejected in 1939 the proposals of Great Britain and France for common action to halt the progress of Germany in eastern Europe; it threw bygones to the winds and made with Hitler's Reich agreements assuring Germany of Russian consent to the German conquest of Poland and Danzig, in return for a substantial share of the Polish territorial spoils and a free hand over the little States of the eastern Baltic. These abrupt and total changes in the Union's alignment as to foreign relations admitted Russia into a course of westward expansion that restored its domination over most of the Baltic area that it had lost in the war of 1914-18.

The Bargain with Germany. The chief of the three agreements constituting the Russo-German partnership of 1939 was a treaty of non-aggression signed at Moscow on August 24 (dated August 23). Each party therein bound itself for ten years to refrain from using force against the other; to give no support to any warlike acts of a third power against the other party; and to settle any conflict of interest by direct discussion or arbitration. The ratification of this treaty a week later closely preceded Germany's invasion of Poland. Issuing the treaty's text on the 24th, the signers tried, but failed, to avert the British and French declarations of war against Germany on Poland's behalf.

A second part of the bargain with Germany, a commercial agreement signed on August 19, arranged for German purchases of raw materials up to the value of 180,000,000 marks and Russian purchases of machinery to a total of 200,000,000 marks in the course of two years, and for a German credit of 180,000,000 marks to Russia. A third agreement, dated September 28, followed the actual partition of Poland by the two powers; it ratified the division of territory, permitting Russia, among other gains, to hold the Galician petroleum deposits.

Russia's accord with its powerful and formidable ex-adversary was a marriage of opposites, a marriage of convenience, and so far as concerned Great Britain and France, an elopement. The latter two had, virtually up to August 23, carried on a slow but hopeful negotiation at Moscow, for Russian aid in the defense of Poland against Germany. It took the news of Russia's new bond to terminate this hope. Yet signs had occurred earlier in the year, to indicate what was to come.

Rejection of Britain and France. Joseph Stalin, speaking to the eighteenth congress of the Communist Party on March 10, denounced the British and French governments and that of the United States for having yielded Czecho-Slovakia to the aggressor and for seeking to bring about war between the Fascist powers and the U.S.S.R. The British Government, nevertheless, approached Russia in April with proposals looking to an agreement under which Russia would join the British

and French in aid to Poland or to Rumania if either of these were attacked. The proposals did not provide for British and French aid to Russia in case of an attack on the latter. The replacement of Litvinov as Commissar of Foreign Affairs by V. M. Molotov, May 3, gave indication that the government at Moscow no longer felt satisfied with Litvinov's long-maintained policy of seeking closer relations with the powers of western Europe. Still the Franco-British effort to enlist Russia for the protection of the latter's small neighbors from Germany was allowed, or encouraged to drag on, serving as a stimulant to a freshly started German bid for Russian favor. Nor did Russia find it necessary to break off with Great Britain and France until attractive proposals from Germany had actually been drafted into treaties and signed.

Russia's Position Toward Japan. Forces of the Soviet Union and of the Japanese and Manchoukuoan armies engaged from May until mid-August in hostilities along the Khalka River, near the border of Outer Mongolia. The campaign, of which few particulars were reported, ended in a reverse to the Japanese; these gave up their attempt to cross this river and advance westward and made a truce (see MANCHOUKUO under *History*). This outcome freed Moscow from military worries in the Far East at the moment when the opportunity to acquire territory in Eastern Europe arrived. See also JAPAN and CHINA under *History*.

Acquisitions in Poland. The successful timing of developments already noted put Moscow in a position to claim a share of Poland after the German forces had crushed all effective Polish resistance (see EUROPEAN WAR, under *The War in Poland*). Russian troops passed the border on

EXPANSION OF U.S.S.R., 1939

The Soviet Union annexed Eastern Poland in September; established domination over Estonia, Latvia and Lithuania in September-October; and launched an attack upon Finland on November 30. Pressure was brought upon Rumania for the cession of Bessarabia (shown by broken black line). Moscow restored to Lithuania part of the Vilna territory (bounded by broken white line in Eastern Lithuania) which the U.S.S.R. had acquired in the partition of Poland.

September 17 and moved rapidly west to a pacific junction with the Germans. Vilna was occupied, but it was soon restored to Lithuania, from which Poland had taken it (see LITHUANIA). Polish landlords found on their estates were reportedly put under arrest, and their properties were divided among peasants. The use of the White Russian and Ukrainian dialects was established in schools. Railroads were widened to the standard Russian gauge. The sovietization of the conquered districts proceeded apace (see POLAND under *History*). Polish territory annexed by the Union was added to the Soviet republics of the Ukraine and of White Russia. The acquired population added about 9 per cent to the number of those under Soviet rule (see above, under *Area and Population*). The map on p. 773 shows the westward expansion of Russian power during 1939 in Poland and elsewhere.

Domination of Eastern Baltic Lands. No sooner had Russian troops occupied the allotted part of Poland and the agreement of September 28 put down the partition with Germany in black and white than Moscow summoned Estonia, Latvia, and Lithuania, each in turn, to conferences. The representatives of these governments made little difficulty over signing treaties of mutual assistance that were presented to them. The Estonian treaty was signed September 28; the Latvian, October 5; the Lithuanian, October 10. Each of the little republics undertook to admit Russian forces to posts within its territory, to accept Russian protection, and to help defend Russia from attack through such territory (see ESTONIA; LATVIA; LITHUANIA). The three, while retaining their own governments and a guaranteed control of their internal affairs, became, in the main essential, protectorates of the Union. The position that Russia had held on the southern shore of the Baltic until 1914 became to this extent re-established.

Finland, approached about the same time as the foregoing three, was invited to Moscow on October 7. The demands made on Finland (q.v.) differed greatly from the proposals to the other Baltic states, for they did not involve the admittance of Russian garrisons in Finnish territory as such, while they did on the other hand call for the lease of the port of Hangö to the Union for a naval base and for demilitarization of the frontier and cession of a certain amount of territory. Unlike the other republics, Finland refused to yield. After a period of diplomatic pressure had failed to effect Moscow's designs, military operations against Finland started on November 30. For the course of these operations, adverse to Russia in 1939, see EUROPEAN WAR, under *The Russian Front*.

Disowned by League of Nations. One prompt result of Russia's attack on Finland was the exclusion of the U.S.S.R. from the League of Nations, December 14. The action of the League did not amount to formal expulsion; the League's Council simply declared that the Union, by its own course toward Finland, had put itself out of the League. See LEAGUE OF NATIONS.

Balkan Policy. The Union's supposed design to recover Bessarabia, to increase its influence in the Balkan countries by organizing a block of states friendly to Russia, and particularly, to influence the course of Bulgaria did not progress in the same rapid manner as the policy of expansion in the area between the Balkans and the Baltic. Agreements with Germany as to Poland, though tacitly allowed to include Russian extension of control over Baltic states, gave no clue of

being intended to permit the realization of any such designs of the Union in the Balkans. Prior to Germany's invasion of Poland, Hungary's adherence to the anti-Comintern agreement led Moscow, February 2, to sever relations with Hungary, the Danubian state most closely connected with Germany; after the Russo-German understanding, these relations were resumed. Toward Rumania, the Russian attitude shifted more than once. Reported concentration of Soviet troops along the Rumanian border early in December came to nothing when the operations against Finland became so difficult as to try the resources of the Union. An article in the *Communist International*, attacking Rumania for mistreating racial minorities and demanding a treaty of mutual assistance with that country, was disavowed, December 8, soon after its appearance, by the Soviet radio. In Bulgaria the Russian policy had to deal, after the partition of Poland, with a rising dread of sovietization, among some social elements. Soviet relations with Turkey, long friendly, became severely strained.

See BULGARIA, GREECE, HUNGARY, RUMANIA, TURKEY, and YUGOSLAVIA under *History*.

Relations with United States. A commercial agreement with the United States, made in 1937, was extended for another year on August 4, under terms providing for the Union's purchasing \$40,000,000 of American goods during that time. The action of a German prize crew in taking the captured American freighter *City of Flint* into the Russian Arctic port of Murmansk, led to a diplomatic discussion with Washington late in October (see NEUTRALITY).

Internal Affairs. The eighteenth congress of the Russian Communist Party met in the Kremlin on March 10. Five years had passed since the last previous meeting, in 1934. Joseph Stalin, in his report to the congress, dwelt on the benefits that the purges and liquidations of high place-holders had effected on the membership and spirit of the party. A new central committee was elected. So far as the news of the year showed, the epidemic of wholesale demotions and executions within the ranks of the party was definitely over. One of its features, comparatively little noted among the more conspicuous individual prosecutions, had been the expulsion of a great number of ordinary and undistinguished members from the party. According to information current in 1939 the majority of those expelled, in a number of jurisdictions, were restored to membership by the middle of the year. The purge, in any event, was judged sweeping enough to have produced a change in the composition of the party, especially by thinning the ranks of the so-called "old Bolsheviks" and the partly identical hierarchy of veteran holders of high offices. The party's center of gravity shifted to a somewhat lower age-level, and the number of technically trained holders of important posts increased.

As the nature of the social-economic system of the Union inextricably united government and business, the success of Communist government had as its necessary condition the success of the collective provision of goods, of services, and of the ability of the individual to obtain them. For this reason the continual recurrence of shortages in goods demanded by the public was a matter of definite concern to those in power. Shortages were noted from time to time in the earlier part of the year; in November and also in December—when the military operations against Finland had be-

come extensive enough to put production and transportation under some strain—shortages of a wide variety of goods were reported. As in earlier instances, people connected with the merchandising system were suspected of buying up the goods as these reached the shops, in order to sell at higher prices to customers who could not get them there.

The question of the doctrinal propriety of keeping up a strong central government in a Communist system was discussed during the year, at least from the Stalinist side. A letter written by Joseph Stalin in February to V. L. Ivanoff represented the need for a powerful authority, well backed by troops and police, so long as the Soviet system had to face governments run according to the capitalistic system. This view was amplified in a pamphlet of instructions issued to propagandists in November.

The budget for 1939 provided for the expenditure of 155,067 millions of rubles, as against 127,006 millions for 1938. The estimated expenditure for defense, in particular, was 40,885 millions, as against 27,000 millions for 1938. Rubles at the time were worth about five to the U.S. dollar, according to the Russian official rate, and possible 20 to the dollar if measured by the general purchasing power of the ruble in Russia. The age of liability to military service was reduced to 17 years, for most men, from 19 years; the period of service was lengthened to three years, from two; the usual reasons for exemption were restricted.

Popular elections, held throughout the Union on December 24, were featureless, as the only candidates nominated were those of the Stalinist bloc. Voters to the number of about 93,500,000 came to the polls and about 97 per cent of them voted for the candidates, the rest spoiling their ballots or striking out the names; of the 1,281,008 persons elected, mainly to local and provincial offices, nearly one-third were women; 31 per cent of the whole were members of the Communist Party, and the rest were non-party supporters of Stalin.

UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND. See GREAT BRITAIN; IRELAND, NORTHERN.

UNITED STATES. The area of the United States proper, or the 48 States and the District of Columbia, totaled (1939) 3,026,789 square miles; this excluded open sea and parts of the Great Lakes within territorial limits; but it included 53,013 square miles of other water. The non-contiguous lands under the United States' au-

thority (Alaska, Hawaii, the Philippine Islands, the Panama Canal Zone, Puerto Rico, Guam, the Virgin Islands, and American Samoa) comprised 711,606 square miles. The combined area of the Union and these lands was 3,738,395 square miles.

The population of the 48 States and the District of Columbia, at the census of Apr. 1, 1930, was 122,775,046. An official estimate for July 1, 1938, made by the Bureau of the Census, placed the total population at 130,215,000. No estimates of the population State by State were made for 1938. The population of the non-contiguous lands (as listed above) totaled 14,233,389, as determined in 1929 for the Philippines and in 1930 for the other lands; the Philippines contributed all but 2,061,570 of this total.

The estimated increase in the population of the Union from Apr. 1, 1930, to July 1, 1938, totaled about 7,440,000; this came to slightly more than 6 per cent of the population of 1930, whereas the population had increased from 1920 to 1930 by 15 per cent. The percentage of yearly increase averaged, for 1930-38 (as estimated), about half of that for 1920-30. Interrupted immigration and a slow rise in the ratio of deaths to births were represented as the causes of the slackening pace of the population's increase. (For States' respective areas and populations, see under each State.)

ADMINISTRATION

General Conditions. The year 1939 was marked by a group of features—economic, social, and political—that made an ebb in earlier trends. In public business, there arose both in National sentiment and in the public temper as to States' affairs, a widespread impulse toward economy; political partisan balance swung back, as a result of the elections of 1938, nearer to the old American norm of two fairly matched sides. The National leadership that President Roosevelt had exercised until 1937 almost without systematic opposition became less evident and political organization, the alternative to highly developed personal leadership, came to the fore. In matters of policy foreign affairs and greater military and naval armament took the center of the scene and drew attention away from many of the materialized conceptions of the New Deal. With

regard to the distribution of livings among particular classes of the needy, the Social Security Act was liberalized in a number of respects, but Congress cut down the allowance for the WPA, while attempts to adopt high pensions for the elderly failed in California and in Ohio. In the social field the freedom exercised by organized labor in dealings with employers after the enactment of the Wagner Act was curtailed by new laws in some states where it had gone to its greatest lengths, and the great gains made by labor in conflict with the employer in prior years were not broadly increased. In the economic field, production of goods and services on the capitalistic basis increased as a whole up to midsummer in the face of the tendency toward retrenchment in the public expenditure for the stimulation of prosperity, and on the basis mainly of domestic needs; later in the year the outbreak of a major war in Europe further increased activity in many lines. Comparatively little of the country's idle capital moved from banks into new investment, yet the makers of the more permanent kinds of goods improved their business sufficiently to indicate anticipation that business might return to an era of greater opportunity.

A substantial rise in the number of persons employed throughout the Nation and an increase in their aggregate pay diminished the ranks of the great group that for a decade had been the most obvious concern of public authority, those dependent on public support because of lack of demand for their services. This change removed millions from their former dependency on the Federal Administration and the State and local governments, but it did not by any means wholly do away with industrial unemployment. The farming class, in part dependent on Federal subsidies and special protective legislation, did fairly well in 1939, as in 1938. The major crops of 1939 approximated in most cases the totals of 1938, as to quantity, and as to crops' value at the place of production; but here too, there appeared no prospect of the dependents' very soon becoming able, as a class, to do without Federal dispensations. With regard to organized labor, the majority of employers and the two opposed labor groups—C.I.O. and A. F. of L.—disagreeing thoroughly on particulars, were disposed to agree that the Wagner Labor Act needed revision of some sort; but nowhere did an individual of influence propose that the country entirely give up the Federal regulation of the relations of employer and employee.

Thus for the time being at least, the stress between New Deal and reaction traversed as yet only a limited area of the structure that the New Deal had reared. As 1940, the next campaign year, approached, the political opposition and its popular following reflected fatigue with the President's leadership, skepticism as to the further fertility of the New Deal and as to the worth of some of its actual fruits, and some renewal of the former taste for individual independence from Federal supports and restraints; yet by common consent some of the chief institutions of the New Deal still stood unassailed. The most dangerous reproach made to the Administration was that its acceptable reforms had cost the Nation too high, in a National debt augmented by 20 billion dollars in seven years, a reduced yearly National income coupled with heavy taxation, firmly established unemployment, and fear of new attacks against capital, private incentive, and self-won "privilege."

The President. A number of the public statements of President Roosevelt in 1939 may be mentioned as bearing on his course as head of the Government. The earliest, his message to Congress, was delivered January 4; it presented a dark view of the situation abroad, where "a war which threatened to envelop the world in flames" had "been averted" but where peace was precarious; it upheld religion, democracy, and international good faith as "three institutions indispensable to Americans" and warned against the consequences in case that "the new philosophies of force" should make their way into the Nation; recommended provision for "adequate defense" to ward off sudden attack against the country's vital points, location of facilities for immediate organization of defense on a war-time scale, and the maintenance of an adequate morale in the citizenship; recited, with reference to internal affairs, features of the Administration's record; spoke for legislation to amend the Neutrality Act and the Labor Act; mentioned the need "to get labor and capital at work" to raise the National income to "at least \$80,000,000,000 a year"; and advocated "maintaining Government activities" in order to help carry the country's income to that figure, as "investment for prosperity." The yearly budget message (January 5) called for expenditure of about \$8,995,000,000 in the fiscal year 1940, inclusive of \$1,126,000,000 for National defense, \$2,019,000,000 for relief of the unemployed, and \$1,044,000,000 for public works; and allowed a deficit (by reason of revenues lower than the proposed expenditures) of \$3,326,000,000. A special message of March 20 asked Congress to remove the statutory limit of 30 billions on the total of outstanding U.S. bonds, but held unnecessary, for the time being, any expansion of the limit of 45 billions on the whole U.S. debt. Messages in April and May presented reorganization plans (see under *Organization and Personnel*, below). A special message of July 14 asked that Congress remove the embargo, on materials of war for belligerents, from the Neutrality Act. A message of August 2 communicated to Congress the President's understanding of the limits to the restrictions imposed by the Hatch Political Activity Act (see *POLITICAL ACTIVITY*), which he had signed. A message of September 21 conveyed anew, and now to the special session of Congress, the President's recommendations as to revising the Neutrality Act (see *NEUTRALITY*). Proclamations and executive orders are mentioned in separate articles to which they relate: e.g., *NEUTRALITY*; *THANKSGIVING DAY*.

The President's position as to the domestic matters of chief moment in 1940 was, above all, defensive. His submission (address of May 22 to the American Retail Federation) to the proposal to repeal the taxation of undivided profits, a levy that he had demanded in his message of June 19, 1935, as the means for redistributing wealth, abandoned a conflict that he had first sought. His withdrawal of the nomination of the well-known liberal, T. R. Amlie, for the Interstate Commerce Commission, obviated a clash with the Senate; the President followed this step with another, the withdrawal of Floyd H. Roberts, his nominee for a Federal judgeship in Virginia, previously named without regard to the preference of the State's two conservative Senators, and hence rejected by the Senate. The ever-increasing stress that the President, throughout

REPEAL OF ARMS EMBARGO

After signing the so-called "cash and carry" Neutrality Bill at the White House on Nov. 4, 1939, President Franklin D. Roosevelt, seated, hands pens used in the signing to Senator Key Pittman of Nevada, left, chairman of the Senate Foreign Relations Committee, and Representative Sol Bloom of New York, chairman of the House Foreign Relations Committee. In the background (left to right) are William B. Bankhead, Speaker of the House of Representatives; Secretary of State Cordell Hull, and Vice President John Nance Garner.

the year, laid on strengthening the military and naval defenses and otherwise guarding against foreign attack seemed to some observers a matter of less need, after combatants had become locked, in Europe as in Asia, than in earlier situations; but the moment found the country highly susceptible to the suggestion of an invasion and ready to spend money to prevent it; the employment in shipyards, factories, and mines, for the reinforcement of defenses, paid wages to many, if uncounted, thousands, much as the same money would have done if assigned to ordinary public works. The advent of the war abroad, under these circumstances, helped raise the President's popularity, for many came to feel, as he intimated in his speech by radio on September 3 (see above) that war might jump the ocean to America but that he would strive to prevent its doing so.

Though the President had implied part of the unchecked outflow of Federal deficits (see address to the retailers, May 22) to be virtually a beneficent investment of public money for the improvement of the country and of its prosperity, he released in November a suggestion that the proposed addition of about \$500,000,000 to the total to be expended in the fiscal year 1941 for armaments be provided out of some tax to be created by Congress for this special purpose. The Georgian delegation in Congress (Senator George excepted) approved the plan, but it met with little applause elsewhere. The President had suffered somewhat from increasingly pointed journalistic comment on his tolerance of deficits; notably, one of his speeches of 1932, an invective delivered against the "veritable cancer in the body politic" that had been caused by President Hoover's overspending the Federal revenue, had been raked up against him.

The possibility of the President's becoming a candidate for a third term was much in mind during the year, but he gave no hint, to the public, of his will as to this. Nor had he anything to gain by doing so, since if intending to run he would want to pick his own time to start, while if minded to retire he could better hope to designate a successor by waiting his season.

Organization and Personnel. The administrative organization was changed in a number of ways, chiefly under a new act of Congress granting to the President particular and novel powers of reorganizing the administrative part of the Government.

Reorganization Act of 1939. This measure gave existence to a plan that had been taking shape for years; to a great extent it met recommendations that had been made to Congress by President Roosevelt and by President Hoover before him. The President received the authority to alter the grouping of administrative bureaus and offices in the interest of better functioning and greater economy. The conferred power was limited: it extended only over administrative divisions ranking below departments, so that the Executive authority could not abolish a department, create one, or increase or diminish the number of the ten departmental secretaries; specific exemption from the President's new authority extended to the Civil Service Commission, Coast Guard, Army Engineer Corps, Federal Communications Commission, Power Commission, Trade Commission, General Accounting Office, Interstate Commerce Commission, National Labor Relations Board, Securities and Exchange Commission, Board of Tax Appeals, U.S. Em-

ployees' Compensation Commission, Maritime Commission, Tariff Commission, Veterans' Commission, Mediation Board, Railroad Adjustment Board, Railroad Retirement Board, Mississippi River Commission, Federal Deposit Insurance Commission, and Federal Reserve Board of Governors; the President might not prolong the life of an agency beyond its statutory limit; the abolition of an agency might take place only when its function had been transferred to another or others; and above all, Congress reserved the power to veto, or countermand an Executive change by vote of both houses within 60 days after the President's submitting the plan to it. He was required to submit such a plan whenever he exercised his power under the act.

With regard to the last-mentioned check on the President, the distinction between the means left for disapproving an act of executive reorganization and the ordinary course sufficient to stop a legislative measure was pronounced. The failure to pass either house sufficed to prevent the enactment of an ordinary measure; but only the disapproval of both houses, and that within a limited time, could deprive an executive reorganization of its effect, in accordance with the terms of the Act. The delegation of authority to the President was so thorough (within the field to which it applied) that Congress, to countermand his action in the manner provided under the act, must render a vote of the sort that would be needed to repeal or amend the act itself.

The act carried a provision more or less outside of its main object, authorizing the President to appoint as many as six additional administrative assistants, at pay of \$10,000 a year for each one, and to assign to them any lawful duties that he saw fit.

Reorganizations under the Act. The President submitted on April 25 his *reorganization plan number one*. Congress approved it by default, failing to vote a resolution against it. The plan attached or transferred agencies to five major administrative divisions, three of them new. These five were the President's Executive Office, the Department of Agriculture, the new Federal Security Agency, the new Federal Works Agency, and the new Federal Loan Agency.

The President submitted, May 9, his *reorganization plan number two*, and Congress allowed it to go into effect. This plan dealt mainly with changes of organization among the departments.

For disposal of individual units, by these reorganizations, see below, under *Independent Offices and Establishments*.

Legislative Modification of the Plans. It has been noted that Congress, by not disapproving the two plans of reorganization, let them go into effect. It did intervene on two points. The time that plan number one had set for going into effect was June 25; the corresponding date set in plan number two was June 28. Congress altered the arrangement by voting that both plans should have effect on July 1, the opening day of the fiscal year 1940. Both houses passed a joint resolution, enacted early in June, altering the two dates. The resolution as enacted carried the further provision introduced as an amendment from the Senate floor, that the two plans should not be construed to continue any function or agency beyond its statutory date of expiration. In accordance with this resolution the two plans were put in effect on July 1.

Other Shifts During 1939. Without submit-

ting the subject to Congress the President issued, September 9, an executive order for the overhauling of the Executive Office. This followed closely on the outbreak of war between Germany and the British and French governments. The President's order expressed the object "that the Nation may not again be caught unaware" in an international crisis. The authority for changes to be made was asserted to lie in plan number one. On October 14 the President ordered the consolidation of the National Defense Power Committee with the National Power Policy Committee. Another executive order, issued September 6 changed the distribution of Federal authority in the administration of the Panama Canal Zone; Brig. Gen. C. S. Ridley, Governor of the Canal Zone, was put under the orders of the officer commanding the troops stationed in the Zone, Maj. Gen. David L. Stone, "as to the operation of the Panama Canal and all duties, matters, and transactions affecting the Canal Zone."

Personnel. The number of the civil employees of the Federal Government rose, from 919,161, as reported for December, 1938, to 920,310 for June 30, 1939 (just before the reorganization plans went into effect).

Among changes in conspicuous administrative posts were: the appointment of Frank Murphy, ex-Governor of Michigan, to be Attorney-General, succeeding Homer S. Cummings, in January; that of Fred H. Brown, outgoing Democratic Senator from New Hampshire, to succeed Richard N. Elliott as Comptroller-General in April, for a term of 15 years; the resignation, effective December 31, of John W. Hanes as Under-Secretary of the Treasury; that of Wayne C. Taylor, February 16, as Assistant Secretary of the Treasury; the appointment of Paul V. McNutt, ex-Governor of Indiana, to the new post of Federal Security Administrator, under reorganization plan number one (July 10); the naming of Francis B. Sayre, Assistant Secretary of State, to be U.S. High Commissioner to the Philippines, July 26, in place of McNutt; the appointment of Henry F. Grady, in Sayre's place, to be Assistant Secretary of State, August 4; that of Daniel C. Roper, ex-Secretary of Commerce, as Minister to Canada, in May; Myron C. Taylor's nomination, December 23, with the rank of Ambassador, as personal representative of the President on a mission to Pope Pius XII, to promote peace among the nations at war; and the assignment, late in December, of Joseph E. Davies, U.S. Ambassador to Belgium, as adviser to the Department of State, on foreign trade and the war in Europe.

Departments and Agencies. (For detailed treatment of those not fully discussed below, see separate articles.) A great number of the departments and agencies of the administrative branch of the Government were affected by the reorganizations carried out under the Reorganization Act; see *Organization and Personnel*. The general tendency of the change was to restore to long-established departments much of their earlier proportionate shares of the entirety of distributed administrative authority; they regained part of the relative importance that they had lost by the creation of separate agencies to perform additional Federal functions in their several fields.

A number of elements in the general situation of the country modified the courses of some of the administrative bodies. Misgivings as to the

Nation's security, excited by the condition of Europe and coupled with the President's policy of greater armaments, increased the activity of the departments of the Navy and of War. The rise of sentiment for Federal economy and the spread of employment promoted reduction in the WPA and other Federal operations for the support of the unemployed. The foreign situation encouraged new efforts to use Federal credit for stimulating the exportation of existing excess in products of the farm, through the agricultural agencies and some of the Federal bodies acting as middlemen between the Treasury and the individual recipients of loans and subsidies. The spread of antagonism to recent strife in and with organized labor impeded the Federal agencies for the control of the relations of employee and employer. The altered political balance helped produce an act of Congress for the TVA's acquisition of the facilities of a corporate competitor that might otherwise have been extinguished by the duplication of facilities at public expense.

Foreign Affairs. The United States had throughout 1939 a number of serious matters of unfinished business in its dealings with other governments. These included the closely related problems of trade with Japan and trade with China. With these mingled the question of the attitude to be taken toward Japan with regard to its frank pursuit of conquest in the Chinese territories. The difference with Mexico over the latter's expropriation of American producers of petroleum in that country remained in the way of good relations.

In the course of 1939 new and still more insistent foreign problems came up. The United States, a signatory of the Kellogg-Briand treaty against military aggression, had to shape a policy as to two of the lesser European powers, Poland—seized by Germany and Russia in concert—and Finland—attacked by her greater neighbor, Russia, at the outset of winter. Above all, the outbreak of war between Germany and allied France and Great Britain overcast the economic prospects of all the commercial nations and brought to those not already participants the risk of being drawn into the struggle. This great disturbance swept upon the international scene at a time when the United States was busily engaged in efforts to carry out more fully the plans, long prosecuted, of increasing its foreign trade by commercial agreements with individual governments, involving concessions in tariffs or in other means against the entry of merchandise.

See ARGENTINA, BRAZIL, CANADA, CHILE, CHINA, COLOMBIA, COSTA RICA, CUBA, DOMINICAN REPUBLIC, ECUADOR, FINLAND, FRANCE, GERMANY, GREAT BRITAIN, HAITI, JAPAN, LIBERIA, MEXICO, NICARAGUA, NORWAY, PANAMA, PARAGUAY, PHILIPPINES, SALVADOR, URUGUAY, VENEZUELA under *History*.

Problems of the European War. The course of the Government with regard to its position as a neutral in the European war of 1939 is stated in the article on NEUTRALITY. In that course the United States amended its Neutrality Act, which had forbidden the export of materials of war, which Germany lacking the command of the seas could not get; the amended act allowed exports of such materials, after purchaser's payment for them, but shut out American ships from trade with belligerents in the area of war. Apart from this and other steps shaping that portion of the policy of neutrality which lay wholly

within the authority of the United States, several allied matters involving the co-operation of foreign governments may be mentioned. The recognition of the government of Poland was continued, after the conquest of Polish territory, a step tending to encourage the fugitive Polish government not to cede, as some Czecho-Slovakian officials had done, to the powers occupying the country. With regard to the operations of belligerents in the Western Hemisphere and particularly in waters adjacent to the Americas, the United States promoted joint action among American republics in order to prevent hostilities in a broad area of the Atlantic Ocean (see PAN-AMERICANISM).

The naval engagement off the mouth of the Rio de la Plata, December 13, brought the occasion for a more definite commitment of the United States and other American republics as to maintaining neutrality in the designated protective belt of seas. President Boyd of Panama sent to the belligerent governments of Great Britain, France, and Germany, December 23, a protest against the attempt of the German warship *Graf von Spee* to overhual the French merchantman *Formose*, the flight of the German warship into the waters of the River Plate, its scuttling there, and the "sinking or detention of German vessels by British vessels in American waters," with particular reference to the *Duesseldorf* and the *Ussukuma*; all these matters were declared to "compromise the aims of continental protection provided for by the Declaration of Panama"; the American nations were declared to have resolved to start consulting upon further steps—among them, "those which would prevent belligerent vessels from supplying themselves and repairing damages in American ports" if they had committed warlike acts in the waters of the declared zone. While representatives of all 21 republics agreed upon the protest, as its own text asserted, it appeared soon after that Uruguay wanted to distinguish between ships destroying merchantmen and ships protecting them.

The British and French declarations, November 21 and after, of intentions to establish a blockade against exports of German goods in neutral vessels brought on another clash of belligerent and neutral interests. The question arose whether the belligerent could thus extend action against an adversary without overstepping a neutral's right under international law, to receive goods thus exported. The Department of State took the position that importers were entitled to obtain goods from Germany, in neutral carriers, and that reparation could be demanded for harm done to those relying on the receipt of such goods, if the shipments were interned or seized. The matter was not settled in 1939.

The position of the United States on the status of Czecho-Slovakia, seized by German troops in March and thereafter divided into separate dependencies, was one of non-recognition as to the new status; the Czecho-Slovak Minister to the United States retained his accredited position; the Government which he was held to represent became the fugitive provisional Czecho-Slovak government recognized by Great Britain and France.

With regard to Finland, the United States, when the Russians invaded Finland in December, undertook to lend a degree of support to the invaded nation without going to the length of hostilities with Russia. Finland, already heavily

attacked, made its usual payment, December 15, of the sum then falling due on its intergovernmental debt to the United States; as had been arranged, the money was received by the Treasury and set aside to await its appropriation, by the forthcoming session of Congress, "for the benefit of the Finnish people." Secretary of State Hull had previously (November 29) formally tendered the good offices of the United States toward composing the disagreement of Russia and Finland; Russia attacking immediately after, President Roosevelt issued to the press, December 1, a brief statement condemning, though not by name, the Russian government as aggressor; but there was no severance of diplomatic relations with Russia.

The methods used at Washington for helping the Finns included the application (December 2) of the "moral embargo" against Russia, the grant (December 10) of a credit of \$10,000,000 to the Finnish government through the Export-Import Bank (q.v.), and the permission (December 18) for Finland to take from manufacturers about 40 airplanes that would otherwise have constituted the makers' next deliveries to the Navy. As represented in the press the bank credit could not be used for Finnish purchases of materials of war; but only for buying such other goods as American agricultural products. The "moral embargo," a stoppage of exports of specified kinds to certain governments, not by authority, but by the influence or suggestion of the Department of State, had first been invoked against Japanese purchases of airplanes and material therefor; some additional goods were later named as affected by this embargo. Russia was simply added as the second member of the black list.

Relations with Japan. Of the many stresses affecting the relations with Japan during the year, the most obviously important may be mentioned, since they go far toward explaining the nature of occurrences in these relations themselves. The Japanese forces continued, through 1938, the effort to overcome the Chinese republican government and to supplant it. The chief European governments engaged in war within their own continent, became less able to hinder Japanese designs in the Far East. The Japanese government neither carried out wholly nor withdrew the plan, previously adopted, of shutting or partly closing the "open door" to trade between the Chinese ports and the occidental nations. The existing treaty of commerce between Japan and the United States was subject to termination on six months' notice. The "moral embargo," previously mentioned in connection with the Russo-Finnish situation, had been in effect against Japanese purchases of American-made airplanes since 1937.

In May, 1939, the introduction of Japanese troops into Kulangsu, the international settlement at Amoy, followed the killing of a pro-Japanese official of the settlement. The incident formed one of a succession of steps cramping liberty at occidental merchants' trading-posts. The United States, acting in harmony with the British and French governments, landed a small force from a naval vessel. The Japanese move, which to some observers wore the air of an introduction to the eviction of the white foreigners from the Chinese ports, passed into the province of diplomatic discussion; there it lingered for about five months. On October 18 the difficulty was reported to have been settled by an agreement that in-

cluded the appointment of Japanese policemen in this particular settlement.

In the interval the United States made a move of great potential significance to both Americans and Japanese. On July 26 Secretary of State Hull gave notice to the Japanese Ambassador that the United States called for the termination of the two governments' commercial treaty of 1911. The six months' notice under the treaty's terms left it in force until January 26, 1940. Japan, sending a great portion of its yearly total, by value, of exports to the American market and receiving from it great quantities of goods of which the purchaser stood in especial need, had to think of the risk of losing American commerce in the event that the treaty were not renewed. In the United States the manufacturers of silk likewise ran risk of damage in the fall of the treaty, since Japan supplied most of their raw material.

On October 19, just after the announcement of the compromise in the dispute over Kulangsu, Ambassador Grew, speaking at a luncheon in Tokyo, declared bluntly that "bombings, indignities, and manifold interferences with American rights in China" had created deep resentment in the United States. The fact that Grew was but newly returned from consultation with his own Government tended to assure his hearers that his frankness was deliberate and premeditated. The "moral embargo" as to both Russia and Japan was augmented by the addition of molybdenum and of aluminum to the list of materials that "should not" be exported (December 15) and by the further addition of devices for the improvement of aeronautical fuel (December 20). No attempt had been made to discourage American exportation of gasoline to Japan; hence the Japanese had no immediate need of equipment for turning out gasoline for aviation; blacklisting such goods consequently wore the air of preparation for cutting off Japan's (and Russia's) supplies of American gasoline. There were no definite indications at the end of the year as to the course of negotiations for a new commercial treaty with Japan.

Dealings with the Vatican. By December Italy remained the only neutral among the major powers of Europe and indeed, after the United States, the most powerful neutral in the world. It became a matter of policy to seek to unite the influence of these two governments on behalf of the rights of neutrals. Within Italy, but possessing a recognized temporal independence, was moreover the Vatican, which sought to exert the far-reaching power of the Papacy against the spread of war. The United States approached the Vatican, first, of the two powers in Italy. On December 23 President Roosevelt announced the appointment of Myron C. Taylor as his personal representative at the Vatican, with the (courtesy) rank of Ambassador; the appointment did not formally reconstitute the diplomatic relations with the Roman Catholic temporal power, which had lapsed more than seventy years before, but it afforded facility for action in common when the occasion might arise. In the case of the Italian government, the still-recent conquests of Ethiopia and Albania rendered it difficult for the United States to find common ground on which the two powers could directly unite, and nothing was accomplished in that direction up to the end of the year.

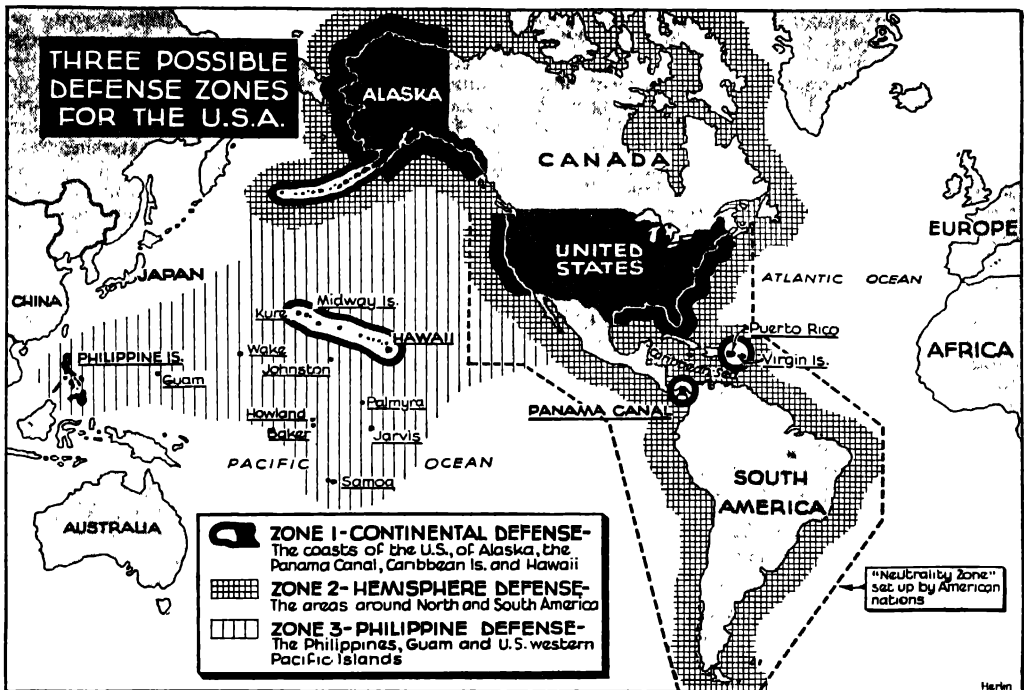

Efforts for New Trade Agreements. Trade

agreements between the United States and three governments were signed and went into force in 1939. These governments and the dates when the respective treaties went into force were: Turkey, May 5; Venezuela, December 16; Cuba (a supplementary agreement), December 23. Negotiations for trade agreements, new or superseding, were in progress or in view at the end of the year, with the following governments: Belgium, Chile, and Canada. Negotiations with Chile and Uruguay, while also still nominally in progress at the year-end, had come to a standstill. See **TRADE AGREEMENTS**.

A part of the subject of inter-American foreign relations was the policy of helping to rehabilitate Latin-American republics' ability to purchase goods in the United States' market. Brazil had, in 1937, received from the United States the option to acquire, for other value, gold up to the sum of \$60,000,000 from the U.S. Treasury. On Oct. 16, 1939, about six weeks after the start of the war in Europe, Brazil began buying gold under this agreement; as that country began to find it difficult to make customary purchases from European lands, the gold thus obtained gave it the power to shift its shopping to the United States. The arrangement was such as, if found satisfactory in its working, might be applied to other American republics. President Somoza of Nicaragua visited Washington in May and obtained for his government, May 22, a credit of \$2,000,000 that might be drawn from the Export-Import Bank for the cost of work on Nicaraguan roads, other public improvements, and economic betterment, in conformity with ideas that President Somoza had discussed with President Roosevelt. The question of hastening, through official action, the reorganization of Latin-American dollar debts in default since the lowest days of the economic depression of the '30s, became a subject of study in Washington late in the year; these debts, as they then were, helped impede the flow of trade that Secretary Hull's policy of commercial reciprocity sought to set in motion.

Claims Against Germany. See **INTERNATIONAL LAW** under *Private Claims*.

Defense. The policy of augmenting the means of National defense, put in force in 1938, continued in 1939 and expanded greatly after the outbreak of war in Europe. The President brought up the subject thrice in successive messages to the incipient regular session of Congress, in the course of nine days: his annual message (January 4) impressed the need of fuller protection in a day of dictators and swift warfare; his budget message proposed (January 5) appropriation of about \$210,000,000 for expenditure on military and naval strength by June 30, 1940, above other authorized money; and his message on defense (January 12) argued for providing this sum and—including it—an authorization of \$525,000,000, for the Army (\$450,000,000), Navy (\$65,000,000), and aeronautical pilots (\$10,000,000). Congress made little effort to pare down these or usual demands. The session's chief enactments for defense accordingly carried, in appropriations for the support of the existing military and naval establishments and for their improvement, well over \$1,500,000,000: of this, the yearly appropriation for the Army carried \$508,789,824, and a supplementary military appropriation act, \$223,389,047; the yearly naval appropriation, \$773,049,151, including about \$253,600,000 toward constructing and arming new vessels. This billion and a half exceeded either the

Courtesy of New York Times

\$1,336,000,000 devoted to like purpose in the President's budget for the year ending with June 30, 1940, or that for the next previous year (1939), when \$1,017,000,000 was thus spent, or the figures for any other year of the decade. The higher appropriations gave high impetus to the program of armament that Congress had authorized in 1938 but that the Administration had hardly yet found time to put to its full pace.

On October 3 the President let it be known that he had decided that the authority lay with him to increase the number of the soldiers, sailors, and marines in the Federal service by about 100,000, and that the Navy and War departments would expend what might be necessary for housing, hospitalization, and the renovation of destroyers. Thus opened the way to further possible whipping-up of the increase in armament, before the next action of Congress.

Steps toward effecting in detail the work of augmenting armament grew more frequent as the year advanced. Progress was made in several determined directions, chiefly toward increasing the fleet; building up the number of the regular Army and its material; producing a huge number of airplanes, to put the United States quickly among the foremost possessors of these implements of war, and educating, with equal haste, the thousands of men needed for tending and flying the planes.

The War Department contracted with civilian schools to train a thousand mechanics for aeronautical duty. By August 10 the Government had contracted for planes and aeronautic engines to cost \$85,000,000 of the sum provided in the supplementary appropriation. Thousands went to work at shipbuilding; the five great navy yards had about 62,000 engaged by August 11. The creation of military aeronautical bases—one of the necessary accompaniments of greater aerial forces—

went on steadily within the Continental United States; in outlying territory, the Army (September 6) acquired a tract of about 1800 acres for a flyers' base at Punta Borinquen, Puerto Rico. Under the authority of a proclamation of the President declaring (September 8) a limited emergency following the outbreak of war among European nations, the Army and Navy started active efforts to recruit their forces to totals more nearly equal to the allowed strength set by statute.

Aid to the Needy. The failure of Congress to appropriate all that the President had recommended in January for the further expenditures of the WPA prior to the end of June was followed by a considerable reduction in the number of those on the WPA's payrolls. See OLD-AGE PENSIONS; RELIEF; WORK PROJECTS ADMINISTRATION.

Government and Labor. The Government's course in the regulation of organized employees' relations with employers, was featured by the effort to establish the level of wages and hours required by the Wages-and-Hours Act of 1938; by a rather protracted strike of miners of soft coal in the Appalachian field, the subsequent liquidation of the Bituminous Coal Commission after it had initiated the re-establishment of prices for coal, and the preparations of the Secretary of the Interior, as the Commission's heir, to renew the application of fixed prices for soft coal; adverse times came upon the NLRB, which lost some important cases in the SUPREME COURT (q.v.), incurred the criticism of both the warring branches of organized labor, and finally underwent investigation by a committee of the House of Representatives. The President brought about a conference between leaders of the C.I.O. and of the A. F. of L., which began March 7 and was abandoned in June after either side had failed to agree to the other's proposals. The conflict be-

tween the two organizations affected the Government's relations to the situation of labor throughout the year.

The change in wages and hours went into effect on October 24. It reduced the working week of those affected to 42 hours, from 44; their lawful minimum rate of pay rose to 30 cents an hour. In principle the regulations went into effect throughout the country, but the law allowed exceptions. The minimum of 32½ cents an hour was especially provided for those engaged in the production of textiles and of seamless hosiery. The changes made more difference in the factories of the Southern midlands than elsewhere, for here a great industrial development had ripened since the beginning of the century, with the aid of cheap and willing labor; nearly one-third of the persons to get higher wages by the new regulations were reported to be in North and South Carolina, Georgia, and Tennessee. The questions as to how closely the new requirements would be enforced and how far they would be opposed by legal process remained for the time unanswered.

The Bituminous Coal Commission proposed, June 16, its new scale of minimum prices for the different sorts of bituminous coal of the Appalachian area. The Commission came to an end a fortnight later, under the terms of the President's reorganization of agencies. Its passing marked the abandonment of an effort to regulate one great industry as a whole, through a single, separate body. It had once before, in 1937, set up regulations as to the minimum prices for soft coal, but it had revoked them, under pressure of suits and injunctions, in February, 1938. Its final proposal of a new scale for the Appalachian field came a month after the conclusion of a six weeks' strike of the United Mine Workers (C.I.O.). This union gained by the settlement of the strike the requirement that, with few exceptions, all miners in the field, including the A. F. of L.'s Progressive Mine Workers, must belong to its organization. As the prices for coal and the amount of work and of wages for the miners stood in close connection, the outcome worked a double advantage for winning union.

Federal Electric Enterprise. The Tennessee Valley Authority came safely through an investigation (see below, under *Legislation*). Its acquisition of the properties of the Tennessee Electric Power Company is treated in the article on TENNESSEE. This acquisition brought trouble with it, for Tennessee counties that had derived indispensable revenue from the taxation of these properties stood to suffer unless the Government should make good their loss by permitting itself to be taxed or by making periodical equivalent grants. Georgia's new legislation for local taxation of the TVA was a like case in point. The problem of what to do in this matter bore on another debated subject, that of whether the operation of the TVA was paying its way. The partisan dispute on this matter was sterile, as it failed to settle, to the satisfaction of all, whether the Federal advantage secured by removal of former private property from liability to taxation achieved a public gain. The chief engineer of the TVA's electric generating system reported, October 13, that September's revenue

of \$1,250,000 indicated \$15,000,000 a year, or enough to meet current electric costs, allotment of common costs for the several purposes of the dams in the Tennessee River, and a reasonable rate of interest on Federal commitments of capital for the electric enterprise. But in October the protracted lack of rain in the watershed rendered the flow of the river insufficient for the creation of current to meet the demand. The Authority had then to resort to generating electricity at the old Sheffield steam generator at Muscle Shoals. Other steam generators, formerly part of the Tennessee Electric properties, were reported also to have been put to use. The question of the constitutionality of the Federal Government's thus selling electricity other than that from its original hydroelectrical development had never been answered by the Supreme Court.

Independent Offices and Establishments.

The following is a list of the more prominent offices and establishments which functioned as independent agencies of the Federal government, as of June 30, 1939, together with a note on the disposition of those agencies affected by the administrative reorganization of July 1. An asterisk preceding the name of an agency indicates that it is discussed as a separate topic in this volume. Other agencies are included in the articles to which cross-reference is made.

- *Civil Service Commission.
- *Interstate Commerce Commission (ICC).
- U.S. Railroad Administration, transferred to the Treasury Department for conclusion of its affairs.
- Federal Reserve Board. See BANKS AND BANKING.
- *Federal Trade Commission (FTC).
- U.S. Tariff Commission.
- U.S. Board of Tax Appeals.
- Federal Power Commission. See ELECTRIC LIGHT AND POWER.
- Federal Housing Administration (FHA), transferred to the new *Federal Loan Agency on July 1. See HOUSING.
- *Veterans Administration.
- Joint Board (Army and Navy).
- Aeronautical Board.
- U.S. Council of National Defense.
- National Advisory Committee for Aeronautics.
- Federal Board of Surveys and Maps.
- Inland Waterways Corporation, transferred to the Department of Commerce.
- *Reconstruction Finance Corporation (RFC), transferred to the *Federal Loan Agency on July 1.
- *Federal Home Loan Bank Board, with its subsidiaries, the Home Owners Loan Corporation (HOLC) and the Federal Savings and Loan Insurance Corporation, transferred to the *Federal Loan Agency, July 1.
- *Tennessee Valley Authority (TVA).
- Electric Home and Farm Authority (EHFA), transferred to the *Federal Loan Agency.
- Rural Electrification Administration (REA), transferred to the Department of Agriculture. See ELECTRIC LIGHT AND POWER.
- *Farm Credit Administration (FCA), with its subsidiary, the Federal Farm Mortgage Corporation, transferred to the Department of Agriculture.
- Federal Emergency Administration of Public Works, officially renamed the *Public Works Administration (PWA) and transferred to the new *Federal Works Agency.
- Central Statistical Committee, abolished.
- Central Statistical Board (CSB), transferred to the Bureau of the Budget now under the jurisdiction of the Executive Office.
- Federal Emergency Relief Administration (FERA), defunct.
- National Munitions Control Board.
- Works Progress Administration (WPA), changed to the *Work Projects Administration (WPA) and transferred to the *Federal Works Agency.
- *National Youth Administration (NYA), transferred from the Works Progress Administration to the new *Federal Security Agency.
- *Civilian Conservation Corps (CCC), transferred to the *Federal Security Agency.
- Foreign Service Buildings Commission, transferred to the Department of State.
- *Federal Deposit Insurance Corporation (FDIC).

*Commodity Credit Corporation, transferred to the Department of Agriculture.

Securities and Exchange Commission (SEC). See FINANCIAL REVIEW.

Foreign Trade Zones Board.

National Archives.

National Resources Committee, changed to *National Resources Planning Board and transferred to the Executive Office.

*Export-Import Bank of Washington (EIB), transferred to the *Federal Loan Agency.

Federal Prison Industries, Inc., transferred to the Department of Justice. See PRISONS.

*National Labor Relations Board (NLRB).

War Finance Corporation, transferred to the Treasury Department for liquidation.

Railroad Retirement Board. See RAILWAYS.

*Federal Communications Commission (FCC).

*Social Security Board (SSB), transferred to the *Federal Security Agency.

National Power Policy Committee. See ELECTRIC LIGHT AND POWER.

U.S. Maritime Commission. See SHIPPING.

Federal Fire Council.

Disaster Loan Corporation, transferred to the *Federal Loan Agency.

Codification Board.

*National Mediation Board.

Civil Aeronautics Authority (CAA). See AERONAUTICS.

National Emergency Council (NEC), abolished as such on July 1. The Council's film and radio functions were transferred to the *Office of Education. Other functions were assumed by an *Office of Government Reports established under the jurisdiction of the Executive Office. (See EDUCATION, OFFICE OF and GOVERNMENT REPORTS, OFFICE OF.)

Maritime Labor Board. See SHIPPING.

The new independent agencies set up on July 1, as a result of the government reorganization, were the following:

*Federal Loan Agency.

*Federal Security Agency.

*Federal Works Agency.

The Cabinet. The members of the President's cabinet during 1939 were as follows: Department of State, Cordell Hull, Secretary; Treasury Department, Henry Morgenthau, Jr., Secretary; War Department, Harry H. Woodring, Secretary; Department of Justice, Frank Murphy, Attorney General; Post Office Department, James A. Farley, Attorney General; Navy Department, Claude A. Swanson, Secretary until his death in July, 1939, when Charles Edison became Acting Secretary; Department of the Interior, Harold L. Ickes, Secretary; Department of Agriculture, Henry Agard Wallace, Secretary; Department of Commerce, Harry Lloyd Hopkins, Secretary; Department of Labor, Frances Perkins, Secretary. For the activities of the ten government departments, see the topics listed under the title of each, as STATE, U.S. DEPARTMENT OF.

LEGISLATION

76th Congress. (For lists of members and those holding special posts, see CONGRESS). First regular session met January 3; ended August 5. The spirit of the members was affected in two ways by the elections of November, 1938: there appeared a numerous new element composed of 10 Senators and 104 Representatives beginning their initial terms on January 3; seven of the novice Senators and the majority of the new recruits to the House were Republicans; apart from this change in partisan complexion, the results of the election were of a kind to affect the spirit of the remaining Democratic majority, straining the bond by which former success had bound them to the President's leadership. Members showed themselves conscious of the fresh signs of opposition to new taxes, manifest in State legislatures; they felt the significance of the vote in northern agricultural States which

had largely favored Republicans and, by implication, voted non-confidence in the Federal treatment of farmers' troubles. Considerable sentiment for revising the Wagner labor-relations act was offset by realization of the difficulty of approaching so bristling a question in a hurry. The obvious political considerations predisposed Congress to favor farmers in its appropriations, to economize somewhat on the outgo of money through the WPA, and to pay more attention to avoiding increased taxes than to bringing Federal income and outgo into balance.

Chief Results of the Session. Congress contested successfully a number of the measures that the President's opponents thought likely to serve his purposes. It made amends by granting many appropriations and proposals unlikely to afford him great help in conflict with the opposition and by even increasing items of proposed expenditure when farmers' conservative tendencies of 1938 had to be rewarded. The abolition of the frankly punitive tax that the New Deal had imposed on the yearly undivided profits of the corporations tended to steady the economic structure in the position regarded as proper by the holders of investments, rather than by the advocates of redistribution. The limited grant of power to the President to initiate plans for reorganizing some of the many bureaus of the administrative government left his proposals subject to a legislative veto. The President's proposal of a measure to permit extensive lending to private borrowers, out of funds necessarily though not obviously nor on the face of the books guaranteed by the Treasury, met with a rebuff that bore an apparent relation to the President's own effort to cast out from Congress, a year before, Democrats who had been found wanting. The chief bills enacted by the session were as follows:

Agricultural. Agricultural Appropriation Act, providing \$1,194,173,633 for use in the fiscal year 1940, principally in subventions to farmers; Insect Pest Act, for Federal destruction of insect pests (appropriation, \$1,750,000);

Commerce and Banking. The Commerce Under-Secretary Act giving the Secretary of Commerce an aid, designated to perform the Secretary's duties in case of need; Export-Import Bank Act, extending the life of this bank for two years and increasing to \$900,000,000 the allowed debt of the Commodity Credit Corporation; Petroleum-Regulating Act, keeping the Petroleum Act of 1935 in force for three years more; Monopoly Appropriation Act, increasing to \$1,100,000 the funds for investigating monopolies through the Temporary National Economic Committee and related Federal Departments; Federal Reserve Note Act, granting two more years in which the Federal Reserve system might issue notes on the security of direct obligations of the Government;

Support for Administrative Bodies. Treasury and Postal Appropriation Act, providing \$909,627,810 for the work of the Treasury in the fiscal year 1940 and \$790,987,244 (largely recoverable from receipts) for the Post Office; Independent Offices Act providing \$1,678,847,840 for the yearly expenditure of Federal offices, chiefly the Social Security Board (\$351,000,000) and the Tennessee Valley Authority (\$561,093,000); Interior Department Appropriation Act, carrying \$172,604,765 for the year's expenditures of this department, inclusive of the cost of Federal work on several great projects for utilizing rivers' waters; State, Justice, and Commerce Departments'

Act appropriating for these three departments a total of \$122,177,220;

Federal Monetary and Debt-Incurring Powers. Monetary Act, extending for two years the President's authority to alter the gold value of the dollar, and raising the price payable at the Mint for new-mined domestic silver to 55 per cent of its nominal monetary parity; Public Debt Act, removing the limitation of the Federal bonded debt to \$30,000,000,000 but retaining the existing limit of the whole Federal debt, at \$45,000,000,000;

Organization and Personnel. Governmental Reorganization Act, granting the President authority to initiate plans to shift, merge, or abolish the functions of some of the governing agencies, which plans would go into force if not rejected by Congress in 60 days after submission (for details, see above, under *Administration*); Civil Service Retirement Act, making provisions for the retirement of other employees in the classified Civil Service apply to postmasters in the Civil Service;

Aid for the Needy. Relief Appropriation Act, providing \$1,755,600,000 for expenditure in the forthcoming year by the Work Projects Administration (\$1,477,600,000), National Youth Administration (\$100,000,000), and other connected bodies; two Relief Deficiency Acts, providing respectively \$725,000,000 and an additional \$100,000,000 for supplementing the provisions for relief in the fiscal year 1939;

To promote public and private construction—Housing Act, extending for two years the authority of the Housing Administrator to insure mortgages and permitting a higher total of insured mortgages; War Department's Civil Appropriation Act, carrying \$305,188,584, chiefly for public works; TVA Amendment Act, modifying the power of the TVA to borrow and specifying purposes for which it might incur further debt;

Means of National Defense. Military Appropriation Act, carrying \$508,789,824 for military expenditure through the fiscal year 1940; Supplemental Appropriation Act, granting another \$223,389,047 for this purpose; Naval Appropriation Act similarly carrying \$773,049,151; Naval Public Works Act, providing for dry docks and other naval construction in divers parts of the world, to cost \$36,964,500; National Defense Act, to augment and improve in a variety of ways, the military organization; Naval Air Base Act, directing improvements, to the possible cost of \$65,000,000, at 15 Pacific and other flying bases; Strategic War Materials Act, for accumulating reserves of foreign materials potentially needful for making goods for defense; Naval Auxiliary Vessel Act, authorizing purchase and conversion of vessels (in addition to construction thereof) for auxiliaries to the Navy; Naval Aviation Reserve Act, to create a body of commissioned aviators in the Naval Reserve; Panama Road Act, authorizing \$1,500,000 to help Panama build a road to aid the defense of the Panama Canal; Battleship Act, for modernizing five battleships; Military Reservation Act, to permit the purchase of tracts at over a dozen military posts;

Political Practices. Political Activity Act, forbidding the intimidation of persons with regard to their voting on a Federal office, forbidding persons in the Federal administrative employ from interfering in the election for such an office, and making it unlawful for members of the executive branch of the Government (leading positions excepted) to participate in political partisanship. See *POLITICAL ACTIVITY, RESTRICTION OF*.

Taxation. Public Salary Tax Act, subjecting the pay of States' employees to the Federal income tax and allowing States to tax Federal employees' pay; Revenue Act, allowing the tax on undistributed profits of corporations to expire and taxing large corporations' net incomes at 18 per cent instead of graduated rates; District of Columbia Tax Act, imposing an income tax on the inhabitants of the District;

Pensions and Special Aids. Social Security Act, halting the statutory rise in the taxes to provide old-age insurance, and making Federal contribution to States' old-age assistance more liberal; Unemployment Compensation Act, adding to the Federal contribution to the States' expenses for administering unemployment insurance;

Railroads. Railroad Bankruptcy Act, opening temporarily to certain railroads quick means of adjusting defaulted debt with consent from the majority of the creditors concerned.

Bills That Failed. Four important measures sought by the President did not get the approval of the regular session. One would have removed from the existing Neutrality Act the mandate that the President put an embargo on the exportation of munitions to belligerents in case of war abroad (this, however, was done by the later special session). The second, a measure for stimulating business by making loans that would be contingent liabilities of the Federal Government but not part of its statutory debt, would have provided \$3,000,000,000 for this purpose. The third, a further appropriation of \$800,000,000 toward the operations of the U.S. Housing Authority, was defeated through an adverse vote in the House in the closing period of the session; the bill had not been generally read by the members, but Gore of Tennessee declared on the floor that the advances to be made by the USHA would not necessarily be self-liquidating under the terms of the bill and that furthermore that body would gain authority to contract to pay out totals of \$45,000,000 a year for 60 years. The fourth of these bills was a proposed deficiency appropriation of \$50,000,000 toward relief for the poor.

Investigations. Among the inquiries carried on in 1939 by committees created by one or both houses of Congress several were of general public interest and concern. Among these were the proceedings of the Dies Committee, the Monopoly Investigating Committee, the committee investigating the TVA, the La Follette Committee, and the committee investigating the NLRB. The Dies Committee, a holdover from the 75th Congress, was officially the House of Representatives' Special Committee for the Investigation of Un-American Activities; headed by Martin Dies, it continued to bring to notice definite assertions as to the alleged efforts of pro-Nazis and of Communists to organize means of acting against the institutions of the United States. For details of its work see *DIES COMMITTEE*. The Monopoly Investigating Committee, a body created by an enactment of the 75th Congress, was officially the Temporary National Economic Committee, a joint committee of Congress, composed of 3 Senators, 3 Representatives, and persons selected from 6 Federal departments and offices; its inquiry ranged through many tendencies and practices of business, giving special consideration to their bearings on the possible growth of monopoly. The investigation of the TVA was carried on by another offspring of the 75th Congress, the Joint Committee to Investigate the

STRENGTHENING CANAL DEFENSES

Brig. Gen. Joseph M. Cummings, newly appointed commanding general of the Atlantic sector of the Panama Canal Department, inspecting units of the First Coast Artillery upon his arrival at Cristobal Oct. 28, 1939. At his right side is Capt. Ralph W. Russell

Tennessee Valley Authority. The La Follette committee, or Senate Civil Liberties Investigating Committee, was officially only a long-established subcommittee of the Senate's standing committee on labor; it continued to seek and from time to time to make public matter indicative of lawless oppression practised by employers and capitalists against the more active labor unions. The investigation of the NLRB was the work of a new body, the Special Committee of the House for Investigating the National Labor Relations Board; it became productive late in the year.

The committee investigating the TVA, alone of these inquiries, finished its assignment. On April 3 it rendered a report to Congress rejecting the charges of dishonesty brought against his former colleagues by Dr. Arthur E. Morgan, ousted chairman of the TVA, during testimony in 1938. The committee had 5 Democratic, 1 Independent Republican—Senator Frazier of North Dakota—and 3 regular Republican members. The exonerating report was signed by the five Democrats and by the Republican, Frazier; it declared the Morgan charges "without foundation," held the TVA's personnel "able, honest, and efficient," judged the Comptroller-General's criticisms of the TVA largely baseless, approved the TVA's acquisitions of land as "efficiently and honestly managed," admitted that the TVA's methods of accounting had been "extremely unsatisfactory" before 1938, asserted that they had since been corrected, and recommended that the Comptroller-General's audit of the TVA's accounts be discontinued and the task turned over to a private auditing firm. The minority signed a strenuously opposite report declaring the pretension of the TVA to serve as a "yardstick" for the proper cost of electricity "not only meaningless but worse, misleading, deceptive, unfair, and dishonest as a measure of the fairness of the rates of privately owned utilities," and recommended subjecting the electrical business of the TVA to the regulation of State utility commissions and of the Federal Power Commission on much the same basis as in the case of private companies. Another recommendation of the minority, that the Government acquire the properties of companies with which the TVA went into competition, was in a measure carried out during the year.

The committee investigating monopolies had started work about the beginning of October, 1938. It disappointed expectations that it would hunt up sensational revelations as to those whom the President, in his first inaugural speech, had called "money changers in the temple." With regard to the concentration of capital, it brought into view the point that nearly seven-eighths of the \$27,650,000,000 of life-insurance companies' assets was held by the 25 chief companies, and that three corporations controlled 86 per cent of the production of automobiles. With regard to the monopolistic use of patents the investigation represented certain makers of glass containers as exercising the power to admit or exclude new entry into the industry by granting or withholding licenses to use these companies' patents. The President, who had originally proposed to Congress the creation of this committee, asked, in a letter published in the press of May 17, that the inquiry look into the means for putting idle capital to work. At this time the failure to invest liquid capital was a conspicuous phenomenon,

attributed by some of the New Deal's opponents to the impairment of the investor's incentive, by recent economic reforms and experiments. The inquiry was immediately directed into the proposed field: Owen D. Young testified that the General Electric Company, in his opinion, could not have survived earlier depressions nor have obtained great public subscription to its stock, if the present Federal curbs on capital had formerly existed; A. P. Sloan, of General Motors, asserted the need of more profit in business; Assistant Secretary of State Berle proposed to the committee the Federal creation of a system of capital-credit banks. The committee issued, July 16, a preliminary report recommending amendments to the laws on patents and on trusts: in particular, that the use of patents for restraint of trade be forbidden, and that a corporation be forbidden to acquire the assets, though allowed to acquire the stock, of another. Hearings were held in September, on the petroleum industry and on industrial life insurance. Rising prices soon after the outbreak of the war in Europe gave occasion for a study of possible regulation of prices, though Assistant Attorney-General Arnold opposed laws to that end as constitutionally shaky and as liable to send prices up.

The committee investigating the NLRB started hearing testimony early in December. It confronted Edwin R. Smith, member of the NLRB, with matter from the Board's files, indicating that he had sought to promote a customer's boycott of the Berkshire Knitting Mills, to aid a strike among their employees. Testimony from William M. Leiserson, the newest member of the Board, showed that Leiserson had opposed the Board's methods and had refused to sit with it in deciding some cases. A discharged regional director, James P. Miller, attributed his fall from grace with the Board to failure to follow alleged instructions to cause the agency to be "feared" in Cleveland. Another regional director, P. G. Phillips, was called to explain a message to the Board, in which Phillips declared that he had persuaded the city editor of the Cincinnati *Enquirer* not to print an article unfavorable to the NLRB. Records were produced, December 19, with intent to show that Nathan Witt, Secretary of the Board, had concerted with leaders of the C.I.O. to lead the Inland Steel Co. into taking a course that would render it a violator of the National Labor Relations Act.

Special Session. The first special session of the 76th Congress assembled on September 21 and adjourned on November 3. Summoned by the President for a single purpose, it enacted but one major bill. This measure, the Neutrality Act of 1939, did away with the statutory embargo on the exportation of materials of war to belligerents, but prohibited travel to belligerents' ports by ships registered in the United States, save in cases of specified exceptions. For details, see under NEUTRALITY.

UNITED STATES CONCILIATION SERVICE. Congress, in creating the Department of Labor under Section 8 of the Act, gave the Secretary of Labor authority to mediate or conciliate labor disputes. This function was carried on in the Secretary's office until 1917 when a Division of Conciliation was established.

The Service has no law to enforce and no police powers. Its duty is to promote and endeavor to maintain harmonious labor relations. It can enter a situation at the request of either party to

the dispute or some representative of the public, such as mayor, governor, senator, congressman, or upon its own motion if it is believed to be in the public interest. The Service follows the theory that a dispute settled between parties themselves is more enduring than one settled by authority of law or force.

The Service renders assistance by aiding the disputants to settle their differences by negotiations; by holding separate conferences with the respective sides; by adjusting certain minor points in the dispute, leaving major differences for consideration at joint conferences; by drawing on its knowledge of trade agreements; by developing a plan and using same as the basis for discussion between employee and employer; by drafting a plan of settlement independently and submitting it to the parties in the dispute as a recommendation; by devising methods of arbitration through disinterested parties or through a party selected by the disputants. There is no charge for services rendered by this Agency. Sixty field men designated as Commissioners of Conciliation are located in strategic areas throughout the country.

The activities of the Service for the fiscal year ended June 30, 1939, embraced work in all of the States, the District of Columbia, Alaska, and Hawaii. It rendered service in 3541 situations involving directly 1,636,543 workers. Of the total number of situations, 1678 were classified as labor disputes which included strikes, threatened strikes, lockouts, and controversies. These accounted for 1,455,675 workers. The remaining 1863 situations involving 180,868 workers were classified as other services rendered and included arbitrations, conducting consent elections, technical services, supplying information, conferences with employees or employers, and complaints.

The most significant work of the Service was in the prevention of threatened strikes, these being defined as situations in which an actual strike vote had been taken and the employees prepared to strike at a designated time. Because Commissioners of Conciliation were made available in 358 of these situations, the Service prevented 324 of them from developing into actual strikes. These involved over 208,000 workers and if computed on the basis of Bureau of Labor Statistics man days lost by strikes, would reveal a potential saving of over 4,300,000 man days of work and wages.

Of the total situations handled during the fiscal year, over 600 were terminated on the basis of signed agreements. This indicates clearly the establishment of better relationships between Labor and Management, and further, that they are finding it more advantageous to reduce their agreements in collective bargaining to written instruments. Over 19 major provisions were included in these signed agreements—the most important having reference to hours of labor, wages, overtime, grievance procedure, and union recognition. Under the grievance procedure it is revealed in numerous instances that either an arbiter is to be designated by the Conciliation Service or that a conciliator shall be called in before there is an actual stoppage of work.

There has been a marked interest on the part of both Labor and Management in the work of the Conciliation Service—in numerous instances this Agency has been called upon to explain to labor as well as to managerial groups, its functions, and all seem especially interested in the

fact that it has no law to enforce. Commissioners of Conciliation—acting as interpreters of principles, clarifying issues, and making suggestions for shortcuts based on practical experience as to methods, practices, and procedure—have aided materially in establishing more satisfactory relationships between employee and employer.

During the calendar year of 1939, the Conciliation Service participated in 3297 situations involving 1,290,843 workers.

J. R. STEELMAN.

UNITED STATES EMPLOYMENT SERVICE. The United States Employment Service, formerly an agency of the Department of Labor, was transferred to the Social Security Board July 1, 1939, in accordance with the President's First Reorganization Plan. Under this plan the functions of the United States Employment Service were co-ordinated with the unemployment compensation functions of the Board in a newly created Bureau of Employment Security, which administers the Federal aspects of both programmes.

The United States Employment Service was first set up in June 1933, with the passage of the Wagner-Peyser Act. Its purpose was to promote the establishment of public employment offices throughout the country in co-operation with the individual States. The act authorized the United States Employment Service to match State appropriations for the administration of an employment service, provided that the State conformed with Federal standards. The act also directed the Federal agency to develop a national system for clearing labor among the several States, to maintain a public employment office in the District of Columbia, to maintain a service for placement of veterans, and to provide special placement assistance for farm laborers, junior applicants (persons under 21 years of age), and the physically handicapped.

Further impetus was given to the development of State Employment Services by the passage of the Social Security Act in 1935, which required all claimants for unemployment compensation benefits to register for work at a public employment office. In order to carry out these new and increased responsibilities, the State Employment Services found it necessary to expand their facilities substantially. The Social Security Board granted funds to the State Employment Services to meet the additional costs arising out of the unemployment compensation programme and, at present, a major part of the operating funds of the State services are derived from Board appropriations. A further development has been the co-ordination of unemployment compensation and employment service, in almost all States, under a single overhead administrative agency. With the adoption of a similar plan of organization on the Federal level, last July, the direction of these two closely related programmes has become unified in both the State and Federal governments.

By the end of June, 1939, there were 1661 full-time public employment offices and 2695 itinerant points in less populous areas, where service is available on a part-time basis through travelling representatives. Local offices and itinerant points have been strategically located so as to meet the needs of employers and workers throughout the country.

In the past fiscal year (June 1, 1938–June 30, 1939) the public employment offices received 14,-

143,382 applications for work, an increase of 17.7 per cent over the previous year. These included 6,587,309 new applications and 7,556,073 renewed applications. At the end of June 6,282,598 persons were registered as actively seeking work through the public employment offices. During the year 3,134,011 placements were made; 2,225,114 in private industry and 908,897 in public employment. Also, during this period, staff members of the public employment offices made a total of 1,852,806 personal visits to employers in order to solicit their co-operation and to broaden the scope of job opportunities available to applicants.

The National Re-employment Service, a temporary division of the United States Employment Service operated solely by the Federal government, was completely liquidated on July 1, 1939. Originally created to meet the emergency demands of the public works and work relief programmes, it was gradually withdrawn and its facilities incorporated in the State services as the latter agencies expanded.

WILLIAM H. STEAD.

UNITED STATES MILITARY ACADEMY.

A government institution at West Point, N. Y., for the theoretical and practical training of cadets for the military service of the United States, opened in 1802. On Sept. 1, 1939, the total number of cadets was 1812. There were 280 members on the faculty. The academy is a component part of the Regular Army of the United States and is maintained solely by appropriations from the Congress of the United States, which in the Fiscal Year 1940 amounted to \$3,331,800 for salaries and maintenance of public works. The Library contained 109,586 volumes. New buildings completed during the year were: Ordnance and Engineering Laboratory, Garage for Mechanized Cavalry, Fire House, 10 sets of Officers' Quarters. Superintendent, Brig. Gen. Jay L. Benedict, U.S. Army.

UNITED STATES NAVAL ACADEMY.

A school for the education and training of midshipmen in Annapolis, Md., founded in 1845. The total number of midshipmen at the beginning of the academic year 1939-40 was 2307. The faculty numbered 278. The library contained 88,000 volumes. Midshipmen, immediately after graduation, who are found in all respects qualified, are provisionally commissioned either as Ensigns in the line of the U.S. Navy or as 2d Lieutenants in the U.S. Marine Corps, to fill existing vacancies. Superintendent, Rear Admiral Wilson Brown, U.S.N.

UNIVERSAL CHRISTIAN COUNCIL. See INTERNATIONAL RELIGIOUS MOVEMENTS.

UNIVERSALISTS. A religious denomination which holds as part of its doctrine the universal fatherhood of God and brotherhood of man. Headquarters, 16 Beacon St., Boston, Mass. See RELIGIOUS ORGANIZATIONS.

UNIVERSITIES AND COLLEGES. The 1939 Educational Directory issued by the U.S. Office of Education listed 1709 institutions of higher education in the United States, including 669 colleges and universities, 257 professional schools, 169 teachers colleges, 62 normal schools, 443 junior colleges, and 109 negro colleges. The accompanying table shows these totals, together with the distribution of control of higher education among public, private, and denominational groups and the type of student body.

It was estimated by the Office of Education that about 1,400,000 students would be registered in these 1709 institutions during the school year, 1939-40, and that they would be distributed about equally between public and private institutions. These students were expected to pay more than \$158,000,000 in fees for the year, but this sum represents a relatively small part of the half billion dollars spent annually for college and university education in the United States. The latest final statistics on higher education were made available in a 1935-36 census covering 1706 institutions (although not all returns were usable). In that school year, 1,208,227 students were enrolled and 110,000 full-time staff members were employed. Expenditures included \$419,882,833 for educational and general purposes and \$47,369,407 for capital outlay. The colleges and universities owned 63,000,000 library volumes, buildings, grounds, and equipment valued at \$2,359,418,489, and endowment and other permanent funds worth \$1,623,105,000.

A financial report covering 330 institutions during the 1938-39 school year indicated that the colleges and universities fared much better than in the preceding year. Collections from students amounted to nearly 8 per cent more in 1938-39 than in 1937-38. Government contributions increased by nearly 1 per cent, private benefactions for current purposes by 9 per cent, and revenue from sales and services of related activities by 24 per cent. See **BENEFACTIONS**.

Educational trends are discussed in the article entitled **EDUCATION**. Statistics on higher education in foreign countries are to be found in the articles on the countries under *Education*. For

UNIVERSITY WOMEN, AMERICAN ASSOCIATION OF. An educational organization founded in 1882 "for practical educational work, for the collection and publication of statistical and other information concerning education, and in general for the maintenance of high standards of education." The chief lines of endeavor of the Association are the establishing and maintaining of standards in education; carrying on a nationwide programme of study in the fields of education, international relations, social studies, economic and legal status of women, and the arts, with varied community activities growing out of study; supporting legislation and other public action to further the Association's objectives; enlarging opportunities for trained women; maintaining a research information service in secondary and collegiate education; and co-operating with university women's groups in other countries to promote international understanding.

The Association, which in June, 1939, had 853 branches and a membership of 63,000, publishes a quarterly *Journal* and holds a biennial convention. The last was held in Denver, Colo., June 19-23, 1939. The receipts for the year were \$270,771 and the expenditures, \$263,698.

The officers for 1939 were: President, Margaret S. Morriss; vice presidents, Louise Pound and Mrs. B. L. Parkinson; treasurer, Mrs. A. Ross Hill; general director, Kathryn McHale. Headquarters are at 1634 I Street, N.W., Washington, D. C.

UPPER VOLTA. See **FRENCH WEST AFRICA**.

URANIUM. See **CHEMISTRY**; **PHYSICS**.

URUGUAY, ū'rōō-gwā or ōō'rōō-gwī'. A South American republic. Capital, Montevideo.

Area and Population. Area, 71,172 square miles; estimated population on Dec. 31, 1938, 2,120,000. Living births in 1937 numbered 41,337 (19.9 per 1000); deaths, 21,561 (10.4); marriages, 13,979 (6.7). Alien passengers entering the country exceeded those departing by 3775 in 1938. The people are almost entirely of European descent, with Spanish, Italian, and Portuguese strains predominating. The language is Spanish. Estimated population of Montevideo, 692,796 (December, 1937); of other cities in 1936: Paysandú, 50,000; Salto, 48,000; Mercedes, 34,000; Minas, 30,000.

Defense. The standing army in 1938 had a peace strength of 808 officers and 7108 of other ranks. Nominal war strength was 50,000. The National Guard (militia) totals about 100,000. One torpedo boat and three patrol vessels are the chief naval units. There is a small air corps with about 50 planes. Defense and police appropriations for 1938 totaled 16,433,663 pesos (18.7 per cent of total budget).

Education and Religion. About 35 per cent of all adults are illiterate. Educational statistics for 1937 showed 1452 public and 172 private elementary schools, with 203,616 pupils; 13,458 pupils in secondary schools; 9918 in evening courses; 1266 in 5 normal schools; and 17,122 in the university (Montevideo). The majority of the people are Roman Catholics, but there is complete religious liberty.

Production. Processing and manufacturing industries account for about 59 per cent of the

total national production, pastoral industries for 24 per cent, and agriculture for about 12 per cent. Production of the chief crops in 1938-39 was (in metric tons): Wheat, 400,600; barley, 15,500; oats, 71,300; linseed, 111,900; corn, 164,500; potatoes, 38,400 (1937-38). Wool output for the year ended Sept. 30, 1939, was 49,900 metric tons. In 1938 963,827 cattle, 1,007,128 sheep, and 88,754 swine were slaughtered in packing plants. Final returns of the 1936 industrial census showed 11,470 establishments with an output valued at 264,813,000 pesos (\$138,683,000), of which 113,977,000 pesos (\$59,689,000) was added in process of manufacture. There were 90,128 employees.

Foreign Trade. Imports in 1938 totaled 96,355,248 pesos (65,375,000 in 1939); exports, 74,394,730 (101,366,000). Market values of leading 1938 exports: Unwashed wool, 35,242,945 pesos; frozen beef, 6,535,161 pesos; washed wool, 6,206,355 pesos; preserved meats, 5,374,607 pesos; chilled beef, 5,174,044 pesos; linseed, 5,098,066 pesos; salted hides, 4,987,929 pesos. Great Britain took 26.2 per cent of the 1938 exports (24.2 in 1937); Germany, 23.5 (13.2); Argentina, 9.5 (9.3); United States, 4.0 (14.1). Of the 1938 imports Great Britain supplied 19.8 per cent (16.8 in 1937); Germany, 16.8 (11.0); United States, 12.1 (13.6). See **IMPORTS AND EXPORTS**.

Finance. Net budget revenues in 1938 were 92,612,000 pesos; net obligations, 89,676,000; surplus (after reserving 1,500,000 pesos for deficit in public service, etc.), 1,436,000 pesos. The 1939 budget estimated revenues at 87,554,000 pesos; expenditures, 87,526,000. Public debt on Dec. 31, 1938, 350,170,089 pesos, against 328,493,258 pesos on Dec. 31, 1937. The average exchange rate of the Uruguayan peso in 1938 was: Free, \$0.4173 (\$0.3623 in 1939); controlled free, \$0.5697 (\$0.4995 in 1939).

Transportation. Railway lines total about 1900 miles, of which three-fourths are British-owned and one-fourth owned by the government. Freight traffic on all railways aggregated 355,200,000 ton-kilometers in 1938. Highways extended 22,487 miles in 1939. Three air lines operated six services over 1151 miles of routes in 1939. A total of 2036 ocean-going ships of 9,342,184 net registered tons entered the ports in 1937.

Government. For the main provisions of the 1934 Constitution, see 1938 **YEAR BOOK**, p. 763. President in 1939, Gen. Alfredo Baldomir (Colorado party), who assumed office June 19, 1938, for four years. The composition of the Chamber of Deputies elected Mar. 27, 1938, was: Colorado party, 64; Blanco party, 29; Socialists, 3; Catholics, 2; Communists, 1. There were 15 Colorados and 15 Blancos in the Senate. President Baldomir's cabinet consisted of 6 Colorado members and 3 Blancos.

HISTORY

Internal Developments. The political tension of preceding years showed a marked recession during 1939, despite reported anti-government activities by a group of military men who controlled the army during the dictatorship of President Terra. A new electoral law promulgated in June tended to eliminate the controversies that had split the two dominant political parties—Colorados and Blancos—into hostile factions. Two factions of Colorados reunited, but a third faction (the Batllistas) and a minority group of Blancos remained opposed both to the electoral law and to reunion with their former associates.

The government continued its programme of internal development. A law of September 9 authorized the National Administration of Alcohol, Fuel and Portland Cement (ANCAP) to issue 1,000,000 pesos of 6 per cent bonds to complete its capital of 6,000,000 pesos authorized by the law of Oct. 15, 1931. The proceeds of the loan were to be used to complete ANCAP's oil refinery and erect a Portland cement plant. The large profits made by the government-owned Bank of the Republic on its exchange control operations were used in large part to stimulate economic activities. Of the 16,753,000 pesos obtained in this manner from June 1, 1938, to Aug. 31, 1939, 3,947,000 pesos were allotted to public works, 1,578,000 pesos to the promotion of pastoral industries, 3,643,000 pesos to export subsidies and premiums on cattle. The government borrowed 3,000,000 pesos for the construction of schoolhouses; a campaign to raise a similar sum by public subscription was carried out.

The problem of obtaining sufficient foreign exchange to pay for Uruguayan imports and other foreign obligations remained difficult. The President called a special conference on April 20 to deal with sharp increases in prices of sugar and certain other imported foodstuffs resulting from the exchange situation. The system of restricting imports from foreign countries to the value of Uruguayan exports purchased by them was continued, with the result that United States trade with Uruguay was sharply curtailed.

With the outbreak of the European war, legislation was enacted to mitigate its effects upon Uruguayan economic activity. On September 28 a tax of 25 per cent was imposed on wartime profits of pastoral producers, the proceeds being used to control prices of articles of first necessity. On September 29 the tax on wool and sheep skins was converted into a 5 per cent export tax, and on October 10 the tax on hides and tallow was similarly converted into a 6½ per cent export tax. On October 15 a commission was appointed to administer the proceeds of these taxes. It fixed prices on most foodstuffs, fuels, and building materials. A decree of October 10 regulated the expropriation of articles of first necessity.

Early in November the government contracted to provide Great Britain with \$863,000 worth of chilled beef, mutton, and lamb. A subsidy of 1.40 pesos per pound sterling was granted cattle raisers out of exchange profits to offset the low prices fixed in the contract. This and other expenses attributable to the war led the Finance Minister to announce on November 21 that there would be a deficit in the 1939 and probably in the 1940 budgets.

Foreign Relations. Uruguay proclaimed its neutrality in the European war on September 6 and joined with Argentina and Brazil in establishing a naval "neutrality patrol" of the adjacent seas. On December 13 three British cruisers forced the German pocket battleship *Graf Spee* to take refuge in Montevideo harbor after an all-day battle fought partly within Uruguayan territorial waters and entirely within the safety zone delimited by the American Foreign Ministers at Panamá in September. The British Government demanded that the *Graf Spee* be forced to leave within 24 hours or be interned. The Uruguayan Government granted the German vessel four days—until 8 p.m. on December 17—to make the battleship seaworthy. Shortly before the expiration of this time limit, the German com-

mander sailed his ship outside of Uruguayan territorial waters and scuttled it rather than accept internment or face battle with British and French warships waiting outside the port. The British and German Governments both protested that Uruguay had violated its neutral duties, the former on the ground that the *Graf Spee* had been granted too long a stay, the latter on the ground that the time allotted was insufficient to make the ship seaworthy. The Uruguayan Government protested to both Britain and Germany against carrying the battle of December 16 into its territorial waters. The issue of violation of the Pan American safety zone was taken up by the other American governments also (see PAN AMERICANISM).

A three-day conference of the Finance Ministers of Argentina, Brazil, Paraguay, and Uruguay met in Montevideo commencing January 27 to work out a programme of mutual commercial and fiscal collaboration (see ARGENTINA under *History* for results). On July 18 delegates of Argentina, Bolivia, Chile, Paraguay, Peru, and Uruguay met in Montevideo to discuss revisions and extensions in the Treaty of Montevideo, signed in 1889, which serves as the cornerstone of international law among the South American countries. The Uruguayan Finance Minister, Dr. Cesar Charlone, late in July went to Rio de Janeiro to sign a treaty facilitating Brazilian-Uruguayan commercial interchange. Earlier in the year a Uruguayan military mission made a formal visit to the Brazilian capital and other cities to return the visit of high Brazilian army officers to Uruguay in 1938.

Uruguayan relations with Argentina were tightened by the visit of President Baldomir to Buenos Aires in the middle of August. Secretary of State Hull announced in Washington October 19 that the United States intended to negotiate a reciprocal trade treaty with Uruguay.

Despite the opposition of Foreign Minister Alberto Guani, the Senate on December 7 passed a bill providing for Uruguay's withdrawal from the League of Nations, though not from the International Labor Office and affiliated technical organizations.

See ARGENTINA under *History*; DEMOCRACY.

USHA. UNITED STATES HOUSING AUTHORITY. See HOUSING; FEDERAL WORKS AGENCY; ARCHITECTURE.

U.S.S.R. See UNION OF SOVIET SOCIALIST REPUBLICS.

UTAH. Area and Population. Area, 84,990 square miles; included (1930) water, 2806 square miles. Population: Apr. 1, 1930 (census), 507,847; July 1, 1937 (Federal estimate), 519,000; 1920 (census), 449,396. Salt Lake City, the capital, had (1930) 140,267.

Agriculture. Utah harvested, in 1939, 996,600 acres of the principal crops. Tame hay, on 507,000 acres, made 968,000 tons (estimated farm value, \$8,325,000); wheat, on 226,000 acres, 3,989,000 bu. (\$2,752,000); sugar beets, 54,000 acres, 694,000 tons (the crop of the previous year, 1938, was valued at \$3,606,000); potatoes, 12,600 acres, 2,016,000 bu. (\$1,109,000); barley, 65,000 acres, 2,405,000 bu. (\$1,058,000).

Manufacturing. The U.S. Census of Manufactures, issuing in 1939 its biennial report, for 1937, on Utah, showed the totals that follow (accompanied by figures for 1935 in parenthesis): Active manufacturing establishments numbered 552 (538), employed 13,094 (10,808) as wage-

earnings, and paid wages of \$14,479,158 (\$10,304,262); all the totals of these establishments' products aggregated \$204,857,058 (\$114,167,157), to which the processes of manufacture contributed \$47,945,632 (\$33,899,431). The sharp rise in the total of products of 1937, above that of 1935, was for the most part offset by a corresponding rise in the cost of materials, etc., used in manufacture. The materials so used included much of the output of the mineral industry, which produced more, at generally higher prices, in 1937 than in 1935.

The census for 1937 published data on specific industries supplying somewhat less than half of the aggregate output of manufactured products. Among this group, the smelting and refining of lead achieved \$33,192,327 in output; grain mills, \$9,423,553; canneries and others making preparations of fruits and vegetables, \$7,311,215; meat-packers, \$7,902,811; beet-sugar factories, \$6,613,252.

Salt Lake City was the chief manufacturing centre in 1935; separate figures as to its industry were not published for 1937. Such figures were published, however, as to the manufactures of Salt Lake County, which included much more industrial operation; the county contained, in 1937, 272 establishments, which paid \$7,932,217 in wages and produced goods amounting to \$136,164,050.

Mineral Production. Mines' yearly production of recoverable gold, silver, copper, lead, and zinc in Utah rose to the aggregate value of \$62,385,575 for 1939 (preliminary estimate), from \$43,745,902 for 1938. Copper, the main component in these aggregates, jumped in output, to 341,040,000 lb. (1939) from 216,252,000 (1938); by value, to \$35,468,160, from \$21,192,696. The production of gold increased considerably, to 276,000 oz. (1939) from 200,630 (1938); by value, to \$9,662,100, from \$7,022,050. That of silver increased moderately, to 10,574,987 oz. (1939), from 9,682,732 (1938); by value, to \$7,178,173, from \$6,259,544. The yield of lead diminished in quantity to 130,826,000 lb. (1939), from 131,314,000 (1938); but in yearly value it augmented to \$6,541,300, from \$6,040,444. Similarly in the case of the production of zinc, quantity declined to 66,714,000 lb. (1939), from 67,316,000 (1938); yet by reason of higher prices the yearly total by value advanced to \$3,535,842, from \$3,231,168.

Education. For the academic year 1938-39 Utah's inhabitants of school age (from 6 years to 17, inclusive) were reported as 144,463. Enrollments of pupils in public schools numbered 138,047; this comprised 95,116 in elementary study and 42,931 in high schools (grades 9-12). The year's expenditures for public school education totaled \$12,908,713. This included the year's pay of the 4631 teachers, principals and supervisors, averaging \$1347.71.

Legislation. The regular biennial session of the Legislature met in January. It made a number of changes in the State's system of taxation, including the rates of the general tax on property for general and for specific purposes, the exemptions from this tax, the use of the receipts from the State's tax on gasoline, and the taxation of some forms of personal service.

Political and Other Events. The State Supreme Court affirmed the constitutionality of the Utah minimum-wage law, authorizing the establishment of minimum wages and of maximum hours of permitted work for women and minors in industrial and mercantile employment. It set

aside, however, an order of the Industrial Commission, intended to set such hours for retailers' clerks, on the ground that the commission had failed to hold an adequate hearing on the matter. An improvement in the economic conditions in Utah was evidenced by an increase in the reported sales made by retailers in July, by 7.4 per cent, over those of July, 1938. This was despite payments of \$101,441 for general poor-aid in the State during July, an amount greater by two-thirds than that for July, 1938. The State Medical Association and the State Dental Association each started a plan for the professional care of patients in its field on the basis of payment by the year, whether needing service or not. A fight against official corruption in Salt Lake City (see *YEAR BOOK*, 1938, p. 764) led to the conviction of E. B. Erwin, former mayor, and Harry L. Finch, former chief of police, on charges of conspiracy to permit gambling and places of vice. Each was sentenced, May 6, to a year of prison.

Officers. Utah's chief officers, serving in 1939, were: Governor, Henry H. Blood (Dem.); Secretary of State, E. E. Monson; Auditor, John W. Guy; Treasurer, Reese M. Reese; Attorney-General, Joseph Chez; Superintendent of Public Instruction, Charles H. Skidmore.

UTAH, UNIVERSITY OF. A State institution of higher education in Salt Lake City, founded in 1850. The enrollment for the autumn quarter of 1939 was 4110. The 1939 summer session had an attendance of 795. In extension courses, 2476. The faculty numbered 227. The income for 1938-39 was \$1,351,683. The library contained 142,429 volumes and 36,270 pamphlets. A new course in ground work and flight training for airplane pilots under the Civil Aeronautics Authority was instituted in October 1939. A Field House costing \$215,000, a \$50,000 addition to the Medical School, and a \$15,900 building to replace part of old Mines Building destroyed by fire, are under construction. President, George Thomas, Ph.D.

UZBEK (ööz'bék or üz'bék) SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., north of Afghanistan. It includes the Kara-Kalpak Autonomous Soviet Socialist Republic (79,650 sq. mi.; capital, Nukuss). Total area, 146,000 square miles; population (Jan. 17, 1939), 6,282,446. Chief towns: Tashkent, the capital (600,000 inhabitants), Bokhara, Khiva, Andijan, and Samarkand. Most of the agricultural products are produced from irrigated lands. Cotton (nearly two-thirds of the Soviet Union's output), rice, alfalfa, grapes, wheat, and various fruits are grown. The breeding of Astrakhan sheep is an important occupation. Ninety-five per cent of the peasant farms have been collectivized. Several factories are in operation for the manufacture of farm implements, silk, cotton, cement, paper, leather, fertilizers, and clothing. Mineral products include petroleum, coal, and sulphur. See *UNION OF SOVIET SOCIALIST REPUBLICS*.

VANDERBILT UNIVERSITY. A non-sectarian institution of higher learning for men and women, in Nashville, Tenn., founded in 1872. The enrollment for the autumn term of 1939 was 1809. The faculty numbered 432. The amount of endowment was \$23,213,000; the annual income, \$1,763,000. Volumes in the library numbered 354,767. Chancellor, Oliver C. Carmichael, B.Sc.

VAN DINE, S. S. See *WRIGHT, WILLARD HUNTINGTON*.

VASSAR COLLEGE. A nonsectarian college for women, in Poughkeepsie, N. Y., founded in 1861 and opened in 1865. The enrollment for 1939-40 was 1234. The faculty numbered 184. The endowment amounted to \$9,730,521; the income from funds was \$2,246,050; endowments and trust funds for scholarship aid amounted to over \$1,000,000, yielding an income of approximately \$40,000. The library contained 218,268 volumes. President, Henry Noble MacCracken, Ph.D., LL.D., L.H.D.

VATICAN CITY. A sovereign State, officially known as the State of Vatican City, established within the city of Rome as the seat of the Papacy on June 10, 1929, in accordance with the Italo-Vatican (Lateran) Treaty of Feb. 11, 1929 (see 1929 YEAR BOOK, p. 417). Sovereign in 1939, Pope Pius XII (Eugenio Pacelli), who succeeded Pius XI Mar. 2, 1939.

The area of Vatican City is 108.7 acres, including St. Peter's Square, and in addition 13 ecclesiastical buildings outside of its limits enjoy extraterritorial rights. It has its own coinage, import duties, railway station, and its postal, telegraph, and radio facilities. The census of Dec. 31, 1932, showed 1025 inhabitants, including 853 Italians and 121 Swiss, the latter mostly members of the papal gendarmery. Under the Constitution of June 7, 1929, the Pope exercises full legal, judicial, and executive powers. Pius XII placed the administration of Vatican City and its civil offices in the hands of a commission of Cardinals headed by Cardinal Canali. The legal system is based on canon law and ecclesiastical rules.

Foreign relations are conducted by the Secretary of State. (Cardinal Luigi Maglione was appointed to this office Mar. 11, 1939.) The Holy See maintains diplomatic relations with 39 foreign governments and has unofficial relations by means of Apostolic Delegates with a number of other countries, including the United States.

See ROMAN CATHOLIC CHURCH; AUSTRIA, GERMANY, ITALY, SPAIN, under *History*; UNITED STATES under *Foreign Affairs*.

VEGETABLES. See HORTICULTURE.

VENEZUELA, vĕn'ĕ-zwĕ'lă; *Amer. Sp. pron.*, vā'nă-swă'lă. A Republic of South America, consisting of a Federal District, 20 States, and two Territories. Capital, Caracas.

Area and Population. Area, 352,143 square miles; population, 3,467,494 at December, 1936, census (3,552,000, estimate for June, 1938). There are whites, Indians, Negroes, and mixtures of all three races. Registered births in 1938 numbered 118,473 (34.4 per 1000); deaths, 64,294 (18.6). Populations of the capital and five largest State capitals in 1937 were: Caracas (Federal District), 203,342; Maracaibo (State of Zulia), 110,010; Barquisimeto (Lara), 50,774; Valencia (Carabobo), 49,963; Maracay (Aragua), 29,255; and San Cristóbal (Tachira), 22,058.

Defense. Military service was made compulsory in 1933. There is an active army of about 6000 men; a navy of six gunboats and patrol vessels and a few minor craft; a military and naval college, and a school for aviation. Defense appropriations for 1938-39 totaled 40,300,000 bolívares.

Education and Religion. About 57 per cent of the population were illiterate at the 1926 census. Educational statistics for 1938 showed 4142 public elementary schools, with 234,024 pupils; 65 secondary or special schools, with 3705 pupils; and three universities, with 2125 students

(see *History*). Roman Catholicism is the prevailing religion but all others are tolerated.

Production. Agriculture, stock raising, petroleum mining, manufacturing, pearl fishing, and forestry are the main industries. Production of the chief crops was (in metric tons): Coffee, 30,000 in 1938-39; cacao, 20,525 (exports in 1938); cane sugar, 24,500 in 1938-39. Other crops are tobacco, cotton, corn, beans, fruits (especially bananas), potatoes, coconuts, rice, and wheat. Mineral production for 1938 included 201,833,000 bbl. of petroleum (199,407,000 in 1937), 3576 kilograms of gold, and 23,000 metric tons of salt. Some copper, coal, iron, tin, and asbestos is mined. The forests yield balata, tonka beans, divi-divi, vanilla, etc. Petroleum refining is the only large-scale manufacturing industry.

Foreign Trade. Imports in 1938 were equivalent to \$97,772,000 (\$86,029,000 in 1937); exports, \$278,463,000 (\$246,101,000). Petroleum and its derivatives accounted for \$250,661,000 of the 1938 exports. Coffee and cacao are the other chief exports. The United States supplied 56.2 per cent of the 1938 imports (52.8 in 1937); Germany, 11.9 (13.6); United Kingdom, 7.0 (9.3). Of the 1938 exports, \$36,852,000 went to the United States. Most of the petroleum exports went to Aruba and Curaçao for refining. See IMPORTS AND EXPORTS.

Finance. For the fiscal year ended June 30, 1940, estimates of revenues and expenditures balanced at 361,325,000 bolívares (335,261,000 in 1938-39). On July 1, 1939, the Public Works Ministry received an additional appropriation of 26,099,000 bolívares. The public debt on June 30, 1938, totaled 2,800,000 bolívares (internal, 2,700,000). Funds were said to be on deposit to redeem any bonds that might be presented. The average exchange value (bank rate) of the bolivar was \$0.3135 in 1938 and \$0.2924 in 1937.

Transportation. Railways aggregated 589 miles in 1938; highways, 5883 miles; passenger automobiles, 16,419 (registered) in 1939. Construction of the Palmasola-El Palito railway link, started in 1939, will open all-rail transportation from the port of La Guaira to Barquisimeto in western Venezuela. Work was also started on an important highway linking Altagracia, opposite Maracaibo at the entrance to Lake Maracaibo, with Coro, capital of the State of Zulia. It will provide the first link of highway connections between the Maracaibo oil district and the north central district of Venezuela. In 1939 there were eight air services operated by government-owned "Aeropostal" over 2563 miles of routes. During 1938 they carried 8363 passengers, 41,446 lb. of mail, 218,964 lb. of express, and 359,330 lb. of baggage. Pan American Airways planes touch at Caripito, Guanta, La Guaira, Coro and Maracaibo. The Dutch (K.L.T.) line links La Guaira with Aruba and Curaçao. Vessels clearing Venezuelan ports in 1937 aggregated 15,877,000 tons. A contract for additional improvements to the port of La Guaira was awarded Feb. 21, 1939.

Government. The Constitution of July 11, 1936, vests executive powers in a President elected by Congress for five years and ineligible for reelection. There is a Senate of 40 members chosen by the State legislatures and a Chamber of Deputies of 85 members elected by municipal councils. The State legislatures and municipal councils are elected by direct ballot of literate males 21 or more years of age. The Constitution prohibits communism and anarchism. President in 1939, Gen. Eleazar López Contreras (elected by Con-

gress Apr. 25, 1936, after having been named Provisional President by the Cabinet Dec. 18, 1935, on the death of the Dictator-President, Gen. Juan Vicente Gomez).

History. Politics. President López Contreras continued throughout 1939 his efforts to rebuild Venezuela along modern lines, without meeting serious opposition to his policies. On March 13 the sentence of exile passed upon 48 Leftist leaders in 1937 (see 1937 YEAR BOOK, p. 765) was extended for another year, despite protests of prominent liberals in the United States and an amnesty agitation in Venezuela. On March 26 the dissolution of two labor unions was announced because of published proclamations that were deemed by the government an incitement to class strife.

The President denied opposition charges that he aimed at a dictatorship and insisted that he would resign in 1940 previous to the expiration of his term. Elections for the partial renewal of the Senate and Chamber of Deputies were held in January. A cabinet crisis resulted in the replacement of three members of the government on July 21. On August 11 President López Contreras appointed new governors for seven of the States.

The Three-Year Plan. The Three-Year Plan of economic and social rehabilitation, launched in July, 1938 (see 1938 YEAR BOOK, p. 767), was carried rapidly forward. Among the projects initiated under the plan were the railway, highway and port works described above under *Transportation*; the modernization of Caracas through the widening of streets and other works; establishment of a 1,000,000-bolivar fund in the Agricultural Bank for the purpose of encouraging and financing farmers' co-operatives and the production of wheat and rice; dredging of the sand bar at the entrance to Lake Maracaibo; extension of the salt works at Araya; installation of water-works and sewers in various cities and towns; further government subsidization of the coffee industry; passage of a law for the creation of a Central Bank capitalized at 10,000,000 bolívares, one-half subscribed by the government and the other half by public subscription; reorganization of the National Coffee Institute so as to grant it wider powers over the coffee industry (decree of Jan. 18, 1939).

A new law governing the exploration, production and sale of petroleum and other hydrocarbons was published Jan. 6, 1939. It provided for an increased government share of the profits of concessionaires through taxation or otherwise and barred concessions to foreign governments, corporations dependent upon them, and foreign companies not legally domiciled in Venezuela. The first distribution under the profit-sharing law signed Dec. 17, 1938, was made the following March. Each employee's participation in the net profits of his employer was fixed as a percentage of his total wages during the year. This percentage varied from 12.45 per cent in the case of large enterprises to 2.05 per cent in the case of small establishments. In some cases bonuses paid to Venezuelan workers by large petroleum companies were as large as \$1200. One-half of each bonus was paid in cash. The remainder was deposited to the laborer's savings account in a local bank and its withdrawal was made subject to drastic restrictions.

In developing the social service aspect of the Three-Year Plan, President López Contreras obtained the aid and advice of 22 experts from the

United States headed by the Rev. John F. O'Hara, president of Notre Dame University. This volunteer, predominantly Catholic, American-Venezuelan Social Service Mission visited the republic during June 22-29. In conferences with Venezuelan government officials and experts the commission aided in the formulation of plans for the extension and improvement of educational, public health, and social welfare services. A Chilean educational mission engaged by the Venezuelan Government arrived in January. Late in July five fiscal and tax experts loaned to Venezuela by the U.S. Government arrived at Caracas to aid in reorganizing the republic's fiscal and taxation policies and methods.

Economic Situation. The distribution of bonuses in March and the expansion of public works activities, combined with the opening up of new oil fields and the tapping of gold and other mineral resources of the interior, produced a substantial economic boom in Venezuela during 1939. There was no unemployment. High wages paid by the oil companies and other enterprises caused many farm workers to desert their fields, with the result that food production declined and prices of food and virtually all other articles soared to unprecedented levels. With the outbreak of the European war in September, the government was forced to take emergency steps to check further price rises. A decree of September 11 declared a long list of articles to be "primary necessities" and established commissions to fix the prices of such articles and regulate their production and distribution. The shortage of dollar exchange became more acute toward the end of the year, hampering trade with the United States.

Foreign Relations. The provisional trade agreement concluded with the United States in May, 1938, was extended for another year on May 10, 1939. On November 6 the commercial relations of the two countries were placed on a permanent basis with the signing of a reciprocal trade treaty.

In August foreign residents were forbidden by decree to participate in Venezuelan political activities or in foreign-inspired political movements. Since communism was banned by the Constitution, the decree was directed mainly at Fascist and Nazi movements among the Spanish, Italian, and German colonies. A non-aggression pact between Venezuela and Colombia was signed December 17.

Other Events. The shanty town of Lagunillas, supported on stilts over the oil-covered surface of Lake Maracaibo, was destroyed by fire on the night of November 13 with the death of between 50 and 100 of the 2500 residents. The Venezuelan Government prohibited the rebuilding of the town on the site.

Part of the Danish colony of 34 families settled in Venezuela in 1938 returned to Denmark in March, 1939, as a result of dissatisfaction with conditions. The government in the same month permitted 251 Jewish refugees to enter Venezuela after they had been refused admission to Trinidad and British Guiana. Thereafter Caracas authorities refused to admit refugees and other immigrants who did not meet the strict requirements of the Technical Institute of Immigration and Colonization.

VENLOO INCIDENT. See NETHERLANDS, THE, under *History*.

VENTILATING. See AIR CONDITIONING; HEATING AND VENTILATING.

VERMONT. Area and Population. Area, 9564 square miles; included (1930) water, 440 square miles. Population: Census of Apr. 1, 1930, 359,611; Federal estimate for July 1, 1937, 383,000; census of 1920, 352,428. Burlington had (1930) 24,789 inhabitants; Montpelier, the capital, 7837.

Agriculture. Vermont harvested 1,102,000 acres in 1939. Tame hay, occupying most of this land, covered 933,000 acres, which gave 1,133,000 tons (approximate farm value, \$11,217,000); 76,000 acres of corn made 3,040,000 bu. (\$2,158,000); 15,000 acres of potatoes, 1,950,000 bu. (\$2,048,000); 57,000 acres of oats, 1,881,000 bu. (\$922,000); there were gathered for market 810,000 bu. of apples (\$729,000).

Manufacturing. The U.S. Census of Manufactures, issuing in 1939 its biennial report for 1937 on Vermont, showed the following figures (accompanied by figures for 1935, here in parenthesis): Active manufacturing establishments numbering 683 (660) employed 23,682 wage-earners (18,870), paying them \$24,614,697 (\$17,597,752); totals of these establishments' products aggregated \$111,876,051 (\$80,847,121), to which the processes of manufacture contributed \$53,104,364 (\$39,523,906).

The leading lines of manufacture in 1937 included the weaving of woolen goods, to a total output of \$13,593,190; the cutting and shaping of stone from quarries of marble, granite, and slate, producing \$12,620,407 in goods and occupying 3219 wage-earners at pay totaling \$4,314,056; the production of machine tools, totaling \$10,100,455, carried on by 5 establishments, employing 1700 wage-earners and paying them \$2,893,457, or the highest average pay for any large wage-earning classification in the manufactures of Vermont. Products of lumber and timber, totaling \$4,506,595, were listed separately from turned and shaped wooden goods, which amounted to \$3,445,336. Butter-making factories' output amounted to \$1,383,583.

Burlington's manufactures totaled \$9,204,870; Barre's, \$6,556,061; Rutland's, \$3,739,695.

Education. Vermont's inhabitants of school age were estimated, for the academic year 1938-39, as more than 76,000. The year's enrollments of pupils in all public schools numbered 65,970; this comprised 49,602 in elementary study and 16,368 in high schools. Outside of these totals a growing group in classes teaching trades and industries showed 541 enrollments in that year and were reported to have enrolled more than 900 for the year 1939-40. The expenditure of the year 1938-39 for public-school education totaled \$5,469,588. Of this sum, about one-half went to pay the 2750 teachers and principals, averaging \$970.74.

Mineral Production. Vermont's production of its native minerals was credited with a yearly total value of \$7,042,547 for 1937; stone contributed three-fifths of this; slate, one-fifth. Producers' sales of stone increased to the total of 264,480 short tons for 1938, from 194,770 for 1937; but by value they decreased to \$3,148,950 (1938) from \$4,215,766 (1937). The main part of the total value of stone (1938) was made up of some 50,130 short tons of granite (value, \$1,909,895); this in turn consisted mainly of monumental granite to the value of \$1,849,890; there also entered into the stone total 17,950 short tons of marble, in value \$1,003,341, of which the greater part by value, or \$705,997 was monumental marble,

the rest being building marble. The production of slate attained for 1938 the value of \$1,729,655, well exceeding the total, \$1,431,798, for 1937.

Legislation. The regular session of the Vermont Legislature which met in January, offered substantial support to Governor Aiken, in his dispute with the Federal Government over the intended Federal acquisition of land in the State, for use in projected works to regulate floods of the Connecticut River; an appropriation of \$67,000 was voted to provide the means for the State to contest the Federal proceedings in the courts. Shortly after the appropriation was made, the President directed that the plan to build works of flood-control in Vermont should be abandoned, and the appropriation to contest the Federal proceedings was therefore not put to use at the time.

The session voted an appropriation act carrying, for the State's expenditures of the next two years, a total of \$19,488,861, the highest such total in several years. A message from Governor Aiken, on the eve of adjournment, charged that this total exceeded the expected revenue from which the appropriations should come, and that a deficit of about \$300,000 was likely to result. The State's income tax was extended to apply to Federal salaries, in accordance with a recent decision of the Federal Supreme Court holding Federal salaries subject to taxation by a State. The Legislature adjourned April 15.

Other Events. Measures to keep the Rutland Railroad in operation began to take shape soon after the system, May 5, 1938, went into receivership owing \$189,000 in taxes alone, reportedly losing money at the rate of \$2400 a day, and lacking cash to pay the cost of operation for much longer. The holders of the railroad's bonds agreed to accept half of the interest due them in January, 1939, and 30 per cent of subsequent interest. The State administration deferred the payment of the line's overdue taxes for the two years prior to the convening of the Legislature in 1941; authorities reduced the yearly taxes levied on the Rutland in Vermont to \$60,000, from \$125,000; the company's employees consented, in August, 1938, to a reduction of their wages according to a sliding scale which at first cut their remuneration by 17 per cent; and business men in the State united to hire a traffic expert and, through him and otherwise, to bring more freight to the road. The company continued to report net loss, which amounted to nearly \$337,000 for the first eight months of 1939, or about half the corresponding sum of a year earlier; but for September, a net income of \$42,963 was reported. The measures taken to keep the railroad from extinction and preserve its services to the inhabitants of a great part of the State made an exceptional record of team play on the part of separate groups of those concerned.

Officers. Vermont's chief officers, serving in 1939, were: Governor, George D. Aiken (Rep.); Lieutenant-Governor, William H. Wills; Treasurer, Thomas H. Cave; Secretary of State, Rawson C. Myrick; Auditor, Benjamin Gates; Attorney-General, Lawrence C. Jones; Commissioner of Education, Francis Bailey.

VERMONT, UNIVERSITY OF, AND STATE AGRICULTURAL COLLEGE. An institution of higher education in Burlington, Vt. The 1939 autumn enrollment was 1479; the summer school enrollment, 941. The faculty numbered 240. The endowment amounted to \$3,508,463, while the income for the year was \$1,406,090. The library contained 150,230 volumes. President, Guy W. Bailey, LL.D.

VERSAILLES TREATY. See GERMANY and ITALY under *History*.

VETERANS' ADMINISTRATION. As of June 30, 1939, the organization of the Veterans' Administration consisted of the following officers; Frank T. Hines, Administrator of Veterans' Affairs; Adelbert D. Hiller, Executive Assistant to the Administrator; Harold W. Breining, Assistant Administrator in charge of finance and insurance; Omer W. Clark, Assistant Administrator in charge of pensions and compensations; George E. Ijams, Assistant Administrator in charge of medical and domiciliary care and treatment, construction and supplies; Edward E. Odom, Solicitor in charge of legal activities; and Robert L. Jarnigan, Chairman of the Board of Veterans' Appeals.

As of June 30, 1939, there were in force 605,716 U.S. Government life insurance policies representing \$2,561,712,315 of insurance. During the fiscal year 1939, there were issued 25,341 new policies aggregating \$75,383,423. The actual disbursements made during the fiscal year 1939, to policy-holders of this form of insurance was \$35,331,225.

Military and Naval insurance covers contracts held by veterans of the World War for a form of insurance formerly designated as "War Risk" insurance. The disbursements for this type of insurance totaled \$38,393,938 during the fiscal year 1939.

During the fiscal year 1939, 218,621 United States veterans received hospitalization, 165,576 being admitted during the fiscal period. As of June 30, 1939, 53,861 United States veterans were receiving hospitalization. These veterans were classified by wars as follows: World War, 48,527; Spanish American War, 2715; Civil War, 48; Regular Establishment, 2486; and all other wars, expeditions and occupations, 85.

At the close of the fiscal year 1939, the veteran population reported as present in domiciliary status in facilities under the control and jurisdiction of the Veterans' Administration totaled 15,426. Of this number approximately 91.13 per cent were veterans of the World War; 4.95 per cent, Spanish American War; 3.79 per cent, Reg-

ular Establishment; 0.01 per cent, Civil War; and 0.12 per cent, other wars, expeditions, and occupations.

The preceding table shows the number of pension and compensation cases of living and deceased veterans by wars including Regular Establishment and Honor Roll—Yellow Fever Experiments as of June 30, 1939, and the disbursements during the fiscal year 1939.

During the fiscal year 1939, the total disbursements made by the Veterans' Administration from all appropriations and trust funds (including adjustments on lapsed appropriations) was \$600,221,534.

FRANK T. HINES.

VETERANS OF FOREIGN WARS OF THE UNITED STATES.

An organization founded in 1899 and chartered by Congress in 1936, composed of American citizens who have served honorably in the Army, Navy, Marine Corps, or Coast Guard of the United States, in hostile waters or on foreign soil during any foreign war, insurrections, or expeditions, in such service as the United States has officially designated as campaign service and for which it has authorized a campaign badge. (For further details of the organization, see the NEW INTERNATIONAL YEAR BOOK, 1937.)

There are 51 charters of departments located in each of the 48 states, in the District of Columbia, the Territory of Hawaii and in the Canal Zone. Local posts exist in every state, the District of Columbia, the Canal Zone, Hawaiian Islands, Alaska, Philippine Islands, and in France and China. The "Ladies' Auxiliary, Veterans of Foreign Wars of the United States" is a subsidiary organization, with a National Headquarters, with state departments, and with more than 2500 local units.

One of the outstanding events of the year 1939 was the celebration, on September 23, of the 40th birthday anniversary of the Veterans of Foreign Wars of the United States. Founded on Sept. 23, 1899, by a group of 13 Spanish-American War veterans at Columbus, Ohio, the organization now numbers approximately a quarter of a million veterans of the War with Spain, the Boxer Rebellion, the Philippine Insurrection, World War, Nicaraguan campaigns and other armed expeditions under the Stars and Stripes during the last four decades.

Among the major activities of the V. F. W. in the 76th Congress was its sponsorship of S. 1885, a proposal to take the profits out of war by taxing the profits out of war. Progress also was achieved by the V. F. W. in its efforts to obtain wider veteran preference privileges in government employment. As approved June 30, 1939, the Emergency Relief Appropriation Act, Public Resolution No. 24, included provisions requiring employment or retention in employment on WPA projects of veterans (first) and other American citizens (second).

The 1939-40 national officers of the V. F. W. are Otis N. Brown, Greensboro, N. C., Commander-in-Chief; Dr. Joseph C. Menendez, New Orleans, La., Senior Vice Commander-in-Chief; Max Singer, Brighton, Mass., Junior Vice Commander-in-Chief; Robert B. Handy, Jr., Kansas City, Mo., Adjutant-Quartermaster General; Robert T. Merrill, Havre, Mont., Judge Advocate General; Dr. S. T. Bostic, New York City, Surgeon General; Reverend Daniel F. Monaghan,

Milan, Ill., National Chaplain; Omar B. Ketchum, Kansas City, Mo., Chief of Staff; and Carl J. Schoeninger, Detroit, Mich., Inspector General. The V. F. W. maintains its National Headquarters in the Medical Arts Bldg., Broadway at 34th Street, Kansas City, Mo.

VETERINARY MEDICINE. In the field of comparative medicine the year 1939 was marked by the continued protection of the livestock industry through prevention of the introduction of the dangerous contagious diseases that are ever threatening to gain entrance from abroad; progress in the suppression of tuberculosis, Bang's disease, and tick fever; and the advance of knowledge of diseases and parasites and means for their control, through research work. The revelation in the course of investigation, that the chemical phenothiazine is a highly effective anthelmintic in the removal of most of the injurious helminth parasites of sheep and many of those of swine, a single treatment being sufficient, was an outstanding achievement. The preparation and publication during the year of an International List of Animal Diseases met a need of long standing.

Bang's Disease Eradication. The control work with Bang's disease of cattle was continued by the U.S. Department of Agriculture in co-operation with State livestock sanitary authorities and livestock owners. There was a considerable increase in the number of herds and of cattle under supervision in the Federal-State project over the number so reported for 1938, the increase of herds being 30 per cent and of cattle about 14 per cent. By November 1 approximately 21 per cent of the dairy and breeding cattle over six months of age in the United States were under supervision. During the fiscal year ended June 30, 7,591,398 cattle in 724,613 herds were tested, of which 2.9 per cent were reactors, as compared with about 4 per cent the preceding year. On June 30 there were 70,000 State-accredited herds in 43 States in the Bang's disease control project. In 24 States the initial testing of all such cattle had by November 1 been or was being conducted in about 490 counties, and in about 400 of these counties in 19 States the initial tests had been completed, showing an average cattle infection of 2.7 per cent and a herd infection of 5.2 per cent. The results of the work at the close of the fifth year that it had been under way show that good progress has been made.

The accumulated results of calfhood vaccination against Bang's disease, commenced in 1936, in which some 10,000 calves in 261 herds have been vaccinated show that the resistance of heifer calves to infection is increased during their first and second pregnancies and probably later. The results of tests made of 1557 representative samples of blood of ewes killed in abattoirs in six central and western States indicate that brucellosis of sheep is of rare occurrence in the United States. Investigation has shown that horses may become carriers and that if allowed to remain upon the farm are a potential hazard. The finding that the common house rat is a host to the infection, that the infection may pass from rat to rat by living in close contact and may be found in its excretions, has emphasized the importance of rat extermination in the attempt to free the farm from this disease. The findings of the year suggest strongly that the Brucella organism plays a part in periodic ophthalmia of the horse.

Encephalomyelitis, Equine. The production

of more than nine million doses of chick-embryo vaccine and its extensive use combined with other factors, of which an abnormally low rate of precipitation over wide areas in the country was perhaps the most important, resulted in a reduction of the number of cases of equine encephalomyelitis in 1939 to only 8006 reported or about 4 per cent of the 184,662 reported in 1938. However every State west of the Mississippi river was involved, and about one-third of all the counties or parishes in the entire country contained animals affected by this disease. The mortality in 24 of the States where western-type virus only had been proved to occur or was suspected was 26.7 per cent and in nine of the States where eastern-type virus only had been proved or was suspected, 89 per cent. As in previous years 90 per cent of the cases were reported to have occurred during the summer and early fall months. The reported comparative incidence in vaccinated and unvaccinated horses and mules was 0.37 and 1.2 respectively per 1000 animals. All of the 35,000 horses and mules in the Army, National Guard, and R.O.T.C. units were vaccinated between May 1 and June 15 with no unfavorable results or disturbing reactions. Work conducted indicated that even one year after vaccination a high degree of immunity was present.

Mastitis or Garget of Dairy Cows. Much of the work with mastitis of cattle conducted with the view to determining the value of sulfanilamide in its treatment has shown the causative streptococci to be suppressed temporarily while the drug is being administered and that they reappear when the treatment is discontinued. The isolation of a filtrable virus from the blood and from the milk of mastitis cows reported by Broadhurst, Cameron, and MacLean was an event that may prove to be of great importance.

Pullorum Disease. During the fiscal year ended June 30 the National Poultry Improvement Plan for improving the productive qualities of poultry and the reduction of losses from pullorum disease was in operation and 44 States were co-operating with the U.S. Department of Agriculture to this end. More than 42,000 flock owners had their 8,500,000 breeding birds selected and tested according to the provisions of the plan. Since the inauguration of the plan 14 States have commenced a pullorum testing program.

Quail Disease. An investigation of the ulcerative enteritis disease of quail, the most important and a serious affection of that game bird, led to the discovery of a Gram-negative bacterium as the cause rather than the previously described Gram-positive form which is now shown to be a secondary invader. The chronic quail-carrier of this organism was shown to be a factor in maintaining and spreading the disease. Observations indicated that the infection is transmitted to young quail through eggs laid by such carriers.

Sulfanilamide Therapy. Experimental use of the new drug, sulfanilamide, led to the discovery of its value in the treatment of additional diseases of the domestic animals. Its administration in the treatment of spontaneous canine distemper on the ground that the superimposed infection is more fatal than the virus infection resulted in the recovery of all but one of 17 animals tested, while all but two of 20 control animals succumbed. The meningo-encephalitis associated with canine distemper, considered for years as an incurable affection, was successfully treated with this drug with an estimated recovery of

93 per cent. Its use in the treatment of salmon poisoning, a fluke-born infectious disease of dogs of common occurrence in Oregon, resulted in a drop in the temperature and return of the appetite within 24 to 48 hours of its first administration. The use of neo-prontosil during the course of an outbreak of strangles among horses of a cavalry depot controlled the infection, and rapidly brought about recovery and prevention of the suppuration that usually occurs, when it was administered in the early stages of the disease. Particular mention should be made of the publication of a *Manual* by Doctors P. A. Long and E. A. Bliss in which the present state of knowledge of sulfanilamide, sulfapyridine, and allied compounds is brought together.

Swine Erysipelas. The old world disease of swine due to *Erysipelothrix rhusiopathiae* has in recent years appeared in the United States and spread rapidly, and is now the source of considerable loss of swine, particularly in the Mississippi, Missouri, and Platte River Valleys. It has also been found of importance as the cause of arthritis in lambs. Reports were made during the year of its appearance in flocks of turkeys and the source of loss in several States. It was the cause of a loss of 10,000 ducklings on a farm in Illinois and was identified as responsible for the death of a quail on a game farm in Iowa.

Tick Fever and Cattle Tick Eradication. Cattle tick eradication activities during the fiscal year ended June 30 led to the completion of the work and release from Federal quarantine of two counties and the remainder of one county in Florida, and eight counties and the remainder of four counties, and parts of three counties in Texas. This resulted in an aggregate area of 10,904 square miles of territory released in continental United States leaving but 2 per cent of the original territory placed under Federal quarantine. Satisfactory progress was made in central and southern Florida, where the necessity for removing the tick infested deer from dense swamps delayed completion of the work. In the lower Rio Grande Valley of Texas adjacent to the Mexican boundary, the advance of the work was delayed by reinfestation on several occasions from stray or smuggled tick-infested animals from Mexico. In the work in Puerto Rico and the Virgin Islands where the tropical variety of the fever tick is prevalent, it was necessary to treat the sheep and goats and a few deer on infested premises. In Puerto Rico the western one-third of the island, covering an area of 1243 square miles, was released.

Tuberculosis, Bovine and Avian. The close of the fiscal year on June 30 saw more than 99 per cent of the counties in the United States in the modified accredited area as the result of the tuberculosis eradication work that had been under way since 1917. At that time the nine remaining counties in the non-accredited State of California were engaged in intensive testing. By the end of December all herds of cattle in the United States had been tested at least once with tuberculin. Investigations reported have shown that the avian type of the tubercle bacillus has a limited pathogenicity for cattle; when lesions occur they are in the majority of instances small, localized, and nonprogressive. Occasionally cattle sensitized by this type under natural conditions will react rather typically to mammalian tuberculin. The occurrence of tuberculosis in the sheep is relatively rare, and most of the cases typed have been

avian, but during the year a case of the bovine type was reported.

Turkey, Disease of. The disease of the domestic turkey caused by a protozoan parasite of the white blood corpuscles (*Leucocytozoon smithi*) that has been the source of considerable loss to raisers in Virginia, was discovered to be present in other States, including Alabama, Georgia, South Carolina, and Florida. The parasite was also found in the blood of wild-turkeys in the wild in Georgia, Florida, and Missouri.

Bibliography. Among the important publications of the year were:

D. H. Bergey, R. S. Breed, E. G. D. Murray, and A. P. Hitchens, *Bergey's Manual of Determinative Bacteriology* (Baltimore, 1939, 5 ed.); G. Carpentier, *Parasites et maladies parasitaires des équidés* (Paris, 1939); R. Edelmann, *Meat Hygiene* (Philadelphia, 1939, 7 ed., rev. by J. R. Mohler and A. Eichhorn); H. Fox, *Chronic Arthritis in Wild Mammals* (Philadelphia, 1939); G. Gilde-meister, H. Haagen, and O. Waldmann, *Handbuch der viruskrankheiten* (vols. i, ii, Jena, 1939); R. L. Haden, *Principles of Hematology* (Philadelphia, 1939); F. B. Hadley, *Principles of Veterinary Science* (Philadelphia, 1939, 3 ed.); W. B. Herms, *Medical Entomology* (New York, 1939, 3 ed.); F. T. G. Hobday, *Hobday's Surgical Diseases of the Dog and Cat* (London, 1939, 4 ed., ed. by J. McCunn); I. F. Huddleson, A. F. Hardy, J. E. Debono, and W. Udall, *The Practice of Veterinary Medicine* (Ithaca, 1939, 3 ed.); W. L. Williams, *The Diseases of the Genital Organs of Domestic Animals* (Ithaca, 1939, 2 ed.).

WILLIAM A. HOOKER.

VICTORIA. An Australian State. Area, 87,884 square miles; population, exclusive of full-blood aboriginals, 1,880,241 (Mar. 31, 1939, estimate), as compared with 1,820,261 (1933 census). During 1938 there were 30,344 births (16.25 per 1000); 18,955 deaths (10.15 per 1000); and 17,113 marriages (9.16 per 1000). The capital city of Melbourne had 1,035,600 inhabitants on Dec. 31, 1938. Other important cities (with 1938 estimated populations) are Geelong, 39,900; Ballarat, 38,270; Bendigo, 29,920; Warrnambool, 9100; Mildura, 6950. On Dec. 31, 1936, there were 2600 State primary schools with 250,070 enrolled pupils, 149 State intermediate and secondary schools with 34,136 pupils, and 28 senior technical schools 22,345 pupils. Trinity, Ormond, Queen's, and Newman Colleges are affiliated with the University of Melbourne. In 1937, 728 students matriculated and 3559 students attended lectures.

Production. Wheat (18,104,369 bu. in 1938-39 season), oats, barley, potatoes, hay, and grapes are the chief agricultural products. The principal dairy products for 1937-38 were butter, 141,321,445 lb.; cheese, 16,466,038 lb.; bacon and ham, 16,696,404 lb. Livestock in the State (Mar. 31, 1939): 17,007,352 sheep; 1,697,295 cattle; 343,828 horses; 252,462 swine. Wool (greasy) produced in year ending June 30, 1939, totaled 170,465,895 lb.

The estimated value of mineral production for 1938 was £A1,883,861, of which gold accounted for £A1,273,351 and coal, £A539,822. Gross tonnage of ships entering the port of Melbourne amounted to 14,748,360 in 1938. In 1937-38, from

the 9241 factories, with 201,793 employees (including working proprietors), the net value of production was £A64,889,390 (Australian £ averaged \$3,8955 in 1938; \$3,9594 in 1937).

Government. For the year ended June 30, 1939, revenue totaled £A26,985,548; expenditure, £A27,772,790; public debt, £A179,698,000. The executive authority is vested in a governor, assisted by a responsible ministry. Parliament consists of a legislative council of 34 members elected for six years (17 elected every three years) and a legislative assembly of 65 members who are elected for three years by universal adult suffrage. The legislative assembly elected on Oct. 2, 1937, was made up of the following parties: United Australia, 21; Labor, 21; United Country, 20; Independents, 3. Governor, Sir Winston Dugan (assumed office, July, 1939). Premier, A. A. Dunstan. See AUSTRALIA.

VIRGINIA. Area and Population. Area, 42,627 square miles; included (1930) water, 2365 square miles. Population, Apr. 1, 1930 (census), 2,421,851; July 1, 1937 (Federal estimate), 2,706,000; 1920 (census), 2,309,187. Richmond, the capital, had (1930) 182,929 inhabitants; Norfolk, 129,710.

Agriculture. Virginia harvested, in 1939, 3,772,400 acres of the principal crops. Nearly four-fifths of this was in corn, tame hay, and wheat. Corn, on 1,405,000 acres, gave 36,530,000 bu. (estimated farm value, \$26,302,000); tame hay, on 1,036,000 acres, 983,000 tons (\$11,501,000); wheat, on 518,000 acres, 7,511,000 bu. (\$6,459,000). Peanuts, on 161,000 acres, made 189,175,000 lb. (\$6,810,000); barley, 80,000 acres, 2,320,000 bu. (\$1,299,000). Among crops of small acreage in proportion to their value, tobacco, on 167,400 acres, produced 138,232,000 lb. (\$19,897,000); potatoes, on 78,000 acres, 6,786,000 bu. (\$5,700,000); sweet potatoes, on 32,000 acres, 4,128,000 bu. (\$2,477,000). The acreage of cotton, 33,000, and its production, 12,000 bales (\$546,000), were far below the average for the decade 1928-37. Apples gathered for market totaled 7,500,000 bu. (\$4,500,000).

Manufacturing. The U.S. Census of Manufactures' biennial report on Virginia, issued in 1939 and covering 1937, showed the following totals (with figures for 1935 also, here included in parenthesis): Active manufacturing establishments numbered 2384 (2241), employed 132,643 wage-earners (113,654), and paid them \$112,773,796 (\$86,376,752); all these establishments' products aggregated \$908,222,316 (\$697,529,672), to which their processes of manufacture contributed \$335,847,817 (\$247,029,343).

Manufactures of tobacco provided nearly one-third of the aggregate value of the manufactured products. Cigarettes amounting in value to \$279,329,749 were produced in five establishments, employing 4976 wage-earners; chewing tobacco, smoking tobacco, and snuff were manufactured to the total of \$18,779,567. The manufacture of rayon amounted to \$55,897,047; separately listed, the production of weaves of rayon totaled \$8,998,052. The output of divers manufactured chemicals attained \$31,687,241. That of cotton woven goods amounted to \$31,230,313. Other manufactured products were: paper, \$29,306,361; miscellaneous lumber and timber products, \$17,344,259; and grain mills' output, \$16,124,956. Much of the manufacturing was concentrated in Richmond, where the wage-earners numbered 18,014 in 1937 and the manufactured output amounted to \$337,-

801,116. Norfolk County and the politically independent cities of Norfolk, South Norfolk, and Portsmouth numbered 11,238 manufacturing wage-earners and attained, in output, \$93,817,734. Roanoke County and city had 8294 such wage-earners and totaled \$45,024,659 in manufactures.

Mineral Production. Production of minerals native to Virginia attained for 1937 the total value of \$46,019,085; coal contributed nearly three-fifths of this, and in the order given, stone, zinc, and clay products followed in importance. The production of bituminous coal decreased somewhat, to approximately 12,192,000 net tons for 1938, from 13,795,239 tons, in value \$27,177,000, for 1937. Virginia also produced, in 1937, anthracite-type coal worth \$539,000. Output of stone, 5,474,690 short tons for 1938 and 5,061,660 for 1937, consisted mainly of crushed and broken stone; the totals, by value, were \$5,606,470 (1938) and \$5,399,137 (1937). The output of zinc mines, not separately stated by the U.S. Bureau of Mines, was included with that of the closely related zinc mining of TENNESSEE (q.v.). The value of clay products made in 1937 totaled \$2,544,596; this did not include pottery. Lime was produced in 1938 to the value of \$1,014,607.

Education. Virginia's inhabitants of school age (from 7 years through 19) were stated, for the academic year 1938-39, as 735,198. Enrollments of pupils in public schools numbered 575,999; this comprised 457,473 in elementary study and 118,526 in high schools. The year's expenditure for public-school education totaled \$31,981,207. It included salaries for 17,310 teachers, averaging \$940 (superintendents and principals included).

Political and Other Events. Two groups of economic producers in Virginia were hurt in 1939 by conflict partly or wholly foreign to the State: in April the miners of bituminous coal in the Clinchfield Coal Corporation's workings sought to keep on with their employment during the strike waged in the Appalachian area by the United Mine Workers. Pickets interfered, and though the local association of employees complained to the authorities that its members were being kept from work by outsiders, production was stopped or heavily cut; in September, after the outbreak of war in Europe, the foreign buyers of bright tobacco, normally the takers of a great part of Virginia's crop, gave up their plans to purchase; in consequence, the primary markets for this crop could not open at the usual time.

A sharp division in the social and political faith of Virginian Democrats intensified contests at the polls, between the Democratic factions headed respectively by Governor Price and Senator Byrd Price, approver of the humanitarian policies of the Federal Administration, possessed the support of the State's New Dealers; Byrd, as one adverse to the Administration on numerous and conspicuous points, had behind him the Democratic conservatives. Carter Glass, Jr., son of the senior Senator, was defeated, running for the State Senate, by a follower of Price in the nominating primaries; in the election, November 7, Republican candidates won three Senatorships and seven places in the House of Delegates, defeating Democratic candidates of either faction.

Officers. Virginia's chief officers, serving in 1939, were: Governor, James H. Price (Dem.); Lieutenant-Governor, Saxon W. Holt; Secretary of the Commonwealth, R. L. Jackson; Treasurer, Edwin B. Jones; Auditor, S. McCarthy Downs;

Attorney-General, Abram P. Staples; Superintendent of Public Instruction, Dr. Sidney B. Hall.

VIRGINIA, UNIVERSITY OF. A nonsectarian institution of higher education at Charlottesville, Va., founded in 1819. The enrollment for the autumn session of 1939 was 2934. In the extension division were 1547 students. The 1939 summer session had an attendance of 1599. The faculty numbered 179. The productive endowment amounted to \$11,028,877 and the income for the year, \$2,264,775. The library contained approximately 325,000 books. President, John Lloyd Newcomb, B.A., C.E., LL.D., Sc.D.

VIRGINIA POLYTECHNIC INSTITUTE. An institution for the higher education of men, founded in 1872. The enrollment for 1939-40 was 3065. The registration for the summer session 1939 was 672. There were 265 faculty members. The endowment fund totaled \$349,312 and the income for the year, \$14,780. There were 85,000 volumes in the library. A building programme was completed at a cost of \$1,622,000. President, Julian A. Burruss, Ph.D., LL.D.

VIRGIN ISLANDS. An insular possession of the United States; situated to the east of Puerto Rico, from which the islands are separated by about 60 miles of sea. They form the southwestern part of a group, the rest of which is a British possession. The whole group are called the Virgin Islands, outside of the United States, where, however, the name, Virgin Islands of the United States, is generally abbreviated in official parlance to "Virgin Islands" as designating the U.S. possession. The latter's area is 132 square miles; population (1930), 22,012. The island of St. Thomas, has but 22 square miles; St. Croix has 84; St. John, 20. In population, St. Thomas, having (1930) 9834 inhabitants, nearly equals St. Croix's 11,413 (1930); St. John had (1930) 765. Of the population of 1930, 78 per cent were Negroes, 12 per cent of mixed race, and 9 per cent white. The capital is Charlotte Amalie; it is situated on St. Thomas and formerly for a time was itself called St. Thomas.

Production and Trade. St. Thomas, too rugged for extensive agriculture, partly supports its population, mainly concentrated in Charlotte Amalie, by serving the tourist trade and by making articles for sale to tourists and other non-insulars. St. Croix, highly agricultural, raises sugar cane, yielding sugar for export to the United States and used also in making rum; it produces cattle, chiefly for the Puerto Rican market. The islands, mainly St. Croix, produced, in the fiscal year 1939, 4956 tons of sugar, as against 4664 tons for 1938 and 5749 tons for 1937. The crop of 1939 was produced mainly by 950 growers on St. Croix; 400 of these were small homesteaders who had set up with aid from the U.S. Government. A deficiency in St. Croix's usually abundant rainfall, in 1938 and again, though less severe, in 1939, cut down the yield of sugar cane, thereby depressing the prosperity of this island. The production of cattle was reflected in the number exported yearly from the islands; 1034 were shipped in 1937 as against 2189 in 1936; by value \$19,556 (1937) and \$43,085 (1936). The Virgin Islands' exports to the United States amounted for 1939, to \$1,558,523; for 1938, to \$1,220,506. The total for 1939 included bitters to the value of \$412,600; rum, \$227,638; cane sugar, \$376,351. The much higher imports from the United States amounted to \$2,487,805 for 1939 and \$2,358,548 for 1938. Those of 1939 included \$402,702 of grains and their preparations,

\$376,387 of coal and products of petroleum, and \$299,849 of manufactures of iron and steel. Much of the excess of imports was balanced by Federal expenditure in the islands.

Government. Governor, Lawrence W. Cramer, who assumed office Aug. 31, 1935. An act of the U.S. Congress, the Organic Act of 1936, founded the existing scheme of government of the Virgin Islands. The President of the United States appoints a governor—the chief executive authority—a Federal District Judge, and a district attorney. A Legislative Assembly, with power to vote measures of general concern to the islands, is made up of the combined municipal councils of the two subdivisions, that of St. Croix and that of St. Thomas and St. John. These councils are elected by popular vote. The inhabitants of the islands were made U.S. citizens in 1927.

The public finances have the peculiarity of conforming to the municipality as the chief unit, rather than to the general insular government. Governor Cramer's persistent effort, renewed in 1939, to move the Assembly to vote taxes for the support of the insular government made little progress in face of the separate interests of St. Thomas and St. Croix, kept apart by 45 miles of sea. The municipality of St. Thomas and St. John collected, in the fiscal year 1939, \$232,676 in revenues, expended \$273,244, and obtained from Congress an appropriation of \$40,000 towards the year's deficit. The municipality of St. Croix collected \$156,881 in revenues, expended \$249,391, and got from Congress, toward covering the consequent deficit, \$80,000. The Federal Government, besides these appropriations conducted a program of public works in the islands during the year. It did not, however, proceed further with its scheme of establishing inhabitants on homesteads.

History. Governor Cramer in his report for the fiscal year 1939 gave strong support to the islands' demand for the revision of Federal laws that handicapped the Virgin Islands' production of sugar cane, their only substantial means of attaining an adequate export trade. These laws were the Sugar Act of 1937, which failed to allow to producers in the Virgin Islands the benefit payments provided to other producers under the American flag, and an earlier act, imposing an export tax, originally with a view to compensating the acquired territory for its loss of revenue from duties on importations of U.S. goods. The combined effect of these two obstacles was to force the grower in the Virgin Islands, according to Governor Cramer, to realize from \$16 to \$18 less per ton on the sugar content of his sugar cane than other growers. Under this handicap he produced at a loss while his competitors under the United States' jurisdiction could still make a profit. The application of the Federal Wage and Hour Act in the islands, though the extent of its effect was uncertain, tended to heighten the difficulty, and the continuance of relative drought in the cane-growing area of St. Croix kept the trouble at the acute stage.

Robert Morss Lovett, former professor at the University of Chicago, was appointed government secretary in August. The U.S. Navy acquired from the Department of the Interior, May 4, three small islands off St. Thomas, inclosing a lagoon to be used as a port for seaplanes.

VITAL STATISTICS. For the second successive year, the United States birth rate showed a slight increase, according to the provisional report of the U.S. Bureau of the Census for the calendar year 1938. The rate for 1938 was 17.6

births per 1000 population, as compared with 17 in 1937 and 16.7 in 1936. This increase is slight, however, in comparison with the decline apparent during the last two decades. In 1921 there were more than 24 births for every thousand persons in the country. In the same year, there were more than two births for every death, while the proportion in 1938 was 1.66 births to one death. The actual number of births in 1938 was 2,286,962.

There were 1,381,391 deaths in continental United States in 1938, a rate of 10.6 per 1000 population, as compared with 17.6 at the beginning of the century. The death rate varied by States from less than 8 in the Dakotas and Oklahoma to 14.1 in New Mexico and 14.6 in Arizona. The high rates in the two latter States was attributed in large measure to the number of nonresident deaths from tuberculosis. Diseases of the heart continued, as in preceding years, to be the leading cause of death. Cancer and other malignant tumors were second, cerebral hemorrhage and related diseases were third and nephritis fourth. A striking decrease was apparent in respect to pneumonia, which caused 119,378 deaths in 1936 and only 87,923 in 1938. The number of deaths from selected causes and the rates per 1000 population are shown in the accompanying table.

The infant mortality rate, which has dropped by almost a third in the past 18 years, showed a further decline in 1938 to 51, as compared with

54.4 in 1937 and 75.6 in 1921. According to the statisticians of the Metropolitan Life Insurance Company, premature birth is now the leading cause of infant deaths; diarrhea and enteritis, which caused 21 per cent of the deaths in 1917, now cause only 8 per cent, and mortality from congenital debility has declined 60 per cent. The Bureau of Census figures on maternal deaths showed 9953 deaths from all puerperal causes in 1938, a rate of 4.35 per 1000 live births, as compared with 4.88 in 1937 and 5.93 in 1934. See ACCIDENTS.

WAGE AND HOUR DIVISION. The Fair Labor Standards Act of 1938, the administration and enforcement of which is vested in the Wage and Hour Division of the U.S. Department of Labor, places a "floor" under wages and a "ceiling" over hours of work and prohibits "oppressive" child labor for employees engaged in interstate commerce or in the production of goods for interstate commerce.

From Oct. 24, 1938, effective date of the Act, until Oct. 24, 1939, the wage "floor" was 25 cents

NUMBER OF DEATHS (EXCLUSIVE OF STILLBIRTHS) FROM SELECTED CAUSES, AND DEATH RATES—UNITED STATES, 1936-1938

an hour and the hours "ceiling," without payment of time and a half for overtime, 44 a week. On Oct. 24, 1939, the statutory minimum wage advanced to 30 cents an hour and the statutory workweek was lowered to 42 hours. An estimated 690,000 workers received wage increases and 2,380,000 workers had their hours reduced or were paid extra for overtime as a result of the Oct. 24, 1939, changes in the law. No further change in the general minimum wage rate is required until 1945, when 40 cents an hour will become the minimum. The workweek will be reduced to 40 hours Oct. 24, 1940. There will be no further reduction in the maximum workweek.

Exempted from the wage and hour provisions of the Act are employees in certain categories, notably those employed in agriculture, as seamen, fishermen, and in retail and service establishments the greater part of whose selling or servicing is in intrastate commerce.

Provision is made for the employment of learners, messengers, apprentices, and mentally or physically handicapped workers at subminimum wages upon certification by the Administrator of the Division. Limited exemptions from the overtime pay provisions are granted to industries found by the Administrator to be seasonal, and to certain employees employed in the processing of agricultural or horticultural commodities within the "area of production" (as defined by the Administrator).

Provision is made for the establishment of minimum wages, industry by industry, at a rate higher than the statutory minimum, but not in excess of 40 cents an hour, by wage orders the Administrator is empowered to issue upon the recommendation of industry committees to be appointed by him. The Act requires that each industry committee shall consist of representatives of employers and of employees in the industry, and of the public, in equal numbers, and that they shall be chosen with due regard to the geographical regions in which the industry is carried on.

Organization of the Division has developed to discharge effectively the major responsibilities imposed by the Act upon the Administrator; namely, (1) enforcement of the minimum wage and maximum hour provisions, (2) the drafting of definitions and the issuance of regulations, (3) the operation of the authorized techniques incidental to the work of the industry committees and the issuance of wage orders, and (4) the certification of learners, messengers, apprentices and handicapped workers for employment at wages less than the minimum.

Responsibility for enforcement is largely vested by the Administrator in the heads of 15 regions with headquarters in Boston, New York, Philadelphia, Newark, Richmond, Charlotte, Atlanta, Birmingham, Nashville, Cleveland, Chicago, Minneapolis, Kansas City, Dallas, and San Francisco. The child labor provisions are administered and enforced by the Children's Bureau of the U.S. Department of Labor.

The Administrator is authorized to enter into co-operative agreements with the several States for the utilization of State Labor Department inspectional staffs on a reimbursable basis in the work of enforcement and the making of inspections and the first such agreement, made with North Carolina, became effective Nov. 1, 1939.

Nine industry committees, covering the textile and apparel industries, had made minimum wage recommendations as of Jan. 1, 1940, and three

wage orders had been issued, as follows: For cotton, silk, and rayon textiles, 32½ cents an hour; for hosiery, 32½ cents in the seamless branch and 40 cents in the full-fashioned branch; for millinery (effective Jan. 15, 1940), 40 cents. A committee for the railroad carrier industry was appointed in November but as of Jan. 1, 1940, it had not reported a recommendation.

Prior to Jan. 1, 1940, 139 cases involving alleged violations of the Act had been taken to the courts. In all but three of the cases in which court action had been completed the Division was upheld. Fines approximating \$115,500 had been paid by defendants in 41 criminal cases. Fines in a considerably larger amount were suspended upon condition that unpaid minimum wages or overtime compensation be paid to aggrieved employees, coupled with promises of future compliance. Approximately 800 cases of nominal or non-wilful violation were closed without court action upon the restitution by employers to affected employees of wages illegally withheld. No case arising under the Act had yet reached the United States Supreme Court, but the constitutionality of the Act had been upheld in several Federal District Courts, notably by Judge R. A. Cooper in a case against the Eastern Sugar Associates of Puerto Rico, and by Judge William H. Holly in a case against Montgomery Ward and Company of Chicago.

In 1939 seasonal exemptions were granted for various branches of tobacco handling and packing, natural ice harvesting and packing, brick manufacturing in Maine, New Hampshire, and Vermont, the mining of placer gold in various northern States and Alaska, the processing of hybrid seed corn, and the milling of sugar cane in Louisiana. About 5000 applications were received, and approximately 2400 certificates issued, for the employment of handicapped workers at subminimum wages. Certificates, limited as to number and time, were issued for the employment of several thousand learners, notably in the hosiery, apparel, knitted outerwear, knitted underwear, and textile industries.

Elmer F. Andrews, first Administrator, resigned effective Nov. 30, 1939. At that time Lieut. Col. Philip B. Fleming, U.S.A., was assigned by the President to the Department of Labor to serve as co-ordinator for the Wage and Hour and the Public Contracts Divisions. Harold D. Jacobs, who had been Assistant Administrator in charge of information, received a recess appointment as Administrator.

HAROLD D. JACOBS

WAGES. See RELIEF.

WAKE ISLAND. An island in the North Pacific (19° N. and 166° 20' E.), 2130 miles west of Hawaii, annexed by the United States in 1898 and created a base for Pan American Airways' transpacific service in 1935. Area, about 2600 acres. The population consists of a few men in charge of the airport. In 1939 Congress appropriated special funds for the construction of a naval air and submarine base on Wake Island.

WALES. See GREAT BRITAIN.

WALLIS ARCHIPELAGO. See NEW CALEDONIA.

WALSH, FRANK (FRANCIS) P(ATRICK). An American lawyer, died in New York, May 2, 1939. Born in St. Louis, Mo., July 20, 1864, he was educated at St. Patrick's Academy there, and in

1889 was admitted to the Missouri bar. Interested in the improvement of social and industrial conditions he served on the Kansas City Tenement Commission (1906-08) and was attorney for the Board of Public Welfare (1908-14) and of the Board of Civil Service (1911-13), both of that city. His work in these fields led to his appointment as chairman of the Federal Commission on Industrial Relations in 1913. Two years later he resigned to become editor and publisher of the *Kansas City Post*, which position he held until 1916.

Mr. Walsh returned to the practice of law in 1916 and continued his work as legal adviser to labor organizations. In 1918 he was the attorney for the employees in the stock yards arbitration and subsequently was the lawyer for the International Brotherhood of Electrical Workers and the International Ladies Garment Workers Union. During the course of his legal career he became known as a defender of civil liberties, having worked for the release of Tom Mooney for 20 years and having defended William Z. Foster on a charge of criminal syndicalism.

During the World War Mr. Walsh was a member of the War Labor Conference Board (1918), serving as joint chairman with William Howard Taft, and from April to December of that year he was a member of the National War Labor Board. A Democrat in politics, in 1924 he supported Robert M. La Follette for the presidency on the Progressive ticket, and in 1928 formed a Progressive League for the support of Alfred E. Smith. In 1932 and in 1936, his National Progressive League advocated the election of Franklin D. Roosevelt. By appointment of the Governor, he was made a member of the N. Y. Commission on the Revision of the Public Utility Laws in June 1929, and in May, 1931, he was named chairman of the Power Authority of the State of New York.

Mr. Walsh was chairman of the American Committee on Irish Independence and represented that organization at the Peace Conferences at Versailles. During 1933-35 he was president of the Society of Medical Jurisprudence.

WAR. See EUROPEAN WAR and the articles on the various countries involved under *History*; CHINA, JAPAN, and MONGOLIA under *History*; ARMAMENTS, COST OF; MILITARY PROGRESS; NAVAL PROGRESS.

WAR, U.S. DEPARTMENT OF. Harry H. Woodring of Kansas was Secretary of War during 1939 and Gen. Malin Craig was Chief of Staff until July, when he was succeeded by Brig. Gen.

George C. Marshall. On July 1, 1939, the Department's Bureau of Insular Affairs was transferred to the Department of the Interior. See AERONAUTICS; MILITARY PROGRESS and the separate article on ENGINEERS, CORPS OF. For expenditures, see the table under PUBLIC FINANCE.

WAR DEBTS. See REPARATIONS AND WAR DEBTS.

WAR FINANCES. See FINANCIAL REVIEW; INTERNATIONAL BANKING.

WAR RELIEF IN THE U.S. The outbreak of war in Europe in September, 1939, set in motion a number of endeavors in the United States aimed at the collection of funds to relieve human suffering in the countries involved. Under the neutrality legislation of the United States (see NEUTRALITY), persons and organizations wishing to solicit such funds register with the Secretary of State, who reported that there had been 242 registrations by Jan. 9, 1940. During the four months, September through December, 1939, \$1,756,608 was collected (in addition to contributions other than money valued at \$286,120) and \$934,614 was spent for relief in the various belligerent countries or for refugees therefrom. On December 31, the unexpended balance of these organizations was reported at \$731,836. A list of the organizations which collected \$20,000 or more between the date of their registration and the close of the year is given in the table at the bottom of the page. Figures do not include relief in Spain, China, and Finland. The drive for Finnish relief funds, started December 8, was headed by Herbert Hoover. By the end of 1939, 2500 local committees were co-operating and \$300,000 had been sent to Finland.

WARSAW, FALL OF. See EUROPEAN WAR.

WASHBURN COLLEGE. A college of Liberal Arts with professional schools of law and music. Founded in 1865. Enrollment for the autumn session of 1939 was: Liberal arts and fine arts, 592; law, 104; music, 157. The faculty numbered 45 full-time and 24 part-time. The endowment was \$1,132,486 and the plant assets \$1,632,701. The general library contained 36,600 volumes and the law library, 15,052 volumes. President, Philip C. King, A.M., D.D.

WASHINGTON. Area and Population. Area, 69,127 square miles, exclusive of State's waters in Gulf of Georgia and Strait of Juan de Fuca, but including (1930) other water, 2291 square miles. Population: Apr. 1, 1930 (census), 1,563,396; July 1, 1937 (Federal estimate), 1,658,000; 1920 (census), 1,356,621. Seattle had (1930) 365,583; Spokane, 115,514; Tacoma, 106,817; Olympia, the capital, 11,733.

Agriculture. Washington harvested, in 1939, 3,414,200 acres of the principal crops. Wheat, products of the orchard, and tame hay brought the greater part of the return on culture of the land. Wheat, on 1,901,000 acres, made 43,822,000 bu. (\$28,484,000, estimated value to the farmer); apples gathered for market totaled 19,500,000 bu. (\$13,650,000); pears, 5,779,000 bu. (\$3,114,000); tame hay, on 989,000 acres, gave 1,891,000 tons (\$16,452,000). Other crops of importance were: Potatoes, 42,000 acres, 7,350,000 bu. (\$4,410,000); dry peas, 101,000 acres, 1,919,000 bu. (\$2,783,000); oats, 229,000 acres, 11,221,000 bu. (\$3,927,000); hops, 4900 acres, 9,212,000 lb. (\$1,886,000).

Manufacturing. The U.S. Census of Manufactures' biennial report on Washington, issued in 1939, summarized the activity of the year 1937 in the totals that follow (with those for 1935 appended in parenthesis): Active manufacturing establishments numbered 3057 (2840), employed 101,260 wage-earners (79,589), and paid them \$128,471,946 (\$83,969,592); the aggregate of all factories' output was \$675,639,592 (\$470,112,615), and to that sum, the processes of manufacture contributed \$295,318,702 (\$201,178,804). Two branches of industry, connected with products of the forest and with those of the farm, provided, together, two-fifths of the year's output. Chief of the forest-fed manufactures, lumber and timber products employed 48,615 wage-earners for \$62,179,010 and totaled \$186,201,508 in output, for 1937; pulp (made from wood), a separate classification in the forest group, attained \$48,811,890; paper made in great part, at least, from wood-pulp, amounted to \$37,048,031; the planing mills produced \$19,507,717. Agricultural manufactures, nourished by the farm or nourishing it, included: flour and other output of grain mills, \$31,774,606; meat-packing, amounting to \$28,175,069; canned and other preparations of fruits and vegetables, \$24,669,198; feeds, \$18,252,054; condensed and evaporated milk, \$4,967,206; and cheese, \$1,103,028. The sea-sustained industries provided canned fish and shell-fish amounting to \$6,550,710, and shipyards' output of \$5,771,576.

Seattle's manufactured products attained, for 1937, \$152,454,694; those of Tacoma came to \$119,522,347; Spokane's, to \$43,210,825.

Mineral Production. According to report published by the U.S. Bureau of Mines in 1939 the value of Washington's yearly production of its native minerals attained \$26,658,257 for 1937. Sand and gravel, coal, cement, and stone, in the order here given, ranked foremost among the mineral products, as to value of output. Gold and clay products, less important, contributed over \$1,000,000 each. The mines' production of coal, 2,001,449 net tons (value, \$6,325,000) for 1937, dropped to a total of about 1,565,000 tons for 1938.

The mining industry reported a production of recoverable gold, silver, copper, lead, and zinc in Washington aggregating about \$6,668,700 in value for 1939, as against \$5,510,440 for 1938. The higher aggregate was attributed mainly to the regular operation, except for two summer months, of the Howe Sound Company's Holden mine, producing gold, copper, and silver. The yearly production of gold increased to 89,300 oz. (1939) from 74,175 (1938); by value, to \$3,125,500, from \$2,596,125. That of copper, to 17,864,000 lb., approximately, (1939), from 12,034,000 (1938); by value, to \$1,857,856, from \$1,179,332. That of silver attained \$300,160 for

1939; that of lead, \$353,700. The output of zinc diminished to 19,462,000 lb. (1939), from 22,804,000 (1938); by value, to \$1,031,486, from \$1,094,592.

Legislation. The regular biennial legislative session, which met in January, adjourned March 12. Its appropriations, including those for poor-relief, exceeded those for the previous two years by about \$7,000,000. Changes made in the State's system of taxation included selective sales taxes, rates on alcoholic beverages, and licenses for motor vehicles. See HORTICULTURE.

Education. The public schools of Washington reported, for the academic year 1938-39, pupils' enrollments to the number of 334,511; this comprised 228,454 in elementary study and 106,057 in high schools. There were, in addition, 900 enrollments in evening elementary schools and 22,138 in evening secondary schools. The year's expenditures for public-school education were: current, \$28,698,568; capital, \$931,062. The 10,682 teachers received pay averaging \$1606.91.

Political and Other Events. In August, when the Federally operated works at the Bonneville Dam on the Columbia River began the sale of electrical current, a movement for setting up public bodies that would take such current from the Government and distribute it to individual consumers was in full progress. Up to the beginning of August, people in various localities had formed 25 such groups, under the name of People's Utility districts. Some of the number had started efforts to obtain the property of local electric companies by condemnation or otherwise. Their spokesmen held out hopes of reductions of 60 per cent in the existing rates of charges for electricity.

An earthquake felt November 14, along the Pacific coastal slope from Portland, Ore., to Vancouver, B. C., attained at Tacoma sufficient violence to cast down a 250-lb. mass of wall from the sixth floor of the National Bank of Washington and to break an electric wire carrying current at high voltage over the flats near the city.

Officers. Washington's chief officers, serving in 1939, were: Governor, Clarence D. Martin (Dem.); Lieutenant-Governor, Victor A. Meyers; Secretary of State, Belle Reeves; Auditor, Cliff Yelle; Treasurer, Phil H. Gallagher; Attorney-General, G. W. Hamilton; Director of Education, Stanley F. Atwood.

WASHINGTON, THE STATE COLLEGE OF. A coeducational institution for higher learning at Pullman, Wash., founded in 1890. The enrollment for the autumn of 1939 was 4015. The 1939 summer session had an attendance of 794. Number of members in the faculty, autumn of 1939, was 245. The land-grant endowment Mar. 31, 1939, was \$4,182,778. The income for the school year 1938-39 was \$2,148,534. The library contains 400,000 volumes. President, Ernest O. Holland.

WASHINGTON, UNIVERSITY OF. A State institution of higher education in Seattle, Wash., founded in 1861. The enrollment for the autumn of 1939 was 10,662. The summer session had an attendance of 3720. There were 463 members on the faculty (not including 400 teaching fellows, graduate, and undergraduate assistants, etc.) during the autumn of 1939. For the biennium 1939-41 the estimated amount of endowment and income combined was \$6,588,490 (comprising all estimated receipts including building funds). The University library contains 352,330 volumes and the Law library 85,534. President, Lee Paul Sieg, Ph.D.

WASHINGTON AND JEFFERSON COLLEGE. An institution for the higher education of men in Washington, Pa., which had its origin in the Washington Academy, founded in 1780 and chartered in 1787. The enrollment for the fall semester of 1939-40 totaled 558 undergraduates and 15 graduate students. The faculty numbered 44. The productive funds of the college amounted to \$1,754,235, and the income from all sources was approximately \$293,225. The library contained over 57,415 volumes. A campaign for \$350,000 to erect a new chemistry building was successfully completed during fall and spring 1938-39; a new dormitory accommodating 21 students is to be opened in 1940. President, Ralph Cooper Hutchison, Ph.D., D.D.

WASHINGTON AND LEE UNIVERSITY. A nonsectarian institution for the higher education of men, in Lexington, Va., founded in 1749. The enrollment for the autumn of 1939 was 936. There were 60 members on the faculty. The productive funds of the university amounted to \$3,166,632, and the income for the year was \$372,704. The number of volumes in the library was approximately 105,000. President, Francis Pendleton Gaines, Ph.D.

WASHINGTON UNIVERSITY. An institution of higher learning for men and women, in St. Louis, Mo., founded in 1853. For the fall semester of 1939-40, the enrollment was 7203; for the summer session of 1939, 1224. Faculty, including emeriti and those on leave of absence, numbered 656. Mary Institute, a preparatory school for girls operated under the charter of Washington University, had an enrollment of 316 as of Nov. 1, 1939. Funds under the control of the University totaled \$33,815,953 as of June 30, 1939, including current funds, \$800,990, and endowment funds, \$18,519,558. Total expenditures during the budget year 1938-39 were \$2,664,555. Gifts reported at the June 1939 convocation totaled \$479,436, including additions to endowments of \$162,176. The libraries contained 399,819 volumes. In August of 1939 the University received a grant of \$60,000 from the Rockefeller Foundation for the construction of a large cyclotron for the disintegration of the atomic nucleus and the production of artificial radioactive substances. Chancellor, George R. Throop, Ph.D., LL.D.

WATERWORKS AND WATER PURIFICATION. Two-thirds of the population of the United States is served by 12,750 waterworks systems delivering water to 13,293 cities, towns, and villages, according to data supplied by the sanitary engineers of the 48 States to *Engineering News-Record*. The population supplied, using 1930 census figures because estimates of growth would be unreliable, is 81,243,000. Seventy-three per cent of the waterworks systems were publicly owned and served 83 per cent of the population supplied. In number of works, New York and Pennsylvania lead with 772 and 661 plants respectively, serving populations of 11.6 and 8.14 millions. About two-thirds of the works supply ground water and

only a third surface water, but if corresponding populations were available they would show surface waters preponderating, since all the great cities are supplied from streams or lakes and, broadly, ground waters are served in small cities, the most notable exceptions being Houston and San Antonio, Texas, Memphis, Tenn., and Dayton, Ohio. Treatment of some kind is applied to the water supply of about 67 million or 85 per cent of the population supplied with water. This ranges in degree from complete treatment by filtration and disinfection to the latter only. Of 2188 filtration plants only 97 employ slow sand against 2081 using rapid or mechanical filters. Disinfection, almost wholly by means of chlorine, was employed by 4054 works. Iron removal was practiced at 398 and removal of manganese at 19, some of the latter being combined with iron removal. Aeration and filtration was generally used for deferrization and demanganation. Taste and odor control, little used until recent years, was employed by 1187 works, 551 using ammonia and 636 activated carbon, either alone or together. Of 526 water-softening plants, 398 added lime or lime and soda ash to the water before filtration and 128 used zeolite as a reagent, restoring the softening power of the zeolite filters by passing common brine through them. (For details by states, see *Engineering News-Record*, Sept. 28, 1939; and for review of growth of American waterworks in number since 1800, see same journal, Nov. 9, 1939.)

Good progress is being made on large additions to the water supplies of Boston and vicinity, New York City, and Los Angeles and near-by cities in California. The Boston Metropolitan District, already supplied with surface water from relatively near sources, is diverting water from tributaries of the Connecticut. The Winsor dam, which is the main dam forming the Quabbin reservoir, was nearly completed at the close of the year. It is the second and last of two hydraulic-fill earth dams that will store water of the Swift River for diversion eastward to the existing storage and aqueduct systems. Filling the reservoir has been started, but not until the spring rains will the stored water be high enough to deliver water into the Quabbin aqueduct tunnel. This tunnel is 25 miles long. It is unique in that it can be used to carry water eastward from the Quabbin reservoir to the Ware River or to carry flood waters of that stream westward for storage in the Quabbin reservoir. A pressure aqueduct 18 miles long is under construction to deliver water from the Wachusett reservoir to the existing aqueduct system leading to the Metropolitan District. The pressure aqueduct will eliminate pumping by delivering water at a higher level than the existing aqueduct and will replace open channels liable to contamination from surface water. Except for a three-mile tunnel under Sudbury reservoir, the aqueduct will be built of large precast steel-cylinder-concrete pipe laid for 15 miles in cut and cover. It will deliver water into a terminal equalizing basin, 273 ft. above mean low tide. Ultimately, a rock-tunnel distributing loop encircling the district will be constructed. (For description of pressure aqueduct, see *Engineering News-Record*, Aug. 31, 1939.)

On the Delaware River project to bring an additional supply of water to New York City, about 27 miles of the 85-mile aqueduct tunnel had been completed on November 1. Contracts for the remainder and for the Rondout reservoir

at Lackawack, N. Y., had been let. This and other contract awards totalled \$171,000,000 of a total estimated cost of \$228,000,000.

Across the continent, the Metropolitan Water District of Southern California began delivering water through the Colorado aqueduct into the Cajalco terminal reservoir on November 19. The aqueduct is 242 miles long. Water from the Colorado River is pumped and repumped six times, the total lift being 1,617 ft. Service to Los Angeles and the 12 other cities in the district will not begin for a year. A contract was let in November for a water-softening and filtering plant with a capacity of 100-million gallons a day which will be quadrupled later. The aqueduct is designed for the delivery of a billion gallons a day, when needed, all of which will be softened and filtered. At the start, softening will be effected by the lime-zeolite process, but if desired the time-honored lime-soda ash process can be substituted.

Great Lakes cities continued to improve their water supplies. Milwaukee put a 200-million gallon purification plant into use in June. Novel features are two-story coagulation and sedimentation basins to save space on a site reclaimed from the lake and jet surface wash for the filters. Chicago is building a 320-million gallon purification plant for its Southwestern district as a one-third start toward purifying its entire supply. The 38-acre site for the Southwest plant is being reclaimed from Lake Michigan, as also 115 acres for a park and beach. Raw- and filtered-water tunnels, connecting with existing lake intake and land distributing tunnels are under construction. A contract has been let for the substructure of a chemical building and for mixing and settling tanks. As at Milwaukee, two-story basins for sedimentation and jets for surface washing of the filters will be used. (For detailed illustrated description by City Engineer Gayton, see *Engineering News-Record*, Nov. 23, 1939.) Toledo, Ohio, Sandusky, Ohio, and Grand Rapids, Mich., are also going to the Great Lakes for water. Other cities have recently done so or have it in mind. By this action hard and polluted river water or hard water from wells, some of the latter containing iron, manganese, and hydrogen sulphide, will be replaced by softer and less polluted lake water.

At Minneapolis the new 120-million gallon softening plant includes 12 Spaulding precipitators for use in the lime process. The city of Wichita is building a water-softening, iron- and manganese-removal plant to treat water from 25 wells scattered over an area of eight miles near the Arkansas River 35 miles north of the city. Electric-driven deep-well centrifugal pumps will deliver the water into a 48-in. pipe line leading to the treatment plant adjacent to the high service pumping station of the Wichita Water Co. The city will sell the water to the company for distribution. Brookline, Mass., has built a spheroidal water tank with a flat bottom resting on a concrete base. The maximum diameter of the tank is 90 ft. and its maximum height is 47 ft. Its capacity is 1.65 million gallons. It is built from copper-bearing steel plates, with arc-welded joints. In striking contrast, Batavia, N. Y., has constructed a tank supported on tall steel columns. The tank is 103 ft. in diameter, has a water depth of 25 ft., and a capacity of 1½ million gallons. The high-water line is 169 ft. above the ground. In Canada, the existing large filter plants

at Toronto will soon be supplemented by a third.

WELLESLEY COLLEGE. A nonsectarian institution for the higher education of women in Wellesley, Mass., chartered in 1870. The enrollment for the academic year 1939-40 was 1512. The teaching staff numbered about 200. Permanent endowment funds for 1938-39 amounted to \$8,972,218. The income was \$1,191,073. The library contained over 189,000 volumes. President, Mildred H. McAfee, LL.D., L.H.D.

WELLS COLLEGE. An institution of higher learning for women in Aurora, N. Y., founded in 1868. The enrollment for the autumn of 1939 was 304 boarders and 3 day students. The faculty numbered 48 active members and 7 Emeriti. The endowment amounted to \$1,480,818, and the income for the year from invested funds, tuition, etc., was \$457,262. There were 88,266 volumes in the library and 369 current periodicals. President, W. Ernest Weld, Ph.D., LL.D.

WESLEYAN UNIVERSITY. A college of liberal arts for men located at Middletown, Conn., founded in 1831. The 1939 autumn enrollment was 761; 734 undergraduate and 27 graduate students. The faculty numbered 79 active members plus four Teaching Fellows. The productive funds of the University on June 30, 1939 amounted to about \$8,000,000, and the plant funds to about \$5,500,000. The total income for the year was about \$865,000. Gifts during the year amounted to \$452,144. Chief among these were \$147,000, residue from the William F. Armstrong Estate, \$93,000 from the Estate of Charles L. Denison, and \$75,000 from the Carnegie Corporation for an extension of the Library. The library contained about 241,000 accessioned volumes. President, James L. McConaughy, Ph.D., L.H.D., LL.D. See **PRINTS; SEISMOLOGY**.

WESTERN AUSTRALIA. An Australian State. Area, 975,920 square miles; population, exclusive of full-blood aboriginals, 463,880 (Mar. 31, 1939, estimate), compared with 438,852 (1933 census). During 1938 there were 9141 births (19.87 per 1000); 4234 deaths (9.20 per 1000); 4153 marriages (9.03 per 1000). The principal cities are Perth (capital) with 220,330 inhabitants on Dec. 31, 1938, including Freemantle (26,191 on Oct. 31, 1937) and other suburbs; Subiaco, 17,850 (1937); Kalgoorlie, 10,650 (1937); Claremont, 6750 (1937); and Boulder, 6600 (1937).

Production. Wheat (36,711,000 bu. in 1938-39 season), oats, barley, hay, wine, raisins, apples, and potatoes are the main agricultural products. There were 9,165,000 sheep in the State in 1938. Other livestock (1937): 740,241 cattle; 151,067 horses; 64,598 swine. The principal dairy products for 1937-38 were butter, 15,373,334 lb.; cheese, 885,418 lb.; bacon and ham, 4,010,446 lb. Wool (greasy) produced during 1938 totaled 70,684,855 lb.

The estimated value of mineral production for

1938 was £A10,830,006 of which gold accounted for £A10,286,349. In 1937-38, from the 2066 factories, with 23,133 employees (including working proprietors), the net value of production was £A8,562,294 (Australian £ averaged \$3.8955 in 1938 and \$3.9394 in 1937).

Government. For the year ended June 30, 1939, revenue totaled £A10,950,000; expenditure, £A11,170,000; public debt, £A95,473,000. Executive authority is vested in a governor, assisted by an executive council of responsible ministers. Parliament consists of a legislative council of 30 members elected for six years and a legislative assembly of 50 members elected for three years by universal adult suffrage. Governor (vacant); Lieutenant-Governor, Sir James Mitchell (July, 1933); Premier, John Collings Willcock. See AUSTRALIA.

WESTERN FRONT. See EUROPEAN WAR; FRANCE, GERMANY, and GREAT BRITAIN under *History*.

WESTERN RESERVE UNIVERSITY. A nonsectarian institution for the higher education of men and women in Cleveland, Ohio, chartered in 1826. There were enrolled in the 13 colleges and schools in 1939, 3297 full-time students and 7165 part-time students. The summer session (1939) had an attendance of 2120. The faculty numbered 749. The endowment was \$14,131,414, and the income for 1938-39, \$2,550,165. The library contained 510,000 volumes. The President was Winfred George Leutner, Ph.D., LL.D.

WESTERN SAHARA (SPANISH). See SPANISH WEST AFRICA.

WESTERN SAMOA. See SAMOA.

WEST SIBERIAN TERRITORY. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

WEST VIRGINIA. Area and Population. Area, 24,170 square miles; included (1930) water, 148 square miles. Population: Apr. 1, 1930 (census), 1,729,205; July 1, 1937 (Federal estimate), 1,865,000; 1920 (census), 1,463,701. Charleston, the capital, had (1930) 60,408 inhabitants; Huntington, 75,572; Wheeling, 61,659.

Agriculture. Farmers in West Virginia harvested, in 1939, 1,498,000 acres in principal crops. Corn, on 491,000 acres, gave 13,994,000 bu. (estimated value on the farm, \$10,076,000); tame hay, on 708,000 acres, 718,000 tons (\$7,683,000); wheat, 145,000 acres, 2,102,000 bu. (\$1,829,000); potatoes, 32,000 acres, 3,040,000 bu. (\$2,736,000). Apples gathered for market came to 4,000,000 bu. (\$2,400,000).

Manufacturing. The U.S. Census of Manufactures' biennial report on West Virginia, issued in 1939, showed for 1937 the totals that follow (with those for 1935 appended in parenthesis): Active manufacturing establishments numbered 1057 (1027), employed 83,464 wage-earners (74,180), and paid them \$102,511,473 (\$76,649,944); output of all factories aggregated \$480,526,030 (\$366,574,067), to which sum the manufacturing processes contributed \$222,774,418 in value (\$167,754,022). As to particular industries, their totals in some cases were not separately divulged; thus nearly one-half of the manufacture of the State remained unclassified. Among the manufactured totals that were stated according to industrial classification, the production of miscellaneous chemicals attained \$58,267,326; that of glass, \$52,954,985; pottery, \$13,554,916. The so-called Wheeling industrial area manufactured goods amounting to \$332,670,971, or nearly seven-tenths of the total for the State; but only a minor part

of this amount was attributable to Wheeling itself, for which city the exact total was not stated.

Mineral Production. The yearly production of native minerals of West Virginia amounted, for 1937, to \$306,660,947; coal supplied over two-thirds of this; natural gas, nearly one-sixth. The reduced industrial activity of late 1937 and of 1938 affected the mining of bituminous coal; output fell to 92,922,000 tons, approximately, for 1938, from 118,646,343 for 1937 (value, \$223,055,000). The output of bituminous coal for 1937 exceeded that of Pennsylvania in quantity, though not in value, and was the greatest for any State of the Union; the coal mines employed 113,643 persons in 1937 for an average of 209 days. The quantity of natural gas taken from wells was about 150 billion cu. ft. for 1938, as against 149,084 million (value, \$19,306,000 at the wells and \$58,639,000 where consumed) for 1937. Drilling into the Oriskany sand formation brought 120 new wells into production in Kanawha County, having a combined initial open flow of 1049 million cu. ft. a day. The production of petroleum continued a slow decline that had proceeded with little interruption for 20 years; the yearly output fell to some 3,684,000 barrels for 1938, from 3,845,000 for 1937; as virtually all was Pennsylvania-grade, the relatively high prices brought \$8,800,000 for the output of 1937. Gasoline taken from natural gas attained for 1937 the value of \$2,528,000. Clay products (exclusive of pottery and refractories, in the U.S. Bureau of Mines totalization of 1939, dealing with the production of 1937) amounted to \$2,745,183.

Apart from the production of native minerals there was a substantial industry in the treatment of minerals mainly from other States. Out of coal originating chiefly in Pennsylvania were made 1,513,888 net tons of coke in 1938 and 2,097,380 tons (value, \$7,054,186) in 1937. Blast furnaces' shipments of pig iron totaled 496,905 gross tons for 1938; for 1937, 685,086 tons.

Education. West Virginia's inhabitants of school age (from 6 years to 20) were reported, for the academic year 1938-39 at 536,804. Enrollments of pupils in public schools numbered 450,754; this comprised 318,286 in elementary study and 132,468 in high schools. Private and parochial schools reported an additional enrollment of 4239. The year's expenditure for public-school education totaled \$25,720,340. It included salaries for the 16,173 teachers, at an average of \$1132.51.

Legislation. The regular biennial session of the Legislature voted the State's ratification of the Interstate Anti-Pollution Compact, in which States in the basin of the Ohio River were to unite on methods for checking its pollution.

Political and Other Events. The great coal-mining industry of West Virginia was interrupted and disturbed, in April and May, by the strike of the United Mine Workers in the Appalachian field. The State Welfare Agency denied to striking miners and their families the benefit of public support from the funds for poor-relief. Late in May the Agency declined a Federal offer of food from the Federal Surplus Commodities Corporation, saying that no additional supplies of food would be required on account of the strike; this drew forth a charge, attributed to a spokesman for the C.I.O., that Governor Holt wanted to break the strike in four counties of West Virginia by refusing food to 3500 miners' families.

Officers. West Virginia's chief officers, serv-

ing in 1939, were: Governor, Homer A. Holt (Dem.); Secretary of State, William S. O'Brien; Treasurer, Richard E. Talbott; Auditor, Edgar B. Sims; Attorney-General, Clarence W. Meadows; Commissioner of Agriculture, J. B. McLaughlin; Superintendent of Schools, W. W. Trent.

WEST VIRGINIA UNIVERSITY. An institution for the higher education of men and women maintained by the State of West Virginia at Morgantown, founded in 1867. The 1939 summer session had an attendance of 1234. In the autumn of 1939 the enrollment was 3245. The faculty numbered 267. The library contained 185,000 volumes. The total income for 1938-39 was \$2,428,380. Charles Elmer Lawall, E.M., M.S., LL.D., President, inducted July 1, 1939.

WHEAT. Wheat production in the United States in 1939 was estimated at 754,971,000 bu., about 19 per cent smaller than the 1938 crop of 931,702,000 bu. and slightly above the 1928-37 average of 752,952,000 bu. The total area harvested in 1939, 53,696,000 acres, compared with 69,869,000 acres in 1938 and the 10-year average of 55,804,000 acres. Decline in acreage was attributed to lower prices for the 1938 crop and AAA allotments for 1939. Acreages harvested, average acre yield, and total production, respectively, were for winter wheat 37,802,000 acres, 14.9 bu., 563,431,000 bu.; durum 3,066,000 acres, 11.2 bu., 34,360,000 bu.; and other spring wheat, 12,828,000 acres, 12.3 bu., 157,180,000 bu. States leading in winter wheat production included Kansas 111,619,000 bu., Oklahoma 60,438,000, Illinois 38,409,000, Ohio 37,070,000, Nebraska 35,432,000, Washington 30,218,000, Missouri 29,205,000 and Texas 27,650,000 bu. Spring wheat production in leading States was in North Dakota 84,062,000 bu., Montana 34,628,000, Minnesota 19,588,000, South Dakota 18,512,000, and Washington 13,604,000 bu. Of the durum crop, 27,918,000 bu. were harvested in North Dakota, 5,484,000 in South Dakota, and 958,000 bu. in Minnesota. The season average price per bushel received by farmers was 67.6¢ and the value of production was estimated at \$510,667,000, compared with 56.1¢ and \$522,639,000 in 1938. Growers keeping within acreage allotments under the Agricultural Adjustment Act of 1938 and securing loans on their 1939 crop averaging 64¢ per bushel also received conservation and parity payments adding to 28¢ per bushel making a total average per-bushel return of at least 92¢ to co-operating producers. World wheat supplies, excluding the U.S.S.R. and China, for the year beginning July 1, 1939, were indicated in late December to be about 255,000,000 bu. more than in the year before, and world stocks of old wheat on July 1, estimated at about 1,190,000,000 bu., were about 590,000,000 bu. more than in 1938. World wheat production was estimated at 4,252,000,000 bu., about 335,000,000 bu. below the record production of 1938. See *Crop Production Table* under AGRICULTURE; AGRICULTURAL ADJUSTMENT ADMINISTRATION; COMMODITY CREDIT CORPORATION; FARM CREDIT ADMINISTRATION; FEDERAL CROP INSURANCE CORPORATION; FEDERAL SURPLUS COMMODITIES CORPORATION; IMPORTS AND EXPORTS; AUSTRALIA and CANADA under *History*.

HENRY M. STEECE

WHITE RUSSIAN SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., bordering on Poland and Lithuania. Area, 48,960 square miles; popula-

tion (1939 census), 5,967,976. Chief cities (with 1936 populations): Minsk (capital), 198,000; Vitebsk, 143,000; Gomel, 139,500. Education (1938): 1,000,000 students in elementary schools and 47,600 students in schools for higher education and technical colleges.

Production, etc. Flax, hemp, and potatoes are the principal agricultural crops. By Dec. 31, 1937 some 97 per cent of the peasant farms had been collectivized. There were 8672 tractors and 1236 harvester combines working in the fields in 1938. Industrial production for 1937 was valued at 2100 million rubles (nominal value of ruble, \$0.20). The output of peat for 1937 amounted to 2,500,000 tons. Peat is used as fuel in the electric power stations (which produced 421.4 million kilowatt-hours during 1937), as a fertilizer, and as a raw product in the chemical industry. The budget for 1938 was 1,167,000,000 rubles. See *POLAND* under *History*; *UNION OF SOVIET SOCIALIST REPUBLICS*.

WHITNEY MUSEUM OF ART. See *ART MUSEUMS*.

WILDLIFE. See *BIOLOGICAL SURVEY*; *FISH-ERIES, BUREAU OF*.

WILLIAM AND MARY, COLLEGE OF. An institution for the higher education of men and women at Williamsburg, Va., founded in 1693. The enrollment for the autumn of 1939 was 1255. The 1939 summer session had an attendance of 492 students. The faculty numbered 96 at the College, 20 in the Norfolk Division, and 25 in the Richmond Division. The endowment for the year was \$1,321,952, and the income, exclusive of gifts, was \$1,011,167. The library contains 140,000 volumes. President, John Stewart Bryan, Litt.D.

WILLIAMS COLLEGE. A nonsectarian college for men in Williamstown, Mass., founded in 1793. The enrollment for the autumn of 1939 totaled 825. There were 88 members of the faculty. On June 30, 1939, the endowment amounted to \$10,836,304, and the gross income from all sources for the same period amounted to \$869,146. The library contained 171,403 volumes. President, James Phinney Baxter, 3d, Ph.D., LL.D.

WILSON, CLARENCE TRUE. An American Methodist Episcopal clergyman and prohibitionist, died in Portland, Ore., Feb. 16, 1939. Born in Milton, Del., Apr. 24, 1872, he was educated at St. John's College, Annapolis, the University of Southern California (A.B., 1894), and McClay College of Theology (B.D., 1895). Attracted to a clerical career and to the temperance movement as a youth, he held his first pastorate in Seaford, Del., when but 17. After graduation from St. John's he served at Sea Cliff, L. I., until 1894, and in 1895 he was appointed to a church in Pasadena, Calif. His work in the temperance movement led to his nomination for Congress by the Prohibition Party in 1896. Thereafter he held pastorates at San Diego (1898-1901), Newark, N. J. (1901-05), and Portland, Ore. (1905-10).

After his appointment to Portland, he became president of the Oregon Anti-Saloon League, and in 1910 was appointed national secretary of the Temperance Society of the Methodist Episcopal Church in Washington. The name was changed to the Board of Temperance, Prohibition, and Morals in 1916, and Dr. Wilson was named general secretary, a post which he held until 1936 when he was retired because of illness as secretary emeritus. A tireless worker for prohibition, he was the originator of the project for the Methodist Building in Washington, was joint editor of

The Voice and Clip Sheet, and served as vice president of the National Conference of Organizations Supporting the 18th Amendment (1928) and of the International Reform Federation (1929).

He wrote extensively on the prohibition movement and published, among other books, a *Pocket Cyclopaedia of Temperance* (1915) and *The Life of Matthew Simpson, Patriot, Preacher, and Prophet*.

WILSON, EDMUND BEECHER. An American zoologist, died in New York, Mar. 3, 1939. Born in Geneva, Ill., Oct. 19, 1856, he was educated at Yale University (Ph.B., 1878) and at Johns Hopkins University (Ph.D., 1881), and during 1881-82 he studied at the universities of Cambridge and Leipzig. In 1883 he joined the faculty of Williams College as a lecturer on biology, and in the following year transferred to the Massachusetts Institute of Technology. He taught biology at Bryn Mawr from 1885 to 1891, and then joined Columbia University as adjunct professor of biology, founding the department of zoology, and serving successively as professor of invertebrate zoology (1894-97), professor of zoology (1897-1909), Da Costa professor of zoology (1909-28), and as emeritus professor in residence thereafter. He acted as dean of the faculty of pure science during 1905-06 and was a member of the University Council (1901-03, 1905-06, and 1913-15).

An eminent zoologist, his researches, particularly in embryology and cellular biology, attracted world wide attention, and in 1914 he was invited by the Royal Society to deliver the Croonian lecture in London. His title was "The Bearing of Cytological Research upon Heredity." His book, *The Cell in Development and Heredity* (1896; 3d ed., 1925), has been referred to as having, "perhaps influenced subsequent biological thought more than any book produced in this country," and in 1928 he received the Daniel Giraud Medal for 1925 of the National Academy of Sciences for this work.

Dr. Wilson's work, particularly in the development of American zoology, brought him many honors and honorary degrees, both American and foreign. He was awarded the Sears Medal of the Linnaean Society (1928) and the John J. Carty Medal (1936). He also held the presidency of such organizations as the American Association for the Advancement of Science (1904), the American Society of Naturalists (1900), American Society of Zoologists (1895), and the Society of Experimental Biology and Medicine (1905).

With W. T. Sedgwick, Dr. Wilson published *General Biology* (1887) and he wrote *Atlas of Karyokinesis and Fertilization* (1895) and *The Physical Basis of Life* (1923).

WINDWARD ISLANDS. A group of islands in the British West Indies comprising Grenada, St. Lucia, St. Vincent, the Grenadines, and (since Jan. 1, 1940) Dominica. Total area, including Dominica, 813 square miles; total population, 220,000. The seat of the government is at St. George's in Grenada. There is one governor for the islands but there is no common legislature and each island has its own institutions. Governor and Commander-in-Chief, Sir Henry Popham (appointed Jan. 19, 1937). See DOMINICA; GRENADA; ST. LUCIA; ST. VINCENT; JAMAICA; LEEWARD ISLANDS, BRITISH.

WINE. See ALCOHOLIC BEVERAGES.

WISCONSIN. Area and Population. Area, 56,066 square miles, exclusive of the State's part of the Great Lakes; included (1930) other water,

810 square miles. Population: Apr. 1, 1930 (census), 2,939,006; July 1, 1937 (Federal estimate), 2,926,000; 1920 (census), 2,632,067. Milwaukee (1930) had 578,249 inhabitants; Madison, the capital, 57,899.

Agriculture. Wisconsin's harvest of principal crops in 1939 covered 10,167,700 acres. Corn, on 2,233,000 acres, made 85,970,000 bu. (estimated value on the farm, \$45,564,000); tame hay, on 3,980,000 acres, 5,829,000 tons (\$43,718,000); oats, 2,185,000 acres, 71,012,000 bu. (\$22,724,000); barley, 779,000 acres, 22,591,000 bu. (\$11,973,000); potatoes, 197,000 acres, 17,336,000 bu. (\$9,535,000); tobacco, 22,300 acres, 31,406,000 lb. (\$3,669,000); wheat, 90,000 acres, 1,350,000 bu. (\$1,066,000); rye, 238,000 acres, 2,380,000 bu. (\$1,095,000).

Manufacturing. The U.S. Census of Manufactures' biennial report on Wisconsin, issued in 1939, showed for 1937 the totals that follow (with those for 1935 appended in parenthesis): Active manufacturing establishments numbered 6318 (6286), employed 234,067 wage-earners (196,972), and paid them \$296,365,346 (\$204,200,564); output of all factories aggregated \$1,772,310,417 (\$1,313,814,794), to which sum the processes of manufacture contributed \$709,824,233 in value (\$529,328,623). Of the classified industries, the production of agricultural implements, inclusive of tractors, made goods amounting to \$121,583,867, the highest stated individual total. The several industries preparing products of the farm for marketing and consumption, if taken together, would attain more than double this figure; they included meat-packing, which produced \$72,387,364; production of factory-made butter, \$63,932,363; that of condensed and of evaporated milk, \$57,354,882; manufacture of cheese, \$54,252,393; products of the grain mills, \$8,155,595; miscellaneous preparations of food, \$31,941,556; canned and other preparations of fruits and vegetables, \$26,468,263. The mechanical fabrications were important, including electrical machinery, etc., \$50,495,855; engines, turbines, water wheels, and windmills, \$33,776,587; pumps, \$4,145,695; refrigerators and refrigerating and ice-making apparatus, \$5,230,490; miscellaneous machinery, \$48,735,386. The output of paper amounted to \$97,933,957; that of bodies and parts for motor vehicles, to \$90,700,733. Breweries, some serving markets outside of the State, produced \$51,565,478 of malt liquors. Production of boots and shoes attained \$41,477,062.

Milwaukee had 76,505 manufacturing wage-earners in 1937; they received \$104,852,954; the manufactured products totaled \$504,545,670; the city accounted for about one-third of the manufacturing in the State. Racine's factories produced \$103,177,883.

Mineral Production. Native minerals of Wisconsin produced in 1937 attained the total value of \$15,228,024; Iron ore contributed over one-fourth of this total, stone nearly an equal amount; zinc was produced to a lesser amount. The production of iron ore came from two mines; over nine-tenths of it, from one of these. Their total of ore mined was 854,795 gross tons for 1938 and 1,155,602 tons for 1937. Their shipments of iron ore 625,378 gross tons for 1938, and 1,419,810 for 1937, in the one case fell short of production and in the other considerably exceeded it; the shipments, by value, totaled \$1,886,477 (1938) and \$4,473,942 (1937). The output of stone, chiefly of the coarser grades, ran to 3,097,230 short tons

(1938) and 3,331,670 tons (1937); by value, to \$3,880,935 and \$4,284,003. The total for 1938 included about \$1,000,000 in granite and limestone of finer grades, of which two-thirds was granite. The mining of zinc decreased to 2073 short tons of recoverable metal in ore (1938), from 6938 tons, value \$901,940, for 1937.

Legislation. Meeting in January, the regular biennial session of the Legislature brought into power a Republican majority, the first in eight years. This group had the help of the Democratic contingent in many of the measures that it passed. Governor Heil, taking office, recommended legislation reversing the course that the Progressive legislatures and administrations had taken while in power. The legislators were slow to improve the State's budgetary position, but they made haste to reorganize the State government and to amend the laws affecting labor unions.

Asserting a right of veto the session, almost at its outset, rejected executive reorganization that Governor La Follette had decreed by virtue of a grant of power made by the previous Legislature; thus 26 decrees, among them one creating the Department of Social Adjustment, were made void. Acts were passed killing the State's Department of Commerce (La Follette's device for regulating trade) by terminating its appropriation; abolishing the Wisconsin Development Authority, that had been created to carry out a State-supported enterprise to build works for the generation of electricity; and making an end of the Board of Regents of the University of Wisconsin, who had ousted Pres. Glenn Frank at the University in accordance with Governor La Follette's wish.

Legislation changing the regulation of labor disputes was embodied in two acts. The first of these redefined a labor dispute as a difference between an employer and the majority of his employees in any collective-bargaining unit; this definition intently restricted picketing to disputes as thus redefined, and in particular it ended the application of a ruling of the State Supreme Court that picketing was lawful in disputes over labor even though no direct issue between employer and employees had been raised; it thus tended to prevent resort to picketing where an outside union sought to use this method to gain as members employees not at odds with their employer. The second and more extensive modification of the State law on labor relations was an act abolishing the State Labor Relations Board; it set up a new board of three members with diminished powers, forbade employees' seizure of the employer's premises, allowed closed shops (those excluding non-unionists) only where 75 per cent of the employees in a unit had voted for one, required ten days' notice in advance of any strike affecting perishable products, and provided punishment for intimidation and violence in a labor dispute.

In connection with the law as to trading practices, the donation of trading stamps with sales of goods of fixed retail price was forbidden.

The session, in the hope of providing either economies or adequate taxes, was stubbornly prolonged until the middle of October. It eventually voted a tax on cigarettes at 2 cents a package, but increased the State's obligations by raising the full rate of old age assistance to \$40 a month, from \$30. Heil sought to veto the latter act in part, while allowing an accompanying section appropriating \$5,000,000 for two years' poor-aid to stand. The courts compelled the Secretary of State to

publish the whole bill as law, without prejudice to later contest as to its validity.

Political and Other Events. Governor Heil, who entered office in January, had the advantage of successful experience as a business man; a strongly Republican Legislature gave him and his political party the numerical strength to put through such reforms as they might judge wise; and Heil had been elected on the strength of his earnest proposals to reduce the scale to which the La Follette regime had carried public expenditure. Nevertheless the new administration failed to make the expected reductions. On the face of the figures the budget presented by La Follette for the years 1937-38 had totaled \$62,919,569; subsequent appropriations had raised the sum to \$70,723,988 (these being sums that covered, not all State expenditure, but the budgetable part, distinct from expenditures out of specially allotted revenue). Heil presented a budget calling for \$66,753,133, to apply to the fiscal years 1939 and 1940; subsequent appropriations brought the total to a reported \$79,919,857. As he had spoken in his pre-election campaign of reducing his predecessor's figures by \$15,000,000, he was taxed with not making good. He charged, on the other hand, that he had found the State, when he took office, to be facing obligations to pay out of its general fund \$39,141,000 of obligations, chiefly \$23,114,000 taken from the highway revenues, and that the general fund was virtually "bankrupt."

The failure of the legislative session, after sitting for seven months, to lay new taxes for more than a minor part of the deficit in prospective revenue left the State, in October, short by nearly \$22,000,000 of the sum expectedly needful for the two years' expenditures out of the general fund. Heil thereupon, after the adjournment, vetoed the appropriating clauses of a bill to raise old-age assistance to \$40 a month, thus cutting the deficit by \$2,535,000.

Wisconsin's experiment in setting prices, by authority of its Department of Agriculture, for milk at retail in the several chief centers of population met with difficulty early in 1939; the price was reduced for the Milwaukee area in March; in September the State dropped an action that it had brought against one of the farmers underselling the fixed prices. The question of the wisdom of the State's policy in heavily taxing wealthy people was brought up for public consideration by Chairman W. J. Conway of the Tax Commission; he reported an investigation in which he had listed 169 former residents of the State, each having an income of \$25,000 a year or more from investments, who had left to reside elsewhere, their departure costing the State about \$300,000 a year in loss of taxes and prospective loss of death dues running to millions.

The State's tax on cigarettes at two cents a package, the year's sole conspicuous addition to taxation, went into effect with September 20. It was expected to yield about \$2,700,000 a year.

Officers. Wisconsin's chief officers, serving in 1939, were: Governor, Julius P. Heil (Rep.); Lieutenant-Governor, Walter S. Goodland; Secretary of State, Fred R. Zimmerman; Treasurer, John M. Smith; Attorney-General, John E. Martin; State Superintendent of Schools, John Callahan.

WISCONSIN, THE UNIVERSITY OF. A State institution of higher education in Madison, Wis., founded in 1848. The enrollment for the autumn term of 1939 was 11,286. In the summer session

the enrollment was 4680. The faculty numbered 1698. The endowment as of June 30, 1939, was \$1,508,177, while the net income for 1938-39 was \$9,114,341. The library contained 1,100,000 volumes and more than 400,000 pamphlets. President, Clarence Addison Dykstra, B.A., LL.D., L.H.D.

WITTENBERG COLLEGE. A coeducational institution in Springfield, Ohio, founded in 1845, supported by synods of the United Lutheran Church. The number of students enrolled for the autumn term of 1939 was 1100, of which 573 were men and 527 were women. Of these, 846 (463 men and 383 women) were enrolled in the College of Liberal Arts. The Summer Session of 1939 had an enrollment of 400. The faculty numbers 77. The productive funds of the institution amounted to \$2,057,990, and the operating income for the year was \$421,080. The library contained 61,919 volumes. President, Rees Edgar Tulloss, Ph.D., D.D., LL.D.

WOMAN'S CHRISTIAN TEMPERANCE UNION, THE NATIONAL. A nonsectarian and all-partisan organization which has as its purpose the protection of the home and the abolition of the liquor traffic. Organized in 1874 it has an approximate membership of 600,000 in 10,000 local unions found not only in every state of the Union but in Alaska, Puerto Rico, Hawaii, and the Philippines. The annual convention of 1939, held in Rochester, New York, marked the observance of the one hundredth anniversary of the birth of Frances Willard. On September 28, two thousand of the convention delegates made a pilgrimage to the little town of Churchville where a brief ceremony was held with tributes paid by the Mayor and other representative people. That night at the Convention Dinner in Rochester, the president of the D.A.R., the National Council of Women, the Alpha Phi Fraternity, and other prominent organizations joined in acclaiming the life of this great woman. The climax was a nationwide broadcast by Senator Morris Sheppard and other members of Congress. The president and secretary of the National Woman's Christian Temperance Union are Mrs. Ida B. Wise Smith, 1730 Chicago Avenue, Evanston, Illinois, and Mrs. Anna Marden DeYo, 1730 Chicago Avenue, Evanston, Illinois. National Headquarters of the organization are at 1730 Chicago Avenue, Evanston, Illinois, and a legislative office is maintained at 100 Maryland Avenue, N.E., Washington, D. C.

WOMEN IN INDUSTRY. See LABOR CONDITIONS.

WOMEN'S BUREAU, THE. A Bureau in the U.S. Department of Labor, which by its organic act is charged with the formation of standards and policies which shall promote the welfare of wage-earning women, improve their working conditions, increase their efficiency, and advance their opportunities for profitable employment.

Since its inception in 1918, the Bureau has become the recognized source of information on the gainful employment of women: Their occupations, opportunities, and exploitation; health and welfare; wages, hours, and working conditions; trends of employment and earnings; income, cost of living, and responsibilities; economic and legal status; census and other data concerning them; legislation in their behalf; and the efforts of Federal, State, and private groups to improve their conditions. Thousands of requests for such information are received annually, and also for copies of publications (a list

may be had on application), charts and exhibits, or the loan of films. Assistance is requested in surveys or in legislative matters; field or research studies are asked for; and many hundreds of complaints are received of unfavorable or illegal conditions of employment, which are replied to and referred to the proper authorities.

In 1939 much time was devoted to two extensive surveys—the women's and children's apparel industry and the canning and packing industry—made for the Wage and Hour Division and other Federal agencies. In the apparel study, pay-roll data for 142,000 workers were secured in the spring; the report went to press in November. The report of the two-year study of fruit and vegetable canning is being written as the year closes. Its uncommon data include year's earnings and fluctuation in employment and earnings from week to week.

Among the publications issued in 1939 are these: *Employed women and family support*—an examination of unpublished Census data for 58,000 women in Fort Wayne, Bridgeport, and Richmond. *Conditions in the millinery industry*—an analysis made at the request of the Millinery Stabilization Commission; *Economic status of university women*—made in co-operation with the American Association of University Women; *Job histories of women at the summer schools*—first-hand information from the students at the summer schools for women workers; and three bulletins giving general information, simply presented, about employed women: (1) *Women at work—A century of industrial change*, (2) *Women in industry—A series of papers to aid study groups*, and (3) *The woman wage earner—Her situation today*.

The Bureau's standards for the employment of women, revised to conform to the practices approved today, were reissued as a leaflet. The bi-monthly news letter, *The Woman Worker*, which keeps its readers informed on current problems and conditions, had a wide distribution.

MARY ANDERSON.

WOMEN'S CLOTHING. See FASHION; GARMENT INDUSTRY.

WOMEN'S CLUBS, GENERAL FEDERATION OF. An organization founded in 1890, and granted a charter by the United States Government in 1901, "for educational, industrial, philanthropic, literary, artistic, and scientific culture, and to bring into communication with one another the various Women's Clubs throughout the world." In 1939 it was composed of approximately 15,000 clubs in the United States, and 87 clubs outside the mainland of the United States; affiliated with it were 12 national organizations. The official publication is *The Clubwoman GFWC*. At the May, 1938, convention in Kansas City, Mo., Mrs. Saidie Orr Dunbar was elected president for the ensuing triennial period. Mrs. Dunbar's program has been built around the administration theme, "Adjusting Democracy for Human Welfare." Programs in the field of public health, child welfare, consumer education and international relations—particularly with countries of South America—have been emphasized during 1939. Headquarters are at 1734 N Street, N.W., Washington, D. C.

WOMEN VOTERS, NATIONAL LEAGUE OF. An organization founded in 1920 for the political education of women through active participation in government. Aware that sovereignty in a de-

mocracy resides in the people and is expressed through public opinion, the League strives to increase the number of citizens who form considered opinions upon the basis of facts. Through activity on a selected program of work, which represents what the majority of the members want to do, women in the League learn to be participants in government with a habit of responsibility for government.

During 1939 the League's activities have been concerned with foreign policies of the United States, including neutrality and trade agreements; structure and functioning of local, county, and state governments; state League legislative programmes; public education; merit system; town or county government; various phases of public welfare; child welfare; housing.

Approximately 100 publications covering its programme range and a News Letter on national events relating to its programme are published. In 1939 the League, whose membership is open to women of all political belief, although its organization is strictly nonpartisan, had 550 local Leagues in 31 affiliated state Leagues, and its budget was \$63,976. A biennial convention is held, the next one to take place in New York City, April 29–May 3, 1940. The President is Marguerite M. Wells and headquarters are at 726 Jackson Place, Washington, D. C.

WOOL. Relatively small supplies of wool on hand in this country, uncertainty of supplies from the Southern Hemisphere, and increase in foreign demand as a result of the war in Europe, resulted in a stimulation of domestic wool prices. However, it was estimated that the amount of wool shorn, or to be shorn, in the United States in 1939 was second largest on record. It was 1 per cent more than the amount shorn in 1938, and about 6 per cent more than the previous ten-year average. A 12 per cent increase in mill consumption in August, the highest reported since March, 1937, resulted in a total wool consumption close to 659,000,000 lb., the 1935 total, and around 50 per cent higher than the consumption during 1938. The increased mill consumption of 1939 was accompanied by large imports. Wool production in Australia in 1939–40 was estimated at 1,005,000,000 lb., but the increased production of 2 per cent over last year was more than offset by a decreased carry-over from the previous year.

Imports of apparel wool into the United States during 1939 totaled 98,194,000 lb., as compared with 30,811,000 lb. for 1938, when consumption was at a low ebb. Imports of carpet wool totaled 144,874,000 lb. in 1939, as compared with 71,908,000 lb. in 1938.

Wool exports from Argentina and Uruguay, in the year Oct. 1, 1938 to Sept. 30, 1939, were heavy, amounting to 485,300,000 lb., as contrasted with 396,300,000 lb. for the seasons from 1934 to 1938. The 1939–40 wool sales in Australia were canceled following the making of arrangements for the purchase of the entire Australian and New Zealand clips by the British Government. However, tentative plans were formulated by the British Government before the end of the year to release fine Australian wools to the United States. It was estimated that 22,500,000 lb. of such wool were available for shipment. The 1939–40 wool clip of the Union of South Africa was estimated at 270,000,000 lb., an increase of 9 per cent over amounts produced in 1938–39. Imports of wool from Argentina and Uruguay decreased to about 15 per cent of total wool shipments in 1938,

although prior to that time about 30 per cent of the exports of those countries were received by the United States.

GEORGE HAINES.

WORCESTER POLYTECHNIC INSTITUTE. A nonsectarian institution for the technical education of men in Worcester, Mass., founded in 1865. The enrollment for the fall semester of 1939 totaled 691. The summer session of 1939 had 67 students. The faculty for 1939–40 numbers 73. The endowment for 1938–39 amounted to \$4,071,149, and the income for the year was \$387,946. There were about 26,000 volumes in the library. President, Wat Tyler Cluverius, B.S., LL.D., D.Nav.Sc., Rear Admiral, U.S. Navy, Ret., inducted Oct. 27, 1939.

WORKMEN'S COMPENSATION. See LABOR CONDITIONS; LABOR LEGISLATION.

WORK PROJECTS ADMINISTRATION (WPA). A Federal agency established to provide work on useful public projects for the able-bodied unemployed. The WPA demonstrated its flexibility of operation during the 18-month period that ended on Dec. 31, 1939. First by expanding its activities to alleviate distress resulting from the business recession, and then by contracting them as recovery got under way again, it proved its ability to adapt itself rapidly and smoothly to changing economic conditions.

Although the number of unemployed people in the United States began to drop after reaching the recession peak of 11,400,000 in June 1938 (estimate of American Federation of Labor), the actual amount of distress among those still unemployed continued to increase for several months thereafter. Many who had been able to rely on unemployment compensation, savings, and other expedients during the recession were now finally forced to seek WPA jobs. Another important factor was the desperate situation of tenant farmers and laborers in the cotton-producing areas of the South. As a result, WPA employment continued to rise for the nation as a whole—from about 2,807,000 at the end of June to a high of 3,270,000 in November—although it had begun to drop as early as September in certain areas. By June 30, 1939—end of the fiscal year—unemployment had dropped below 10,400,000 and WPA employment to some 2,421,000.

During that fiscal year the WPA spent over \$2,154,000,000 of Federal funds—of which 3.4 per cent was devoted to administrative costs, 0.7 per cent to miscellaneous programs (chiefly the purchase of surplus clothing for needy people), and 95.9 per cent to project work. Of the nearly \$2,065,000,000 devoted to project work, 91.1 per cent was paid out in wages to workers. These project funds were supplemented by local project sponsors' funds aggregating over \$493,000,000, most of which was used for other than labor costs—for materials, equipment, etc. The sponsors' share of the total cost of WPA project work was 19.3 per cent. (During the three preceding fiscal years the WPA had spent in all nearly \$4,504,000,000 of Federal funds—4.3 per cent of it on administration and 95.7 per cent on project work. To supplement the over \$4,308,000,-

000 of WPA project funds, local sponsors had contributed nearly \$810,000,000, or 15.8 per cent of the total amount spent on project work.)

More than four-fifths of the WPA program (on the basis of employment as well as of expenditures) was devoted during fiscal 1938-39, as during preceding years, to construction work. More than two-fifths of all WPA workers were on road projects—a slightly larger proportion than in earlier years. About a tenth each were employed on public buildings, parks, public utilities, white-collar work, and sewing projects.

The extent and diversity of the program are indicated by the following statistics for projects completed during the fiscal year:—

Approximately 111,000 miles of roads and more than 26,000 bridges were built or improved, mostly in rural areas. More than 24,000 public buildings were newly built, remodeled, renovated, or erected as additions to existing structures. Over 3000 miles of water lines and nearly 3900 miles of sewer lines were newly laid or reconditioned. Over 2000 parks, over 1000 athletic fields, over 2800 playgrounds, and over 100 airports were built or improved.

Although figures showing the amount of non-construction work done during that year are not yet available, some idea of what was accomplished may be got from statistics covering the three previous fiscal years. By June 30, 1938, more than 180,000,000 garments and household articles had been made in WPA sewing rooms for distribution among needy families, and more than 238,000,000 lunches had been served to undernourished school children. Millions of needy adults and children had received aid from WPA medical clinics and nursing service. Some 1,000,000 people were enrolled in 100,000 WPA educational classes. Over 96,000 drawings, paintings, murals, and sculptured works had been produced by art workers; music performances, averaging over 4000 a month, had attracted monthly attendance of around 3,000,000; and writers, chiefly occupied in producing a series of guidebooks, had completed 293 books and pamphlets.

No statistics showing physical accomplishments during the latter half of the calendar year 1939 are yet available, but the amount of work done was proportional to that accomplished during the four preceding years of WPA operation.

Business conditions during the last six months of 1939, following the trend of the fiscal year immediately preceding, continued to improve. By December, total unemployment in this country had dropped below 9,400,000 (A. F. of L. estimate), and by December 27 the number of people on the WPA rolls had dropped to 2,076,000. During this half-year period the WPA spent some \$722,893,000, including about \$696,156,000 of project funds; while local sponsors contributed about \$247,926,000, or 26.3 per cent of all money spent on project work.

A few changes in WPA operation were put into effect during this period, pursuant to the Emergency Relief Appropriation Act of 1939. WPA working hours were standardized at 130 per month for all workers. (Previously the number of hours had varied widely for workers doing different kinds of work.) Wages were readjusted in accordance with available information on living costs in various sections, resulting in higher wages for the South and a slight increase in the average monthly wage for the country as a whole. The amount of Federal money that could

be spent for other than labor costs was reduced from \$7 to \$6 per month per worker. The Federal Theater Project was abolished, and music, art, writers', and historical records projects were required to obtain local sponsorship the same as other projects. Workers (except war veterans) who had been employed continuously for 18 months were dropped from the rolls.

The WPA was made a branch of the new Federal Works Agency on July 1, 1939, along with the Public Buildings Administration, Public Roads Administration, Public Works Administration, and United States Housing Authority. WORK RELIEF ACT. See RELIEF.

WORKS PROGRESS ADMINISTRATION. See WORK PROJECTS ADMINISTRATION.

WORLD COURT. The Permanent Court of International Justice of the League of Nations, commonly known as the World Court, has fifteen members chosen for a nine year term, a new term for all beginning with the year 1940. New members are nominated by the existing national groups in the court, each of which may suggest as many as four names; in the case of a nation not represented on the court the government appoints a national group for nominating purposes. An invitation to nominate candidates was issued on Feb. 18, 1939. Germany, Brazil, and Japan, non-members of the League of Nations, but parties to the World Court, were offered the privilege of participating.

On May 19, Pres. Federico Laredo Bru of Cuba appointed Dr. Orestes Ferrara to take the place on the World Court made vacant by the death of Carlos Manuel de Cespedes (q.v.). On May 25, Spain announced that though it had withdrawn from the League following Franco's victory, it would retain its membership in the World Court.

On June 13, the League of Nations published the names of thirteen candidates nominated for World Court membership. To qualify, a candidate must be qualified for the highest judicial post in his own country or must be a recognized authority on international law. Election is made by majority vote of the League Council and Assembly. Among the candidates were two Americans, Manley O. Hudson, (already a member) nominated by Bulgaria, China, Latvia, and Lithuania, and James Brown Scott nominated by Cuba; Antonio de Bustamante nominated by Cuba, Panama, and the Dominican Republic; the Mexican Eduardo Suarez Aranzolo, nominated by Argentina, Panama, and the Dominican Republic; the Italian Dionisio Anzilotti (already a member) nominated by Hungary, Bulgaria, and the Netherlands; and the Spaniard Emanuel Gonzales Hontaria.

Egypt signed the Court's statute in 1939, bringing the number of signatories to fifty-nine. She also signed the Optional Clause.

On September 13, Great Britain, France, India, New Zealand, South Africa, and Australia notified the League of Nations that they no longer considered themselves bound by Article XXXVI of the World Court Statutes, the so-called Optional Clause, which constitutes an engagement to submit juridical disputes to a court of arbitration. The number of states bound by this clause is thus reduced to thirty-three. This action was taken on

the ground that the League Covenant, especially Articles XVI and XVII, had ceased to be considered binding by League members and a new situation had arisen. Australia made the additional statement that it does not consider its engagement to the court as covering any disputes arising out of the present crisis.

The number of judgments rendered by the court up to June, 1939, reached the number of thirty-two. On October 14, Dr. J. Gustavo Guerrero (El Salvador), President of the Court, said that the Court would meet and that he would preside in the next regular session in the Peace Palace at the Hague despite the war. The Court took under consideration a dispute between Belgium and Bulgaria over a Belgian street railway franchise in Sofia. This indicates the type of controversy which generally engages the attention of the court under existing conditions.

On October 16, it was announced from League of Nations headquarters in Geneva that the Court would be asked to reduce its 1940 budget by one third. This was in line with the general curtailment of League functions because of budget difficulties caused by the withdrawal of members, and the expulsion of Russia.

In November, 1939, the League authorities decided to postpone election of new World Court members, the sitting members to stay in office another year.

The membership of the Court at the end of December, 1939, was as follows: Dr. J. Gustavo Guerrero, President, (El Salvador); Sir Cecil Hurst, Vice-President, (United Kingdom); Count Rostworowski (Polish); M. Fromageot (French); Sr. de Bustamante (Cuban); Sr. Altamira (Spanish); Signor Anzilotti (Italian); Sr. Urrutia (Colombian); Mr. Negulesco (Rumanian); Jonkheer van Eysinga (Netherlands); Mr. Cheng (Chinese); Dr. Hudson (United States of America); Mr. Ch. De Visscher (Belgian); Mr. Erich (Finnish).

WPA. Work Projects Administration (q.v.), formerly Works Progress Administration.

WRIGHT, WILLARD HUNTINGTON (S. S. VAN DINE). An American writer, died in New York, Apr. 11, 1939. Born in Charlottesville, Va., on Oct. 15, 1888, he was educated at St. Vincent College, Pomona College, Harvard, and abroad, and in 1907 turned to a journalistic career. Subsequently he was literary editor of the Los Angeles Times until 1913, literary critic (1910-14) and dramatic critic of *Town Topics* (1912-14); editor of *Smart Set Magazine* (1912-14), art critic of *The Forum* (1915-16), for which he arranged the Forum exhibition; art critic of *International Studio* (1916-17), literary editor of the New York Evening Mail (1917), music critic and art editor of the San Francisco Bulletin (1918-19), and art critic of *Hearst's International Magazine* (1922-23).

During this period he wrote widely on art and literary criticism, and published several books on these topics, including *Modern Painting—Its Tendency and Meaning* (1915); *The Forum Exhibition of Modern American Painters* (1916); *The Great Modern French Stories* (1918); *The*

Future of Painting (1923), and *Modern Literature* (1926).

While convalescing from a nervous breakdown due to overwork, he became interested in detective stories and decided that he could write some as good as, if not better than, those he read. His first book, *The Benson Murder Case* was published in 1926, and his suave, learned detective, Philo Vance, became an instant success. Thereafter he wrote, among others, *The "Canary" Murder Case* (1927), *The Greene Murder Case* (1928), *The Casino Murder Case* (1934), *The Powwow Murder Case* (1938), and *The Gracie Allen Murder Case* (1939).

WÜRTTEMBERG. See GERMANY.

WYOMING. Area and Population. Area, 97,914 square miles; included (1930) water, 366 square miles. Population, Apr. 1, 1930 (census), 225,565; July 1, 1937 (Federal estimate), 235,000; 1920 (census), 194,402. Cheyenne, the capital, had (1930) 17,361 inhabitants.

Agriculture. Wyoming harvested, in 1939, 1,735,000 acres of principal crops. Tame hay, on 732,000 acres, gave 803,000 tons (\$6,263,000, estimated farm value of crop); sugar beets, on 50,000 acres, 541,000 tons (\$2,975,000, value of crop of 1938, latest estimate); wheat, 276,000 acres, 2,812,000 bu. (\$1,772,000, for 1939 crop); dry beans, 46,000 acres, 460,000 100-lb. bags (\$1,354,000); corn, 161,000 acres, 1,771,000 bu. (\$204,000); potatoes, 20,000 acres, 1,600,000 bu. (\$1,200,000).

Mineral Production. Native minerals produced in Wyoming attained, for 1937, a total value of \$41,087,908. Of this, petroleum supplied somewhat less than half, coal over one-fourth, and natural gas and gasoline extracted therefrom most of the remainder. All the minerals of primary economic importance were thus in the class of fuels. An adverse state of business failed to cut down the yearly yield of petroleum, which held at 19,004,000 barrels, approximately, for 1938, as against 19,166,000 barrels (value, \$18,860,000) for 1937. A new deposit of petroleum, the Cole Creek field, in Natrona County, was discovered in 1938, yielding at a depth of 8000 feet; the six-year-old Lance Creek field became the rival of the older and declining Salt Creek. The mining of coal decreased to a yearly total of some 5,200,000 net tons (1938), from 5,918,359 tons, \$11,600,000 in value (1937). The yield of the natural-gas wells, about 38 billion cu. ft. for 1938 as for 1937, was not all metered in either year. Much of it was put back underground after being stripped of gasoline; the total delivered to consumers in 1937 was 31,023 million cu. ft.; by value at the wells, \$1,008,000; by value where consumed, \$4,997,000. Gasoline taken from natural gas totaled 33,548,000 gallons for 1938; by value, \$1,718,000.

Manufacturing. The U.S. Census of Manufactures' biennial report on Wyoming, issued in 1939, summarized the activity of the year 1937 in the totals that follow (with those for 1935 as well, appended in parenthesis): Active manufacturing establishments numbered 235 (209), employed 3795 wage-earners (3172), and paid them \$5,218,821 (\$4,072,185); the aggregate of all factories' output was \$49,128,729 (\$42,192,195), to which sum the processes of manufacture contributed, in value, \$16,100,652 (\$12,599,840). The chief form of manufacture, the refining of petroleum, occupied 1169 of the wage-earners, paid \$2,117,522 of the manufacturing wages, and attained \$29,993,494 in output; of this amount,

\$8,497,098 was ascribed to the value imparted by the processes of manufacture. Thus the refineries afforded three-tenths of the manufacturing employment, paid two-fifths of the wages therein, produced three-fifths of the manufactured goods, and imparted more than half of the value added by manufacture. Of industries found in all States, Wyoming had makers of soft drinks, bakers, printing shops, and machine shops. Their several totals of production for 1937 ran about or below \$1,000,000. Lumber products, butter-making, and cheese-making (of the industrial type) ran on about the same scale.

Education. Wyoming's inhabitants of school age (from 6 years to 21) were reported, for the academic year 1938-39, as numbering 72,626. The year's enrollments of pupils in the public schools totaled 55,393; this comprised 39,492 in elementary study, 15,339 in high schools, and 562 others. Expenditure for public-school education, \$5,678,422, included salaries for 2741 teachers, who averaged from \$1350 in high-school positions down to \$650 in the rural schools.

Legislation. The regular biennial, 40-day session of the Legislature met in January. Its general appropriation act carried about \$4,000,000 for the expenditures of the State government in the course of the next two fiscal years. Republicans, again in control, overthrew legislation of 1937 that had set up a game and fish commission; the commission was reorganized, to be manned with new appointees. The Legislature gave the State's adherence to a compact, already entered by 25 States, for supervising paroles and persons on parole, and for aiding their extradition.

Political and Other Events. Nels H. Smith was inaugurated as Governor in January. Disputes with other States over water rights in rivers had an important bearing on Wyoming's outlook. The compact of the seven States of the Colorado River basin, for the amended partition of water and electricity from the Boulder Dam development, awaited the ratification of Wyoming and other States concerned. This agreement, drafted in December, 1938, proposed that the parties in California contracting for electricity from this source should pay \$500,000 a year into a fund, to be spent, for the first three years, in making surveys of the whole basin of the Colorado River and thereafter for development in the upper part of the basin (largely Wyoming). In the U.S. Supreme Court the State was defendant, with Colorado, in a suit brought by Nebraska to settle respective priority of rights to water in the North Platte River. In the same court Wyoming appeared as a petitioner seeking that action be taken against Colorado for contempt as having violated the Court's order of 1936 limiting the latter State's withdrawal of water from the Laramie River; the Supreme Court called upon Colorado, October 9, to respond in this action; the matter of the suit was that persons distributing water for irrigation to farmers in the Meadowland district in Colorado had forcibly opened locks and released, in July, water much in excess of that which the decree of 1936 had allotted to this district.

The payments to persons in Wyoming dependent in whole or in part on public support totaled \$764,000 for June, 1939. The monthly total payment was low in proportion to the payments in most other States; but its rate per capita exceeded considerably the average rate for the Union, per capita of the population. On the latter basis the

payments for June came to \$2.34 for the United States and to \$3.39 for Wyoming.

Officers. Wyoming's chief officers, serving in 1939, were: Governor, Nels H. Smith (Rep.); Secretary of State, Lester C. Hunt; Treasurer, Mart T. Christensen; Auditor, William Jack; Attorney-General, Ewing T. Kerr; Superintendent of Public Instruction, Esther L. Anderson.

WYOMING, UNIVERSITY OF. A State institution of higher education at Laramie, founded in 1886. The enrollment for the autumn term of 1939 was 2043. The 1939 summer session had an attendance of 915. The faculty numbered 212. The endowment amounted to \$2,367,100 and the income for the year was \$96,054. A Liberal Arts Building was completed. There were 100,061 volumes in the library. President, Arthur Griswold Crane, Ph.D.

X-RAY EQUIPMENT. See ELECTRICAL INDUSTRIES.

YAKUT AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

YALE UNIVERSITY. A nonsectarian institution for higher education in New Haven, Conn., founded in 1701. The enrollment for the autumn of 1939 was 5744. Of the candidates for degrees or certificates, 735 were in the Graduate School, 1532 in Yale College, 483 in the Sheffield Scientific School, 320 in the School of Engineering, 836 in Freshman Year, 250 in the School of Medicine, 238 in the Divinity School, 369 in the School of Law, 339 in the School of the Fine Arts, 96 in the School of Music, 37 in the School of Forestry, and 131 in the School of Nursing. There were 425 others not candidates for degrees. The faculty numbered 1024. The endowment of the University amounted to \$100,448,707 and the income for the year was \$7,317,889. The libraries contained more than 2,850,000 volumes. President in 1939, Charles Seymour, Ph.D., Litt.D.

YAP ISLANDS. See JAPANESE PACIFIC ISLANDS.

YEATS, yâts or yêts, WILLIAM BUTLER. An Irish poet and dramatist, died near Mentone, France, Jan. 28, 1939. Born at Sandymount, near Dublin, Ireland, June 13, 1865, the son of a distinguished artist, J. B. Yeats, he was educated at Godolphin School, Hammersmith, England, and at Erasmus Smith School in Dublin. After studying art for three years he turned to literature in 1886 with the publication of his first poem, "The Island of Statues" in the *Dublin University Review*. For two years (1887-89) he was a journalist in London, but with the publication of *The Wanderings of Oisín* in 1889 he devoted his life thereafter to writing. His first poetic play, *The Countess Kathleen* appeared in 1892, and in the following year he published a book of essays, *The Celtic Twilight*, and edited the *Poems of William Blake*, and with E. J. Ellis, *The Works of William Blake*. He also edited *A Book of Irish Verse* (1895) and in that same year his first volume of poetry appeared.

Becoming interested in the formation of an Irish national theater in 1897, with Lady Gregory and others he established the Irish Literary Theatre, and the first play to be performed was his *The Countess Kathleen* (1899). He became the active director of the Theatre and served it for 30 years, and under his direction a high pinnacle of folk drama was maintained. His *On Baile's*

Strand opened the Abbey Theatre in 1904. In later years during his Senatorship in the Free State he pleaded for the establishment of a national theater and the Abbey was endowed with an annual income by the government. His best known plays were *The Pot of Broth*, *The Hour Glass*, and *Cathleen ni Houlihan*, and a great favorite was *The Land of Heart's Desire*. Several of his plays, notably those mentioned above and *Deirdre* (1907) form an important part of world anthologies of dramatic writing.

But it is for his verse, rich in Irish symbolism, that he will be best remembered. Praise of his work culminated in the award of the Nobel Prize for Literature to him in 1923, and in 1935, Maselfield, the poet laureate of England, referred to him as "the greatest living poet." His work, mostly in ballad form, may be divided into two periods, the first, a period rich in emotion and full of brilliant figures weighted with mysticism, and the last, more conservative in form and austere. His greatest lyrical poetry was produced between the years 1915-25. His concern over his work in his later years led to his re-editing and rewriting almost all of it, and as a result eight collections of his work appeared, each superseding the previous. Of all his work, *The Wind Among the Reeds* (1899) was the only one untouched, and it has been said of it that it fulfilled the Symbolist idea of the French poets.

One of the leaders of the Irish literary renaissance of the 1920's he united the Irish revolutionary tradition with that of the folk singers and with the ancient heroic tradition. He was an important figure in the Irish Nationalist movement, and served in the Senate of the Irish Free State during 1921-28. With George Bernard Shaw he founded the Irish Academy of Letters, although he early relinquished his connection with that body.

His works up to 1908 were published in a Collected Edition. Thereafter they include *The Green Helmet and Other Poems* (1910); *J. M. Synge and the Ireland of His Time* (1911); *Plays for an Irish Theatre* (1912); *Responsibilities* (1914); *Reveries* (1916); *Per Amica Silentia Lunae* (1918); *The Cutting of an Agate* (1919); *The Wild Swans at Coole* (1919); *Michael Robartes and the Dancer* (1921); *Seven Poems and a Fragment* (1922); *The Trembling of the Veil* (1922), which was privately printed and formed the first part of his autobiography; *A Vision* (1926), also privately printed; *The Tower* (1928), his last notable work; *Selected Poems, Lyrical and Narrative* (1929); *The Winding Stair* (1929); *Words for Music, Perhaps* (1932); *Collected Poems* (1933); *Wheels and Butterflies* (1934); *Collected Plays* (1934); *Full Moon in March* (1935); *Dramatis Personae* (1936), considered an outstanding intellectual autobiography; and *Essays by W. B. Yeats, 1931-36* (1938). *Later Poems* (1923), *Plays in Prose and Verse* (1923), *Plays and Controversies* (1923), *Essays* (1924), *Early Poems and Stories* (1925), and *Autobiographies* (1926) were the first volumes of a new collected edition of his work.

YEMEN. See ARABIA.

YESHIVA COLLEGE. A college of liberal arts and sciences for men, under Jewish auspices, founded in New York City in 1928, as an integral part of the Rabbi Isaac Elchanan Theological Seminary, which was incorporated in 1896, later absorbing the Yeshiva Etz Chaim, the oldest Yeshiva on American soil, founded in 1886. The

enrollment for the autumn of 1939 was 217. There were 36 faculty members. The endowment for the year amounted to \$180,527, and the income was \$125,982. The library contained 30,500 volumes. President, Bernard Revel.

YOUNG MEN'S CHRISTIAN ASSOCIATION. An educational, social, physical, and spiritual movement among men and boys, which originated in London in 1844 under the leadership of George Williams. According to the latest figures available there were in 54 countries of the world, 10,380 local associations, unions, or fellowships with a membership of 1,869,963. These associations employed 5822 officers and owned and occupied 1792 buildings. In 1938 the United States had the largest membership (1,253,846) and the largest number of Y.M.C.A. buildings, representing a property value of \$212,508,800. Local associations numbered 1290, with 3873 employed officers and 107,600 directors and committee men.

The general board of the associations in the United States is the National Council of the Young Men's Christian Associations, with headquarters at 347 Madison Avenue, New York City. Ralph W. Harbison, president; John E. Manley, general secretary. The National Council is one of 33 national movements of federated local associations which constitute the World Alliance of Young Men's Christian Associations, with headquarters at 52 rue des Paquis, Geneva, Switzerland. The president in 1938 was Dr. John R. Mott, of New York City. Tracy Strong, of Geneva, was general secretary.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION. An organization whose purpose is to advance the physical, social, intellectual, and spiritual interest of young women. The first Association was formed in New York City in 1858. By 1939 there were throughout the United States 1012 Associations, affiliated in a national organization whose active body is the National Board of the Young Women's Christian Associations. Of these, 422 are in cities, towns, and rural communities, and 590 on college and university campuses. There are also 478 Registered Y.W.C.A.'s in rural centers, 63 branches and centers for colored girls and women, and 18 International Institutes for foreign-born women and girls. During the past year there have been nearly 3,000,000 women and girls served by the Y.W.C.A. of this country or taking some part in its programs. Of these 3,000,000, about 548,000 are members, of whom 40,000 are students.

The organization employs 2699 professional workers, of whom 2564 are connected with local Associations, 105 are on the national staff, and 30 are American secretaries serving in foreign countries. Working as volunteers, as board and committee members, and as advisers in local Associations are 95,052 women. The next biennial convention will be held in Atlantic City, New Jersey, Apr. 10-16, 1940. Mrs. Austin L. Kimball of Buffalo, N. Y., is the president of the national organization. Mrs. John French of Greenwich, Conn., is the president of the National Board, to which is entrusted the work of the national body during the interim of conventions. Headquarters of the National Board are at 600 Lexington Avenue, New York City, with Miss Emma P. Hirth as general secretary.

YOUTH PROBLEMS. See EDUCATION; NATIONAL YOUTH ADMINISTRATION.

YUGOSLAVIA. A kingdom in the Balkans. Capital, Belgrade (Beograd). Sovereign in 1939,

Peter II, who succeeded to the throne under a regency upon the assassination of his father, Alexander I, on Oct. 9, 1934.

Area and Population. Yugoslavia has an area of 95,576 square miles and a population estimated at 15,630,000 on Jan. 1, 1939 (13,934,038 at the 1931 census). About 80 per cent of the population is rural. Living births in 1937 numbered 423,794 (27.7 per 1000); deaths, 242,184 (15.8 per 1000); marriages, 117,646 (7.7 per 1000). The 1931 census populations of the chief cities were: Belgrade (Beograd), 241,542; Zagreb (Agram), 185,581; Subotica, 100,058; Sarajevo, 78,182; Skopje, 64,807; Novi Sad, 63,966; Ljubljana, 59,768.

National Defense. Military service is compulsory. On Nov. 1, 1939, the army consisted of 500,000 active soldiers and 1,340,000 trained reserves, according to the Adjutant General's Office, Washington, D. C. The air force comprised 6500 men and 800 aircraft. Naval units included 1 flotilla leader, 8 torpedo boats, 11 minelayers, 3 destroyers, 4 submarines, 1 aircraft tender, 1 small ex-German cruiser, and various river craft. The personnel was 583 officers and 8041 men.

Education and Religion. More than 40 per cent of the population is illiterate. School attendance in 1938-39 was: Elementary, 1,474,224; secondary, 177,034; university, 16,969. At the 1931 census, 48.7 per cent of the population were members of the Serbian Orthodox Church; 37.45 per cent were Roman Catholics; 11.2 per cent Moslems; 1.66 per cent Protestants; .49 per cent Jews, and .32 per cent Greek Catholics.

Production. About 85 per cent of the population are supported by agriculture. Yields of the chief cereals in 1939 (in metric tons) were: Wheat, 2,869,200; barley, 433,600; rye, 244,800; oats, 346,200; and corn, 3,694,200. Other leading crops in 1938 were: Potatoes, 62,825,000 bu.; sugar beets, 557,000 metric tons; beet sugar (1938-39 season), 86,000 metric tons; tobacco, 32,425,000 lb.; wine, 123,429,000 gal.; prunes (export), 15,055,000 lb.; hemp fiber, 122,135,000 lb.; flax fiber, 28,478,000 lb. Livestock statistics for 1938 showed 4,267,000 cattle; 3,451,000 swine; 10,137,000 sheep; 1,890,000 goats; 38,000 buffaloes; 22,763,000 poultry, and 1,407,000 horses, mules, and asses.

The value of mineral production in 1938 was 2,230,688,000 dinars. The output of the chief minerals in 1938 was (in metric tons): Coal, 450,000; copper, 42,000; lead (smelter), 8600; zinc (smelter), 4000; bauxite, 406,400; iron ore, 300,000; chrome ore, 28,000; steel ingots and castings, 200,000; pyrites, 150,000. The principal industries are flour milling, brewing and distilling, cotton spinning and weaving, tanning, boot-making, pottery, and iron-working.

Foreign Trade. In 1938 imports were valued at 4,975,342,000 dinars (4,757,383,000 in 1939) and exports at 5,047,434,000 dinars (5,521,187,000 in 1939). The chief exports were wood, corn, wheat, crude copper, and swine. Germany supplied 32.5 per cent of the 1938 imports; Czechoslovakia, 10.7; Italy, 8.9; United Kingdom, 8.7; Austria, 6.9, and the United States, 6.0. Of the 1938 exports, Germany took 35.9 per cent; United Kingdom, 9.6; Czechoslovakia, 7.9; Belgium, 6.7; Italy, 6.4; Austria, 6.1; and the United States, 5.1. See **IMPORTS AND EXPORTS**.

Finance. Budget returns for the fiscal year ending Mar. 31, 1939, showed receipts of 12,285,000,000 dinars and expenditures of 11,291,000,000 dinars. The budget estimate for 1939-40 balanced at 12,947,000,000 dinars. The total debt on May 1,

1939, was 24,620,000,000 dinars. The nominal average exchange value of the dinar was \$0.0231 in both 1937 and 1938 and \$0.0227 in 1939.

Transportation. With 5862 miles of line, the railways in 1937 carried 52,964,278 passengers and 19,241,974 metric tons of freight. The gross receipts were 2,410,000,000 dinars. The highway mileage in 1939 was 26,183 (see **ROADS AND STREETS**). Excluding operations of international lines, the civil air statistics for 1938 were: Miles flown, 331,000; passenger-miles flown, 1,212,000. The merchant marine on June 1, 1939, comprised 190 vessels (of 100 tons each or over) with a capacity of 411,384 gross tons. Entrances at Yugoslavia ports in 1937 totaled 102,548 vessels of 20,840,668 net tons.

Government. The Constitution of Sept. 3, 1931, declared Yugoslavia a constitutional monarchy, in which legislative power is vested jointly in the King and Parliament and executive power in the King, acting through a ministry which is not responsible to Parliament. Parliament in 1939 consisted of a Senate of 94 members (47 elected and 47 appointed by the Crown) and a Lower Chamber (Skupstina) of 371 members, elected by popular suffrage for four years. The Regency governing during the minority of King Peter was headed by Prince Paul, a cousin of the late King Alexander. Premier at the beginning of 1939, Dr. Milan Stoyadinovich, heading a Yugoslav Radical Union cabinet. For changes in 1939, see *History*.

HISTORY

Croatia Wins Partial Autonomy. Of outstanding significance in Yugoslavia's political evolution was the extension to the Croats in 1939 of a large measure of the autonomy for which they had struggled ever since Croatia became part of the Kingdom after the World War. The growing foreign dangers that beset Yugoslavia convinced Prince Paul and other Serb leaders that a settlement of Croat grievances was essential to the preservation of the state.

The opposition of the Stoyadinovich Government was overcome through its forced resignation on February 4. When the new Parliament elected in December, 1938, convened on Jan. 16, 1939, the 47 Croat members again boycotted the sessions (see 1938 **YEAR BOOK**, p. 793 for background). Five members of the cabinet then offered their resignations, stating that an agreement with the Croats was absolutely necessary. Premier Stoyadinovich then resigned. Prince Paul called on Dr. Dragisha Cvetkovich, a member of the Stoyadinovich Cabinet, to form a new Radical Union Government for the express purpose of negotiating a Serb-Croat accord. These negotiations, after surmounting many difficulties, were crowned with success on August 24, when Premier Cvetkovich and Dr. Vladimir Matchek, leader of the Croatian Peasant party, signed an accord.

In accordance with this agreement, the Cvetkovich Cabinet resigned on August 25 and was reorganized the next day with Dr. Cvetkovich as Premier and Dr. Matchek as Vice Premier. Six Croats and 3 members of the Serbian Opposition entered the cabinet along with 7 other Serbs, 1 Slovene, and 1 Bosnian Moslem. A decree issued the same day (August 26) created the new Banovina (province) of Croatia, with Zagreb (Agram) as its capital. To the Croatian authorities of the Banovina was transferred control of all activities except foreign affairs, national defense, foreign trade, and communications. The new Croatian gov-

ernment had jurisdiction over 26 per cent of the area and 28 per cent of the population of Yugoslavia.

A separate Croat legislative assembly was established and a Croat governor (*Ban*) appointed (August 29). As a further concession to Croat demands, the Yugoslav Parliament was dissolved on August 26 and a new law providing for free elections was ordered drafted. At the same time the Serb and Yugoslav capital was transformed into a federal district (Directorate), on the order of the District of Columbia, through extension of its boundaries to include the neighboring towns of Zemun and Panceva. Other decrees issued August 26 aimed at the termination throughout Yugoslavia of the dictatorial regime established in 1929 and the restoration of a parliamentary democracy.

Political Unrest. The Croat-Serb accord was followed almost immediately by the outbreak of the European War, which multiplied the difficulties involved in effecting the transition of Yugoslavia from a unitary dictatorship to a federal democracy. This program was bitterly opposed by Serb reactionaries. There was a split in the ranks of the government (Yugoslav Radical Union) party in June over the Croat-Serb negotiations, leading to the expulsion from the party of ex-Premier Stoyadinovich and 19 other Serb deputies. At the same time many Croat extremists were dissatisfied with the concessions obtained. Unrest in Croatia and in other minority districts—Slovenia and Bosnia—was reportedly fanned by German and Italian agents seeking to weaken Yugoslav unity. The large German minority agitated vigorously for racial autonomy.

On September 24 the Croatian authorities prohibited public meetings following the development of an extremist agitation against Dr. Matchek's leadership, resulting in sporadic disorders and bloodshed. A score of police agents and other officials were murdered, and several hundred Croats in danger of assassination for their co-operation with the Serbs took refuge in Belgrade. An extensive round-up of anti-government agitators was launched in Zagreb October 20. On October 25 Zagreb University was closed as a result of student riots. On December 4, 40 Croat extremists were arrested for plotting the assassination of Dr. Matchek and the Governor of Croatia.

The unrest in Croatia was duplicated during the last quarter of 1939 in the Serb districts of Yugoslavia. Attributed mainly to Communist propaganda in favor of the Soviet Union and against Britain and France, rioting between Communist and Nationalist students led to the closing of Belgrade University on November 30. During December outbreaks at Belgrade, Split and many other points led to the arrest of hundreds of alleged Communists. To counter the Communist propaganda, the government on December 23 released nearly 3,000,000 peasants owning small plots of land from the payment of taxes.

The Cvetkovich Government on September 18 assumed virtual dictatorial powers through a decree authorizing it to abrogate or change any existing law. Nevertheless it proceeded with its federalization plan. On November 7 it was announced that Bosnia and Herzegovina would be granted the same autonomous rights as Croatia. Senatorial elections held November 12 were boycotted by the Serb Opposition groups and all 47 candidates on the government list were elected, including 15 Croat Peasant party members. The projected law

for the election of a new Skupshtina was not completed by the end of 1939 and no date for the voting had been fixed by the year end.

Economic Measures. Part of the political unrest was attributed to higher prices and shortages resulting from the European War. The emergency measures introduced by the government to deal with this situation included a temporary restriction on withdrawal of bank deposits; regulations against profiteering and unwarranted price increases; and establishment of government agencies to safeguard food and coal supplies, accumulate foodstuff reserves, and control the production and export of minerals. Early in September the National Bank of Yugoslavia was empowered to regulate imports and exports through control of foreign exchange transactions. Effective August 29, the dinar was detached from the pound sterling and linked to the U.S. dollar at 55 dinars to the dollar, or \$0.018 against the previous official rate of \$0.023. On October 5 the National Bank was authorized to revalue its gold and foreign exchange holdings at a level representing a 39 per cent depreciation of the dinar in terms of gold.

Foreign Relations. The international position of Yugoslavia, ringed by powerful and potentially hostile states, was sufficiently alarming in 1938 (see 1938 YEAR BOOK, p. 794). But the menace to its independence and security mounted steadily during 1939. By the Little Entente and Balkan Entente treaties, Yugoslavia was committed to defend Rumania against a Hungarian attack and to aid Rumania, Turkey, and Greece against Bulgarian attack, in return for reciprocal guarantees. The growing revisionist sentiment in Hungary and Bulgaria thus threatened to draw Belgrade into war.

Still more dangerous was the growing threat from the great powers. German absorption of Bohemia and Moravia in March wiped out one of Yugoslavia's partners in the Little Entente. By transferring the large Czech capital investments in Yugoslavia to German control, it gave the Reich a tighter economic stranglehold upon the kingdom. Italian annexation of Albania in April afforded Mussolini a new base for possible invasion of Yugoslavia or disruption of its internal unity. The conclusion of the Italo-German alliance in May increased Yugoslavia's danger from both these powers.

In September the re-entrance of Russia into Balkan power politics added a new element of foreign and internal danger. Soviet intrigues and pressure upon Bulgaria threatened to end Bulgarian-Yugoslav friendship and co-operation. The spread of Communist propaganda within Yugoslavia widened the breach between the anti-Soviet Belgrade Government and some sections of the Yugoslav people who were pro-Soviet. It also gave Italy an excuse for increasing pressure upon the Yugoslav Government. Late in 1939 Mussolini hinted that he might be forced to intervene in Yugoslavia to prevent Soviet influence from gaining a strategic foothold on the Adriatic. At the same time the strongly Catholic Slovenes and some Croats began to look to Rome rather than to Belgrade to defend them against the Communist menace.

These imminent perils forced the Belgrade Government to cling throughout 1939 to a policy of strict neutrality, although the kingdom's long-term interests and its popular sympathies alike linked it to the cause of the Anglo-French alliance. Premier Cvetkovich, like his predecessor, strove to balance Yugoslavia between Germany, Italy, and

the Allies, while seeking to reduce the danger of conflict among the Balkan and Danubian powers. At the same time the government took extensive precautions to defend the kingdom against attack from any quarter. After the outbreak of the European War, about 500,000 men were mobilized.

The attempt to create a bloc of neutral Balkan and Danubian powers, pursued in co-operation with Turkey and with some Italian aid, was wrecked by the refusal of Hungary and Rumania to compromise their territorial controversy. The policy of balancing Germany, Italy, and the Allies against one another proved more and more difficult with all three bringing progressively greater pressure to bear for economic and political concessions.

In April Yugoslavia side-stepped a British offer to guarantee its independence. In May it formally complained of Turkey's action in forming a tentative alliance with Britain without consulting the other members of the Balkan Entente. On July 10 the Yugoslav and Bulgarian Premiers jointly declared for a Balkan policy of "peace and independence," thus rejecting a German bid for an alliance. A month later Belgrade turned down a German-Italian demand for its benevolent neutrality and for use of Yugoslav railways by the Axis in the event of a European conflict.

The German-Soviet rapprochement and the outbreak of the war forced Yugoslavia to seek closer relations with Italy to safeguard its own neutrality. The kingdom soon became one of the principal Balkan centers of the Nazi struggle to obtain essential foodstuffs and raw materials and of Anglo-French efforts to prevent the Reich from getting them. Italy likewise entered the battle for Yugoslav trade. A German-Yugoslav trade pact signed October 16 provided for increased shipments of minerals and timber to the Reich in return for German armaments. To divert to Germany the copper, lead, and zinc produced by important French and British-owned mines in Yugoslavia, the Belgrade authorities on November 12 assumed control over the production and export of all minerals. Sharp protests from Britain and France and the threat of retaliatory economic action caused the government to postpone this program. Seeking to break Germany's economic stranglehold, the British and French undertook to purchase larger quantities of Yugoslav agricultural products and in December opened negotiations for a large armament credit to Yugoslavia.

See BULGARIA, FRANCE, GERMANY, GREAT BRITAIN, GREECE, HUNGARY, ITALY, RUMANIA, and TURKEY under *History*; BALKAN ENTENTE; LITTLE ENTENTE; MILITARY PROGRESS; NAVAL PROGRESS; REPARATIONS AND WAR DEBTS.

YUKON, yōō'kōn. A territory of northwestern Canada. Area, 207,076 square miles; population (1939 estimate), 4000 as against 4230 in 1931. Dawson, the capital, had 828 inhabitants in 1932; Whitehorse, 540. The mining of gold, silver, and lead was the main occupation of the people. In 1938 the total mineral output was valued at \$3,959,570, of which gold (72,368 fine oz.) accounted for \$2,545,544; silver (2,844,659 fine oz.), \$1,236,772; and lead (5,198,990 lb.), \$173,854. The territory had 58 miles of railway, 324 miles of wagon roads, and 978 miles of sled roads and trails. For the year ended Mar. 31, 1938, revenue totaled \$213,712; expenditure, \$212,597. The Yukon, which has been a separate political unit since 1898, is governed by a controller and a territorial council of three elected members. It elects a member to the House of Commons of the Cana-

dian parliament at Ottawa. Controller, George A. Jeckell.

ZANZIBAR PROTECTORATE. A British East African protectorate, consisting of the islands of Zanzibar (640 sq. mi.) and Pemba (380 sq. mi.). Total population (Jan. 1, 1939), 241,792 compared with (1931 census) 235,428 (Zanzibar, 137,741 and Pemba, 97,687). The town of Zanzibar (capital) had 45,276 inhabitants. Tentative figures, for all races (per 1000), place the crude birth rate at 14.1 and the death rate at 20.7.

Production and Trade. The production of cloves is the chief industry; about 83 per cent of the world's supply are grown in the islands. During 1938, 7860 tons of cloves were exported. Copra (11,964 tons exported in 1938), clove oil, and sesame oil are important products. Cassava, tobacco, citrus fruits, rice, maize, potatoes, and legumes are grown. Mineral deposits are not known to exist. Forests are of little extent. Pottery, rope, soap, coconut oil, jewelry, and mats are manufactured. In 1938, imports were valued at £993,521; exports (including re-exports of £181,867), £844,820. The main imports consisted of rice, cotton piece goods, petroleum, sugar, ivory, flour, and tobacco. Ocean-going vessels which entered the port of Zanzibar numbered 322 and represented a net registered tonnage of 1,594,568. In 1939 there were 243 miles of roads and 627 automobiles.

Government. For the year ended Dec. 31, 1938, revenue totaled £465,000; expenditure, £463,000; public debt—nil. For 1939, revenue was estimated at £471,815 and expenditure at £460,862. The government is administered by the British Resident who exercises his functions under the Zanzibar Orders in Council of 1924 and 1925. There is an executive council of 8 members (the Sultan—president, British Resident—vice president, 3 ex-officio members, and 3 other senior officials appointed by the Sultan) and a legislative council of 15 members (British Resident—president, 3 ex-officio members, 5 official and 6 unofficial members appointed by the Sultan). Legislation consists of Decrees of the Sultan which, when countersigned by the British Resident, are binding on all persons. Sultan, Seyyid Sir Khalifa bin Harub (succeeded Dec. 9, 1911); British Resident, John H. Hall (assumed office, Oct. 5, 1939).

ZINC. Outstanding events affecting the world's zinc industry in 1939 were the war abroad and the reciprocal trade treaty between the United States and Canada. Under the terms of the treaty, which went into effect Jan. 1, 1939, the U.S. tariff on slab zinc and zinc in ore was reduced 20 per cent. This immediately depressed the domestic industry and lowered the price of the metal, so that for the first eight months of the year activity was at a low level. During that time imports of slab zinc encouraged by the treaty, rose to more than 16,000 tons, plus 9000 tons of zinc in ore. Total imports for 1939 amounted to 73,883 short tons; total exports amounted to 517,114 short tons.

The price from January to July 1939, was 4.50¢ per lb., St. Louis. Toward the end of the year, when war in Europe caused consumers to cover future requirements, the price rose to 6.50¢ and remained at that level until December, when it dropped successively to 6.00¢ and 5.75¢.

On Dec. 18, 1939, the British Ministry of Supply posted maximum buyers' price of £25¼ per long ton on ordinary brands of foreign zinc, delivered duty paid. Up to September, when the

London Metal Exchange was closed, the 1939 price had ranged from £13½ to £14½.

Zinc production, all grades, in the United States in 1939 is estimated by American Bureau of Metal Statistics at 538,198 tons, compared with 456,990 tons in 1938, and 589,619 in 1937. Domestic shipments rose rapidly in September and October, 1939, but tapered off again toward the end of the year. For 1939, shipments of all grades totaled 598,972 tons or about 60,000 tons more than production. Stocks of all grades diminished rapidly with increased fall buying, and closed the year at 65,995 tons, compared with 128,407 at the end of January.

United States production of Prime Western slab zinc in 1939 according to American Zinc Institute, amounted to 239,922 tons, compared with 219,553 tons in 1938. Shipments for the year were 258,872 tons, reducing stocks from 51,875 tons in January to 30,052 tons in December. Net decrease in stocks for the year was 18,950 tons.

The principal zinc producing countries in order of importance are United States, Belgium, Germany, Canada, Poland. War in Europe has disrupted ordinary channels of trade, and data for 1939 on world production are not available.

H. C. PARMELEE.

ZIONISM. See JEWS; PALESTINE.

ZONTA INTERNATIONAL. An organization established in 1919 to "work for the advancement of understanding, goodwill, and peace through a world fellowship of executive women in business and the professions, united in the Zonta ideal of service." In 1939 there were 143 clubs in the United States, Hawaii, Canada, Denmark, and Sweden, with a membership of approximately 4200. Membership is limited to one outstanding representative for each business or profession in the community, who pledges herself to co-operate with others in its civic, social, and commercial development. The official monthly publication is *The Zontian*. Headquarters are at 59 East Van Buren Street, Chicago, Ill.; Dr. Helen Pearce, Salem, Oregon, president; Miss Harriet C. Richards, executive secretary.

ZOOLOGY. General. The American Society of Zoologists met at Columbus, Ohio, in conjunction with the American Association for the Advancement of Science December 28th to 30th, under the presidency of J. T. Patterson. The British Association for the Advancement of Science was scheduled to meet at Dundee August 30th to September 6th but owing to war conditions this schedule was not fully carried out. The French Association for the Advancement of Science met at Liège, Belgium, July 17th to 22nd. The 7th International Congress of Genetics was originally planned to meet in Moscow in 1937, was postponed to 1938, and then, that date proving impractical, finally met at Edinburgh in 1939 under the presidency of F. E. A. Crew. No Russians attended and the Germans and Dutch were called home by the outbreak of the war. A permanent committee on genetical nomenclature was formed with F. E. A. Crew as Chairman. The 6th Pacific Congress was held in and around San Francisco on July 24th to August 12th. One section was devoted to the consideration of zoological problems connected with Oceanography, Marine Biology, and the fisheries. On April 11th to 15th the Italian Society of Experimental Biologists celebrated at the University of Pavia the 110th anniversary of the birth of Spallanzani. At this time the publication of a

new journal, *Scientia Genetica*, was announced. From the taxonomic point of view the *Systema Naturae* of Linnaeus is accepted as the ultimate authority as it was the starting point for the application of the priority rule in the naming of animals. Since this is rare and expensive the British Museum has begun the publication of a photographic facsimile, of which that of Vol. 1 has already appeared. Vol. 1 of a new periodical, *Chromosoma*, to be published as *Abteilung B of Zeit für Zellforschung u. Mikroanatomie* appeared during the year. An important book is Just, *The Biology of the Cell Surface*. Just considers the ectoplasm or outer layer of the cell the most important part. The first life arose, according to Just, through the formation of this outer layer which separated the first living protoplasm from its environment. At a summer meeting of the American Association for the Advancement of Science held at Ottawa, Lillie (*Science* 88 p. 65) said that the future of the zoological sciences must be founded on the course of their evolution up to the present time, and that it is an error to assume that taxonomy, comparative anatomy, embryology, geographical distribution, etc., have played their part and may be ignored in the future development of the subject. The relationships between all of these and experimental zoology is very close and neither can afford to ignore the other. He predicted a great future for "micro evolution," which may be defined as a study of evolutionary forces within available intervals of time, this being more or less bound up with genetics and the gene theory. Biology must make a thoroughgoing physico-chemical analysis of living beings, but this does not necessarily lead to mechanistic conclusions since organisms tend to depart from routine in a fashion for which we have no physical analogy. Evolution has been in the direction of an increasing organization, not in an increasing physico-chemical complexity. The so-called "simplest" organisms are physico-chemically as complex as the highest. According to Lindsay (*Quart. Rev. of Biol.* 14, p. 220), it is of the utmost importance in the study of evolution that we get new evidence of the influence of the environment on the individual. Ritchie (*Nature* 144, p. 534), in the presidential address to the zoology section at the meeting of the British Association on "Perspectives in Evolution," said that life phenomena elude treatment by the laws of thermodynamics, not necessarily because living matter does not obey these laws, but because the unknown conditioning of living organisms is too complex for analysis applicable to inorganic states. In the study of evolution we are too apt to ignore the stability of many organisms (e.g. *Lingula*) and devote our attention to those having greater variability. This phenomenon of stability may throw doubt on the validity of arguments derived from laboratory experiments where variability is emphasized. As noted in earlier YEAR BOOKS the gene is the hypothetical unit responsible for the transmission of hereditary characteristics and the determination of what those characteristics shall be, Rahn (*Am. Nat.* 73, p. 26), argued that evolution depends largely on the formation of new kinds of genes and this could only occur through chemical reactions which must follow chemical laws. The frequency of the appearance of a new unit bears a definite relation to the number of individuals born during a year, and is higher in warm than in cold climates due to the fact that chemical reactions are more rapid in the latter environment. In reptiles there are eight

times as many species in warm as there are in cold, regions.

A part of the programme of the December 1938 meeting of the American Society of Zoologists was a symposium on color changes in animals, which especially dealt with the activities of the chromatophores which by expansion or contraction affect the appearance of the animal. It is generally thought that chromatophore activity is directly controlled by nerve stimuli, but Parker (*Am. Nat.* 73, p. 193) found that these changes in form of chromatophores are due to definite substances discharged from nerve endings. These may be brought from distant glands. Goodrich (*Am. Nat.* 73 p. 198), showed that the chromatophore cell may have an individuality which like that of the whole organism is an expression of its gene complex. Abramowski (*Am. Nat.* 73, p. 208), found that chromatophore change in sharks is caused by hormone action. Sumner (*Am. Nat.* 73, p. 219) thought that in fish the ratio between the amount of light received from above and that received from the background is the direct stimulus leading to color changes. Smith (*Am. Nat.* 73, p. 235) recorded the reactions of chromatophores in isolated fish scales to various stimuli. Brown, (*Am. Nat.* 73, p. 247), thought that color changes in crustacean chromatophores are due to four or five "humorly" controlled pigments. One phase is caused by hormone action, another by its absence. The hormones involved in this action are probably manufactured in the eye stalks. The American Society of Naturalists meeting at Richmond in December of 1938, held a symposium on the "Contributions of Higher Animals to an understanding of Human Biology." Noble (*Am. Nat.* 73, p. 113), showed that throughout the series of vertebrates from fish to man we can recognize the same social components: (1) Group attraction; (2) Dominance behavior; (3) Parental behavior; (4) Suggestion. No social behavior is possible in any vertebrate in the absence of the fore brain. The mechanisms necessary for the above activities have shifted from the corpus striatum of the fish to the cortex of man. Hartman (*Am. Nat.* 73, p. 139), particularly in phenomena connected with reproduction, found as regards degrees of similarity a series man-chimpanzee-monkey. Each of these must be regarded as at the end of its evolutionary branch and is not leading to any other.

Heredity. Timofeef-Ressovsky (*Biol. Zent.* 59, p. 358) found that in treating fruit flies with Roentgen rays the production of mutations is independent of temperature conditions. Haldane and Philips (*Jour. of Genetics* 38, p. 193), stated that within the limits imposed by errors of diagnosis and sampling, it appears that the daughters of haemophilic men bear equal numbers of normal and haemophilic sons. One half of the sisters of haemophilic men are heterozygous for haemophilia. Wepman (*Jour. Heredity* 30, p. 207) got results indicating that there is an hereditary factor in stammering, this being more apt to occur in the male than in the female. An important publication is *Evolution of Genetic Systems*, by Darling-ton.

Experimental. Parker (*Proc. Acad. Nat. Sci.* 25, p. 499) noted that normal catfish become light or dark in color when put on corresponding backgrounds but that blinded fish are always dark. If only one eye is removed they react as under normal conditions. The reaction to light is partly due to stimuli reaching the eyes and partly to re-

ceptors in the skin. These act on the pituitary, producing "intermedin" which is the immediate cause of the reaction. The eyes react by stimulating the nerves which govern the expansion of the chromatophores.

Harvey (*Biol. Bull.* 76, p. 384) found that enucleated fragments of the egg of the annelid *Chaetopterus* would develop parthenogenetically but would not develop as far as will the eggs of echinoderms. The ascidian *Ciona* is hermaphroditic but self sterile. Morgan (*Jour. Exp. Zool.* 80, p. 19) found that after treating with various acids self-fertilization would occur. This he thought indicated that the egg-membrane acts as a block to the entrance of the sperm which block is removed by the action of the acid. Porter (*Biol. Bull.* 77, p. 233) removed the polar bodies from the egg of *Rana pipiens* (the tree frog), and found that the egg would develop with only the sperm chromosomes; 90 per cent of the eggs developed but development was delayed and abnormal. Pincus (*Jour. Exp. Zool.* 82, p. 85) removed the ovum from a rabbit after treatment with pituitary extract, transplanted this ovum to the uterus of another female; the egg developed parthenogenetically into a normal adult, and this adult when mated produced offspring. (*Proc. Acad. Nat. Sci.* 25, p. 557).

Commensalism is a term applied to a situation where two organisms occupy the same shelter but are independent of one another in all of their activities, as, e.g., the reputed case of the rattlesnake and prairie dog occupying the same burrow. Schwarz (*Am. Nat.* 73, p. 270) considers as commensal the association of man and the common house mouse and thinks that in this association the protection afforded by man allows of the fixing of recessive mutations which could not persist without this protection. (It might be questioned here whether this is not rather a parasitic relationship than a commensal.) Schwarz thinks that man also develops recessive mutations but because of his intelligence is able to protect himself against their consequences.

Protozoa. Wicklerman (*Nature* 144, p. 123) described in *Paramoecium* a sexual process which he called "cytogamy." Two animals come together in the usual conjugation fashion and nuclear division occurs, but the products of this division do not unite. Tartar (*Jour. Exp. Zool.* 81, p. 181) found that *Paramoecium* will regenerate after injury as fully as do any other protozoa. Finley (*Jour. Exp. Zool.* 81, p. 209) reported evidence for sexual differentiation in *Vorticella*. Dixon (*Jor. An. Ecol.* 8, p. 162), found that soil samples from Greenland contained a large protozoan population even though this soil is frozen nine months in the year. Soil which produces the richest vegetation has at the same time the largest number of protozoa.

Hydroids. Morre (*Biol. Bull.* 76, p. 104) found in *Tubularia* at Woods Hole that if the temperature rises above 20° to 21° C the hydranth is lost and the coenosarc retreats into the perisarc. If a dormant colony is kept at 18.4° C it will produce hydroids within three days. Papenfuss and Bokenham (*Biol. Bull.* 76, p. 1) found, contrary to beliefs generally held, that neither ectoderm, entoderm, nor interstitial cells of hydra are able by themselves to give rise to an entire animal. Schmitt (*Am. Nat.* 73, p. 33), studying the records of occurrence of fresh water medusae in the United States found that they have been recorded for 19 states. It is not probable that

recent new records indicate migration, but merely more complete information.

Annelids. McGinite (*Biol. Bull.* 76, p. 113) described the feeding process in *Chaetopterus*. Here by secretion a bag of mucus is formed through which a current of water is passed. The mucus entangles food particles which are then passed forward to the mouth. The New York Academy of Sciences published a key to the species of polychaetous annelids of Puerto Rico by Treadwell.

Mollusks. At Milford, Conn., the Federal Bureau of Fishes has for some 20 years maintained a laboratory for the study of various problems connected with the oyster industry. Announcement has been made of the building of a new laboratory especially well equipped for the study of oyster culture as well as that of other commercially important mollusks. Loosanoff (*Biol. Bull.* 76, p. 171) stated that the clam *Venus mercenaria* (quahog) will go into hibernation at low temperatures, keeping its valves closed at this time. Under temperatures of 21° to 22° C the valves remain open for the maximum length of time; there is no periodicity in these movements.

Crustacea. Coker (*Quart. Rev. of Biol.*) stated that the common fresh water *Daphnia* exhibits extreme variability in such characters as form of head; these are often so great that great-grandparents would be regarded as of different species or even genera from their descendants. It was suggested that these variations, especially in the form of the head, are to be explained by the temperature of the water in which they live and possibly by the size of the body of water. Different lakes may have different chemical composition and this may be responsible. The name "cyclomorphosis" is given to cases where there is a seasonal difference in the animals, e.g., the summer forms being different from the winter. Clarke and Bonnet (*Biol. Bull.* 76, p. 371), found that in the copepod *Calanus* growth is influenced both by food and by temperature. Some conditions promoting growth are undesirable because they lead to a greater percentage of death during moulting. Both growth and survival rate decrease in passing from spring to autumn.

Insects. Wood (*Nature* 144, p. 381) recorded a peculiar flashing, quite different from the normal, in fireflies that had been bitten by a spider. Here the "lantern" showed as a "seething cauldron of points of light." With the development of automobiles and airplanes it has generally been recognized that the problem of insect control has been made more complicated because of the ease with which they may be carried over long distances. Glick (*Tech. Bull. No. 673, U.S. Dept. of Ag.*) recorded observations made on the occurrence and distribution of insects in the air. Insects of various orders were found on airplanes at differing heights up to 14,000 feet. It was noted that dragonflies did not appear in these collections, possibly because they could fly faster than the planes and thus escaped. Cockerell (*Science* 90, p. 353) found that there is a constant supply of insects and spiders as well as plant spores and seeds going from the mainland to islands off the California coast, so that the fauna of these islands duplicates that of the mainland. He thought it possible that this drift from the mainland is great enough to furnish an appreciable part of the food of fishes in the oceanic waters.

Fishes. Norman (*Nature* 143, p. 52) recorded observations on the Remora or "sucking fish" in

which the dorsal fin is modified into a sucker. When the Remora attaches itself to another fish the margin of this sucker is raised, creating a vacuum, and the raising of other parts of the sucker intensifies this action. An adult Remora can withstand a vertical pull of 40 pounds before it lets go and the only way to detach it is to push it forward over the edge of whatever its area of attachment may be. He thought it was probably derived from the pilot fish which accompanies sharks. Its use in fishing is familiar. Coates (*Bull. N. Y. Zool. Soc.* 42, p. 80), found that the electric eel can release a current of 600 volts having a wattage of about 1000, though the average eel can generate only about 550 volts. It is not possible, because of the rapidity of the flash, to use the current for lighting a bulb. McGinite (*Am. Midland Nat.* 21, p. 489) described the habits of the blind goby (*Typhlogobius californiensis*) which lives commensally in the burrows of the shrimp *Callinassa affinis*. One pair of shrimps and one pair of fish live in the burrow at the same time. The fish pair early and mate for life, and either male or female will fight another fish of the same sex if it enters the burrow. Eyes and pigmentation are normal when the animal hatches but disappear after the fish enters a burrow. In the burrow they have no enemies and may live for 10 years. Moy-Thomas (*Biol. Rev.* 14, p. 1) concluded that the elasmobranchs or fishes with cartilaginous skeleton arose in the Devonian and that the fossil *Cladoseiache* is very near the ancestral form in structure. Gudger (*Nature* 143, p. 80) found that the whale-shark feeds by taking water into mouth and straining out the food organisms in it by the use of its gill structures. Colbert (*Nat. Hist.* 43, p. 280) reported the discovery in South America of a fish, given the name *Latimeria chalumnae*, which has all of the characteristics of the coelacanth fishes supposed to have become extinct by the end of the Mesozoic era.

Amphibia. Higinbotham (*Ecology* 20, p. 58) experimented with several species of toads in an attempt to analyze their activities. The results indicated an inherent activity rhythm which would be increased after a temperature rise of 10° C., but this did not greatly affect the distribution of these activities.

Reptiles. A traditional belief is that reptiles enjoy basking at high temperatures in the sun. Bogert (*Nat. Hist.* 44, p. 30) found that being variable-temperature animals (i.e., that their temperature is determined by that of their surroundings), and with no regulating mechanism, such as is found in birds and mammals, the upper limit at which they can exist is soon reached as the temperature rises. Desert lizards and snakes, he found, cannot endure a temperature above 120° F. On the other hand, these animals are incapable of co-ordinated movements if the temperature drops below 60° F. Cowles (*Science* 90, p. 465) got similar results from a study of reptiles of southern California deserts where the most heat-tolerant forms have optimum temperatures of 37° to 38° C., showing marked discomfort if the temperature rises much above this. He suggested that the disappearance of the large Mesozoic reptiles may have been caused by increased exposure to the sun's rays which followed the clearing up of the dense atmosphere supposed to have existed in early Mesozoic times. A convenient manual for the identification of snakes is that of Conant and Bridges, *What Snake Is That*, a field-guide to snakes east of the Rocky Mountains.

Birds. Under the leadership of A. A. Allen an expedition from Cornell University to the south and southwestern states secured moving-pictures and sound-records of a number of birds, among them the Coppery-tailed Trogon which had not before been seen since its discovery some 50 years earlier. Poulter (*Sci. Monthly*, July, p. 5), stated that the records of the Byrd Antarctic Expedition showed that this region is "a paradise for students of mammal and bird life." This article gives data on breeding records of a number of birds, among them the snow petrel which breeds on Mt. Helen Washington 51 statute miles from its source of food. Because of the alarming decrease in the numbers of the California Condor, the National Association of Audubon Societies has given \$4500 to the University of Chicago to pay the expenses of a trained observer who will go into the mountains and make observations on this bird. (*Bird Lore* 41, p. 67). Lockley (*Nature* 143, p. 141) found that Manx's Shearwater breeds in burrows, sometimes using those made by rabbits and sometimes making its own. A clutch consists of only one egg. Both sexes take part in incubation, each bird staying on the nest for 3 to 4 days at a time and during this interval is not fed by the other. On dark nights the free bird visits the nest, but not when there is moonlight; this may be through fear of predatory birds. The young is fully feathered in about a fortnight and then goes out to sea. Banding showed that some birds return to the nest year after year and have well developed homing instinct. The puffin deserts the young when they are 49 days old. The young of the puffin and of the shearwater is very fat when abandoned, but the subsequent starvation period thins it so that when it walks to shore it is more active and in less danger of being caught. Densing (*Auk* 56, p. 367) described the nesting habits of the Pied-billed Grebe which builds a floating nest of plant materials. Both sexes incubate until the eggs begin to hatch, after that the labor falls on the female. There is no evidence that the temperature of the nest in any way affects the length of incubation. Lincoln (*Auk* 56, p. 250), stated that a species migration of birds follows along definite lines, but that individuals differ widely one from another. The Herring Gull, e.g., in its first year migrates for long distances; this range is shorter in the second season, and in later ones it may not migrate at all. A bird does not return to a definite locality unless it has previously nested there. He concluded that no hard and fast rules can be given for the migratory movements of any one bird. Herrick (*Auk* 56, p. 244), stated that instead of fixed and invariable habits in the selection of nesting materials a bird, such as the oriole or robin, inherits definite ways of working, with a predisposition to draw from the environment any available materials suited to their methods. Allard (*Science* 90, p. 370) discussed the powers of mimicry shown by the starling, which he considered greater than those of the mocking bird, much more varied in method and range. He mentioned one case in which the starling not only mimicked the voice of the flicker but used its beak to drum on the lid of a box, making the characteristic woodpecker noise. It will imitate the songs of other birds even when these are not in season, indicating memory(?). Of interest is the fact that a given note will have a "run" for a while and will then be discarded.

Stolpe (*Zoöl. Anz. Suppl.* 11, p. 71) made motion-pictures of the movements of humming-

bird's wings and found a vibration rate of from 20 to 25 per second. The tip of the wing describes a figure 8 and on the down stroke the wing twists through an angle of 160° so that the ventral surface is dorsal. Lask (*British Birds* 32, p. 290) described the display of the Blackcock. The male has five attitudes, crowing, display, fighting, circling, and crowding, the latter two being preliminary to mating. Fighting may be either symbolic or actual, the former being mostly the case when on "territory." Gerber (*Beitr. Fort. Vogel* 15, p. 17) gives a long list of cases where birds carry their young; this occurs usually when the birds are in danger. Grote (*ibid* p. 25) said that in South Russia hawks nest in colonies with jackdaws, doves, and starlings. This is due to the fact that groves of trees in which nests can be built are relatively few and widely scattered. The term "Kumpan" has been coined to designate the role that a fellow member of a species plays in the life of a bird. Nic (*Auk* 56, p. 255) discussed the social kumpan in the song sparrow. This bird is generally considered as anti-social, but closer study reveals a large number of social reactions, many of which are continuous throughout the year. There are imitative tendencies leading to location of food, reactions to evidence of fright in companions, social defense against enemies, and territorial behavior that offers protection to individual rights. It is well known that increased light acting upon birds will hasten the time of sexual maturity. Ringoen and Kirschbaum (*Jou. Exp. Zoöl.* 80, p. 173), found that this action is more rapid in males than in females and that in the sparrow it probably is the ocular region of the brain that is the receptor for the light that acts as this stimulus. Burger (*Jour. Exp. Zoöl.* 80, p. 249) found in the starling that a periodic increase in the length of day is effective only when the day lengths are above nine hours. Burger (*Jour. Exp. Zoöl.* 81, p. 333) found that the length of daily exposure to light is the essential stimulating factor in sexual photoperiodic activation, but the intensity of the light is a subsidiary factor.

Mammals. Fisher (*Jour. Mam.* 20, p. 21), recorded observations on the sea otter (*Enhydra lutews nereis*) as studied off the coast of Southern California. The food of these animals consists largely of abalones, but he was unable to determine how the otter manages to loosen the abalone from its attachment to a rock. The abalones are brought to the surface and eaten while the otter is lying on its back at the surface. When mussels are eaten they are cracked on a stone held on the stomach of the animal while it is lying on its back at the surface. In mating, either male or female makes the first advances. In rapid swimming otters lie on their backs with the arms folded across the chest, the legs being the propelling organ. When floating a slight movement of the tail keeps the animal in position, but no other movement is apparent.

Lister (*Bull. N. Y. Zoöl. Soc.* 42, p. 131) stated that no true pigs are native to the western hemisphere but are entirely of old world origin. Domestication in the western hemisphere occurred at different times, using whatever wild pigs happened to be available. Errington (*Ecology* 20, p. 168) found that the muskrat may be either herbivorous or carnivorous, in general all of the members of a colony being either one or the other. Unless in times of severe need these conditions are not greatly changed in time of drought.

Enders (*Ecology* 20, p. 104) noted definite

changes in the mammalian fauna of Barro Colorado Island since it was set aside as an animal refuge, especially noteworthy was the diminishing number of the larger species. This condition he blamed on illegal shooting by poachers.

AARON L. TREADWELL

ZULULAND, zōō'lōō-länd'. A territory in the province of Natal, Union of South Africa. Area, 10,427 square miles; population (1936 census), 361,938 (6142 Europeans, 351,938 natives, 2599 Asiatics, and 1259 of mixed race), compared with (1921 census) 258,356. Capital, Eshowe.
